"Farm commodity marketing" should be placed on a nation-wide business basis where it could stand alone as other big businesses do. Marketing of farm products should be controlled by the farmers themselves. A real farm commodity marketing system which would put agriculture on a permanently profitable basis can be established to market separately standard farm commodities for an expenditure on each commodity not in excess of the amount provided for in your bill for the board's expenses the first 12 months—that is, $500,000. The only loans for such commodities as wheat or cotton would be for organization purposes to be repaid from the first crop. These loans would be so small that they could easily be repaid without a fraction of risk by the Government.

The enforcement of the equalization fee and other features of the bill will require an army of employees and Government agents, detectives, and spies; and if every farmer or dealer who does not pay the fee is to be prosecuted, it will soon clog the courts.

Even $400,000,000 would be a small price to pay if this bill would accomplish the promised results and put agriculture on a profitable basis. But many of us who have studied the question for years know that it will not do so.

Furthermore, what is the use of passing a bill that in its present shape merely invites a presidential veto? Such a bill would not be of any use nor would it be good politics. To force another veto would so strengthen the President with farmers that they would force him to relinquish his hopes of turning the reins of government over to some one else.

Farmers have suffered so long and encountered such financial losses that necessity is forcing them to do some thinking on their own account. When further legislation is enacted they want it of a kind that will enable them to build up their industry on a sound, enduring, and profitable basis. They want to run their business on its merits. Thousands of farmers tell me this personally and by letter. They realize that "he who suffers all he can, can suffer no more."

If your bill, before it is put upon its final passage in the House, were so amended that it would provide for the establishment of a real "farm commodity marketing" system, provide for a combination of cooperatives and the organization of "farm commodity marketing" national in scope, under the management and control of marketing boards composed of producers of the respective commodities, giving farmers the power and authority to conduct their own marketing on business principles, such a measure would meet with the general approval of the people and I believe that of the President.

Sincerely yours,

B. F. YOAKUM.

## MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, returned to the Senate, in compliance with its requests, the following bills:

S. 3511. An act granting the consent of Congress to the State Highway Commission of Arkansas to construct, maintain, and operate a bridge across the White River at or near Cotter, Ark.;

S. 3723. An act to amend and reenact subdivision (a) of section 209 of the transportation act, 1920; and

H. R. 12632. An act to provide for the eradication or control of the European corn borer.

The message further announced that the House had passed without amendment the bill (S. 4046) authorizing the Henderson-Ohio River Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Henderson, Ky.

The message also announced that the House had disagreed to the amendments of the Senate to the bill (H. R. 11026) to provide for the coordination of the public-health activities of the Government, and for other purposes; requested a conference with the Senate on the disagreeing votes of the two Houses thereon, and that Mr. PARKER, Mr. MAPES, and Mr. LEA were appointed managers on the part of the House at the conference.

## COORDINATION OF PUBLIC-HEALTH ACTIVITIES

The PRESIDING OFFICER (Mr. ODDIE in the chair) laid before the Senate the action of the House of Representatives disagreeing to the amendments of the Senate to the bill (H. R. 11026) to provide for the coordination of the public-health activities of the Government, and for other purposes, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. JONES. I move that the Senate insist on its amendments, agree to the conference asked by the House, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. JONES, Mr. MCNARY, and Mr. FLETCHER conferees on the part of the Senate.

## DISTINGUISHED-FLYING CROSS

The bill (H. R. 13331) to authorize the President to present the distinguished flying cross to Ehrenfried Gunther von Huenefeld, James C. FitzMaurice, and Hermann Koehl, was read twice by its title.

Mr. BINGHAM. I ask unanimous consent for the present consideration of the bill that I may move to amend it so as to conform with the bill which the Senate passed by unanimous consent earlier in the day.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

Mr. BINGHAM. I move to insert in the bill immediately after the enacting clause the following:

That the President be, and is hereby, authorized to present the distinguished-flying cross to Col. Francesco de Pinedo in recognition of his extraordinary achievement in making an aerial journey of 25,000 miles by flying boat in the course of which he arrived in the United States by air from Rome.

That the President be and is hereby authorized to present the distinguished-flying cross to Dieudonne Costes and Joseph Le Brix in recognition of their extraordinary achievement in an aerial journey of 35,000 miles in the course of which they arrived in the United States by air after making the first nonstop flight across the South Atlantic.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

The title was amended so as to read: "To authorize the President to present the distinguished-flying cross to Col. Francesco de Pinedo, Dieudonne Costes, Joseph Le Brix, Ehrenfried Gunther von Huenefeld, James C. FitzMaurice, and Hermann Koehl."

Mr. BINGHAM. I move to reconsider the vote by which the bill (S. 4218) to authorize the President to present the distinguished-flying cross to Col. Francesco de Pinedo, Dieudonne Costes, Joseph Le Brix, Ehrenfried Gunther von Huenefeld,

James C. FitzMaurice, and Hermann Koehl was passed, and that the bill be indefinitely postponed.

The PRESIDING OFFICER. Without objection, it is so ordered.

PENSIONS AND INCREASE OF PENSIONS

Mr. NORBECK submitted the following report:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 10141) granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy, etc., and certain soldiers and sailors of wars other than the Civil War, and to widows of such soldiers and sailors, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 4 and 12.

That the House recede from its disagreement to the amendments of the Senate numbered 1, 2, 3, 5, 6, 7, 8, 9, 10, 11, 13, 14, 16, 17, 18, 19, and agree to the same.

Amendment numbered 15: That the House recede from its disagreement to the amendment of the Senate numbered 15, and agree to the same with an amendment as follows: In lieu of the figures proposed to be inserted by said amendment insert "$60"; and the Senate agree to the same.

Amendment numbered 20: That the House recede from its disagreement to the amendment of the Senate numbered 20, and agree to the same with amendments as follows:

Page 2 of the engrossed amendment, in the case of Arthur E. Wilcox, strike out the figures "12" and in lieu thereof insert the figures "20."

Page 7, in the case of Catarino Armijo, strike out the figures "12" and in lieu thereof insert the figure "6."

Page 7, strike out the language "The name of William L. Curry, late scout in the United States Army, Nez Perce Indian war, and pay him a pension at the rate of $30 per month."

Page 7, in the case of George W. Peck, strike out the figures "30" and in lieu thereof insert the figures "20."

Page 8, in the case of Andrew J. Stewart, strike out the figures "30" and in lieu thereof insert the figures "20."

Page 9, strike out the language "The name of Joseph Baker, who served as Indian scout, United States Army, and pay him a pension at the rate of $50 per month."

Page 10, in the case of Ella M. Beckett, strike out the figures "30" and in lieu thereof insert the figures "20."

Page 10, in the case of Effie I. Disney, strike out the figures "30" and in lieu thereof insert the figures "12."

Page 10, in the case of Anna M. Sherman, strike out the figures "30" and in lieu thereof insert the figures "12."

Page 11, strike out the language "The name of John L. Baxter, late a scout with the United States Army, Bannock Indian war, and pay him a pension at the rate of $20 per month to commence March 4, 1927."

Page 11, in the case of Frank H. Wilson, strike out the figures "17" and in lieu thereof insert the figures "12."

Page 18, in the case of Wilbur B. Swafford, strike out the figures "30" and in lieu thereof insert the figures "20."

Page 18, strike out the language "The name of Bascom Prater, late of Company E, Second Regiment Kentucky Volunteer Infantry, and pay him a pension at the rate of $8 per month."

Page 20, strike out the language "The name of Edward L. Schmiedemann, late of Company B, First Regiment Nebraska National Guard Infantry, and pay him a pension at the rate of $20 per month in lieu of that he is now receiving."

Page 20, strike out the language "The name of Milous Day, late of Company D, First Regiment of Capital Guards Kentucky Infantry, and pay him a pension at the rate of $50 per month."

Page 20, strike out the language "The name of Samuel H. Anderson, late an employee of the Quartermaster Department in the Yellowstone Expedition, and pay him a pension at the rate of $20 per month."

Page 20, strike out the language "The name of George R. Odle, late of Capt. D. B. Randall's Company, Idaho Volunteers, Nez Perce Indian War, and pay him a pension at the rate of $20 per month."

Page 21, in the case of William Franklin De Spain, strike out the figures "20" and in lieu thereof insert the figures "12."

Page 22, in the case of James W. Allen, strike out the figures "20" and in lieu thereof insert the figures "12."

Page 22, in the case of Francis H. Kearney, strike out the figures "20" and in lieu thereof insert the figures "12."

Page 22, in the case of Charles A. Packwood, strike out the figures "20" and in lieu thereof insert the figures "12."

Page 22, in the case of Hubert L. Bassett, strike out the figures "20" and in lieu thereof insert the figures "12."

Page 23, in the case of Sarah R. Bates, strike out the figures "20" and in lieu thereof insert the figures "12."

Page 23, in the case of Charles E. Finch, strike out the figures "20" and in lieu thereof insert the figures "12."

And the Senate agree to the same.

ARTHUR R. ROBINSON,
PETER NORBECK,
*Managers on the part of the Senate.*

HAROLD KNUTSON,
J. M. ROBSION,
WM. C. HAMMER,
*Managers on the part of the House.*

The report was agreed to.

AMENDMENT OF TRANSPORTATION ACT, 1920

Mr. COPELAND. Mr. President, I gave notice the other day that I desired to have a reconsideration of the vote by which the bill (S. 3723) to amend and reenact subdivision (a) of section 209 of the transportation act, 1920, was passed, and to have the bill recalled from the House. As the time is very short, I ask if it will be acceptable to the Senator from Maryland if we let that go over?

Mr. BRUCE. I think we could discuss it very briefly, if the Senators who are interested in the Boulder Dam bill would allow us a few minutes.

Mr. COPELAND. My only purpose in calling this bill back is to offer some brief amendments which would place the Clyde, Mallory, and Southern Steamship Lines on the same basis as the Merchants & Miners Transportation Line, included in this bill. If I may ask the Senate unanimous consent to have the vote by which the bill was passed be reconsidered, in order that these amendments may be entered, I shall do so.

The PRESIDING OFFICER. Is there objection to the reconsideration of the vote by which the bill was passed?

Mr. BRUCE. Indeed, I object most strongly.

The PRESIDING OFFICER. There is objection.

Mr. BRUCE. Request was made to recall the bill from the House, as I see it, without any valid reason at all after it had been passed by the Senate, and I propose, of course, to resist a motion for a reconsideration.

Mr. COPELAND. I coupled with my request for reconsideration the suggestion of the adoption of these amendments, so as to place all these lines on the same basis. I would have no desire to interfere with the passage of the bill.

The PRESIDING OFFICER. There is objection to the reconsideration of the vote.

Mr. COPELAND. Mr. President, may I ask for a reconsideration of the vote by which the bill was passed and the adoption of these amendments in the same motion?

Mr. FESS. That can not be done, Mr. President.

The PRESIDING OFFICER. It must be in the form of a request for unanimous consent and not in the form of a motion.

Mr. COPELAND. Is there objection to that?

Mr. FESS. That can not be done, Mr. President.

Mr. BLACK. Mr. President, I do not like to object to a request of that kind, but I was the only member of the Committee on Interstate Commerce who voted against a favorable report on the original bill.

The PRESIDING OFFICER. The hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business, which is Senate bill 728, the Boulder Dam bill.

Mr. BRUCE. Mr. President, I ask unanimous consent, and I hope the Senators interested in the Boulder Dam bill will unite in the unanimous consent, that we be allowed just a few moments for the purpose of disposing of the pending motion. It will take a very brief time, so far as I am concerned.

Mr. JOHNSON. Mr. President, I regret exceedingly that I can not consent to it. We have a morning hour for that purpose. Our bill will never be proceeded with if we accede to such requests.

Mr. BRUCE. I will say to the Senator that the Senate is going to have several days of discussion in relation to his bill. All we are asking is just a few moments to dispose of the matter which we have been discussing. Here is a bill which passed the Senate and went to the House, was passed by the Senate after it had been approved by the Committee on Interstate Commerce, and after it went to the House this motion is made for a reconsideration in order to let into the benefits of the bill three steamship companies which apparently had taken no notice of the bill during the time it was before the committee and during the time it was pending in the Senate.

Mr. JOHNSON. Much as I regret it, it is obvious that the matter is going to require debate. I see the Senator from Alabama [Mr. BLACK] upon his feet. I do not know whether he is interested. The Senator from New York [Mr. COPELAND] is interested. The morning hour is provided for the consideration of such matters. I am facing a filibuster upon the particular bill in which I am interested, and, therefore, I feel it incumbent upon me to ask that we proceed with the unfinished business.

Mr. BLACK. Mr. President, I am not going to debate the matter. I just want it to be of record that I have voted against the motion when it is taken up. I do not desire to debate it.

Mr. BRUCE. There is nothing to do but to submit.

Mr. JOHNSON. I am sorry, but I desire to proceed with the Boulder Dam bill.

BOULDER DAM

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 728) to provide for the construction of works for the protection and development of the lower Colorado River Basin, for the approval of the Colorado River compact, and for other purposes.

Mr. PITTMAN obtained the floor.

Mr. BRATTON. Mr. President, will the Senator from Nevada yield to me?

Mr. PITTMAN. I yield.

Mr. BRATTON. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

| | | | |
|---|---|---|---|
| Ashurst | Fess | La Follette | Sheppard |
| Barkley | Fletcher | Locher | Shortridge |
| Bayard | Frazier | McKellar | Simmons |
| Bingham | George | McMaster | Smith |
| Black | Gerry | McNary | Steiwer |
| Blaine | Goff | Mayfield | Stephens |
| Blease | Gould | Neely | Swanson |
| Bratton | Hale | Norbeck | Thomas |
| Brookhart | Harris | Norris | Tydings |
| Broussard | Harrison | Nye | Tyson |
| Bruce | Hawes | Oddie | Vandenberg |
| Capper | Hayden | Overman | Wagner |
| Caraway | Heflin | Phipps | Walsh, Mass. |
| Copeland | Johnson | Pittman | Walsh, Mont. |
| Curtis | Jones | Ransdell | Warren |
| Dale | Kendrick | Robinson, Ark. | Waterman |
| Deneen | Keyes | Sackett | Wheeler |
| Dill | King | Schall | |

The PRESIDING OFFICER. Seventy-one Senators having answered to their names, a quorum is present. The Senator from Nevada will proceed.

Mr. PITTMAN. Mr. President, I do not at the present time intend to discuss this entire legislation. I rise principally for the purpose of discussing the chief committee amendment, which is found upon page 6 of the bill, lines 5 to 12, inclusive, and which reads as follows:

> If during the period of amortization the Secretary of the Interior shall receive revenues in excess of the amount necessary to meet the periodical payments to the United States as provided in the contract, or contracts, executed under this act, then, immediately after the settlement of such periodical payments, he shall pay to the State of Arizona 18¾ per cent of such excess revenues and to the State of Nevada 18¾ per cent of such excess revenues.

Mr. President, I have heard it charged that that is a revolutionary policy. I wish to state now that it is the uniform policy of the Congress, which was first established in 1908 in connection with forest reserves. The same policy was adopted in the oil leasing bill of 1920 and in the Federal water power act of 1920. Before I conclude I shall cite the provisions of such acts.

It is thought that the States of Arizona and Nevada are attempting to force a bonus out of the Federal Government. There is no such intention whatever. I had the honor to present a resolution at the Denver conference, where the seven States were in conference over the Colorado River legislation last year. That resolution stated the rights of States in waters, the rights of States in the beds and banks of navigable streams. The resolution was worded in the language of the Supreme Court of the United States, which had stated that it is the settled law of the country that beds and banks of navigable streams are owned by the States.

The resolution stated, almost in the direct language of the Supreme Court of the United States, that the waters of the State are under the sovereign control of the State except in one case, and that case is where the State has surrendered its sovereignty over the waters through the interstate commerce clause of the Constitution. In that clause the States gave the Congress of the United States control over all navigable waters for the purpose of commerce. Outside of that clause, no authority was delegated to the Congress of the United States or the Federal Government over any of the waters of the country.

Mr. KING. Mr. President, will the Senator submit to an interruption? However, if he does not wish the continuity of his remarks disturbed, I shall not ask it.

Mr. PITTMAN. I would rather not yield just now. If the Senator will remember his question and ask it at a later time, I shall be glad to answer him.

Mr. KING. I just wanted to suggest that the interstate commerce clause merely gives control to the Federal Government to prevent interference with navigation.

Mr. PITTMAN. I am sorry I can not agree with that statement. I think that the interstate commerce clause has been interpreted to place in the exclusive jurisdiction of Congress the right to do anything with streams that may prevent interference with navigation or that may facilitate navigation. I am frankly stating that one exception. That is the admitted law.

The resolution to which I have referred did not assert the right of a State to tax any Government property, either a dam or reservoir or electric power, if it was Government property. It did assert, however, that the States had the right, being the owners of the beds and banks of the river, to charge any corporation or individual for the use of that land or even to prevent them from using it.

That resolution holds that when the Congress of the United States, under the delegated powers of the Constitution, takes possession of State land—that is, the bed of the river—and uses it for a national purpose for the benefit of the whole country, the policy adopted in the past by Congress should prevail, and that is that the States in all justice and morality should be granted by Congress some compensation for having taken away their taxable property for the benefit of the whole United States. Mind you, that was agreed to by six of the seven States. The State of California simply asked leave not to have to vote on the subject for other reasons than the law.

Let me for a brief moment digress from my argument with regard to this particular subject. It is perfectly evident to all of us that there is such violent opposition to certain provisions of the bill that unlimited debate is threatened in the last hours of this session of the Senate. I do not say that in criticism nor with any reflection upon anyone. We have pursued the practice here, when legislation was sufficiently obnoxious and of sufficient vital importance, of exercising the right of unlimited debate to prevent its passage.

Here is what I want to call to the attention of the Senate in all seriousness. The opposition is not to the amendment which I have read. Arizona is in favor of the amendment which I have read. Utah is in favor of the amendment which I have read. Every one of the Colorado River States is in favor of the amendment I have read. In my opinion California's statement before the conference at Denver shows that they are in favor of the principle.

It is not that which is causing the opposition to the bill. The opposition to the bill is by reason of other provisions of the bill and by reason of the failure to include provisions which those Senators who are opposing it believe are essential to a just bill.

What I am getting at is this: How do we know at this moment what the bill is going to be when we come to vote upon it? Is not the proper thing to do to find out what is going to be in the bill before we oppose the bill? The bill is only suggested by the committee. It is not the act of the Senate. It is not the act of the Congress. We are here to consider a suggestion by the committee. The suggestion of the committee should have weight, of course, because the committee has spent two or three years in investigating the matter, and has spent two or three years working on the legislation. But under the practice of the Senate the bill is open to the consideration of any amendment that any Senator sees fit to offer. If, for instance, the provision of the bill which raises some opposition, namely, that it may be only ratified by six States instead of seven interested States, were changed so that the bill should not go into effect until seven States had ratified it, what objection could the Senators from Utah and Arizona have to it? None whatever, in my opinion, because that would refer the act to their States and their States would pass on it as to whether or not it protected their rights.

So I say that it is not the proper procedure to fight the bill before there is an opportunity to consider the recommendations of the committee as to changes and to consider any recommendations that may be made in the form of amendments by any Senator whatever.

The opposition to the bill loses nothing by attempting to perfect the bill. The same opportunity to fight the bill, if it is not perfected, will exist as it always did. This is an important measure, one of the most important measures that has ever come before this body. We have to deal with the protection, or the proposed protection, of the Mississippi River lands from

floods. Those floods, when they come, eventually recede, even though they cause great destruction. We have a flood situation on the Colorado River that, while it may not be of the magnitude of the situation on the Mississippi, is far more dangerous and far more serious than the floods of the Mississippi River. The floods of the Mississippi River come and go, and have done so through the ages. If the floods of the Colorado ever break into Imperial Valley—which is from two to three hundred feet below sea level, and below the bed of the Colorado River—we will have an irreparable destruction.

There is not a Member of this body who does not desire to protect against that impending destruction. I say "impending destruction" because all of the evidence discloses that that river has built up a delta to such an extent that there is no grade to it, no flow, and no channel; there is but one place for the river to go, and that is into Imperial Valley, if great floods come down the Colorado.

All of us want to protect that valley. It is our duty to do it, the same as it was to protect the Mississippi Valley; but here is the situation:

Senators say, "Build a dam sufficiently high to impound 10,000,000 acre-feet of water, because the holding back of 10,000,000 acre-feet of water will prevent the danger of this flood going into Imperial Valley." It will for 1 year, 2 years, 5 years, 10 years; it will until that capacity is reduced by the settling of silt in the reservoir. How long will that take? Mind you, there is no engineering way to get the silt out of a reservoir. When it is filled up its usefulness is ended.

A reservoir of 10,000,000 acre-feet capacity would not have 10,000,000 acre-feet capacity after the first year, and it would steadily decrease. The water of that river deposits 100,000 acre-feet of silt every year. In other words, it deposits silt that will cover 100,000 acres of land 1 foot deep every year. In building a reservoir that is going to cost this Government a large sum of money in any case it is foolish to build it to last merely 5 years or 10 years. It should be built of sufficient capacity that it will require a number of years to fill it up; and therefore there should be a dam high enough to take care not only of the flood waters but of the silt.

The cost of a dam high enough to impound 10,000,000 acre-feet of water, that would be of value only for a few years, is almost if not quite half as much as the cost of a dam that would not fill up with silt for 300 years. Not only that; a dam that would hold back only the necessary 10,000,000 acre-feet of water, with a steadily decreasing efficiency, would be a total loss to the United States Government, because there never would be any return from it. A dam 550 feet high would last not only for 300 years but the disposal by the Government of the incidental power created by such a dam would pay back the Government every cent of the investment, with interest at 4 per cent per annum.

Which is the practical thing to do? There is not any question about it. I say to you that those who are opposing this bill are in favor of this legislation. The country gets the impression that there is a tremendous opposition against the building of this dam.

Mr. ASHURST. Mr. President, will the Senator yield?

Mr. PITTMAN. Yes.

Mr. ASHURST. Surely the Senator does not mean to say that those who are opposing this bill are in favor of the bill or the legislation.

Mr. PITTMAN. No; I do not.

Mr. ASHURST. The Senator can not speak for me upon that point.

Mr. PITTMAN. The confusion arose by reason of my inability to convey my meaning, because there is no difference between the Senator from Arizona and myself.

Mr. ASHURST. The Senator may draw any conclusion he desires. I am opposed to the bill. He is in favor of it if his amendments are adopted.

Mr. PITTMAN. I mean there is no difference in regard to what I mean by this legislation; that is all. I mean by that that the Senator from Arizona, as well as the Senator from Nevada, desires to protect the Imperial Valley against destruction and also the lands on the Arizona side.

Mr. ASHURST. Will the Senator yield? I really would prefer not to interrupt the Senator, but I must.

Mr. PITTMAN. That is all right.

Mr. ASHURST. Yes, Mr. President; the Senator from Arizona—and I shall take the liberty to say, with the kind permission of my colleague [Mr. HAYDEN], who sits here—that both Senators from Arizona are not only in favor of flood control for Imperial Valley, and that in the committee I offered an amendment appropriating $30,000,000, nonreimbursable and a gratuity out of the Federal Treasury, as a free gift to Imperial Valley for flood control, and the senior Senator from California [Mr. JOHNSON] voted against it. Is that the truth?

Mr. JOHNSON. Part of the truth.

Mr. ASHURST. It is the whole truth, sir.

Mr. JOHNSON. No, no; when the Senator speaks for the Senator from California, he does not speak of the whole situation. Here is a unified scheme with a definite plan that has been presented here session after session. To say merely that a flood-control dam shall be erected in the Colorado River means that the purposes of the whole plan would go to naught, save in the single direction of an inadequate flood control.

Mr. ASHURST. Mr. President, with the permission of the Senator from Nevada, I wish to ask the Senator from California is it not a fact that I offered an amendment to this bill in the Irrigation Committee appropriating as a gratuity out of the Federal Treasury $30,000,000 for flood control for Imperial Valley? Is that true?

Mr. JOHNSON. It is so that the Senator from Arizona offered an amendment by which there would be a flood control——

Mr. ASHURST. No; I did not ask that question.

Mr. JOHNSON. Wait a minute; I will answer it in my own way.

Mr. ASHURST. Well, then, answer it. Did I or did I not offer an amendment appropriating $30,000,000 as a free gift for flood control for Imperial Valley?

Mr. JOHNSON. I will answer the Senator's question.

Mr. ASHURST. The Senator is dodging the question. I ask him to answer it, and not dodge it, but to answer it like a man.

Mr. HARRIS. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order.

Mr. JOHNSON. I do not like the offensive manner——

Mr. ASHURST. And I do not like the Senator's dodging of my question. He shall be required to answer.

Mr. PITTMAN. Mr. President, I decline to yield any further.

Mr. JOHNSON. Mr. President, will the Senator from Nevada yield to me? I do not propose, by the Senator from Arizona or any other person, to be accused of dodging anything in this controversy. I proceeded to answer him, and answer him adequately and accurately. I proceed to answer him adequately and accurately now.

The question that arose in the committee arose over whether or not there should be an appropriation for flood control and flood control alone. To that, of course, I objected. That, of course, was not offered, in my opinion, in good faith by the Senator from Arizona, because it foreclosed them from every conceivable claim that they were making before that committee, and every claim that they make now in respect to this particular measure.

Mr. PITTMAN. Mr. President, I do not want this controversy to go on.

Mr. ASHURST. The Senator must yield until I at least challenge the statement that has just been made.

Mr. PITTMAN. Will the Senator try to be brief?

Mr. ASHURST. I will.

Mr. PITTMAN. I wish to go on with my remarks.

Mr. ASHURST. It is strange that the Senator from California, who in committee voted against my amendment for flood control for Imperial Valley, should now try to escape from his dilemma by impugning my good faith. I have served here 16 years, sir, and he is the first Senator who ever accused me of bad faith.

Mr. PITTMAN. I refuse to yield further, Mr. President.

Mr. ASHURST. I repudiate the intimation of the Senator from California, and I say it is unworthy of him.

Mr. PITTMAN. I refuse to yield any longer.

The PRESIDING OFFICER. The Senator from Nevada has the floor.

Mr. JOHNSON. Mr. President, will the Senator from Nevada yield?

Mr. PITTMAN. I will not, to anyone. I do not intend to stand here and have this debate broken up by a controversy of this kind.

The PRESIDING OFFICER. The Senator from Nevada has the floor.

Mr. WALSH of Massachusetts. Mr. President, will the Senator yield to me?

Mr. PITTMAN. I do not intend to yield to any Senator for any purpose. I am afraid even of the Senator from Massachusetts.

Mr. WALSH of Massachusetts. I was asking the Senator to yield in the interest of peace.

Mr. PITTMAN. I am afraid that what caused this diversion was the fact that I stated that I thought everyone, while not in favor of this bill, was in favor of legislation. I intended by that statement to draw a distinction between the bill and legislation. I only had in mind legislation for the protection of

Imperial Valley—not this bill, but some legislation—and therefore I am sorry that I was misinterpreted.

I reiterate that the purpose of this legislation—still drawing the distinction between legislation and bills—is unquestionably meritorious. I have never heard its merits denied, and therefore I come back again to the question that the only dispute arises over the language and form of the bill. If there is a difference over the language and the form of the bill, why should we not first attempt to agree on the language and the form of the bill before we condemn a bill?

When we finally vote on the bill, it may not be this bill at all. It may be a substitute bill. It may be entirely changed by amendments. I think, therefore, that the orderly, intelligent way to consider legislation is not to say, "I am opposed to the legislation because the bill is not in the form in which I want it," but for Senators first to find out whether they can put it in the form that they want it; and if they are not successful, and still have objections to it, then, of course, we understand their rights and duties in the matter.

I have diverted from the particular amendment I started to argue for the simple reason that I think we stand in our own light; I think we fight the interests of our own communities if we obstruct a bill dealing with legislation that we want and do not attempt to offer any other legislation in its place.

Arizona is not in as great danger as California from these floods, of course, because its land is not below sea level; but there is a large area there that needs flood protection, and should have it. This bill provides that if the seven-State agreement entered into between Wyoming, Colorado, Utah, New Mexico, Nevada, Arizona, and California with regard to the development of that river is agreed to by six States, the law shall go into effect. The Senators from Arizona and the State of Arizona have always contended that that agreement should not go into effect unless ratified by all seven States. That is a question, Senators, of dispute; but I say to you now, if this bill should be amended by the Senate, in its judgment, saying that the act should not take effect until all seven States had ratified it, what objections could the Senators from Arizona, Utah, or anywhere else make to this bill? None at all. They would not object to having the bill referred to their legislatures to determine whether or not it was protective of their States. Why fight this bill until you find out whether or not it can be amended so as to require seven-State ratification?

I state now that if a seven-State ratification amendment were agreed to instead of the six-State provision in this bill, there would be no legitimate grounds for any of the Representatives of the seven States to fight it, because it would be transferring the fight from this floor to the States themselves. Why is not that possible? Why fight this bill, then, until you find out whether or not it can be re-formed according to your particular ideas, whatever they are?

The seven States want this legislation. Ever since 1918 their representatives have been convening and discussing this proposition for the purpose of bringing about legislation of this kind, not in the form of this bill—I do not want anyone to rise to make that point—but legislation of this general kind. It has been a matter of serious consideration for years. An agreement or treaty was drawn up under the authority of Congress with regard to the development of the river; but that treaty was not ratified by the State of Arizona, and consequently it has never gone into effect. Arizona contends that no legislation should go into effect until it has been ratified by her; but an amendment may be offered here by Arizona or Utah or the representative of any other of the seven States requiring seven-State ratification.

Mr. HAYDEN. Mr. President, I will state to the Senator that such an amendment will be offered.

Mr. PITTMAN. Then, if such an amendment will be offered, why not get down to it now and offer it instead of discussing the bill before it is offered? I think it is a serious proposition. I think every Senator who has an amendment to offer to this bill should offer it, let it lie on the table, and have it printed, so that we can consider it, and we should proceed to consider those amendments.

Mr. BRATTON. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Nevada yield to the Senator from New Mexico?

Mr. PITTMAN. I do.

Mr. BRATTON. In that connection I desire to call the attention of the Senator from Nevada to the fact that I have offered an amendment, had it printed, and it is lying on the table now providing that the act shall not go into effect until each and all of the seven States have ratified the compact, if that can be done within 12 months from the time the bill is passed. If not, then construction may proceed on the basis of a six-State ratification, with a certain limitation as to the maximum use of water in the State of California.

At the appropriate time I shall advance that amendment and discuss it, but I call the attention of the Senator from Nevada to the fact that an amendment looking in that direction has been offered, has been printed, and now lies on the table.

Mr. PITTMAN. I think the Senator has followed the proper procedure.

Mr. ASHURST. I shall promise not to quarrel with the Senator from California——

Mr. PITTMAN. I am very sorry I can not yield now. I am afraid of the Senator.

Mr. ASHURST. I think the Senator should yield at this juncture.

Mr. PITTMAN. Very well; I yield.

Mr. ASHURST. The Senator said it is the duty of the Arizona Senators to introduce an amendment proposing a seven-State ratification. Day before yesterday I introduced the following amendment. May I read it? It is very short?

Mr. PITTMAN. Why not just tell what it is? It is printed.

Mr. ASHURST. No; let me read, for it provides as follows:

Amendment by Mr. ASHURST: *Provided*, That no appropriation for construction under the gravity plan shall be made until a compact shall have been entered into between the States of Wyoming, Colorado, Utah, New Mexico, Nevada, California, and Arizona, either to determine the allocation of waters and definite storage elevation and areas or to determine the basic principles that for all times shall govern these matters: *And provided further*, That the passage of this act shall not in any respect whatever prejudice, affect, or militate against the rights of the State of Arizona or the residents or the people thereof, touching any matter, or thing, or property, or property interests relative to the construction of the Colorado River Boulder Dam project.

That amendment is an exact rescript of the amendments adopted at the suggestion of the Senator from Idaho [Mr. BORAH] and at the suggestion of the Senator from Montana [Mr. WHEELER] with reference to the Columbia Basin project.

My learned friend from Nevada descants ably, as he always does, and intimates that I have been guilty of some remissness, whereas in truth that is the first amendment that I offered. I hope he will not now imply that Arizona has been guilty of remissness or delay.

Mr. PITTMAN. I am not doing so. Just the exact opposite; I said the Senator had done his duty.

Mr. ASHURST. Very well. I thank the Senator for yielding.

Mr. PITTMAN. Both the Senator from Arizona and the Senator from New Mexico have done their duty, as I see it, humble as my opinion may be, in presenting these amendments. I know the Senator desires to get action on his amendment, and I am going to help him get action.

Mr. ASHURST. Will the Senator vote for my amendment?

Mr. PITTMAN. I have not considered it. I may and I may not. I mean by that, the Senator has introduced that amendment for the purpose of getting an expression of the Senate on it, and I am going to help him all I can to get an expression of the Senate on it.

Mr. ASHURST. I hope the Senator will vote for it.

Mr. PITTMAN. I may after I shall have considered it.

This has been a diversion. Let me get back to the amendment. I only stated what I thought it was the duty of the Senate to do in this matter. I will read this amendment once more, and then I am about to close. I want the Senate to understand the amendment. It is found on page 6 of the bill, lines 5 to 12, inclusive, and reads:

If during the period of amortization the Secretary of the Interior shall receive revenues in excess of the amount necessary to meet the periodical payments to the United States as provided in the contract or contracts executed under this act, then, immediately after the settlement of such periodical payments, he shall pay to the State of Arizona 18¾ per cent of such excess revenues and to the State of Nevada 18¾ per cent of such excess revenues.

Let us see what that means. This bill provides that before the Secretary of the Interior can start any construction he must have contracts that will insure the return of the money to the Government with 4 per cent interest. It provides that those payments must be made within 50 years. It means that those payments are to be annual, or semiannual, or at some other periodical times.

How much money does it take to pay this back? Let me give the Senate exactly what the Government says about this. Listen to this: Dam, including interest, $55,000,000; power plant, $35,000,000; all-American canal, $35,000,000. That includes interest during the amortization period. This bill pro-

vides that the all-American canal shall be built under the reclamation act, which means that the lands benefited are to pay for it. So we eliminate that item of $35,000,000.

"Dam, $55,000,000." That has to be paid for out of the sale of power. If the plant that generates the electricity is built by the Government, that will be another $35,000,000; and that will have to be paid out of the sale of power.

Under this bill the Secretary of the Interior is given the option either to build this plant or to contract for the use of the water and let the individual build the plant. In any event, the only charge against the power is for the dam and the power plant, or the dam alone. What is the result? It has been estimated that in 35 years this power could be sold at less than 2 mills per kilowatt-hour, and the Government's total investment with interest paid back. But here comes a question. If the Government sells the power for exactly the amount that will meet each annual payment, or periodical payment, and there happens to be some injury to the dam, or to the transmission lines, or to the power house, then there would be a deficit at that time. Consequently, good, economic business management requires that there shall be a reserve, with the result that instead of the power being sold at exact cost, it will be sold at some price above cost. That will be annually an excess revenue over and above the amount required to pay the Government its amortization fee, which means the principal with interest.

This bill gives the Secretary of the Interior the absolute, exclusive power to fix the price at which the power is sold. If he sells the power at cost, then there is no revenue for the State of Arizona or to the State of Nevada. If he sells the power at a quarter of a mill above cost, then the States of Arizona and Nevada get only 37½ per cent of the quarter of a mill, which is a negligible sum. In any event, the testimony shows that under that amendment the returns of revenue to the State would be far less than the taxes they would receive from private individuals, if the dam were built by individuals or corporations.

It is said, however, it is a revolutionary policy. We are not urging the right to tax Government property, we are not urging the right to tax hydroelectric energy created by the Government. We know legally that can not be done. If it could be done, we would not have to be here asking for Congress to do justice.

Senators will remember when we passed the forest reserve act in 1902. What did Congress do in that act? The Congress of the United States, having absolute, exclusive jurisdiction over the public lands of this country, said that the forests of this country were being destroyed, watersheds were being destroyed, and it was absolutely necessary, for the national safety and the national welfare, that we withdraw these great forest areas and prevent them from going into private ownership; and we passed the act of 1902.

What was the result of that? Great national conservation had been accomplished; but it almost destroyed certain counties in the United States. It did destroy some of them. There were counties in the great areas that were forest areas of the West that are now forest reserves, where towns had been built up on the lumber industry, and when the Government of the United States, for the purpose of national conservation, went in there and withdrew all that immense timber area, larger than the State of Rhode Island, in some cases larger than the State of Connecticut, when they withdrew all that land from ever going into private ownership, for the purpose of conserving those forests, those towns which had been built up for the purpose of carrying on the lumber industry found themselves without sufficient taxable property to support town or county government.

What happened? In 1908 the Congress of the United States realized that no particular community should be made to suffer for the benefit of the whole Nation, and passed the act of May 23, 1908 (35 Stat. L. 260), which provided:

* * * That hereafter 25 per cent of all money received from each forest reserve during any fiscal year, including the year ending June 30, 1908, shall be paid at the end thereof by the Secretary of the Treasury to the State or Territory in which said reserve is situated, to be expended as the State or territorial legislature may prescribe for the benefit of the public schools and public roads of the county or counties in which the forest reserve is situated: *Provided*, That when any forest reserve is in more than one State or Territory or county the distributive share to each from the proceeds of said reserve shall be proportional to its area therein.

What was that? Twenty-five per cent of the gross receipts from the forest reserves, and yet, as we know, the forest reserves have never made any money since they were created. But the Congress in its wisdom, after the policy which had proven so destructive to counties and States, thought it right to compensate them when they were destroyed for the benefit of the whole Nation.

At the last session Congress passed a bill to pay to certain counties in Oregon a sum equal to the taxes they would have received had not the lands gone into forest reserves. That was done because those counties had been practically destroyed by the withdrawing of land from going into private ownership and becoming subject to taxation.

That was with regard to forest reserves. Let us see what the next step was. We passed an act to conserve the oil resources of this country. The oil resources of the country were only found in certain sections of the United States, in certain Western States. Before we passed the act of March 11, 1920, those great oil lands were subject to acquisition by citizens of the United States and corporations organized under the laws of the States, and when they became subject to the ownership of those individuals and corporations, they were subject to the taxation of the States. The Congress of the United States came to the conclusion that the oil resources of this country were essential to its protection, were essential to put it on a commercial equality with other countries, and they found it necessary to pass an act, in 1920, authorizing the Secretary of the Interior to withdraw from acquisition by individuals all of these great areas of oil lands. The whole Nation was benefited, but every State where these great oil lands were found was proportionately damaged. Every county in the withdrawn area was practically destroyed, and every town within the withdrawn area was practically destroyed for the time being.

What happened? The Congress of the United States, after having fixed the policy with regard to forest reserves in 1908, in its wisdom and in justice to those States which had been deprived of their property for the benefit of the whole Nation, put this in the oil leasing law:

SEC. 35. That 10 per cent of all money received from sales, bonuses, royalties, and rentals under the provisions of this act, excepting those from Alaska, shall be paid into the Treasury of the United States and credited to miscellaneous receipts; for past production 70 per cent, and for future production 52½ per cent of the amounts derived from such bonuses, royalties, and rentals shall be paid into, reserved, and appropriated as a part of the reclamation fund created by the act of Congress, known as the reclamation act, approved June 17, 1902, and for past production 20 per cent, and for future production 37½ per cent of the amounts derived from such bonuses, royalties, and rentals shall be paid by the Secretary of the Treasury after the expiration of each fiscal year to the State within the boundaries of which the leased lands or deposits are or were located, said moneys to be used by such State or subdivisions thereof for the construction and maintenance of public roads or for the support of public schools or other public educational institutions, as the legislature of the State may direct.

Thirty-seven and a half per cent is the exact amount that is provided in this amendment which I have just read. They gave not only 37½ per cent of the royalties to the States when the lands were withdrawn, but they gave an additional 52½ per cent to the reclamation fund, and the Government kept only 10 per cent to administer the act. That was because Congress, when it passed the act of 1908 giving 25 per cent of the receipts of forest reserves, had already had enough experience with conservation so that they knew it absolutely destroyed certain counties and towns for the benefit of the whole country. So, when they passed this oil act they put the same 37½ per cent in there for the State, 52½ per cent to the reclamation fund, and 10 per cent to the Federal Government.

That was not all. It is said that this is a new policy. We passed here on June 10, 1920, what we called the Federal power act. This dam could be built under the Federal power act if the Government did not see fit to build it. Why? The Federal power act only provided this, that the Government of the United States, through the Interior Department, might lease the use of its public lands to anyone desiring to build a power project. But that was not all. What else did the act say in regard to that? It provided:

(d) To issue licenses to citizens of the United States, or to any association of such citizens, or to any corporation organized under the laws of the United States or any State thereof, or to any State or municipality for the purpose of constructing, operating, and maintaining dams, water conduits, reservoirs, power houses, transmission lines, or other project works necessary or convenient for the development and improvement of navigation.

Then, having done that, they went further and stated this:

That each applicant for a license hereunder shall submit to the commission—

(b) Satisfactory evidence that the applicant has complied with the requirements of the laws of the State or States within which the pro-

posed project is to be located with respect to bed and banks and to the appropriation, diversion, and use of water for power purposes and with respect to the right to engage in the business of developing, transmitting, and distributing power, and in any other business necessary to effect the purposes of a license under this act.

I call attention to the fact that Congress at that time recognized that the States do own the beds and banks of navigable streams, that they do have sovereignty over the water, with the exception that the Congress was granted in the Constitution power to control the waters for navigable purposes. Before it would let any license for the use of the public land for power purposes, it required that the applicants should comply with the laws of the State relative to the use of the beds and banks of the rivers, and the use of water over which the State had sovereignty.

That act was intended to govern deals with private corporations and citizens. The Congress of the United States, under the Constitution, the State having delegated that authority, has the right to use the State lands. It has a right to use the lands owned by the States in the bed of a river and on the banks of a river, because the Supreme Court of the United States has held that when the States granted the right to Congress to regulate navigation on rivers, the incidental right of using the land of the State in the bed and on the banks of the river was essential. We do not question that at all. We do not question that the Congress of the United States has the right to use the lands of Arizona and Nevada upon which to build a dam, notwithstanding the fact that the great benefits will be bestowed 250 miles below in another State. We are only calling attention to the justness of the situation.

If the Government did not reach out and take this great power site, the only power site in our State, for flood control, and if a private corporation then did it, that private corporation would have to comply with the laws of our State, and the dam and the power house it built would be subject to taxation and help to support our State. But we are not urging that. We say there are circumstances connected with the whole transaction which justify the United States Government in doing this work itself. As a matter of fact, it is the duty of the United States Government to do the work out of the funds of the Nation, as it should do along the Mississippi River, and not at the expense of a single State or two States or three States.

The Federal power act of 1920 provided that the Federal Power Commission should fix the fees and that the license fees should pay for the use of public lands. It was all right to charge for the use of public lands, but how would the State get paid for the use of its lands? Congress in passing the act realized that the States were being deprived of something, and what did we put in the act? In the act we find this provision, in section 17, page 11, of Public, 220, Sixty-seventh Congress:

> That all proceeds from any Indian reservation shall be placed to the credit of the Indians on such reservation. All other charges arising from licenses hereunder shall be paid into the Treasury of the United States, subject to the following distribution: Twelve and one-half per cent thereof is hereby appropriated to be paid into the Treasury of the United States and credited to "miscellaneous receipts"; 50 per cent of the charges arising from licenses hereunder for the occupancy and use of public lands, national monuments, national forests, and national parks shall be paid into, reserved, and appropriated as a part of the reclamation fund created by the act of Congress known as the reclamation act, approved June 17, 1902; and 37½ per cent of the charges arising from licenses hereunder for the occupancy and use of national forests, national parks, public lands, and national monuments, from development within the boundaries of any States shall be paid by the Secretary of the Treasury to such State.

That is the exact amount we have provided in the committee amendment to the pending bill. But, mind you, in that case the States not only get 37½ per cent of the fees charged for the use of public lands, but the dam and plants are to be built by private corporations and private individuals and are to be subject to the regular taxation of the States. In this case it would not be subject to taxation. Under this bill all we will get out of it is 37½ per cent of the profits, which amount we would have gotten under the Federal power act, together with additional revenues from taxation.

Just think of it! Not only does the Congress of the United States, under the power of the Constitution, take the beds and banks of the rivers that belong to the States of Arizona and Nevada for national purposes, but it takes over 400,000 acres of the public lands in Nevada as a reservoir site. It withdraws permanently and forever 400,000 acres of public lands in our State so that they can never come into private ownership and can never be subjected to taxation, and this is done for the purpose of carrying out a great national policy.

But we have not any objection. We have stood for every conservation act that has ever been brought up. To-day nearly one-half of the State of Arizona is taken up by Indian reservations and forest reserves. The Government has prevented them from ever becoming taxable by the State. The same situation exists in Nevada. We do not object, but we do say that the Congress of the United States discovered in 1908 that the forest act of 1902 had destroyed cities and counties, had interfered with the credit of whole States, and then the Congress passed an act providing that 25 per cent of the receipts from sales of timber fees and for grazing should go into the State treasury and into the treasuries of those counties that were interfered with. That was the beginning of the policy.

Then when we reserved forever the land with oil underlying it, so it could not go into private ownership and be taxable, again the Congress said there must be some compensation to the States which are injured for the benefit of the whole United States, and provided not only 37½ per cent of the royalties, the same 37½ per cent that we propose to divide between the States of Arizona and Nevada in this case, but an additional 50 per cent was provided to go into the reclamation fund for the benefit of those States. Again, when we passed the Federal power act Congress recognized that the States own the beds and banks of navigable streams and have sovereignty over the waters thereof, subject only to the superior authority granted by the Constitution to Congress to use them for navigation, and in that act provided that 37½ per cent of the revenues from licenses issued by the Federal Power Commission should go to the States wherein a dam was built.

Away back in 1860 the Federal Government granted every other section of land in certain parts of Oregon to aid the building of a railroad from Portland to the State line, but the railroad company did not comply with the law which required them to sell that land to settlers at $2.50 per acre, so the Government took the land away from the railroad company and made it into forest reserves, and thus logging ceased and lumbering ceased and manufacturing ceased, and those towns died which were built up there on the strength of the belief that the lands were going to be sold and be subject to taxation. The Congress of the United States at the last session appropriated money to pay these counties the taxes which they would have received for the land if it had gone into private ownership as originally intended.

Do not confuse the proposition. We are not insisting for one moment that we have any right to tax a dam built by the Government of the United States or a power plant built by the Government, or anything owned or built by the Government. We say that Congress has the authority to do justice in this matter, and all we have asked is that if in any year there is in the hands of the Secretary of the Treasury a revenue larger than enough to meet the annual payments on the principal and interest of amortization that then the two States of Arizona and Nevada shall have 37½ per cent of that excess revenue, and that 62½ per cent shall be retained by the Government as a safety reserve fund to meet any deficit that may come in subsequent annual payments.

It is a fair and reasonable proposition, and it is in absolute accord with the whole policy of the Congress which was established away back in 1908 and followed consistently ever since that time. We do not ask that a cent be added to the cost of the power, not a cent. The bill provides that the Secretary of the Interior may sell the power at any price he fixes, and that if there is no excess revenue over and above the amount necessary to pay the Government with interest then the States of Arizona and Nevada get nothing. If there is an excess over that amount, they only get 37½ per cent of it. It is a plain and simple proposition.

Mr. SIMMONS. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Nevada yield to the Senator from North Carolina?

Mr. PITTMAN. I yield.

Mr. SIMMONS. I am a member of the committee which reported the bill, but the Senator from Nevada knows that I am a member of two other committees, the Committee on Commerce and the Committee on Finance, who are holding meetings at the same hour every day, and that I was not able to attend the meetings of the committee having the Boulder Dam bill in charge. I am not as familiar with the bill as I would like to be.

The Senator spoke about the number of acres of land which the Government would take away from the State of Nevada for the purpose of establishing a reservoir. I understand that when the Government establishes a forest reserve out of Government-owned land, the Senator claims, by reason of the fact that those lands are withdrawn from purposes of production or any use to which they are susceptible of being put, that the

Government, for the purpose of recouping the State for the loss sustained by reason of that withdrawal, has provided that the State in which the reservation is located shall receive a certain percentage of the profits derived from the use of such withdrawn areas.

Mr. PITTMAN. That is correct.

Mr. SIMMONS. The Senator claims that where the Government goes into a section where it owns no land, as in my State, for instance, and buys large tracts of land for the purpose of establishing a forest reserve, provision is therefore made in the act that to recoup the State for the losses sustained by the nonuse of the area the State shall receive a part of the profits derived.

Mr. PITTMAN. That is correct.

Mr. SIMMONS. I do not understand that the Senator is contending that when the Government decides to take over this vast area in his State for the purpose of establishing a reservoir, the Government shall not pay the owners of those lands their reasonable value?

Mr. PITTMAN. The land out there is not privately owned.

Mr. SIMMONS. Is it owned by the State?

Mr. PITTMAN. No; it is owned by the United States Government. It is in the same position as were the forest lands. The forest lands were owned by the Government and were withdrawn from entry or acquisition, and in lieu of withdrawing them from taxation as in the Senator's State, where private lands were taken by the Government through purchase, the Government pays the State 25 per cent of the gross receipts for such forest reserves

Mr. SIMMONS. Yes; I understand the Senator. I am well aware of how the Government would go and take charge of these lands, and I assumed, of course, that if they were privately owned the Government would pay for them; but I understand now that they are publicly owned. The Government owns the lands?

Mr. PITTMAN. Yes; and simply withdraws them.

Mr. SIMMONS. The Senator said that we ought to put the State of Nevada, with respect to those lands, upon the same footing that we have placed other States in which lands were withdrawn for forest reserves by the Government.

Mr. PITTMAN. Or for oil purposes.

Mr. SIMMONS. That is the Senator's contention, is it not?

Mr. PITTMAN. That is correct. The whole situation is that no State can maintain its sovereignty in the proper way and can not exist without the power of taxation or, necessarily, without property to tax. Eighty-seven and one-half per cent of the lands of Nevada are public lands. We have very large areas there which have been withdrawn as forest reserves. We have large areas withdrawn there as oil lands on the theory that they may have oil under them. We have one Indian reservation, for instance, larger than the State of Rhode Island, with only 400 Indians living on it.

What I am getting at is this: We have reached the constitutional limit of our taxation, and instead of acts to encourage land going into private ownership and being taxable the natural tendency is the other way.

Mr. WALSH of Montana. The unnatural tendency.

Mr. PITTMAN. No; I think the tendency for conservation is natural. I think all of us favor the conservation of our forests, and in a great many cases the burden rests chiefly on the State where it is taken. Sometimes, as I said, it has destroyed whole counties and towns, as it did in Oregon. I believe in the conservation of our oil reserves. I do not think our Navy could compete with any navy in the world that had oil if we did not have oil. I do not believe our commerce could compete with the commerce of any other nation of the world if they had oil and we did not have it. Conservation of oil is essential. When we passed the act giving the Secretary of the Interior blanket power to draw lines around millions of acres of land, with the provision that that land shall never go into private ownership, it was a good step. It was done for the benefit of the Nation.

Mr. SIMMONS. The Government owns a great deal of land that has never yet been declared forest reserves, does it not?

Mr. PITTMAN. Oh, yes; a great deal.

Mr. SIMMONS. Those lands do not pay any taxes.

Mr. PITTMAN. No; they do not.

Mr. SIMMONS. It seems to me the Senator's position is very much stronger as to those lands which are appropriated by the Government for a specific purpose, whether it be as a forest reserve or whether it be for the purpose of a reservoir, when he puts it upon the ground that by that act it brings that particular Government-owned land into utility, but a utility which destroys altogether its value for any other purpose except that specific purpose.

Mr. PITTMAN. That is true.

Mr. SIMMONS. And that the State, therefore, loses any possibility of obtaining any revenue from that land in the future. Now, if it was publicly owned land and not in a reserve, or the Government was leasing those lands out and the Government was permitting them to be logged in a proper way so as to preserve the forests and not destroy them, the community would get the benefit of those operations. But in this particular case the community can never hereafter get any income from the use of these lands.

Mr. PITTMAN. That is exactly the situation.

Mr. SIMMONS. I think if the Senator will put it upon that ground he will be upon a pretty solid and logical foundation.

Mr. PITTMAN. Those 420,000 acres of land will be covered with water in a reservoir. All the land in that area—and there is a lot of it—will be covered forever. All the irrigable land within that district—and there is a lot of it, because it would not be a reservoir unless it was low land along the river—will be covered with water and destroyed forever. The only great dam site in the State of Nevada is this dam site. It happens that the walls rise there perpendicularly for thousands of feet, narrow, straight up, hard, granite rock; and it happens that on the Nevada side above that dam there is a great basin running over into Nevada covering 420,000 acres of land, and that basin is to be covered with this water.

Private individuals want this dam site, of course, because it is a remarkable site. You could build the dam a thousand feet high if you wanted to. The amount of power you could create is enormous. The city of Los Angeles, through its agents, when we were out there with our committee two or three years ago, stated that if the Government did not want to build a dam there Los Angeles would built it. There is no doubt that the people want to build the dam.

If an individual built that dam under the Federal power act, what would happen to Nevada? Under the Federal power act the licensee would have to get permission to use the bed and the bank of the river which are owned by the State of Nevada. He would have to get permission to use the water, which the State of Nevada has the sovereignty over except as against the United States Government under the interstate-commerce clause; and when he built that dam at a cost of $55,000,000, and when he built that power house at a cost of $35,000,000, it would be subject to taxation by the State of Nevada at the regular rate of taxation that exists. In other words, since our taxation rate in Las Vegas is about 5 per cent, $5 on the hundred, the taxes that we would receive from that enterprise would be over $750,000 a year.

Now, what do we do by this amendment? We are simply following out the policy even as to the exact percentage that was fixed in the oil leasing bill and the Federal power act; that is, that if there are any excess revenues in any year over and above the amount necessary to pay the Government the principal and interest for that year, the excess revenue shall be divided between the Federal Government and the States—that is, 62½ per cent to the Federal Government and 37½ per cent to the States of Arizona and Nevada.

That is 37½ per cent of the net receipts. Under the forest reserve act, when they buy lands in the State of the Senator from North Carolina and make a forest reserve out of them, they pay you 25 per cent of the gross receipts, not of the net receipts. This amendment is 37½ per cent of the net receipts.

I do not know that I desire to say anything more on this matter. I rose in the first place only for the purpose of refuting the idea that there was something new or revolutionary in this amendment. Why not let us get down to the consideration of some of these amendments?

I feel like asking unanimous consent now that we consider committee amendments first, beginning with the amendment that I have just read, and, after the committee amendments are considered, that we then proceed to consider any and all amendments that may be offered. I will not ask that if there is any indication of any objection.

Mr. ASHURST. Mr. President, in reply to the question of the Senator I will say that the concluding part of his speech was an able speech. The earlier part, of course, was worth listening to; but the concluding part of the Senator's speech was a worthy and able speech. Now, the Senator asks me a direct question.

Mr. PITTMAN. No; I will not do it. I was only feeling out the Senator's position in the matter.

Mr. ASHURST. I think it is a proper question.

Mr. PITTMAN. I will withdraw the question. I have not made a formal request.

Mr. President, I ask unanimous consent that I may place in the RECORD at the end of my remarks the resolution that was adopted at the meeting of the governors and commissioners of the seven Colorado River States on August 29, 1927:

Resolution offered by Senator KEY PITTMAN on behalf of the Nevada commission to the Conference of Governors and the Commissioners of the Colorado Basin States in session at Denver, Colo., August 29, 1927

Whereas it is the settled law of this country that the ownership of and dominion and sovereignty over lands covered by navigable waters within the limits of the several States of the Union belong to the respective States within which they are found, with the consequent right to use or dispose of any portion thereof, when that can be done without substantial impairment of the interests of the public in the waters, and subject always to the paramount right of Congress to control their navigation so far as may be necessary for the regulation of commerce with foreign nations and among the States; and

Whereas it is the settled law of this country that subject to the settlement of controversies between them by interstate compact or decision of the Supreme Court of the United States and subject always to the paramount right of Congress to control the navigation of navigable streams so far as may be necessary for the regulation of commerce with foreign nations and among the States, the exclusive sovereignty over all of the waters within the limits of the several States belongs to the respective States within which they are found, and the sovereignty over waters constituting the boundary between two States is equal in each of such respective States; and

Whereas it is the sense of this conference that the exercise by the United States Government of the delegated constitutional authority to control navigation for the regulation of interstate and foreign commerce does not confer upon such Government the use of waters for any other purposes which are not plainly adapted to that end, and does not divest the States of their sovereignty over such waters for any other public purpose that will not interfere with navigation: Therefore be it

*Resolved*, That it is the sense of this conference of governors and the duly authorized and appointed commissioners of the States of Arizona, California, Colorado, New Mexico, Nevada, Utah, and Wyoming, constituting the Colorado River Basin States, assembled at Denver, Colo., this 23d day of September, 1927, that:

The rights of the States under such settled law shall be maintained.

The States have a legal right to demand and receive compensation for the use of their lands and waters, except from the United States, for the use of such lands and waters to regulate interstate and foreign commerce.

The State or States upon whose land a dam and reservoir is built by the United States Government, or whose waters are used in connection with a dam built by the United States Government to generate hydroelectric energy, are entitled to the preferred right to acquire the hydroelectric energy so generated or to acquire the use of such dam and reservoir for the generation of hydroelectric energy upon undertaking to pay to the United States Government the charges that may be made for such hydroelectric energy or for the use of such dam and reservoir to amortize the Government investment, together with interest thereon, or in lieu thereof agree upon any other method of compensation for the use of their waters.

We, the undersigned committee, to which has been referred the foregoing resolution, as presented to the conference on August 29, 1927, by Senator KEY PITTMAN, having adopted certain amendments unanimously, which are now incorporated therein, we recommend that the resolution set out above be adopted.

KEY PITTMAN,
FRANCIS C. WILSON,
WM. R. WALLACE,
CHARLES E. WINTER,
A. H. FAVOUR,
DELPH E. CARPENTER.

Mr. ASHURST. Mr. President, I would not speak this afternoon except for the colloquy which just took place between the senior Senator from California [Mr. JOHNSON] and myself.

I have known the senior Senator from California I do not know exactly how many years—at least more than 30 years. I have known the junior Senator from California [Mr. SHORTRIDGE] much longer than that. I regret that the debate on this question of such transcendent importance should have been opened by a challenge of my good faith, such as has just been made by the senior Senator from California; and I am persuaded that as the shades of this murky and gloomy afternoon draw closer about us he will regret much that he should have charged me with a lack of good faith.

Mr. JOHNSON. Mr. President, let me suggest to the Senator that I regret the entire incident equally with him. Let it pass entirely.

Mr. ASHURST. Let me now repeat what I have said before in this forum, namely:

I do not know in the entire history of our country of a State that was ever more ably represented in the Senate of the United States than is the State of California in the person of her two sitting Members—Mr. JOHNSON and Mr. SHORTRIDGE. I have no reason to enlarge upon the abilities of these two gentlemen or to indulge in any excessive euology of them. Before coming to the Senate they were preeminent among the lawyers of their State. I have met them at the bar of the judicial forum; each was a foeman worthy of anyone's steel. All important and grave is this question to my State. I shall not by any intendment, or by any word be betrayed into any characterization of the motives of the Senators from California, and I freely grant that their motives are just as high as my own motives. I believe they are attempting to follow the light as they see the light, and I respectfully insist and demand that the senior Senator from California shall grant the same consideration to others.

Mr. President, I learned in my youth, in the companionship of gay and gallant cowboys about whom clustered a dash of chivalry, that those men who are always so ready to accuse other men of bad faith would better look into their own hearts and search their own consciences. I long ago learned in the company of gentlemen that those who are guilty of intentional bad manners are capable of crime. I do not mean these remarks to refer to anything that has taken place this afternoon, because we are under high tension and are worn down.

The Senators from California have been ably and aggressively pressing this bill for years and they would be more than human, or less than human, if they did not feel some irritation over my determined opposition to their bill. Therefore, I give assurances that although we may be vanquished and Arizona's hope of future development choked and strangled by "Johnson grass" I shall indulge in nothing unworthy or unbecoming a Senator.

The advocates of this bill, with masterly skill, have dramatized the possible menace to Imperial Valley from flood, and with histrionic ability that would arouse the envy of an Edwin Booth or a Richard Mansfield they have made some parts of the country believe that Imperial Valley is in constant danger of being overwhelmed by the waters of the Colorado River unless this particular bill is enacted into law.

If the advocates of the Swing-Johnson bill had exercised energy and good judgment, Imperial Valley would to-day have been protected from floods of the Colorado River, and the all-American canal would have been nearing completion; but, most unfortunately for Imperial Valley, the advocates of this bill have preferred to spend their time and energy in planning how most effectively to exploit Arizona's resources rather than to spend their time and energy in securing the relief which Congress would quickly and amply grant. Just so long as Imperial Valley continues to be beguiled by those urban Pollyannas who seek to acquire Arizona's potential hydroelectric energy, just so long will Imperial Valley be imperiled.

California seeks not flood control but hydroelectric power. Flood control may be the excuse, but power is the substance of the demand for this bill. Arizona has never stood in the way and does not now stand in the way of ample appropriations for flood control on the Colorado River. California has never been willing to have an engineering investigation made of the Colorado River under the terms of section 3 of the flood control act of March 1, 1917.

Politically, financially, industrially, socially, and economically California is one of the most powerful States of the Union, and if her congressional delegation had labored for Imperial Valley along flood-control lines success would have long ago abundantly crowned such efforts.

If the sword of Damocles is suspended over Imperial Valley and if the waters of wrath are held in check only by a tricky guard of sand, let the California delegation but ask for appropriations and the relief prayed for will be promptly granted by Congress.

In the Senate Committee on Irrigation and Reclamation I offered the following amendment to this bill:

*Provided*, That the sum of $30,000,000 shall be allocated to flood control and shall not be reimbursable to the United States.

This amendment was rejected by the committee upon the suggestion of the proponents of this legislation, as was another amendment which directed that the Boulder Canyon Dam be built to only such height as would provide flood control.

More than five years ago my colleague and I visited Imperial Valley. He will speak for himself; he is well able to do so; and I will speak for myself. I then became convinced that ultimately flood control would be necessary for Imperial Valley. Later, to wit, about two and one-half years ago, in company with the two Senators from California and other Senators, I again visited Imperial Valley, and my belief that ultimately flood control for Imperial Valley was necessary was strength-

ened and reinforced. I hold that opinion now, hence I repeat that in the committee considering this Boulder Dam bill, S. 728, now before us, I was convinced that it was my duty, if you will pardon me, somewhat to take the lead on flood control, and hence I offered the proper amendment.

The Senators from California voted against these amendments; I do not question their motives in thus voting, but in view of such vote they are now estopped to talk of a demand for flood control. I here disclaim any motive other than that of a sincere desire to use such ability as I possessed to assist in preventing floods from ever overwhelming Imperial Valley. But simply because Imperial Valley requires flood control is no reason why Arizona should be robbed.

The Senator from California is too astute and too sagacious to fail to perceive that it will be 10 years before Boulder Canyon Dam, if authorized, could afford flood control to Imperial Valley—some engineers say 12 years. I felt that it was our duty to take some step looking toward flood control, because the senior Senator [Mr. JOHNSON] said that the peril was immediate and that the waters of wrath would almost any moment overwhelm Imperial Valley and destroy a zone which produces $70,000,000 or more worth of greenery every year and which has within it 70,000 people. I have no memory for injuries done to me; and let me say of the Senators from California that I would prefer to gild the refined gold of their many virtues rather than to spend any time darkening the shadows of their few defects.

Mr. SIMMONS. Mr. President, may I ask the Senator one question?

Mr. ASHURST. I yield, but must hurry along.

Mr. SIMMONS. I know. It is just a simple question, and the Senator can answer it in a word. What is estimated to be the cost of constructing a dam which would be adequate for the purposes of flood control at that point?

Mr. ASHURST. The Senator knows that I am not an engineer; but from the best advices I am able to obtain, the ultimate cost of a good flood-control dam that would save Imperial Valley would be $28,000,000; but making all allowances, it would be about $30,000,000.

Mr. SIMMONS. And the Senator thinks that with $30,000,000 we can at that point establish such works as are necessary to protect that valley from floods?

Mr. ASHURST. I do; and I call upon all the engineers of America to say whether I am wrong or right.

Mr. WALSH of Montana. Mr. President——

Mr. ASHURST. I yield to the Senator.

Mr. WALSH of Montana. Is it not the idea, however, that if the entire amount is expended to carry out the program as the bill outlines it, which would likewise include the protection necessary, the entire cost would be reimbursed by the avails coming from the improvement, so that the flood-control feature would not be so much outlay from the Treasury at all—that is, so much gone? That is, if the entire project is constructed, the revenues derived from it will take care of the expenditures?

Mr. ASHURST. That is the point where the difference begins, Mr. President. I believe that flood control is a national duty, but because a valley needs flood control it does not necessarily follow that the Federal Government must furnish hydroelectric power and potable water also.

Mr. SIMMONS. The effect of that is, as I understand, that if we confine our works down there to flood control only there would be no income derived from that?

Mr. ASHURST. Manifestly not; and there should not be; and there should be no revenue from flood control.

Mr. SIMMONS. But if we go further and construct a power plant, then there will be an income derived, and the States want to participate in it?

Mr. ASHURST. The difficulty arises from the fact that because Imperial Valley will ultimately require flood control, the city of Los Angeles and other coastal cities make such need for flood control the basis for a demand that hydroelectric energy and potable water shall be furnished to them at Government expense, just as flood control is to be furnished to Imperial Valley at Government expense. The Federal Government can not undertake to furnish hydroelectric energy and potable water to Los Angeles unless at the same time the Government is also willing to furnish hydroelectric energy and potable water to Richmond, Boston, Rochester, Atlanta, Minneapolis, and all other cities applying for the same.

Mr. JOHNSON. Mr. President, will the Senator yield?

Mr. ASHURST. I yield to the Senator.

Mr. JOHNSON. The income would not be derived solely from the construction of the power plant. It could be derived either from the leasing of the water, without any power plant at all, or from the leasing of units of water in a power plant.

If the Senator will permit me, very quietly and I trust courteously, to respond in just a word to what he has said——

Mr. ASHURST. Certainly.

Mr. JOHNSON. The Senator presented the amendments that he suggests. I sent them to the Interior Department—I have the letter here from the Interior Department—and they declined absolutely to consent to any such basic appropriation. We have carried a bill for years now upon the theory that we were not going to ask a penny from the United States Government ultimately; that the scheme itself would pay for the project. There had been no estimates of a flood-control dam. There had been no budgetary requirements required with. There had been nothing at all except the suggestion that was made by the Senator from Arizona in the amendments that he presented. It was an utter impossibility to transmute this project into a flood-control dam at this particular locality; and, in addition to that, it set entirely at variance every single representation we had made concerning the payment of the particular project; and, beyond that, there is another problem that is only secondary in importance to flood-control, and that is the control of the water that goes down into Mexico.

You could not, with a low flood-control dam—and I have engineering assurances in that regard—control the flow for Mexican lands. The only way in which you can have an absolute control, so they assure me, is by the high dam and the possibilities of regulation with great storage.

Mr. ASHURST. On the contrary, I insist that when you build your dam 550 feet high and generate 550,000 firm, primary horsepower of electrical energy, annually, which is equivalent to all the horsepower generated at Niagara in 1917, you must constantly, and during every minute, allow enormous quantities of water to flow over the dam, for in order to generate this 550,000 primary horsepower the water flow must be constant. It must not be interrupted a moment; but through the years to come who is going to recapture the water after it has passed over the dam? Answer. Mexico and California.

Now, let us examine the arithmetic of this question.

Here [indicating] is a map showing the Colorado River Basin. All of Arizona, except a few hundred square miles in the south, is within the Colorado River Basin. Arizona furnishes 28 per cent of all the waters of the Colorado River.

California furnishes not a drop of water to the Colorado River. Senators, the fact that California furnishes no water to the Colorado River is no reason why she should not have some water from the river, but it is a reason why she should not have practically all the water of the river.

Through her tributaries Arizona furnishes 28 per cent of the waters of the Colorado. The great artery of the Colorado River for 300 or more miles meanders upon her bosom; the river then forms the boundary line between Arizona and Nevada for 100 miles or more. Then, in a meandered line, the river flows [indicating] to the Gulf of California—California, on the western side, furnishing the western bank—the waters debouching into the Gulf of California after flowing through Mexico not quite a hundred miles. Perceive on the map all of Arizona's area within the Colorado River drainage basin, and California's 2½ per cent of her area within the basin. California has appropriated nearly all of the normal flow of the stream and taken it to Imperial Valley, until at times you could play baseball in the bed of the stream below Yuma.

I say to those Senators who honor me by listening, here [indicating] is the Boulder Canyon Dam site, where it is proposed to build the dam. Arizona furnishes one bank of the stream, Nevada the other. California has no dam site and seeks that one site between Arizona and Nevada. The Hand that formed the configuration of the country there and painted it in colors warranted never to fade, in His judgment saw fit to place the dam site between Arizona and Nevada, and southern California now caught within the dizzying whirligig of her dazzling expansion looks eagerly, if not greedily, toward the resources of her sister States. Southern California has been great in her growth, stupendous in her growth. Not elsewhere in the history of the world has such an event occurred as has taken place in southern California in the lifetime of the youngest Member of this body. A proud city of a million souls has grown up at Los Angeles within 30 years. Thrusting out avidly for more expansion, it says, "We must have more water for potable purposes; we must prepare for 6,000,000 people." Hence it demands one-tenth of the river for domestic water and demands that the Government shall generate the electrical energy to pump this water from the Boulder Reservoir, 250 miles to Los Angeles, and this spirit of enterprise and "boosting" causes her to be oblivious to Arizona's claims and just rights.

The senior Senator from Nevada [Mr. PITTMAN] in the concluding quarter hour of his speech made, in my judgment, an

argument that will never be answered, when he pointed out that it was the moral duty of this Government to pay to Arizona and Nevada something for the great resource the Government proposes to take from Arizona and Nevada and give to California. Senators may not see this resource, but it is there and is valuable. There are invisible values. We can not see, we can not weigh nor count, some values. Truth, justice, and credit are not tangible; they are rather invisible and intangible values. That dam site at Boulder is worth—shall I say millions of dollars, although it may appear intangible. I do not hesitate to say it is worth hundreds of millions of dollars to California. Yet in committee the Senators from California fought against and voted against an amendment proposing to pay these two States, Arizona and Nevada, an insignificant sum annually for this resource which California is trying to capture and take from them.

Human nature is the same everywhere. Power, greed, and authority generate an appetite for more power, greed, and authority, and in pursuit of expansion men and nations disregard the rights of smaller nations and weaker men. When we perceive what California is trying to do by this bill, is it any wonder that the Governor of the State of Utah said—

> I am amazed that nobody has ever arisen in the United States Senate and denounced the infamous proposition as it deserves.

Although we hope to do so, Arizona has not yet produced any coal or any oil. Hydroelectric power and petroleum gasoline are the great horses of God that are always on the road, and that never grow weary. Rob us of our hydroelectric power, we shall always be stunted and dwarfed. You know what hydroelectric power means to a State that has as yet no coal and oil developed. Is it any wonder, therefore, that we, with militant and determined resistance, insist that our State shall have its just due in any bill you pass dealing with our waters?

You, sir, may I say to the Senator from Montana, took good care to put an amendment on the Columbia Basin bill that no water should be taken from Montana until the States agreed. Are you going to vote against us on this? Are you going to demand that the scales be balanced justly for you but deny the same measure of justice to others? I shall observe how you vote on such a proposition.

California, with 2½ per cent of the Colorado River Basin, and furnishing no water thereto, demands the right to be the sovereign distributor of water and the power which belongs to Arizona. The vandals who rushed to the sack of Rome would have blushed to have proposed such a thing.

My friend the Senator from Massachusetts [Mr. WALSH], sotto voce, says to me, "Take it easy." I ask him, if other States should combine and confederate to rob his State of its only great resource, would he "take it easy?" In mixing a dose of poison for the other fellow, it is always well to go into a closet and say, "How would I like to take a cup of this same medicine for myself?" I have mixed doses for other men, but when I was about to administer them, somehow that still, small voice told me, "How would you like to take it yourself?" and I dashed the cup to the ground, for I am unwilling to commend to another's lip a cup I refuse to press to my own.

Mr. WALSH of Massachusetts. I referred to the Senator's physical strength.

Mr. ASHURST. My physical efficiency is superb. Let no man doubt that my voice, my heart, knees, or backbone will ever play traitor to me in this fight. But if, perchance, I stumble in this fight to the death, my worthy colleague will pick me up, and other men here with impulses for fair play will pick me up. Do you know that if this measure were to come up on its merits, and nobody here were seeking the Presidency, or seeking to be reelected, the Senators from California would be required to give justice to Arizona before they could make any headway on this bill?

The desire of some Senators for delegates to the coming national conventions and the desire of some others for certificates of reelection have induced them to yield to propaganda sent out for the bill, although these yielding Senators know nothing of the demerits of the bill.

It seems as if a desire to capture delegates to national conventions or a desire for certificates of reelection to this body may be likened unto the conscience of which Shakespeare spoke, which "makes cowards of us all."

Much of the southwest portion of Arizona is largely desert, and some of it a real desert, where the scorching sun sends down its shafts of heat like pitiless flails and blazes like a disk of burnished brass, and where only the cacti upthrust their arms into the brazen heat. The soil is, however, very rich, and when water is applied thereto in abundance these lands will produce crops of a highly valuable character.

Mr. President, as the years have lengthened out, pioneers have endured this heat, endured the thirst and distress incident to such surroundings, have gone forward and reclaimed the desert, and if Arizona may be assured of her equitable share of the waters of the Colorado River, more of this land will be reclaimed and brought into cultivation.

I direct attention to the city of Phoenix and its environs in the Salt River Valley.

There is a smiling civilization; there is a superb city built upon a site once occupied by peoples of antiquity, who achieved a culture not wholly contemptible, but who disappeared centuries before Montezuma ascended the throne of the Aztecs. So this modern, graceful Phoenix has literally "risen from her ashes." She must guard her water supply for her thirsty lands surrounding her, and other like sections of the State must likewise guard their waters if they would flourish. We do not covet California's water, but California seeks to stunt our growth by capturing our water. Amidst the flood of misrepresentation that has poured over Senators regarding the Boulder Dam bill I find one statement that ought to have some attention. The Power Trust! If there be a single Senator here, or a person in the United States, who believes that Arizona in opposing this bill is influenced by the Power Trust, let him say so. Insinuations are the refuge of a coward.

If men have charges to make, let them make them. I repeat, insinuations are the refuge of a coward. Arizona has no connection with or interest in any Power Trust. Montana has two great Senators, and when one of her great Senators introduced a resolution to inquire into the Power Trust, the two Senators from Arizona voted with him; but all of the Senators but one who are for this bill voted against him. Does he know that? Does he charge Arizona with being actuated by the Power Trust? Arizona stood with him. I commend that to the Senator from Montana before he makes any reflection upon Arizona as being connected with any Power Trust. Arizona's Senators voted with him and the proponents but one [Senator JOHNSON] voted against the Senator from Montana.

Mr. WALSH of Montana. Mr. President——

The PRESIDING OFFICER (Mr. COUZENS in the chair). Does the Senator from Arizona yield to the Senator from Montana?

Mr. ASHURST. I yield to the great Senator from Montana.

Mr. WALSH of Montana. I trust the Senator does not impute to me any intimation of any character whatever that the Senators from Arizona were playing the game of the Power Trust. In fact, I may say that this is the first time I ever heard it suggested from any source whatever that the two Senators from Arizona were actuated by any desire but the most sincere purpose to subserve the interests of their State.

Mr. ASHURST. I accept the Senator's statement.

There is one newspaper of such influence, of such character, of such worth, that I must not pass by its editorial of yesterday morning. I refer to the New York Times. That paper, in an editorial entitled "Harnessing the Colorado"—I was about to say "harassing the Colorado"—quoted at length from Mr. Harry Chandler, of Los Angeles, who the New York Times says is a pioneer in the development of Imperial Valley, and argues for the Boulder Dam bill.

I have no desire here or elsewhere to rake the dying embers on an ancient feud between Mr. Chandler and his interests and myself. But the editorial in question from this paper concludes by saying:

> Dwellers in the Imperial Valley are constantly threatened by the flood waters of the Colorado. Here is an imperative and urgent need. Congress should not allow the appeal of the valley for protection to go unheeded.

The New York Times is a paper that would welcome a correction. If the construction of the Boulder Dam were authorized, it would be some years before the dam would afford any protection from floods in Imperial Valley. So I say, in reply to that editorial, let the Congress pass a bill granting flood control to Imperial Valley and take up the question as to whether Los Angeles should have potable water at the expense of the Government, and whether Los Angeles and other coastal cities should have electrical energy at the expense of the Government, and thrash these questions out later. But the Senators from California undoubtedly fear that if a flood-control dam should be built at Boulder or at any other place on the Colorado River it might in some way destroy their hope of securing potable water for their coastal cities or electrical energy at Government expense for those cities.

These California Senators anticipate the difficulties of the future. That is only a common part of their magnificent strategy at the bar and in the Senate. But let no one be de-

ceived about Boulder Canyon Reservoir affording any flood control to the Imperial Valley within the lifetime of anyone now occupying a seat in the United States Senate.

The proposed dam at Boulder or Black Canyon, as authorized by this act, would be at least 675 feet high. It would be "550 feet above the present water level" and "125 feet below the water level to bedrock." (A. P. Davis, Senate hearings on S. 320, p. 493.)

There is no dam now in existence comparable with it. It would be equal in height above the water level to the Washington Monument. In this connection the testimony of Col. William Kelly (House hearings on H. R. 2903, April 23, 1924, pp. 1251, 1252) is pertinent:

Colonel KELLY. As you go up in height the mere weight of the dam itself puts a pressure on the foundations that runs into very large figures. On the Washington Monument that pressure was great enough to cause the stones to sprawl at the edges around the bottom of the monument. * * * In addition to the weight of the structure itself you have the pressure of the water behind it which greatly increases the stresses, especially on the downstream part of the foundation. In order to keep these stresses within reasonable limits the dam has got to be widened out and made very wide at the base.

In this connection I again direct your attention to the fact that the foundations of the dam will be at least 125 feet below the water surface. This is a greater depth than has ever been used as a foundation for any other dam, and its total height from bedrock to crest will be 675 feet. Continuing Colonel Kelly's statement, he said:

Up until a few years ago the usual practice on gravity dams was to keep the maximum stress below 20 tons per square foot. The Reclamation Service, in designing some of their higher dams like Arrow Rock, found that in order to comply with that requirement they had to expand the dam at the base to such an extent that the cost became very great. They consequently made use of the arch principle in combination with the gravity section or weight of the dam and allowed a maximum stress of 30 tons per square foot.

The Reclamation Service, evidently in an attempt to keep the estimates of the cost of Boulder Dam within the bounds of reason, felt that it was necessary that some further modification be made, but away from the principle of safety, because, continuing to quote from the testimony of Colonel Kelly:

In the design of this Boulder Canyon high dam they again found that going up to 600 feet, 30 tons per square foot required a dam of abnormal dimensions, and their design proposes to have an allowable maximum stress of 40 tons per square foot on that 600-foot dam.

Mr. President, it would be disgraceful for me to refer in improper terms to the recent collapse of the St. Francis Dam, near Los Angeles. All men of character and conscience regretted that calamity. Success in this world soars aloft on high and rapid wing, and surely the unfortunate collapse of that dam was the hanging out of a red-lantern danger signal advising that we must be certain in these great projects that we give safety and security. The only way to proceed is to be sure of the foundation. Let engineers of national repute, engineers of large ability, be given opportunity to pass upon and approve this project, and you then will have removed what is now an insuperable obstacle in your path.

When California statesmen shall extend the hand of amity and justice, when California statesmen shall extend the hand of friendship, Arizona will go half way. When California statesmen shall speak with the voice of reason instead of the voice of selfishness, with the voice of calm diplomacy instead of with a forked tongue, then Arizona will be willing to assist them in what they believe to be an enterprise of gigantic magnitude. I denounce this present Boulder Dam bill in the name of that fair play which most bullies and all prize fighters respect.

Mr. President, I ask unanimous consent to insert at the conclusion of my remarks certain editorials regarding the Boulder Dam question.

The PRESIDING OFFICER. Without objection, it is so ordered.

The editorials are as follows:

[From the Ottumwa, Iowa, Daily Courier]

DEFEAT IS DESERVED

Senator ASHURST, of Arizona, threatens to talk the Boulder Dam bill to death if and when it comes up for action in the Senate. He led a successful filibuster against the project in the last Congress and thinks himself well able to lead another in case of necessity.

In his minority report differing from the favorable findings of the Senate Committee on Irrigation and Reclamation Mr. ASHURST has provided texts to keep opponents of the measure talking for a long time should a second filibuster be undertaken.

In that report he lists and enlarges upon 15 objections to the Boulder Dam proposal. His first objection is that the bill would authorize an invasion of Arizona by the Federal Government over the State's protest—an unconstitutional trespass on the State's sovereignty. Other objections are, in effect, that the bill discriminates in numerous ways against the States in the upper basin of the Colorado River, and in favor of California, which, though it contains only 2½ per cent of the basin and contributes no water, would appropriate 38 per cent of the water supply made available by the dam.

The final and completely unanswerable objection urged, not only by Senator ASHURST but by numerous other opponents of the project, is that the bill, which would authorize the expenditure of many millions of dollars of Government money, makes no provision for a review of the plans by competent engineers and financial experts to guarantee the practicability and safety of the dam.

More than anything else the Boulder Dam bill is a California power project. The seven States that would be affected directly by the dam's construction have reached no agreement as to the distribution of the water supply. Altogether the huge project, which would be loaded upon the shoulders of the Nation's taxpayers mainly for the benefit of private interests, richly deserves defeat.

---

[From the Chicago Tribune, April 10, 1928]

IS BOULDER DAM TO SUCCEED TEAPOT DOME?

The analysis of the Boulder Dam project by Harper Leech, of the Tribune, leaves little doubt of the true character of the proposal. If the thing goes through, the scandal, we believe, will be fully comparable to Teapot Dome, if it does not surpass it. The intent appears to be no less infamous.

The propagandists say that Boulder Dam is required to control the floods which threaten the Imperial Valley. If so, the proposed site is not best for the purpose. The propagandists say further that the electricity which can be generated at the dam will pay the whole expense of the project. Mr. Leech believes the cost of electricity from the dam delivered at the consuming centers would be higher than the cost of steam-generated electricity. Where electricity from the dam would be cheap there is only desert and an occasional ranch house to use it.

Little doubt remains that the driving power behind the colossal Boulder Dam propaganda is the desire of owners of desert real estate to get rich at Government expense. There is evidence that they propose to do this by a manipulation of water rights to their own advantage. We can see little distinction in morals between a conspiracy for oil and a conspiracy for water when in both the rôle of the Government is to enrich the private individual who happens to be on the ground floor.

Whatever advantage there is appears, indeed, to be on the side of the oil conspirators. From them, at least, the Government was going to get fuel tanks at strategic places and fuel oil to put in the tanks. Some of the tanks have been built. The Nation, as such, gets nothing from Boulder Dam except expensive and perhaps inadequate flood control, uneconomical electricity, and more farm lands at a time when fewer rather than more farms are needed. The Government pays the bill, which is likely to exceed by far the original estimate of $125,000,000, and the speculators get the profit.

---

[From the Chicago Tribune, April 16, 1928]

BOULDER DAM NEEDS INVESTIGATING

Senator ASHURST, of Arizona, has opened the attack on the Boulder Dam bill in the Senate by filing a minority report as a member of the Irrigation Committee. Senator ASHURST is attacking the bill as a spokesman for Arizona. He says the bill is a "reckless and relentless assault" on his State in that it deprives Arizona of its fair share of water for irrigation and of the power to be generated at the dam.

Mr. ASHURST had already threatened a filibuster against the bill.

We are persuaded that the Boulder Dam proposal should be defeated. The expenditure of $125,000,000 of the taxpayers' money, primarily for the benefit of real-estate speculators, would be worse than unwise; it would be a scandal as odious as Teapot Dome.

If ever a filibuster were justified, the one threatened by Senator ASHURST is justified. Unfortunately, the filibuster can serve to prevent action at this session only and the project is certain to be revived at the next. A sweeping inquiry is likely to prove more serviceable. It will show, among other things, the sources of the astonishing propaganda in favor of the dam and whose pockets will be lined if the dam is built.

There has been no such inquiry. Hearings on the bill have been conducted by the Committees on Irrigation of the two Houses, but the members from the States of the Rockies and westward dominate the two committees. The Senate committee consists of 15 members. Only three of them are from States east of the divide. Of the three, one is a Nebraskan and the other a Texan. Western Nebraska and much of Texas are arid. Only one member of the committee, SIMMONS, of North Carolina, is not likely to have a pet irrigation project for which he desires the approval of his fellow members of the committee. To talk of

a fair hearing on the merits of an irrigation project before such a committee of back scratchers is to talk arrant nonsense.

The situation in the House is similar. The House Committee on Irrigation and Reclamation is made up of 17 members. Of the 17, 12 are from mountainous and arid States. The 12 are not likely to insist upon a careful analysis of any irrigation project. They do not want the precedent of holding such inquiries to be established.

Mr. ASHURST has dramatized his position as a fight for Arizona against California. That is good political medicine in Arizona, but it will not engage the sympathy of the citizenry in the Mississippi Valley and eastward, where rather more than three-fourths of the citizenry and very nearly all the taxpayers live. If an injustice to Arizona is threatened, it is nothing compared with the injustice to the taxpayers, whose representatives are, therefore, Mr. ASHURST'S natural allies in this fight. If he will broaden the basis of his opposition to include them, he will have far greater chances of winning out. The taxpayers and their representatives will support him in a demand for an investigation and the investigation will not only save Arizona's rights but prevent a national disgrace.

---

[From the Chicago Tribune, April 17, 1928]

MR. ASHURST ON BOULDER DAM

Senator ASHURST, of Arizona, threatens to talk the Boulder Dam bill to death, if and when it comes up for action in the Federal Senate. He led a successful filibuster against the project in the last Congress, and thinks himself well able to lead another in case of necessity.

In his minority report, differing from the favorable findings of the Senate Committee on Irrigation and Reclamation, Mr. ASHURST has provided texts to keep opponents of the measure talking for a long time should a second filibuster be undertaken. In that report he lists and enlarges upon 15 objections to the Boulder Dam proposal. His first objection is that the bill would authorize an invasion of Arizona by the Federal Government over the State's protest—an unconstitutional trespass on the State's sovereignty. Other objections are, in effect, that the bill discriminates in numerous ways against the States in the upper basin of the Colorado River, and in favor of California, which, though it contains only 2½ per cent of the basin and contributes no water, would appropriate 38 per cent of the water supply made available by the dam.

The final and completely unanswerable objection urged, not only by Senator ASHURST but by numerous other opponents of the project, is that the bill which would authorize the expenditure of many millions of dollars of Government money makes no provision for a review of the plans by competent engineers and financial experts to guarantee the practicability and safety of the dam.

More than anything else, the Boulder Dam bill is a California power project. The seven States that would be affected directly by the dam's construction have reached no agreement as to the distribution of the water supply. Altogether the huge project, which would be loaded upon the shoulders of the Nation's taxpayers mainly for the benefit of private interests, richly deserves defeat.

Mr. ODDIE. Mr. President, I do not intend to discuss this Boulder Canyon legislation at length now because of the lateness of the hour. It has been gone into quite fully, and we will hear more from it at a later time. But at this time I want to make one reflection on the physical character of the dam site at Boulder Canyon.

The Senator from Arizona has just referred to a recent very distressing disaster that occurred to a dam in southern California. The reason for that disaster has been brought out, namely, that one of the sides of that dam was built into a rock formation which was not of a permanent or strong enough character to support a dam of that size. That is most unfortunate and distressing. I do not cast any reflection upon or criticize the engineers who constructed the dam, because what they did has been done. Human intelligence or human judgment might or might not have been at fault.

Mr. President, the site at Boulder Canyon is as perfect a site as has ever been selected for a dam. I personally would not object to another investigation of the site by proper engineers under proper appointment. Boulder Canyon offers a site on which great precipices rise nearly 2,000 feet on each side of the river, forming a narrow chasm for miles. The rock is solid granite. The Department of the Interior some years ago made an investigation of the site. A large amount of money was expended in boring. They found a solid rock foundation for a great depth and for indefinite distance into the sides of the canyon. There is no better site in the world than Boulder Canyon for a dam—a safe site, a site that will maintain a dam and hold it as solid as Gibraltar for all time to come.

Mr. President, I thoroughly approve this legislation and shall have more to say on it at a later time.

RECESS

Mr. CURTIS. I ask that the unanimous-consent order be carried out at this time and that the Senate take a recess until to-morrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

Thereupon the Senate (at 4 o'clock and 2 minutes p. m.), under the order previously entered, took a recess until to-morrow, Sunday, April 29, 1928, at 11.45 o'clock a. m.

---

## HOUSE OF REPRESENTATIVES

SATURDAY *April 28, 1928*

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Almighty God, the Father of our Lord Jesus Christ, a strange, mysterious, yet merciful guest has fixed this day. The shadow of death has fallen across our common path. O in the hope and glory of Thy promise, let these moments whisper unto us as they pass by. We thank Thee that the resources of our wearied lives are in the heavenly regions, where the dreams of love and faith come true. We would brush aside the shadow of distress with the heart of a child who sees his Father's face and breathe the vigor of the everlasting hills. We silently wait; do Thou quiet the restless pulse of care. The air is chilled; a familiar voice is unheard; a prince among men has fallen. We thank Thee for such a life given to the Republic, for its genius and for its potencies—aye, for a life that walked in the pride of personal honor. As we meditate upon his memory, his fortitude, his unselfish love for country and for all men, grant us Thy benediction. Reach forth Thy arm of infinite love and encircle those who sorrow. Over the sea and through the storm may they see Thy face and hold Thy hand. When we have passed through the afternoon of life and face the sunset skies, O may the morning skies scatter the shadows and let it be daylight everywhere. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE PRESIDENT

A message from the President of the United States was presented to the House of Representatives by Mr. Latta, one of his secretaries, who also announced that on the following dates the President had approved and signed bills and a joint resolution of the House of the following titles:

On April 26, 1928:

H. R. 11023. An act to add certain lands to the Lassen Volcanic National Park in the Sierra Nevada Mountains, of the State of California;

H. R. 11685. An act to accept the cession by the State of California of exclusive jurisdiction over the lands embraced within the Lassen Volcanic National Park, and for other purposes; and

H. R. 12441. An act to amend section 2 of an act entitled "An act in reference to writs of error," approved January 31, 1928, Public, No. 10, Seventieth Congress.

On April 27, 1928:

H. R. 10437. An act granting double pension in all cases to widows and dependents when an officer or enlisted man of the Navy dies from an injury in line of duty as the result of a submarine accident;

On April 28, 1928:

H. J. Res. 244. Joint resolution authorizing a modification of the adopted project for Oakland Harbor, Calif.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Craven, its principal clerk, announced that the Senate had passed without amendment a bill and joint resolution of the House of the following titles:

H. R. 8132. An act authorizing the appropriation of $2,500 for the erection of a tablet or marker at Medicine Lodge, Kans., to commemorate the holding of the Indian peace council, at which treaties were made with the Plains Indians in October, 1867; and

H. J. Res. 239. House joint resolution authorizing the erection in the District of Columbia of a monument in memory of Peter Muhlenberg.

The message also announced that the Senate had passed bills and a joint resolution of the following titles, in which the concurrence of the House of Representatives was requested:

S. 4046. An act authorizing the Henderson-Ohio River Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Henderson, Ky.;

S. 4222. An act to authorize the creation of Indian trust estates, and for other purposes; and

S. J. Res. 125. Joint resolution authorizing the President of the United States to accept a monumental urn to be presented by the Republic of Cuba, and providing for its erection on an appropriate site on the public grounds in the city of Washington, D. C.

The message further announced that the Senate insists upon its amendments to the bill (H. R. 12286) entitled "An act making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1929, and for other purposes," disagreed to by the House of Representatives, agrees to the conference asked by the House on the disagreeing votes of the two Houses thereon, and appoints Mr. HALE, Mr. PHIPPS, and Mr. SWANSON to be the conferees on the part of the Senate.

The message also announced that the Senate disagrees to the amendments of the House of Representatives to the bill (S. 3740) entitled "An act for the control of floods on the Mississippi River and its tributaries, and for other purposes," requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. JONES, Mr. MCNARY, Mr. JOHNSON, Mr. FLETCHER, and Mr. RANSDELL to be the conferees on the part of the Senate.

The message further announced that the Senate had passed the following resolution:

Senate Resolution 210

APRIL 27, 1928.

*Resolved*, That the Senate has heard with profound sorrow the announcement of the death of Hon. MARTIN B. MADDEN, late a Representative from the State of Illinois.

*Resolved*, That the Secretary communicate these resolutions to the House of Representatives and transmit a copy thereof to the family of the deceased.

*Resolved*, That as a further mark of respect to the memory of the deceased, the Senate do now adjourn.

JOINT RESOLUTIONS AND BILLS PRESENTED TO THE PRESIDENT

Mr. CAMPBELL, from the Committee on Enrolled Bills, reported that on April 27, 1928, they presented to the President of the United States for his approval joint resolutions and bills of the House of the following titles:

H. J. Res. 145. Joint resolution to provide for the payment of an indemnity to the Chinese Government for the death of Chang Lin and Ton Huan Yah, alleged to have been killed by members of the armed forces of the United States;

H. J. Res. 146. Joint resolution to provide for the payment of an indemnity to the Dominican Republic for the death of Juan Soriano, who was killed by the landing of an airplane belonging to the United States Marine Corps;

H. J. Res. 147. Joint resolution for the relief of the estate of the late Max D. Kirjassoff;

H. J. Res. 148. Joint resolution to provide for the payment of an indemnity to the British Government to compensate the dependents of Edwin Tucker, a British subject, alleged to have been killed by a United States Army ambulance in Colon, Panama;

H. J. Res. 149. Joint resolution to authorize an appropriation for the compensation of William Wiseman;

H. J. Res. 150. Joint resolution to provide for the payment of an indemnity to the Government of the Netherlands for compensation for personal injuries sustained by two Netherlands subjects, Arend Kamp and Francis Gort, while the U. S. S. *Canibas* was loading on May 1, 1919, at Rotterdam;

H. J. Res. 151. Joint resolution to provide for payment of the claim of the Government of China for compensation of Sun Jui-chin for injuries resulting from an assault on him by a private in the United States Marine Corps;

H. J. Res. 152. Joint resolution authorizing and requesting the President to extend invitations to foreign governments to be represented by delegates at the International Congress of Entomology to be held in the United States in 1928;

H. J. Res. 230. Joint resolution to provide for the membership of the United States in the American International Institute for the Protection of Childhood;

H. J. Res. 244. Joint resolution authorizing a modification of the adopted project for Oakland Harbor, Calif.;

H. J. Res. 259. Joint resolution authorizing assistance in the construction of an inter-American highway on the Western Hemisphere;

H. J. Res. 262. Joint resolution requesting the President to extend to the Republics of America an invitation to attend a conference of conciliation and arbitration to be held at Washington during 1928 or 1929;

H. R. 484. An act to amend section 10 of the plant quarantine act, approved August 20, 1912;

H. R. 2654. An act for the relief of Anton Anderson;

H. R. 4068. An act for the relief of the Majestic Hotel, Lake Charles, La., and of Lieut. R. T. Cronau, United States Army;

H. R. 4126. An act authorizing the Secretary of the Interior to issue a patent to Katie Cassiday for a certain tract of land;

H. R. 6103. An act to amend an act entitled "An act making appropriations for sundry civil expenses of the Government for fiscal year ending June 30, 1884," and for other purposes;

H. R. 6862. An act authorizing and directing the Secretary of the Interior to investigate, hear, and determine the claims of individual members of the Sioux Tribe of Indians against tribal funds or against the United States;

H. R. 7184. An act authorizing J. L. Rowan, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Shawneetown, Ill.;

H. R. 7722. An act authorizing the health officer of the District of Columbia to issue a permit for the opening of the grave containing the remains of the late Nellie Richards;

H. R. 8128. An act to authorize a permanent annual appropriation for the maintenance and operation of the Gorgas Memorial Laboratory;

H. R. 8487. To adjudicate the claims of homestead settlers on the drained Mud Lake bottom, in the State of Minnesota;

H. R. 9047. An act to authorize appropriations for the construction of roads at the Presidio of San Francisco, Calif.;

H. R. 9485. An act authorizing Roy Clippinger, Ulys Pyle, Edgar Leathers, Groves K. Flescher, Carmen Flescher, their heirs, legal representatives and assigns, to construct, maintain, and operate a bridge across the Wabash River, at or near McGregors Ferry, in White County, Ill.;

H. R. 9569. An act authorizing the payment of an indemnity to the British Government on account of the death of Reginald Ethelbert Myrie, alleged to have been killed in the Panama Canal Zone, on February 5, 1921, by United States Army motor truck;

H. R. 11212. An act authorizing Paul Leupp, his heirs, legal representatives, or assigns, to construct, maintain, and operate a bridge across the Missouri River, at or near Stanton, N. Dak.;

H. R. 11265. An act authorizing the Cabin Creek, Kanawha Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Kanawha River, at or near Cabin Creek, W. Va.;

H. R. 11266. An act authorizing St. Albans Nitro Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Kanawha River, at or near St. Albans, Kanawha County, W. Va.;

H. R. 11267. An act granting the consent of Congress to the board of county commissioners of Itasca County, Minn., to construct, maintain, and operate a free highway bridge across the Mississippi River, at or near the road between the villages of Cohasset and Deer River, Minn.;

H. R. 11279. An act authorizing the Postmaster General to establish a uniform system of registration of mail matter, and for other purposes.

H. R. 11356. An act authorizing the State of Indiana to construct, maintain, and operate a toll bridge across the Ohio River, at or near Rockport, Ind.;

H. R. 11473. An act granting the consent of Congress to the States of North Dakota and Minnesota to construct, maintain, and operate a bridge across the Red River of the North, at Fargo, N. Dak.;

H. R. 11478. An act to amend an act to allot lands to children on the Crow Reservation, Mont.;

H. R. 11578. An act authorizing the B & P Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Rio Grande River, at or near Weslaco, Tex.;

H. R. 11583. An act granting the consent of Congress to the State Highway Commission of Arkansas, to construct, maintain, and operate a bridge across the White River, at or near Cotter, Ark.;

H. R. 11625. An act granting the consent of Congress to the State of Montana, Valley County, Mont., and Garfield County, Mont., or to any or either of them, jointly or severally, to construct, maintain, and operate a bridge across the Missouri River, at or near Glasgow, Mont.;

H. R. 11764. An act conferring jurisdiction upon the Court of Claims of the United States, or the district courts of the United States, to hear, adjudicate, and enter judgment on the claim of A. Roy Knabenshue, against the United States, for the use or

manufacture of an invention of A. Roy Knabenshue, covered by Letters Patent No. 858875, issued by the Patent Office of the United States, under date of July 2, 1907;

H. R. 12179. An act to provide for the reimbursement of the Government of Great Britain, on account of certain sums expended by the British chaplain in Moscow, the Rev. F. North, for the relief of American nationals in Russia, in 1920; and

H. R. 12320. An act to amend the longshoremen's and harbor workers' compensation act.

SENATE ENROLLED BILL SIGNED

The SPEAKER announced his signature to an enrolled bill of the Senate of the following title:

S. 3437. An act to provide for the conservation of fish, and for other purposes.

MY RECORD IN CONGRESS

Mr. BLACK of Texas. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD upon my record in Congress, and to insert in connection therewith one brief letter bearing upon that record as a part of my remarks.

The SPEAKER. The gentleman from Texas asks unanimous consent to extend his remarks in the RECORD upon the subject of his record in Congress, and to print therewith a letter. Is there objection?

There was no objection.

Mr. BLACK of Texas. Mr. Speaker, I am glad that we live in a republic where the people are the source of power and where public officials must account to them for the way they have discharged the duties of their office. During the time I have been a Member of Congress I have lived in the strictest union, the closest correspondence, the most unreserved communication with my constituents. Their wishes have at all times had great weight with me; their opinions, high respect, and their business has had my unremitted attention. In the performance of this service I am sensible of the fact that I have not been infallible, and doubtless at times have erred in judgment. But conscious that at all times I have discharged my duty with honesty and fidelity, I stand squarely upon my record, and am ready at all times to submit it to the people for their approval or disapproval. Any Member of Congress who has been active and who has taken a definite stand on important measures must expect to be criticized. The only way he could avoid that would be to make his record wholly a negative one and do nothing and be nothing.

I wish to take this opportunity to answer some of the charges which have been brought against me in my district by my opponent, concerning my support of certain measures which have been before the House of Representatives since I have been a Member. Inasmuch as this criticism has been directed against my official record, I feel that it is proper that I should answer it through the CONGRESSIONAL RECORD. The people are entitled to have the fullest publicity concerning the record of their Member of Congress. I am glad to give it to them.

WORLD WAR VETERAN LEGISLATION

It has been charged by my opponent that I was the only Member of Congress who voted against a bill righting a wrong perpetrated against ex-service men. What are the facts?

The bill referred to was to amend the World War adjusted compensation act and was taken up in the House of Representatives on July 1, 1926, and on page 12568 of the CONGRESSIONAL RECORD will be found my statement of objection to the bill. These objections were confined to section 4 of the bill, which section sought to remove the payments to be made by the Veterans' Bureau under the adjusted service compensation act from the audit of the comptroller. I have the highest confidence in the present Director of the Veterans' Bureau, Gen. Frank T. Hines, but I can not forget our experience with former Director Charles R. Forbes, who was sent to Leavenworth Penitentiary for misconducting the Veterans' Bureau. Therefore, when this bill was before the House it was then my opinion—and it is still my opinion—that all expenditures by the Veterans' Bureau should be under the independent audit of the Comptroller General. For that reason it is true that I was the only Member of the House that voted against it. But what of it? The important question is not whether I was the only one voting against the bill in that form, but whether I was right or wrong. Taxpayers have some rights in these matters, and one of these rights is that every dollar of expenditure of public funds of any department of the Federal Government, including the Veterans' Bureau, shall be subjected to the independent audit of the Comptroller General. The ex-service men are just as much interested in having this done as anyone else.

This bill, after it passed the House, was sent to the Senate, and when it got to the Senate the very section 4 to which I objected was amended by striking out the objectionable matter in it. The bill, after passing the Senate with section 4 thus amended, came back to the House, and the Senate amendment was unanimously accepted by the House, the bill thereby passing in that amended form without a single dissenting vote. These proceedings are found on page 13028 of the CONGRESSIONAL RECORD of July 3, 1926. Therefore, the statement that I voted to make the soldiers pay for a lost rifle, or other equipment lost during the war, is entirely false. There never was any such bill before the House. Was I right in insisting that the provision to which I objected should come out of the bill? Let the Comptroller General of the United States say. He says in a letter to me dated April 17, 1928, as follows:

> Had the provision quoted been retained in the law as enacted the accounting officers, in the settlement of the accounts of the disbursing officers of the Veterans' Bureau involving payments under the appropriations referred to, would have been required to allow credit for all payments made upon authorization by the director, regardless of the fact that the payment may have been for a purpose or object not within the scope of the appropriation, or that the amount may have been incorrectly computed, or that the identical item may have been previously paid, or that, through inadvertence or otherwise, the payment was made to the wrong person.
>
> In other words, if the provision had been enacted the accounting officers would have been compelled to confine their examination as to the legality of the payments to a determination as to whether the Director of the Veterans' Bureau had authorized the payment and would have been precluded from making an independent determination as to whether the appropriated moneys had or had not in fact reached the particular veterans, or their widows, dependents, etc., for whose benefit the Congress had provided them, or in the correct amounts, and in the place of a normal accounting procedure—such as prevails generally throughout the Government—there would have been substituted an abnormal accounting procedure, whereby the director would have adjudicated, awarded, and distributed the millions of public money provided by the Congress annually for veterans and their beneficiaries without any independent accounting check on his action.

Therefore I respectfully submit that I deserve credit rather than blame for calling attention to this bad provision of the bill and assisting in having it removed. It is easy enough for a Member of Congress, for fear of incurring criticism, to sit around and let everything go by, good or bad, but if the people are to be protected against bad legislation those who represent them must be constantly on guard to protect their interests. I have tried to do that to the exent of my abiliy.

MY AMENDMENTS TO THE WAR RISK INSURANCE ACT

Now, let us go a little further back and see who was the friend of the private soldier. When the original war risk insurance act was before the House of Representatives in 1917 it carried provisions which would have paid much greater benefits to a disabled officer than to a disabled private soldier, and would also have carried forward these same discriminations to the dependents of a private soldier. I offered a series of amendments to equalize and make uniform the benefits of this war risk insurance act, and these amendments were adopted by an overwhelming vote in the House and were accepted by the Senate and thereupon became a part of the law of the land. The purpose and effect of these amendments is briefly explained in the following account, which was published at the time by the Survey, one of the leading magazines of the country:

> By a vote of 139 to 3 the House wrote into the soldiers' and sailors' insurance bill, before its passage on September 13, the principle of equal care as between the dependents of officers and of private soldiers and sailors. The amendments offered by Representative BLACK of Texas, indorsed in this decisive fashion, provide that the payment to be made to the dependents of soldiers and sailors killed or totally disabled shall be specific rather than based on a percentage of the pay of the dead or disabled man.
>
> Congressman BLACK, with a number of other Members of the House, assailed the committee's plan of compensation, based on the rate of pay of the soldier or officer, as being an attempt to establish class and caste in America "while we are carrying on a war for democracy." Mr. BLACK termed it "Preserving the distinction of rank and pay beyond the borders of the grave."
>
> Representative Alexander, of Missouri, one of the Members who had charge of the bill in the House, gave his entire approval to the Black amendments, when the measure was finally passed. He said:
>
> "It was clearly demonstrated in the debate that the House considered it only fair that there be established complete equality in treatment, as to this compensation on the Government's part, of the dependents of all in the service."

MY RECORD IN SUPPORT OF WORLD WAR VETERAN LEGISLATION

What are the facts with reference to my support of legislation for the benefit of World War veterans? The facts are that I have voted for every important law which has been enacted for the benefit of World War veterans. These include war

risk insurance act of 1917, and the amendments thereto; act providing for vocational training of disabled veterans; act to create Veterans' Bureau and to improve the facilities and service of such bureau by establishing regional officers of the bureau in the several States of the Union; act to enable the Director of the Veterans' Bureau to provide for the construction of additional hospital facilities for persons who served in the World War and the Spanish-American War; act to provide adjusted compensation for veterans of the World War, approved May 17, 1924, and amendments thereto. In fact I do not recall a single important law for the benefit of World War veterans now on the statute books which I have not actually supported and helped to pass.

At the present session of Congress I have voted for the Johnson bill, to liberalize the veterans' act of 1924, and for the Rogers bill, to appropriate $15,000,000 to provide additional hospital facilities for sick and disabled veterans.

In addition to my support of these measures, I have been glad to assist disabled ex-service men to secure proper consideration of their claims pending with the Veterans' Bureau for hospitalization, compensation, and other benefits under the acts passed by Congress, and will be glad to continue to do so. There is scarcely a community in the first congressional district but where it has been my privilege to render service of that kind. I would make no mention of it now, except for the effort being made by my opponent to create the feeling that I have been hostile to veterans.

FOREIGN DEBT SETTLEMENTS

It has been charged by my opponent that I voted to give France over $4,000,000,000 and to place the debt upon the backs of the American people.

Here are the facts:

| | |
|---|---|
| The total amount loaned France | $2,933,405,070.15 |
| Sale of surplus war materials | 407,341,145.01 |
| Total amount of principal owed us by France | 3,340,746,215.16 |

Under the terms of the French debt settlement, for which I voted, France is to pay us over a period of 62 years $6,847,674,104.17. This is every cent of the principal and $3,506,927,889.01 interest. I may say further that this French debt settlement, although ratified by the American House of Representatives by a vote of 236 to 112, has never been ratified by the French Parliament. They claim it is more than they can pay and have thus far refused to ratify it. It is my belief, however, that the terms we have accorded to France are liberal enough, and I shall be against their further modification.

Let me say this further word with reference to these foreign debt settlements: Not a cent of the principal of the debt was canceled. The interest agreed upon with the various debtor nations was such as the United States Debt Commission and Congress believed the debtor nations were able to pay. Since the settlements were agreed upon and ratified by Congress we have collected in principal and interest, up to February 27, 1928, the sum of $837,590,942.34. And this money has been used in payment on our national debt and thereby lightens the burdens of the American taxpayers. The aggregate amount of principal and interest which will be collected this year on these foreign debts is $210,000,000; in 1930 these payments will increase to $217,000,000 annually, and after 1935 the annual payments will be $300,000,000. The Secretary of the Treasury estimates that our collections on these debt settlements for the next 10 years will aggregate $2,616,800,000. These payments will not only greatly lighten the burdens of our American taxpayers, but by reason of the fact that most of the money is used in the retirement of Liberty bonds it will greatly reduce the interest rate which our own Government will have to pay on its own obligations and in that way will enable us to refund the remaining Liberty bonds at a very much lower rate of interest than they now bear.

Now, there were three schools of thought in the United States regarding these foreign debt settlements. One group—not a very large one, but rather persistent—wanted to cancel out the debts entirely. Another group wanted every cent of the principal and the full war-time rate of interest which we were paying at the time the loans were made collected. Now that would be all right if it could be done, but it could not be done. In one of Shakespeare's plays one of the characters is made to say: "Why, I can call the dead to life." The other character in the dialogue replies, "Yes; and so can I; but the trouble is they will not answer when I call."

Now the trouble about all this talk about making the foreign nations which owe put the money on the barrel head and pay us immediately in cash is that it can not be done. It takes two parties to make an agreement, and the nations which owed us refused to enter into agreements which, they said, they could not fulfill. Our American Debt Commission early in the negotiations with the nations which owed us laid down three fundamental principles.

First, that the principal sum of the debt should be paid in full without a cent of cancellation. Second, that annual payments over a term of years should be given, so that the payments could be met. Third, that in determining the rate of interest which should be paid each nation should be considered separately. The capacity of the debtor nation to pay should be determined.

Under these principles the debt settlements were arrived at, and I think this country and the world are very much better off than they would be if the debt settlements had been left unratified and we were collecting nothing and the interest was still piling up on the principal. Suppose enough Congressmen had taken the viewpoint of these critics and had refused to ratify the debt settlements. Our debt on paper would, of course, be still piling up and would look mighty big, but we would not be getting any cash, and the economic recovery of Europe and the world would be immeasurably retarded.

Europe is America's best customer, especially for our cotton. Economic recovery has progressed to the point where it is estimated that Europe has taken close to 15,000,000 bales of American cotton during the past two years. What would have happened to us if these markets had been still in a demoralized condition by reason of the foreign debt settlements still hanging fire? Who would have benefited by it? Certainly not the United States.

MY PROHIBITION RECORD

It has been charged by my opponent that I have not by my votes supported prohibition. Well, I will give my record on that subject and let my constituents judge. Nothing speaks better than the record.

In the first place, I voted to submit the prohibition amendment to the several States for their ratification, and after it had been ratified I voted for the national prohibition act to enforce it. The final vote on the national prohibition act before it was sent to the President for his signature was taken in the House of Representatives on October 10, 1919, and I was present and voted "aye." The bill was then sent to the President, and he vetoed it, and the bill was taken up in the House of Representatives on October 27, 1919, to pass it over the veto of the President. On this vote to pass the national prohibition act over the veto of the President 198 Members of Congress were absent and did not vote at all, but I was one of the 175 Members present who voted "aye." The vote to pass the bill over the veto of the President was 175 to 55. It was upon this vote that the prohibition act became the law of the land, and is still the law of the land.

So if a Member of Congress who voted to submit the prohibition amendment and then voted for the act to enforce it, and then voted to pass it over the veto of the President, has not the record of a prohibitionist, then I do not know what it takes to make that kind of a record.

The late Wayne B. Wheeler, who was for years the leader of the prohibition forces of America, on June 7, 1924, wrote me the following unsolicited letter:

HON. EUGENE BLACK, M. C.,
*Washington, D. C.*

DEAR MR. BLACK: At the close of another session of Congress I want to thank you for the splendid cooperation and help you have given in maintaining prohibition and its enforcement through national legislation. Our opponents are planning to defeat Congressmen with dry records in the hope that it will prevent their successors from following their example. The people of your district stand for law enforcement, and I feel sure they will not allow you to suffer because of the splendid record you have made.

Yours cordially,

W. B. WHEELER.

Mr. Speaker, I have never previously referred to this letter from Mr. Wheeler for the very simple reason that my prohibition record has never before been attacked by anyone in my district, so far as I know. I only refer to it now to show how utterly absurd and false is the attack which my opponent has made against my prohibition record.

RAILROAD LEGISLATION

I have been attacked for my vote in favor of the transportation act of 1920, and the statement has been made by my opponent that I voted to give the railroads $1,500,000,000. That, of course, is not true. Here are the facts about the Government operation of railroads:

In December, 1917, President Wilson, under the war power granted him by law, took over the railroads as a measure of national defense. He appointed Mr. McAdoo, then Secretary of the Treasury, Director General of Railroads; and from the

time Mr. McAdoo took charge all the receipts and revenues derived from the operation of railroads were under the control of the Government. Out of these funds were paid the operating expenses of the railroads, such as salaries and wages to employees, cost of fuel and materials, taxes, and other such items of expenses, and the balance, if any, was left on hand to pay the rental agreed upon with the railroads for the use of their property. The question naturally at once arose as to what the annual rental should be. The Government had two methods from which to choose to settle the question. One was to make contracts with the railroads by mutual agreement and the other was to let them go into the United States Court of Claims and prove up their claims.

It must be remembered that under the Constitution of the United States you can not take private property without the payment of compensation, and that rule of law applies whether the Government purchases the property outright or whether it merely takes over its use. Therefore even if one believes that the Government should have seized the railroads and should not have paid them one cent for the use of their property he must remember that under the Constitution and laws of the United States it could not be done. The Constitution and laws require that compensation shall be paid. Therefore, Mr. McAdoo made the proposition to take three years—1914, 1915, and 1916—and get the average return for three years and use that average as a basis for the annual rental of the railroads while under Government control. The railroads accepted that proposition and the contracts were made on that basis. As to whether that basis was fair or not, let Mr. McAdoo himself testify. He said in the hearings before the House committee:

> You have heard the arguments of the carriers as to why the proposed rental is too small and you doubtless will hear argument as to why it is too large. Any matter of such complexity might be made the subject of endless debate and there might be a hundred different views each perfectly honest and well informed as to the precise basis that would be the best, but after hearing all that has been suggested from every standpoint since the President's proclamation taking over the railroads, I have remained convinced that the basis proposed is fair and reasonable, and that is what Congress ought to direct their attention to, and that is what the courts would impose if the question were remitted to the courts.

Therefore when Congress voted the money to pay these annual rentals which Mr. McAdoo, as director general, had agreed upon, we were not voting any bonus or gift to the railroads but were voting to fulfill a contractual obligation which even if Congress had repudiated the courts would have enforced.

I do not consider there would be any advantage gained at this late date to enter into discussion as to the wisdom or unwisdom of President Wilson's act in taking over the railroads. I will simply say that at the time they were taken over our allies were being pressed on the battle fields of Europe and it was necessary to speed up war preparations in every possible way and to subordinate all transportation rules and practices to the one supreme end of winning the war. That was done, and it is doubtful if it could have been as well done without the Government being in complete control of the entire transportation facilities of the country.

It is perfectly easy to stand up at this late date and criticize it, but it must be remembered that those charged with responsibility in those stirring times had to take action at a time when action was needed, and President Wilson, as the Commander in Chief of the Army and Navy, took it, and I do not think anyone need apologize for it. If by unifying the transportation system of the country under one responsible head, he speeded up war preparations so as to shorten the period of the war, even for one month, then the lives of our American soldier boys, to say nothing of the lives of our allies, and even of the enemy, which were saved by it were worth every cent that it cost.

Congress voted the necessary money to pay the annual rentals which accrued during the period of Government control just as we voted the money to pay other war expenses. After the war ended President Wilson asked Congress to pass legislation turning the railroads back to their owners and to provide a more unified transportation system for the future. In response to that message, delivered by President Wilson to Congress December 2, 1919, Congress passed the transportation act of 1920, commonly known as the Esch-Cummins law.

Now, I have no desire to evade any responsibility of my own or to shoulder it on anyone else; but if the enactment of the Esch-Cummins law was a betrayal of the people into the hands of Wall Street, as my opponent has said, then that great man, who will go down in history as one of the great Presidents of the United States, Woodrow Wilson, was guilty of the same offense, because he signed and approved the Esch-Cummins law, and it became the law of the land by reason of his signature. Many other distinguished Democrats voted for it, among them being Senator ROBINSON, of Arkansas, Democratic leader of the Senate; Senators CARTER GLASS, of Virginia; John Sharp Williams, of Mississippi; and THOMAS WALSH, of Montana.

I think no one would accuse Senator WALSH, for example, of being in league with Wall Street and the railroads, and yet Senator WALSH voted for the Esch-Cummins railroad bill just the same as I did. And let me pause here long enough to say that I think that Senator WALSH in exposing the crookedness of Sinclair and Doheny and Fall in the oil scandals has rendered the country one of the most conspicuous acts of public service that has been rendered by anyone for the last quarter of a century. I regard him as one of the ablest and most valuable men in public life to-day.

It has been charged by my opponent that the Esch-Cummins law directed the Interstate Commerce Commission to pay a return of 5½ to 6 per cent on watered and inflated stocks. What are the facts? The Esch-Cummins bill itself does not set any value whatever on the railroads. It directs the Interstate Commerce Commission to find the value of the entire railroad mileage of the United States, and after finding this value to fix rates which under honest, efficient, and economical management will yield a reasonable return, not greater than 6 per cent, upon the value of the property actually used in transportation. If any particular railroad earns more than 6 per cent, then one-half of the excess goes into the hands of the Government. The Interstate Commerce Commission found the aggregate value of the railroads at the time of turning them back to their owners to be $18,900,000,000. The facts upon which this valuation is based were not ascertained under the Esch-Cummins bill at all but under the La Follette Valuation Act of 1913, an act prepared by the late Senator Robert M. La Follette and which was passed in 1913, before I came to Congress. The valuations which the Interstate Commerce Commission has given to the railroads under the terms of that act may or may not be correct, but it is the best information we have.

It has been a tremendous job to value the more than 250,000 miles of railroads in the United States, together with all the railroad property and equipment, and has taken 15 years to complete. The railroads are now contesting the valuations which have been fixed by the Interstate Commerce Commission, and the test case which has been brought is the celebrated case of the St. Louis & O'Fallon Railway Co. against the United States of America and the Interstate Commerce Commission. This is to be a test case for all the railroads, and on account of the enormous sums involved in its ultimate determination it has been termed the most important law suit ever brought to trial in the United States. The railroads are contending for a much higher valuation on their property than has been fixed by the Interstate Commerce Commission. The case was first tried in the District Court of the United States, Eastern District of Missouri, and I am glad to state that the decision was a complete victory for the United States. The final decisions will, of course, be by the Supreme Court of the United States. The brief of the counsel for the United States in that case has been sent to me by one of the Government's counsel, and I am glad to say that on page 38 of the brief, citation is made of a speech which I delivered in the House of Representatives on February 21, 1920, in support of the Government's contention as to the rule of rate making. Now, while, of course, I feel some satisfaction in the fact that an argument which I made in Congress should be cited by the Government in so important a case as the St. Louis & O'Fallon Railway case, yet I do not make mention of the fact to boast in any way. I simply say this, that if the charges of my opposition are true, that I have been the tool of Wall Street, then the counsel of the Government would hardly be citing an argument which I had made in Congress against the contention of the railroads and in favor of the contention of the United States Government.

### GUARANTY TO THE RAILROADS

It is charged that under the Esch-Cummins bill the railroads are now guaranteed a net return of 6 per cent. That is an untrue statement. Not a word of truth in it. They now have no guaranty of any kind of net return under the terms of the bill. All guaranty of net return to railroads expired six months after they were returned to their owners from under Government control. That was nearly eight years ago. This Esch-Cummins law contains, for example, the first stock and bond law ever enacted by the United States Congress for the regulation and control of railroad stocks and bonds. Since the adoption of that act no railroad in the United States can issue any stocks or bonds without coming before the Interstate Commerce Commission and making satisfactory showing that

the money is necessary to go actually into the railroad and be expended under accounting methods prescribed by the Interstate Commerce Commission. It is the most salutary and effective check against watered stock and bonds issued on fictitious valuation ever enacted by the Congress of the United States.

Nothing that could possibly be done would play more into the hands of those who want to issue watered stocks and float bond issues based on fictitious valuation than to vote to repeal this stock-and-bond provision of the Esch-Cummins bill. Now, I have this one more word to say about the railroad question. If the Democrats win the election this fall, in all probability the transportation question will again be taken up for study to see what improvements can be made in the law for the public good. No one will cooperate more readily in such a study than I will. The only interest in the world that I have in the whole transportation question is to safeguard the public interest and give the people the very best transportation service it is possible to give at the lowest possible cost. Upon that platform I am willing to stand and submit my cause to the people for their approval or disapproval.

AGRICULTURE

With reference to agriculture, I have actively supported and helped to pass the following legislation:

First. Farm loan act: When I came to Congress there was no farm loan act. Under the able leadership of President Wilson the farm loan act was enacted, and under its provisions 12 Federal land banks were established. The one for our State is located at Houston, Tex. Up to the present time the land banks in the United States have loaned more than one billion and a half dollars to more than 400,000 farmers in the United States. Our own Federal land bank at Houston, Tex., has loaned $170,000,000 to 58,000 farmers in Texas and bringing the operations of the land bank closer home it has loaned nearly $7,000,000 in our own congressional district to nearly 4,000 farmers. The average loan in our district is less than $2,000, showing that the system is being used by the real home owners. This money has been loaned at a low rate of interest, much lower than that which prevailed when the farm loan act was passed, and has been loaned on long terms of payment.

During the war when the bonds of the Federal farm loan system were unsalable on account of the marketing of so many Liberty bonds, I supported and helped pass a law directing the Secretary of the Treasury to purchase up to $200,000,000 of the farm-loan bonds in order that the system might continue right along in making loans to the farmers. In compliance with this law the Secretary of the Treasury purchased $195,000,000 of the bonds and the proceeds were used in making loans to farmers. I am glad to say that the Treasury of the United States did not lose a single dollar on these operations. All of these bonds have now gone into the hands of private investors and the farm loan system is now able to sell its own bonds bearing an interest rate of 4¼ per cent, and loan farmers their money at 5 per cent. I take pride in the fact that early in my congressional career I was one of those who actively helped to pass the farm loan act, and as a member of the Committee on Banking and Currency of the House I have been at all times its steadfast friend and supporter. I also helped to frame and pass the intermediate credits act.

Second. Good roads law: Another act which was passed soon after I came to Congress, and which I helped to pass, was the Federal good roads law. I well remember in my first campaign I advocated that the Federal Government should cease spending money for river navigation where there was no navigation and use that money in the building of better highways. I have kept faith with that promise. We passed a Federal highway act which provided for the building of improved highways by the States and Federal Government in cooperation with each other. In that act we provided that the Federal funds should be apportioned to the several States in proportion to their area, population, and mileage of roads. Under that basis of apportionment the State of Texas has received much the largest amount of any State in the Union. Total allotments which have been made to Texas by the United States Government under this good roads act, including fiscal year 1929, is $49,606,279. This money has been used in aiding the construction of more than 6,000 miles of hard-surfaced highways in Texas.

Third. Farm organization law, under which persons engaged in the production of agricultural products are permitted to act together in associations, corporate or otherwise, for cooperative marketing of their farm products in interstate and foreign commerce.

Fourth. Hoch-Smith resolution, requiring the Interstate Commerce Commission to effect such lawful changes in the freight-rate structure of the country as will promote the freedom of movement by common carriers of the products of agriculture, including livestock, at the lowest possible rate. Under this resolution the commission has made certain reductions in freight rates on farm products and is holding hearings on the applications for freight-rate reductions on other important commodities, such as wheat, cotton, cottonseed, and livestock.

Fifth. Immigration law: Another thing which I advocated in my very first campaign for Congress was restriction of foreign immigration. In fulfillment of these views I voted for the restrictive immigration act of 1917, the restrictive immigration act of 1921, and the act of 1924, known as the Johnson Immigration Act.

The Johnson Immigration Act, which I helped to pass and which is now the law of the land, preserves the basic immigration law of 1917, retains the principle of numerical limitation as inaugurated in the act of 1921, reduces the quota admissible in any one year from 3 per cent to 2 per cent, provides a method of selection of immigrants at the source rather than to permit them to come to this country and land at the immigration stations without previous inspection, provides entire and absolute exclusion of those who are not eligible to become naturalized citizens under our naturalization laws.

CONCLUSION

I am one who believes implicitly that the judgment of the people can be relied upon if they get the facts straight. In making these statements about my record in Congress I have tried to state the facts exactly as they are.

I leave the verdict to the people of my district.

COORDINATION OF PUBLIC HEALTH ACTIVITIES

Mr. PARKER. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H. R. 11026) to provide for the coordination of the public-health activities, and for other purposes, with Senate amendments thereto, disagree to the Senate amendments, and ask for a conference.

The SPEAKER. The gentleman from New York asks unanimous consent to take from the Speaker's table the bill (H. R. 11026), with Senate amendments thereto, disagree to the Senate amendments, and ask for a conference. The Clerk will report the title of the bill.

The Clerk reported the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from New York?

Mr. GARNER of Texas. Reserving the right to object, will the gentleman state whether this is agreeable to the ranking minority member of the committee?

Mr. PARKER. It is. This is the public health bill. What I am doing is done at the request of the committee.

The SPEAKER. Is there objection?

There was no objection.

The Chair appointed the following conferees: Mr. PARKER, Mr. MAPES, and Mr. LEA.

EHRENFRIED GUNTHER VON HUENEFELD, JAMES C. FITZMAURICE, AND HERMANN KOEHL

Mr. JAMES. Mr. Speaker, I ask unanimous consent for the present consideration of the bill (H. R. 13331) to authorize the President to present the distinguished-flying cross to Ehrenfried Gunther von Huenefeld, James C. FitzMaurice, and Hermann Koehl, which I send to the desk and ask to have read.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

The Clerk read the bill, as follows:

*Be it enacted, etc.,* That the President be, and he is hereby, authorized to present the distinguished-flying cross to Ehrenfried Gunther von Huenefeld, James C. FitzMaurice, and Hermann Koehl, in recognition of their extraordinary achievement in making the first nonstop westward trans-Atlantic flight by airplane from Europe to North America.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed..

A motion to reconsider the vote by which the bill was passed was laid on the table.

INTERNATIONAL CONVENTION FOR PROTECTION OF LITERARY WORK

Mr. VESTAL. Mr. Speaker, I ask unanimous consent for the present consideration of House Joint Resolution 286, to provide for the expenses of participation by the United States in the International Conference for the Purpose of Revising the International Convention for the Protection of Literary and Artistic Works, which I send to the desk and ask to have read.

The SPEAKER. The gentleman from Indiana asks unanimous consent for the present consideration of House Joint Resolution 286, which the Clerk will report by title.

The Clerk reported the title of the joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

The Clerk read the joint resolution, as follows:

*Resolved, etc.*, That there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $1,500 for the expenses of a delegate to represent the United States at the International Conference for the Purpose of Revising the International Convention for the Protection of Literary and Artistic Works, to be held in Rome, Italy, on May 8, 1928; including transportation, subsistence, or per diem in lieu of subsistence (notwithstanding the provisions of any other act), and such miscellaneous and other expenses as the President shall deem proper.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider the vote by which the joint resolution was passed was laid on the table.

ACCEPTANCE OF STATUE OF ANDREW JACKSON

Mr. GARRETT of Tennessee. Mr. Speaker, I ask unanimous consent to have printed in the RECORD the several addresses made upon the occasion of the presentation of the statue of Andrew Jackson in Statuary Hall on Sunday, April 15, 1928, and other matter pertinent to the exercises then had, including the biographical sketch prepared by Hon. John Trotwood Moore, State librarian and archivist of Tennessee, which was published in the official program.

The SPEAKER. The gentleman from Tennessee asks unanimous consent to extend his remarks in the RECORD by printing the account of the exercises recently held in respect to placing of the statue of Andrew Jackson in Statuary Hall. Is there objection?

Mr. CHINDBLOM. Mr. Speaker, reserving the right to object, does not the gentleman think it would be well to have those addresses printed as a House document also?

Mr. GARRETT of Tennessee. Of course, the gentleman understands that later there will be issued, in accordance with custom, a very handsome bound volume. I should be happy, however, to have it printed as a House document now if it can be done under the printing law.

Mr. CHINDBLOM. Those volumes will not be available to the Members?

Mr. GARRETT of Tennessee. Not for quite a while.

Mr. CHINDBLOM. By citizens who are interested in the matter?

Mr. GARRETT of Tennessee. I should like to add to my remarks the statement that I have not conferred with the Committee on Printing about the matter of having it printed as a document, and I think there is a statute or rule about that.

Mr. TILSON. Mr. Speaker, will the gentleman yield?

Mr. GARRETT of Tennessee. Yes.

Mr. TILSON. The printing of this kind of matter in the CONGRESSIONAL RECORD is quite unsatisfactory. The gentleman knows that when it appears in the required small 6-point type it is difficult to read. It seems to me that this being of considerable importance, it might be printed as a House document or in some other way rather than simply in small type in the RECORD. It is not a satisfactory way to print it.

Mr. GARRETT of Tennessee. It is not completely satisfactory, but this is a way of preserving it for the printing of the volume which eventually will be issued. For instance, in the case of one or two of the addresses there is only one copy outstanding. I have those, and I would like to have them printed in the RECORD.

Mr. TILSON. I have no objection to its being printed in the RECORD.

Mr. LOWREY. Mr. Speaker, will the gentleman yield?

Mr. GARRETT of Tennessee. Yes.

Mr. LOWREY. When the statue of Doctor Curry was unveiled we had a very elaborate bound edition of the exercises had on that occasion distributed through the Members, giving us about five copies each. I am hoping that when this volume is published it will be in larger numbers that will give us more copies than that, and I hope it may be published at an early date. I hope the gentleman will press that to publication as soon as possible in larger number.

The SPEAKER. The gentleman from Tennessee asks that the addresses delivered at the exercises referred to and other matter pertinent thereto shall be printed in the CONGRESSIONAL RECORD. Is there objection?

There was no objection.

The matter referred to is here printed in full as follows:

BIOGRAPHICAL SKETCH

By John Trotwood Moore

Andrew Jackson, seventh President of the United States: Born in Waxhaw settlement, in what was then Mecklenburg, but now Union County, N. C., March 15, 1767.

His father, by the same name, with his wife, Elizabeth Hutchinson, and two small boys, Hugh and Robert, had immigrated to America two years before and settled on Twelve Mile Creek in the Waxhaw settlement of North Carolina. He entered a small tract of inferior land on which he made only a small first payment, built for his family a log cabin, but succumbed to pneumonia and overwork two weeks before his son was born.

Her support gone, almost penniless, with two small boys and expecting daily the birth of a third child, Betty Jackson, cheerful, energetic, and of indomitable courage, put her boys and the few belongings she had in a single wagon and started to the home of her sister, Jane Hutchinson Crawford, 12 miles away near the old Waxhaw Church in South Carolina for a temporary home for herself and her boys. Taken ill before reaching her destination, she stopped at the log cabin of another sister, Peggy Hutchinson McKemey, just over on the North Carolina side, where Andrew Jackson was born on the night of March 15, 1767.

A log cabin, but the great hand of destiny had studded the sky of his horoscope above the cradle in that cabin with stars of immortality which later fell in showers around him to lighten the long hard road of his journey. He grew up at his Uncle Crawford's home, went to Old Field Schools, and helped his mother work on the farm until 13, when partisan war broke in all its cruelty and fury on the settlement. He saw his eldest brother, Hugh, 17, killed fighting for his country at Stono. Entered with his brother Robert, saw Tarleton surprise and murder 113 of his neighbors and wound 150 more at the old Waxhaw Church, helped his mother nurse them, shouldered his musket at 14 years of age, and fought the invaders of his country at Hanging Rock; was captured with his brother Robert, ordered by a bullying, brow-beating Hessian to black his boots, refused and defied him, when both boys were struck down with the Hessian's saber, Robert dying of the cut on his head and the smallpox; Andrew, with the same disease, nursed back to life by his mother, who in turn died of it and was buried in an unknown grave near Charleston, S. C.

When Andrew Jackson, major general of the United States Army, 34 years afterwards, stood on his impregnable breastworks below New Orleans, with his deadly Tennessee and Kentucky riflemen four lines deep behind it, and saw the flower of Britain's Napoleon conquerors coming so gamely but surely on into the trap of annihilation his military genius had set for them, he turned to an officer behind him, and these words came from his grim set lips this verdict of his Scotch-Irish Calvinism: "And now we'll give them a taste of Waxhaw!"

After the war he taught school, studied law under Hon. Spruce McKay in Salisbury, N. C., and when 21 years old followed the covered-wagon trail across the mountains into the western country of North Carolina, now the State of Tennessee, landing in Nashville in the fall of 1788. Here by his integrity, shrewdness, common sense, fearless courage, and resolute iron will in 10 years he attained every office he asked for at the hands of the people: First Representative in Congress from Tennessee, 1796; Senator, 1797; judge of the Superior Court of Law and Equity, 1798; once again Senator, he voluntarily resigned as soon as he thought he had finished the work. He resigned more offices than were ever held by any citizen of the Republic.

As major general of Tennessee Militia (1802–1814), he turned the disastrous tide that had brought humiliation and defeat to America in the year 1813 by destroying the powerful Creek Nation of Indians, on whom the British relied to help them hold the southern coast, and made possible the treaty of Ghent. But even before it was signed (December 24, 1814) he stopped the British General Keane's army of 3,000 seasoned soldiers—Napoleon war fighters—and drove them back in a night attack on an open plain with less than half Keane's force in a fight that has no parallel in history. Two weeks later he entirely routed and destroyed a veteran British army of twice his own force, led by Gen. Sir Edward M. Pakenham, their ablest general save Wellington, and drove them and their navy of 50 battleships, the same that had helped destroy and burn Washington four months before, into the sea. This battle, though won two weeks after the treaty, has in the light of more recent history proved to be the most brilliant and far-reaching in our own history. It has made over a century of peace between the English-speaking peoples, showing the folly of two great peoples with the same ideals, religion, and language fighting each other, and it assured us the integrity and possession of the Louisiana Purchase, comprising 14 of our great States.

Elected President in 1828 after the bitterest and most merciless campaign of slander and hate ever waged against any candidate for that high office—the first President of the plain people of America to enter the White House—he retired after eight years of strenuous work, but left to the people a heritage which is to-day the fixed tenets of the faith of the Republic; no autocracy of wealth; no dissolution of the Union; no privileges of power at the expense of the weak, and that established soundness in banks and money that has made it possible for the Federal reserve of to-day.

In history he has been persistently misrepresented by the ignorant or malicious as uncouth and unlettered, rough, and ungentle. The reverse is the truth; his letters and papers are beyond criticism, with the fire of purpose in them. In character he was courteous, gentle,

romantic, tender, and deeply religious, but unflinchingly stern, when duty called.

He was the first gentleman of his rough day—his blood lines on both sides running to the old Kings of Scotland. Thomas Jefferson said he had the finest manners of any Senator in the old Philadelphia Congress of 1797. His love affair with Rachel Donelson is the greatest, tenderest, and most devoted in all history. He was the knight errant of every woman who knew him and both the Cæsar and the Sir Galahad of every man who called him friend. No other man in American history so completely and thoroughly accomplished every thing of any kind he ever attempted. In spite of his long life of stern devotion to principle and duty, Thomas Benton says he found him in his old age with a child on one knee and a pet lamb on the other, and when he died at sunset on a beautiful Sabbath, June 9, 1845, his last words were to console his weeping servants around him with the positive assurance that they would meet him in heaven. And so, in the fullness of life and of every honor his people could bestow upon him, at the age of 78, childlike and lamblike, his great spirit went to his Maker.

---

ADDRESS OF MRS. FLORA MYERS GILLENTINE, PRESIDING OFFICER, PAST STATE REGENT, TENNESSEE DAUGHTERS OF THE AMERICAN REVOLUTION, PAST VICE PRESIDENT GENERAL, DAUGHTERS OF THE AMERICAN REVOLUTION

Man's test is memory's treasured store;
What past, he holds for conning o'er.

Memory is a vital rung in the ladder on which man has climbed above the level of the beast. Through it the inspiration and experience, not only of his own past, but of that of the race, is at his daily service.

Official recognition of the constant need of a reminder resulted in the congressional act of 1864, by which—

"The President is authorized to invite all the States to provide and furnish statutes in marble or bronze, not exceeding two in number for each State, of deceased persons who have been citizens thereof and illustrious for their historic renown or for distinguished civic or military services * * *. The same shall be placed in the old Hall of the House of Representatives * * * which is set apart, or so much thereof as may be necessary, as a national Statuary Hall for the purpose herein indicated."

In response to this invitation, Tennessee is proud now to place in the Nation's Capitol this statue, cast in bronze, mounted on Tennessee marble, of her most dynamic and colorful son, Andrew Jackson, confident that not even her gleaming marble can prove more enduring than the potent influence of his personality and example, more pure than the spotless honesty of his character, more unyielding than his iron will when enlisted in the popular service. Our trail to this shrine was not dim. It was worn deep by his tread in the flesh responding to the call to national service. No less than five times did he tread it in response to popular call—each time to the Nation's good. In 1797, as Senator, he set an example worthy of observance in that body even to the present day—saying little, but thoughtfully pondering his problem. In 1829 he came, a militant crusader to crush an insidious monopoly and insist that the Nation's spyglass embrace in its sweep the western horizon as well as the eastern seascape.

But Jackson's services were not all in Washington. My embarrassment in pointing his claims to a people's grateful remembrance lies in their very abundance. Tennessee's "marvel militia" and its supreme court both bore his stamp. Its constitution echoed his voice. He was the original "Florida booster," and soon held the whole territory on an option for the Nation. Napoleon-conquering veterans crumbled before his cotton-bale barricade. Even a Horseshoe Bend afforded Indians no talismanic defense against his luck, plus his pluck.

From another point of view he merits immortality. In many respects Andrew Jackson was the first real American, a typical frontier product. He was the first President to be called from the heart of the Nation—the first to discover a trail back eastward across the mountains to the White House; he was the first Chief Executive to sponsor unreservedly the direct and universal rule of the whole people; the first to make of the presidential office a commanding, directing agency in the accomplishment of programs approved by the popular will in regular elections. He was the first of the sturdy, self-taught "personages of the ranks" to be called to the exalted office of the presidency.

For such exalted position perhaps none have ever entered upon its duties with less of scholastic preparation; perhaps none have ever equaled him in the extent and value of accomplishment. His was a genius for effective service ranging over many fields. The baton of the marshal, the bench of the judge, the commission of the territorial governor, the floor of Congress, the chair of the Chief Executive, all found in him a dominating, original, and conspicuously successful master.

It is eminently fitting that this presentation be made in the year 1928, the hundredth anniversary of the Nation's call to Jackson to take the helm of Government. To-day there is unusual need that that same Nation recall for its guidance his spirit, his zeal, his political faith. The continuance of that thorough-going, universal democracy which he did so much to establish is being widely questioned. While plutocracy plucks at power with its questionable millions shall democracy be thus openly bought in this slave's market? In such a day well may a grateful people point to the prophet-statesman, Andrew Jackson, and borrowing the old slogan declare in his stirring voice; "Let the people rule." To such a dedication are we called; to a dedication as complete, to a zeal as tireless, to a loyalty as unswerving, to a fearlessness as militant, and to a patriotism as dynamic.

---

PRAYER BY REV. NEWTON P. PATTERSON, D. D., PASTOR OF THE FIRST PRESBYTERIAN CHURCH, WHERE GENERAL JACKSON WAS A REGULAR WORSHIPER AND PEW HOLDER FOR EIGHT YEARS

Almighty God, our heavenly Father, we are met together in Statuary Hall in our National Capitol for the purpose of honoring the name and memory of the seventh President of these United States of America—Gen. Andrew Jackson. We turn our hearts and minds to Thee in humble recognition of Thy sovereignty. We acknowledge Thee as the God and Father of us all.

We invoke Thy blessings upon us as we gather together here in this fellowship. In this fellowship may we realize health, holiness, and happiness. We recognize Thee and pray that in Thy love we may have life, hope, and peace. Purify our thoughts with the breath of Thy presence, that the deepest yearning of our being may be ennobled by the power of our faith and exalted by the sanctity of reason into the majesty of prayer. Free us from the narrow, lonely lives we live into a larger, freer, more abundant life—a holy communion of mortals in the immortal realm.

O Spirit of Holiness, kindle in us a flame of pure aspiration to consume all grosser passions. Hold before us constantly the brilliancy of that life which actuated the noble Jackson of the earlier centuries. Let the light of Thy countenance shine upon our way, and, if it may be, make us reflectors of that same light to shine upon the pathway of others who may follow after us.

In the midst of hurrying days and the very shifting human scenes teach us how to live in the sanctuary of the eternal and in good and wholesome fellowship with each other and even with all mankind. Let not the glitter and hardness of a complex civilization blind us to the fact that we are citizens of the larger units—municipalities, States, or even the Nation—but are citizens of a world-wide brotherhood. Fill our minds with wisdom, fill our hearts with tenderness, and our hands with humble and useful service. Take all reluctance out of our obedience and all bitterness out of our endurance, and let Thy laws become songs in the house of our pilgrimage. Unite us with all lovers of goodness and give us courage and faithfulness to follow the ways of Thy teachings in spirit and in truth.

To Thy loving-kindness we offer our prayer in the name of Him who walked the road of the great loving heart, even Jesus Christ, our Lord and Master. Amen.

---

PRESENTATION OF STATUE BY GOV. HENRY H. HORTON

Mr. President, in behalf of the people of the State of Tennessee I present to you, as Chief Executive of the Nation, for its Hall of Fame, this statue of a great President, a great statesman, and a great soldier, but, greater still, this statue of a man.

---

ADDRESS OF PRESIDENT COOLIDGE

Fellow countrymen, one of the great sources of the strength of our country has been the pioneering spirit. It was characteristic of those who first settled on our shores and was the cause of a resistless march to the Pacific Ocean. Our people have ever been going forth into the forest and over the plain to establish themselves in the region of the unknown. They have sought for new fields to conquer. They have been pioneers, however, not only in the physical world but in the realm of ideas. In science and invention, and especially in the art of government and of social relations, they have taken a dominant part. The frontier has long since disappeared, the opportunity for exploration into unfrequented lands is gone, we seek no additional territory, but the ambition to enter uncharted regions of industry, of enterprise, of social relations, and of thought continues with increasing fervor.

We would miss much of the significance and meaning of the history of the United States unless we took into account this outstanding quality. Our whole outlook has been greatly influenced by it. It is the complete antithesis of all systems of class and caste. Under some theories of human society, theories which have been of value in their time in effecting the organization of a people and bringing them into that condition of order which is the necessary preliminary of enlightened progress, all persons were born to a certain station and oftentimes to a certain locality, which they were supposed to hold during their lifetime. They found that not only their place in life, but also their thought, had been previously ordained for them. It was for the purpose of escaping from this doctrine that this Nation came into existence. The people who came here were seeking freedom of action and freedom of mind. The great revelation of our country has been that men are not born to servitude and obscurity. They are born

to all the possibilities of a glorious station which can be won by their own achieving.

This is our national epic, exemplified in the lives of those whom we are most desirous to honor. It is the story of small beginnings which have developed into great concerns. It is the life of men born amid the surroundings of great hardship and great privations, who, through their own exertions and the confidence which their character has inspired in their fellow men, have risen to positions of influence and importance in private affairs and public office. It is a record of untiring effort, undaunted courage, and persevering will, all of which have set an inextinguishable mark upon the history of our country.

One of the outstanding figures which so well represents this development of our national life is Andrew Jackson, the seventh President of the United States. He was born in such obscurity in 1767 that two States have claimed his birthplace, though he himself stated that it was South Carolina. Only two years previously his parents had come from County Antrim, Ireland. A few days before his birth his father died. When he was only 14 his mother passed away, leaving her son entirely alone and without property. She was a Scotch Presbyterian of marked piety and cherished the hope that her boy would become a minister. We can catch but a fleeting glance of her as she passes off the stage of existence, but it is sufficient to win our admiration and create a desire for a better acquaintance. Her memory must have been an inspiration to the great man she bore.

The young man had some common-school education, sufficient for the transaction of ordinary business affairs, but while he was constantly seeking for practical information he never came to care for learning for its own sake. Thrown on his own resources as he was, he grew up proud and high tempered, oftentimes violent in his disposition, and considerably interested in the sports of the countryside. He soon started to study law and began its practice when he was scarcely 21. In 1788 he established himself on the soil of Tennessee, where he was destined to become her most renowned citizen. The next year he was solicitor of one of the districts and the year following United States attorney. In 1796 he was chosen the first Member of Congress from the new State. He showed that he held opinions of his own by opposing a resolution in the House commending President Washington on his last annual address. At the age of 30 he was elected to the United States Senate, but resigned at the end of the first session, and the following year became a justice of the Tennessee Supreme Court, where he served six years and resigned. It was during this interval that he became a major general of militia. While he had held many public offices, he had likewise resigned from many. In 1804 he sought appointment as Governor of New Orleans, and apparently never forgave President Jefferson for refusing his request.

From this date until he was given a command in the War of 1812 he spent considerable time tilling the soil, in which he was moderately successful. His high temper brought him into some quarrels. The society of that day was in the flux, customs were in the making, men were obliged to rely somewhat on themselves for the defense of what they believed to be their rights.

Placed in command of 2,500 volunteers, in 1813 he marched toward New Orleans. When he had reached Natchez, Miss., he was directed to disband his forces. Because this would leave them stranded, he had the order modified and marched back to Tennessee. The hardships which he endured on this march won for him the title of Old Hickory. An uprising of the Creek Indians in Mississippi and Alabama caused him to be sent into that district, where he forced them to terms of peace. It was during 1814 that he became a full major general in the Regular Army, in command of the Department of the South. From that time on he became a national figure. In the late fall he invaded Florida, then a Spanish Province, it was claimed without orders, and captured Pensacola on the ground that it was a base used by English troops. Going from there to New Orleans, he began the defense of that city. He was attacked by the British and defeated them in the famous battle of the 8th of January, 1815.

Though a treaty of peace had been signed at Ghent on the 24th of December, news of it did not reach New Orleans until February 19, and official notice not until March 13. This impetuous warrior took a personal satisfaction in a victory over some of the troops who had humbled Napoleon, especially because of a scar from a British saber, which he had received in childhood during the Revolutionary War. This brilliant achievement did much to redeem other reverses which our forces had suffered on land. It revealed the remarkable fighting qualities of the hardy frontier riflemen when they were properly led, as the almost unbroken line of victories on the water had demonstrated the remarkable capacity of our sailors. General Jackson had now become undoubtedly the foremost military hero of his country.

His turbulent temper still followed him. New Orleans being under martial law, he was soon engaged in altercations with the civil authorities. He did not hesitate to arrest judges and the United States attorney when they interfered with his orders. A curious sequence followed. When civil authority was resumed he submitted to a fine of $1,000 for contempt of court. "I have during the invasion," he said, "exerted every one of my facilities for the defense and preservation of the Constitution and the laws. * * * Considering obedience to the laws, even when we think them unjustly applied, is the first duty of the citizen. * * * I entreat you to remember the example I have given you of respectful submission to the administration of justice." Nearly 30 years later the Congress remitted the fine with interest.

This was a most significant statement. It might well have been pondered by those who were undertaking to argue away the Constitution after General Jackson became President. Here was a man who stood ready to fight a duel, if he thought the circumstances required it, of an impetuous nature and impatient of all restraint, yet clearly announcing the supremacy of law. More than that, he was acting upon that principle. When the city was under martial law he required that his orders should be obeyed, as he clearly had a right to do. When it was under civil law, he cheerfully submitted to a judgment of the court which he thought unjust. He believed that at all times and in all places the duly constituted authority of law should be supreme.

During the next few years he was engaged in the Indian wars. He again invaded Florida. If he had any order for this, it was not authentic. St. Marks and Pensacola, which he had captured, were restored, and the general's course was defended on the theory that he was pursuing an enemy. After the purchase of Florida was ratified in 1821, Jackson became its first governor. The Army being reduced, he was discharged as a major general. He remained in Florida long enough to come into conflict with the former Spanish governor and the judge, after which he resigned and returned to his home. Notwithstanding the many animosities that he had aroused, he remained an outstanding, popular figure.

Already, he was being considered for the Presidency. He was again sent to the United States Senate in 1823, where he voted for increased tariff rates and certain internal improvements. He was in the presidential race in the national campaign in 1824, receiving 99 electoral votes against 84 for Adams, 41 for Crawford, and 37 for Clay. This threw the election into the House of Representatives, where John Quincy Adams secured the votes of 13 States against 7 for Jackson and 4 for Crawford. The support of Clay went to Adams on the theory that a civilian was preferable to a military man. The appointment of Clay as Secretary of State was, therefore, severely criticized by the followers of General Jackson. Following his past custom he resigned from the Senate in 1825.

In the campaign of 1828 General Jackson achieved a remarkable victory, securing 178 electoral votes, while John Quincy Adams received but 83. The popular vote was 648,000 against 508,000. John C. Calhoun was reelected Vice President. He undoubtedly expected to succeed President Jackson, who had been an advocate of one term, and the Vice President had several of his friends in the Cabinet. Except for the Secretary of State, Martin Van Buren, and Secretary of War, the President was little influenced by his Cabinet. He often sought the advice of other men on questions of policy. He was regarded as a President of the people, and in seeking to remove their burdens and improve their condition he favored economy and payment of the public debt. When this should be done, he favored dividing the surplus revenues among the States. He also criticized the United States Bank and advised taking up the question of extending its charter, which was not to expire until 1836. During 1830 he broke with Calhoun, which necessitated a reorganization of the Cabinet. He vetoed the bill to assist in constructing a highway in Kentucky, on the old principle that widespread internal improvements were unconstitutional.

The President was soon engaged in his great contest to prevent the recharter of the United States Bank. A great amount of bitterness prevailed and there was a broad appeal to class prejudice. Those supporting the bank were charged with representing an aristocratic tendency in society intent upon creating an overmastering money power. Those who opposed it contended that they were defending the rights of the people and resisting the encroachment of monopoly. At the same time they questioned the constitutional power of the Congress to establish a bank. The bill, however, was passed late in the spring of 1832, just as the presidential campaign was beginning, and was promptly vetoed by the President in a message of great force and character.

The popularity of his administration was demonstrated at the election, where he received 219 electoral votes against 67 for all others. Students of his career have thought that he considered this a complete approval of his entire public life and a complete disapproval of all those who had ever differed with him on any subject. But with the work he had before him, it was fortunate that he had secured such a popular indorsement and was well endowed with self-confidence, backed by an iron will.

South Carolina had been very much opposed to the duties imposed by the tariff law. On November 24, 1832, that State passed its famous nullification ordinance, which undertook to set aside the tariff within its territory. This policy had been discussed in the Senate in the famous debate between Webster and Hayne in January, 1830. At a Jefferson Day dinner, the following April, President Jackson had proposed the toast: "Our Federal Union—it must be preserved." At the same time Calhoun had argued that liberty was of more importance

than the Union. Without reference to his former views on the tariff or State rights, when this ordinance was passed President Jackson declared: "The duty of the Executive is a plain one. The laws will be executed and the Union preserved by all the constitutional and legal means he is invested with."

He soon followed this with a proclamation denying the right of secession, refuting the power of a State to set aside an act of Congress, and asserting the supremacy of the Federal Constitution. This proclamation has been regarded as one of the best state papers of any American President. It was thoroughly nationalist in spirit and had a profound effect. While the President was seeking authority to enforce the tariff laws Clay secured the passage of a compromise tariff measure, whereat South Carolina repealed the ordinance. A service of this nature, rather at variance with some of the positions he had formerly taken and some of the policies strongly supported in his own party, could only have been performed by a great man.

His fight on the bank was not yet ended. His next move was an attempt to withdraw the public deposits. Two Secretaries of the Treasury refused to take this action; and being displaced in turn, Taney became Secretary of the Treasury long enough to transfer the Government funds to State banks. The elections of 1834 returned a majority favorable to the Jackson policies, so the bank charter expired in 1836. Of course a violent change of this nature, affecting the financial policies of the Nation, was bound to have an economic effect throughout the country. Government funds in local banks were used for speculation, which, as usual, brought the reaction of depression. Opinions have differed concerning the United States Bank, but no one doubts the great courage of President Jackson in opposing it or the public approbation he received in support of his policy. A great financial contest of such a nature was bound to have some depressing effect upon values all over the Nation. But the President had won so completely that two resolutions of criticism for removing the deposits, passed by the Senate in 1834, were expunged from the Journal on January 16, 1837.

For his successor he dictated the nomination of Van Buren and saw him elected by a good margin. He had already made Van Buren Vice President to retaliate upon Calhoun, who had cast the deciding vote refusing to confirm him as minister to England.

The latter months of the administration saw reflected in the country the need of a better currency and banking system, but the national debt had been all paid off and the revenues were so large that provision was made for their distribution among the States in return for negotiable certificates of deposit. This policy was questioned by the President in his message of 1836 and did not prove to be salutary.

On the 7th of March, 1837, he set out for his old home, the Hermitage. He had triumphed over opponents who were considered then, and rank now, among the great statesmen of his day. Calhoun had gone down on nullification. The great figure of Daniel Webster had stood with the President on that issue but had opposed his banking policies. Clay had compromised and lost. In his travels about the country it was evident that he was idolized by the people. He never failed to support what he believed to be their interests. As the first Congressman from Tennessee he set a high standard in the Federal service which that State has never failed to maintain. If at times he was high tempered and overbearing, there is no fairer story of chivalrous devotion and affectionate consideration than that which he lavished upon his wife. In her benign presence he was all submission.

History accords him one of the high positions among the great names of our country. He gave to the nationalist spirit through loyalty to the Union a new strength which was decisive for many years. His management of our foreign affairs was such as to secure a wholesome respect for our Government and the rights of its citizens. He left the Treasury without obligations and with a surplus. Coming up from the people, he demonstrated that there is sufficient substance in self-government to solve important public questions and rise superior to a perplexing crisis. Like a true pioneer, he broke through all the restraints and impediments into which he was born, and leaving behind the provincialisms and prejudices of his day, pushed out toward a larger freedom and a sounder Government, carrying the country with him.

In recognition of the great qualities of her most illustrious son, the State of Tennessee has presented his statue to the National Government. In gratitude for the preeminent service which he rendered, I, as President of the United States, accept it, to stand here in the Hall of Fame so long as this Capitol shall endure.

---

ADDRESS BY GOV. HENRY H. HORTON

Mr. President, gentlemen of the Senate and House of Representatives, Daughters of the American Revolution, ladies, and gentlemen, as chief executive of the Commonwealth which has given to the Nation the seventh, the eleventh, and the seventeenth Presidents of the United States, there devolves upon me the pleasing duty of presenting to his country's Hall of Fame the statue of Andrew Jackson, the first of Tennessee's sons to wear this wreath of memory and immortality. This privilege, indeed, is mine, but the authority comes from the people of the State of Tennessee, unanimously voiced by the sixty-fifth session of the legislature of the State and embodied in its public acts. Their generous appropriation made possible this statue of her great son to rest on this its pedestal of achievement and in the Capitol of the Nation, where as Chief Executive for eight years he earned his greatest fame. It is fitting and appropriate that he should stand here, companionate with many of his colleagues and colaborers, who, while they lived, faltered not with him in sacrifices and service and now in death share with him the veneration and love of their countrymen. He stands indeed among his friends. What heroic souls of granite and bronze welcome him into their marbled Valhalla.

Washington, colossal in that integrity and simplicity, which alone is greatness, was first to recognize in the courage and steadfastness of the young practitioner before the wilderness courts, the coming usefulness of the man and signed his commission as prosecuting attorney in the extreme frontier district of Miro, in western North Carolina—now Nashville and middle Tennessee. Webster, from the granite hills of his native New Hampshire—greatest of the New World's orators, the Demosthenes of democracy, the fire of whose logic and eloquence was the artillery that hurled Jackson's solid shots from the White House against the foregatherers of disunion: "Liberty and union, now and forever, one and inseparable."

Benton, the great Senator whom Tennessee gave to Missouri, the youngest and most beloved of Jackson's trusted lieutenants who led his Tennesseeans down the old Natchez Trace to avenge Frenchtown and the River Basin—the Old Bullion of Democracy, the author of the expunging resolution that wiped from the records the false accusations of his old chief's enemies. Francis P. Blair, from the same State, Jackson's greatest editor and adviser, and William Allen, of Ohio, and Lewis Cass; and here, in graceful hunting shirt of the frontiersman, the leggings of the Indian, and the bowie blade of the Texan, stands Sam Houston, 100 years ago to-day Tennessee's popular young governor. As a youth of 20 it was he who led Jackson's Tennesseeans to victory over the Creek barricade of death with a barbed arrow in his groin and two bullets that shattered his breast, ending the war that made famous his chief. From President of the Republic of Texas he rode horseback a thousand miles to close his old chief's dying eyes. What a galaxy of ghostly greatness surrounds us!

Here, in this Hall, Madison was twice inaugurated President of the United States—in 1809 and 1813. Monroe, for his second term, in 1821, and Millard Fillmore on the 10th day of July, 1850. Here Clay presided as Speaker, Webster thundered, John Quincy Adams died, and Abraham Lincoln began to live. Like the angel aerial of fiery light they have passed into the twilight in flames of glory that have kindled to white heat the souls of men. Indeed, Jackson stands among his peers.

It is not my purpose in this brief time assigned me to dwell on the life and character of Andrew Jackson. This has been reserved for others who will follow and complete these exercises. But permit me to picture him as we of Tennessee love most to remember him: Not on the field of battle; conqueror of the Creeks and winner of the most brilliant and far-reaching victory ever fought on American soil; not as a justice of our supreme court, nor as Congressman, Senator, or even as Chief Executive of a Nation—the first to turn Jefferson's great vision of democracy into a reality—but we would speak of him as the kindly neighbor, the devoted friend, thoughtful of others, given to charity, as approachable as a county squire and as generous as the prince that he was—the country gentleman of the Hermitage. We would tell of him as the best farmer of Davidson County, with the best-tilled land and the cleanest fence corners, the most noted breeder of Black Poll cattle and black-faced sheep, the greatest breeder and patron of blooded horses, who took no man's dust nor distance and carried him over the long wilderness road with the same tireless gameness that filled his own great soul. We would tell of how he built neighborhood schools and churches chiefly with his own funds and the help of his neighbors.

The little brick Presbyterian church he built for his beloved Rachel still stands a shrine at the Hermitage. From his own abundant crops his teams put corn in the cribs of the destitute and bacon in their larders. He had that rugged gift of honesty that made men believe in him—made the world believe in him. We would illustrate this by his personal credit, which was so strong that his name on the notes of a bank in far-away Philadelphia or New York sold at a premium. We might show you in the archives of our State a canceled warrant where in the emergency of the crisis of the defense of New Orleans he borrowed $25,000 on his own note after they had turned down the draft of the Secretary of War. We might show you his canceled check for $1,000, his fine paid to the civil courts of New Orleans for the astounding contempt of saving their city from capture. How he pledged his credit to borrow $300,000 from the treasury of Tennessee to fight the Creek War and Battle of New Orleans, ending in a blaze of glory for American arms in the war which, until he came upon the field, had only brought us humiliation and defeat. We might show how he voluntarily gave up his first home in Tennessee—Hunter's Hill—and in all 30,000 acres of land to pay an indorsement debt and moved further into the wilderness to live in a log cabin he called the Hermitage, even after his fame had encompassed the world. That log cabin to-day is a shrine; and though dead for over three-quarters of a century, Andrew Jackson is to-day the most influential, the most personal, the greatest inspiration, and the most alive citizen of the State.

ADDRESS OF MRS. ARTHUR S. BUCHANAN, STATE REGENT, DAUGHTERS OF THE AMERICAN REVOLUTION

I feel that it is a great privilege on this epochal occasion for Tennesseeans to pay a brief tribute from the Tennessee Society of the Daughters of the American Revolution to our hero-statesman, President Andrew Jackson.

It has been a great privilege to hear our honored governor present this statue to the Nation, and a great pleasure to hear the President of the United States accept it with such gracious words of appreciation.

It is good to see President Jackson standing here; too long has he been absent from this galaxy of heroes, and I believe there is no man in this great company who served his time and his country more ably and conscientiously than did he.

We are used to breeding heroes in Tennessee; our stalwart, storm-tossed, virile State has ever had a place in the national picture "near the flashing of the guns." It was a fitting background for this bold, dynamic figure.

Jackson's was always a name to conjure with. His soldiers worshipped him, and they do say that amid the mist-clad hills of Tennessee you may still catch the echo of his bugle calling his volunteers to arms.

We wonder as we see him standing here—his old friends and foes grouped about him—if he is dreaming backward over that long life of his, so packed with incident, adventure, and achievement, that it might be called the great American epic. Is he thinking of the bitter hardships of his childhood, lighted only with his mother's love and the blaze of his boyish courage, or dreaming of his hardy youth when he helped to build a great Commonwealth? Does he recall the ensanguined fields of his Indian warfare? Does he remember New Orleans, where he went flaming from his Tennessee mountains to defend with his untrained volunteers a thousand miles of coast without a fort garrisoned or adequately armed? Does he dream of his bitter political battles, when his keen intellect and singular power of directness pierced the splendid rhetoric and finished periods of the orators of that stirring time, sharper than any two-edged sword?

Does he remember nullification and smile across the Chamber at Calhoun? Does he remember the removal of the United States deposits from the great bank—the consternation of the financiers? And does he again rear that old white-crested head and say, "By the Eetrnal, sirs, I take the responsibility"?

Alas, he may not answer us, but we can say that with love and pride Tennessee has given into the keeping of the Nation he helped to build and which he loved so well this statue of Gen. Andrew Jackson.

"From a patriot's dream
And a soldier's sword
Was liberty won.
May the trails that they blazed
And the standards they raised
Live on and on."

---

ADDRESS OF MRS. ALFRED J. BROSSEAU, PRESIDENT GENERAL NATIONAL SOCIETY, DAUGHTERS OF THE AMERICAN REVOLUTION

It is particularly fitting that in the great Capitol of a great Nation there should be unveiled this marble bust in honor of the seventh President of the United States.

By such act the devoted and admiring men and women of Andrew Jackson's adopted State are not only placing an imperishable memorial in the Hall of Fame but they are also honoring themselves and the fine old State of Tennessee as well.

Our young Republic had few such patriots as this remarkable man. His country was his all-absorbing passion and he glorified every act of service by his sacrificial patriotism.

No other actor in the great drama of our colonial history has created more vivid and lasting mental pictures. No one individual has thrilled the student of that stirring period to a greater extent than this soldier who fought relentlessly under the strain of physical handicaps that would have rendered the average human being impotent.

One historian said of Andrew Jackson: "It is no wonder that this slender 6-footer should have been called 'Old Hickory,' for he could be bent in the heat and anguish of conflict but never could be broken."

Seldom quiet in body, mind, or spirit—often in the thick of some terrible conflict—he always retained the respect of those whom he opposed and not infrequently fought and vanquished. Indeed, the soul of that intrepid soldier-patriot will go marching on long after the more peaceable ones of earth have been forgotten.

I need not reiterate, for all the world knows that the administration of Andrew Jackson as President of the United States furnishes an illustration of the influence that one far-visioned man can exert in shaping the destinies of a country. Under a Chief Executive less inflexible, courageous, and intelligent the young country could hardly, with its existing handicaps, have made such remarkable progress.

To women the infinitely tender side of this tempestuous man will ever carry a singular appeal. His beautiful devotion to his wife, Rachel, has placed him among the truly great lovers of the world. The sunset of her life came just as the culminating honors and rewards of his career were reached and his days thereafter were deeply shadowed.

In this workaday world; in these restive times when pleasure, pain, misunderstanding, and inordinate ambition crowd close upon the softer, sweeter aspects of existence, such a picture of true devotion and beautiful felicity should be cherished.

In dwelling upon this phase of Andrew Jackson's remarkable and colorful life I feel as though I were opening a long-closed door and inhaling the fragrance of old lavender. In our minds and hearts may the honoring of him to-day run the gamut of human emotions, from the pinnacle of unselfish service and great achievement down to the simplicity of tender domestic ties and love of home.

Especially significant is the acceptance of this splendid memorial to a President of the far South by a President of the distant North. Time rolls back the curtain of life and the two great leaders clasp hands across the ages.

To Washington—this pied-à-terre of common ownership—have journeyed reverent sons and daughters of Andrew Jackson's own Southland. Down from the North have come many to greet and to share with them in this public tribute to their beloved statesman.

May all such gatherings of mutual interest tend toward a better and a higher patriotism, toward a deeper understanding and stronger ties of comradeship between the States which Andrew Jackson kept united because he believed in national unity.

Were he here to-day he would, I am sure, share the sentiments expressed in the following bit of verse written by a young soldier of the North during the World War:

"Here's to the blue of the wind-swept North,
When we meet on the fields of France;
May the spirit of Grant be with you all
As the sons of the North advance.

"And here's to the gray of the sun-kissed South,
When we meet on the fields of France;
May the spirit of Lee be with you all
As the sons of the South advance.

"And here's to the Blue and Gray as one,
When we meet on the fields of France;
May the spirit of God be with you all
As the sons of the Flag advance."

---

ADDRESS OF MR. CLAUDE G. BOWERS

Andrew Jackson, above all men, was the sword bearer of democracy in America. He translated the democratic philosophy of Jefferson into reality. He found the masses of the people potentially free; he made them free. He found popular government challenged by the most powerful financial institution of his time, and, accepting the challenge, he smote it hip and thigh and sent it staggering back before his blows to wait for better times.

Because he was the most picturesque of the Presidents, too many perhaps are prone to think of him as the D'Artagnan of the far frontier, a rough and ready fighter of the forest, honest, but impetuous to the point of temerity. We love him for his physical courage that never quailed before man born of woman. We picture him as a child of poverty and obscurity fighting for our independence and proudly bearing the scars upon his breast; as the impulsive dare-devil who broke through the barbed-wire entanglements of diplomacy in the memorable dash on Florida; and as the dynamic commander of the little band of soldiers of the woods who met the enemy at New Orleans and brilliantly avenged the humiliations of an unhappy war. We love him for his flaming passions, the dexterity of his sword, and the unvarying gallantry of his conduct—and all these things are fine. But it is not for these that men do reverence to his memory through succeeding generations; and not for these that we unveil this statue here to-day. Peace hath higher tests of manhood than battle ever knew, and Jackson's greatest services to the people were not with sword and musket in his hand but with a passionate devotion to liberty and democracy in his heart.

With independence won, we see this youthful veteran of the war turn his face to the western wilderness to fight another battle for its redemption to the purposes of man. We like to think of him braving the perils of the onward march at the head of a procession of hardy, liberty-loving men in coonskin cap and buckskin breeches. Because nature made him a leader, the men of the settlements and the log cabins in the clearings turned to him in the molding of a society that should be dedicated to liberty and democracy forever. He was the Thomas Jefferson of the Cumberland. He felt what Jefferson reasoned out. He found liberty in the unfettered life about him and democracy in the sanity and sound sense of stalwart men carving an empire out of the wilderness and depending wholly on their own brain and brawn. And he felt that men capable of creating organized society are entitled to control it. His was the democracy that blossoms freest at the edge of the woods.

Thus these bold conquerors of wild places turned to him to lead them to the ways of stability and order; and they followed him on foot and horseback along the streams and over the narrow trails to the constitutional convention at Knoxville. It did its work with that facility and felicity that goes with the doing of sound elemental things which are

always simple; and all the intervening years have not improved on the spirit of that first fundamental law.

Every man was given the right to vote, and Jackson fought for the principle all his life.

Every citizen was given the right to speak his honest thought, and he always stood for that.

Every man and woman should have the right to worship God according to the dictates of the conscience, and Jackson was always the synonym of toleration.

And in that document was one provision that breathed the very soul of Jackson, exacting from every future legislator the solemn pledge "never to consent to any act or thing whatever that shall have even a tendency to lessen the rights of the people." That pledge he took and kept, and here in later years he fought that fight and won a victory that consolidated and vindicated all the triumphs of democracy from the time of the landing of the Pilgrim Fathers.

ORGANIZER OF DEMOCRACY

Andrew Jackson was the organizer of democracy. He found the masses helpless and futile in the midst of their tools, and he taught them how to use them. He mobilized the scattered forces of ordinary men; vitalized them with his energy, fired them with his faith, and made sharpshooters of them, every one. He made the trapper in the wilderness, the worker on the wharf, the toiler in the factory, and the farmer in the field realize that the Government is his government in days of peace as well as when he is solemnly reminded of it in days of battle.

Thus he found politics an exclusive thing; he made it democratic. He regimented the masses in each community, coordinated their activities, and created leaders in every hamlet and bade them follow them as they had followed him upon the field of battle.

When they reminded him that these men of the masses were untrained in government, he answered that in a democracy it was high time to train them. When the timid cringed at the thought of these crude folk being awakened to a realization of their civic power, he consoled himself with the reflection that they were the same crude folk who battled behind him at New Orleans. He knew that men good enough to die for the Republic are good enough to have a voice in the determination of its destiny; and he knew that a nation that will exact a life and withhold a civic right is not fit to live.

Thus for some years he sat at the Hermitage busy with his pen, perfecting and consolidating a political organization along popular lines that penetrated to every nook and corner; and when at length he sounded the clarion call to battle the people rose en masse, crowded the highways with their marching columns, trampling down prejudice and precedent, and moving on to victory.

When Andrew Jackson vitalized and dynamitized American democracy he rendered a greater service to the Nation than through any of his splendid triumphs in the field. Jefferson gave the people the machinery of democracy; Jackson made them mechanicians. Jefferson gave them an idea, and Jackson gave them a sword.

HIS FIGHT ON THE BANK

Some historians are chortling still because Jackson threw open the people's house to the people, who crowded in with muddy boots to celebrate his triumph. He knew that nations are made by such as these from the corn rows and the woods and shops, and not by the gamblers in stocks and bonds.

And Jackson was sorely needed at the helm 100 years ago. There was one outstanding question then—whether America should be dominated by a democracy or plutocracy. A financial group under the direction of the National Bank had seized on power. It had its ramifications everywhere. Its lobby here held open house. When Nicholas Biddle, of the bank, came down he came as the conqueror comes, almost with flying banners and the roll of drums, and representatives of the people hastened to his presence at his beck and call, and he made it worth their while. Statesmen, not a few, were given money, and he called it loans, without security. Newspapers, all too many, were subsidized to do the master's work, and he called it loans for the encouragement of the press. The greatest statesman of them all, whose rounded periods our children still recite, sat in this very Capitol when the fight between Jackson and the bank began and wrote to Biddle soliciting "a refreshment of my retainer."

And when Jackson was warned that this great money power, with its control of credit and its corruption squad in public places, was too powerful to attack he swore by the Eternal that if any set of men had that much power they had too much power in a democracy to live.

We know the story of the memorable fight that followed. The grim old warrior grappled with the Congress and prevailed, and the fight was finally waged before the people. It was a major conflict between men and money, and as in all such struggles it seemed at first that the heavy artillery was on the side of money.

It controlled the greater portions of the press by subsidy or through snobbery. It used its money to flood the country with poison propaganda. It forced business to do its bidding through its control of credit. It called in loans and restricted credit to curtail the work of industry, and when laborers were turned out into the street its orators, the greatest and most persuasive in the land, mingled hypocritical sympathy with denunciations of the tyrant who was wrecking the business fabric of the Nation. When the fight was fiercest and the heavy artillery of the combined forces of snobbery and plutocracy were belching thunder, and some of the stoutest hearted of his supporters quailed, he stood alone, unmoved, uncompromising at Rip Raps in Virginia looking out upon the sea and said: "Providence may change my determination, but man can no more do it than he can remove these ripraps which have resisted the rolling of the ocean from the beginning of time."

And the people had faith in Jackson because he had faith in them, and moving in mighty columns to the attack they scored a victory that literally preserved democracy in America and set an inspiring example for posterity to follow.

TRIUMPHS OF FOREIGN POLICY

As he had made the people preeminent in the State, he made the Republic respected as it never had been before among the nations of the world. In the field of foreign relations his administration was marked by a procession of triumphs under the flag of peace. Where his predecessors had, with one exception, kept the peace, he linked peace with a prestige such as we had never known before.

No President has ever been more wisely served in the State Department. Martin Van Buren, suave, courtly, and learned in the laws of nations; Edward Livingston, brilliant, polished, cautious, and courageous, whose name was known to thinkers in every capital because of his famous code; John Forsyth, familiar with the courts and chancelleries, with velvet glove concealing well the iron hand within—these were the mentors of his foreign policy.

And through these he wrought results that lifted the young Republic to a position of dignity and respect among the powers. He found a general disposition to presume upon our weakness; he changed it by a show of strength. He found our claims to indemnity for spoliations lightly brushed aside through four administrations; he forced the consideration and the recognition of these claims.

Thus France for 30 years had refused to consider our claim for spoliations in the Napoleonic wars; he forced a settlement and she paid. Thus Naples saw the drift and paid, and Denmark fell in line, followed by Portugal and Spain, and wiped out old liabilities with indemnities. He sought results on the justice of our claims, without the rattling of the sword; but when the pirates of Sumatra stole our goods and murdered our people on the seas his shimmering sword instantly was out waving our infant Navy to the scene, and these outlaws of far waters were driven to their dens and notice served on all mankind that Americans everywhere are covered by the protection of our flag, and followed, if need be, by the thunder of our guns.

But the supreme triumph which marked the first awakening of the world to the advent of a new power among the nations came with the triumphant culmination of the controversy with the French. Long years before treaties of indemnity had been negotiated with every nation in the world—with all but us. Jackson determined to compel an equal consideration for our claims. A treaty was signed whereby France was to pay the indemnity and we were to admit French wines duty free. Congress immediately carried out our part of the agreement; the House of Deputies manifested no disposition to conform. Session after session passed with no suggestion of an appropriation. Jackson sent Livingston to France to persuade a settlement; and when Lafayette suggested that because of the political situation in France there would be no settlement until Jackson struck a vigorous note, he asked authority from Congress to make reprisals on French commerce as a last resort. Instantly the storm broke in both countries, to serve party politics in both. At length, with diplomatic relations broken and the two Nations on the verge of war, England offered mediation. Jackson accepted, with the Jacksonian proviso that the decision must go our way; France, having no will to war, played blind to the proviso, and in the end, with the money paid, America had scored a diplomatic triumph of the first magnitude.

Now, there was no real quarrel between the peoples of the two Nations; their friendship, deep seated in sacred memories forbade. There was no real quarrel between the two executives; they were agreed. If we were driven to the verge of war, it was because of party politics in the French House of Deputies and the American Congress. It was a politicians' quarrel, vicious and dishonorable, and an infamous quarrel, ready to wreck an ancient friendship to serve a petty party end.

It was in connection with that quarrel that a scene occurred in this very Hall reflecting glory on two great Americans which historians have seemed loath to touch upon, albeit one of the most inspiring in our history.

The debate on Jackson's policy was on here in what was then the House. The Whigs were making hypocritical attacks on Jackson as rash and dangerous. And then an old man rose from his seat over there, where later he fell, dying at his post of duty. If he was no friend of Jackson—and he was not—he was ever the friend of his country. He had been defeated by Jackson for reelection to the Presidency,

and he was not on speaking terms. He was a leader of the opposing party. But the old man rose, prodded by the pettiness of his associates, to protest against the cowardly proposal to abandon the treaty. And vibrant with feeling, the partisan absorbed in the patriot, he declared that Jackson's conduct "was high spirited and lofty, such as became the individual from whom it emanated." And here in this Hall again, answering a sophisticated party speech of Webster's, who had said that on legalistic grounds he would have opposed Jackson's policy if the enemy had been hammering at the gates, the old man brushed Jackson's party friends aside to assume the leadership, and his voice rang like a clarion: "Sir, for a man uttering such sentiments there would be but one step more, a natural and an easy one for him to take, and that would be to join the enemy in hammering at the gates."

With the Whigs dazed by the revolt and Jackson's supporters shouting their approval, and another son of Tennessee, James K. Polk, in the chair vainly pounding for order, John Quincy Adams sank into his seat. A bronze tablet over there is said to mark the spot where Adams fell; to me it means the spot where Adams rose to the heights of patriotic manhood in magnificent defense of the robust Americanism of Andrew Jackson.

A MANY-SIDED MAN

Andrew Jackson was a many-sided man. We think of him as a fighter, lusty, and gusty, and so he was; but he was a lover, too. In all the records of romance you'll search in vain for a more beautiful story of devotion than that of this grim man for his lost Rachel. Her picture stood through all the bitter days of his administrations on the table in his room, and every night this warrior lighted his kerosene lamp and read a while in Rachel's Bible as a tribute to her memory. There is something more than charming in the picture of this old man, who had fought his enemies tooth and nail throughout the day, walking the White House floor at night with a crying baby in his arms.

He was the soul of gallantry. He liked shirt sleeves, old shoes, and pipes, but in the presence of a woman he was the soul of chivalry; and many a worldly woman who went to be amused by the crudity of a woodsman went away with the conviction that she had met one of the finest gentlemen of the age.

He had the genius of adaptability. One day he rode up aristocratic Beacon Street in Boston on his way to Harvard to receive a degree. The blinds were drawn as an affront, albeit the aristocrats were peeking through, unable to resist the presence of a hero; and in his home near by John Quincy Adams sat grumbling over the degradation of his alma mater. And at the ceremonies at the university Jackson bore himself with such propriety and dignity and played his part with such consummate grace that the intelligencia was captivated by his charm.

He was a consummate actor. No one knew better when to play the lion and when the fox. Some of the historians have simulated a fastidious shock because of his mad scenes before the distress committees sent with bank money in their pockets to divert him from his course, and they have conveyed the impression that the old man was half insane with rage. But we have the evidence of an opponent who came upon him as a delegation was departing to find him shaking with laughter until the tears rolled down his cheeks. "They thought me mad, Wise; they thought me mad. Well, I can do my share of the play acting if the stage is right." No; he never lost his head in a crisis, and in his most tempestuous moments he thought as straight as he shot from among the cotton bales of New Orleans.

But first and foremost he was the happy warrior of civil liberty and democracy, and he fought for both from early manhood to trembling age. For the service of the average man he dwelt ever in his tent, alert, awake, his sword unsheathed and ready. The people loved him because he loved them first.

Here was a man who rose to supreme power and never forgot the side of the barricade on which he was born. His devotion to human rights did not blind him to the legitimate rights of property. He was not an enemy of business; he discriminated between business and brigandage, and he was so much the friend of honest business that he fought to make it free.

His love of liberty did not make him heedless of the need of stability and order, and he worshipped that liberty only which is made pregnant by the law.

His devotion to the sovereign rights of the States did not overshadow his love of the Union, and he who spoke in action rather than in words made one superb oration in a sentence—"The Federal Union; it must and it shall be preserved."

He was a perfect judge of men and motives, and in the selection of his lieutenants he was wiser than the politicians of his day or the historians of our own. If some of these lieutenants could not read Homer in the original, all of them could translate the heartbeats of the people of the plains.

A lover of liberty, he gave his blood to it; a crusader of democracy, he gave his life to it; and liberty and democracy in America will never die so long as the people treasure the memory of his battles and follow the shimmer of Andrew Jackson's sword.

PRESENTATION OF THE SCULPTRESS

The PRESIDING OFFICER. At this time I wish to present the sculptress, Miss Belle Kinney, who collaborated with her illustrious husband, Leopold Scholz, in the creation of this statue of Andrew Jackson. Miss Kinney is a native of Tennessee.

---

ADDRESS OF MRS. JAMES E. CALDWELL, REPRESENTING THE HISTORICAL SOCIETIES IN ANDREW JACKSON'S DISTRICT

Women are the preservers of history, the priestesses of the past, and their ears shall not be deaf to the voices of time. We shall remember the deeds of our heroes and see that they have just recognition.

Tennessee could fill this hall with statues of her illustrious sons, three of whom were Presidents of the United States—Jackson, Polk, and Johnson—the great empire builders who added one-third of the territory to our glorious America.

We gather here this afternoon to honor Gen. Andrew Jackson, a man known to all readers of history wherever the English language is spoken.

As this statue was made possible through the efforts of the Daughters of the American Revolution of our State, aided by the pennies of our school children, it is fitting and appropriate to make mention of his domestic and family life.

General Jackson was a great warrior, but a greater patriot because of his love of country, home, and family. In his beautiful home, the Hermitage, near Nashville, Tenn., one feels the presence of his strong personality in the pictures, the state and personal papers, while his refinement of nature and taste is shown in the artistic furnishings and the quaint old flower garden, intact to-day, with the classic tomb erected by Jackson to his wife. He shows his chivalrous nature in the inscription to his beloved Rachel: "A being so gentle slander might wound, but could not dishonor."

All through his troubled life as President the one soothing thought was his home in fair Tennessee. To finish his work and rest once more under the shelter of the Hermitage was his constant thought, and now at last—

"Deep in the shadow of the friendly trees,
In that old garden of the Hermitage,
All color-crammed like some rare-pictured page
Whose quaint old patterns still essay to please;
Deep scarred and warworn, ends his pilgrimage,
Among the lily bells and wandering bees.

"His troubled heart, fierce with world's unrest,
No longer throbs while beating to the tread
Of bugle-summoned, fear-defying horde;
But dust to dust, and still breast to breast,
Bravely content beside his gentle dead,
The warrior to the lover yields his sword."

---

BENEDICTION

And now may the God of peace that brought again from the dead our Lord Jesus, that great Shepherd of the sheep, through the blood of the everlasting covenant, make you perfect in every good work to do His will, working in you that which is well pleasing in His sight, through Jesus Christ, to whom be glory for ever and ever. Amen.

FLOOD CONTROL

Mr. REID of Illinois. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill S. 3740, entitled "A bill for the control of floods on the Mississippi River and its tributaries, and for other purposes," insist on the House amendments, and agree to the conference asked for.

The SPEAKER. The gentleman from Illinois asks unanimous consent to take from the Speaker's table the bill S. 3740, insist on the amendments of the House, and agree to the conference asked for. Is there objection?

There was no objection, and the Speaker appointed as conferees on the part of the House Mr. REID of Illinois, Mr. CURRY, Mr. ROY G. FITZGERALD, Mr. WILSON of Louisiana, and Mr. DRIVER.

BRIDGE ACROSS THE OHIO RIVER AT OR NEAR HENDERSON, KY.

Mr. DENISON. Mr. Speaker, on behalf of the Committee on Interstate and Foreign Commerce, I ask unanimous consent to take from the Speaker's table the bill S. 4046 and pass it, an identical bill having been reported by the House committee.

The SPEAKER. The gentleman from Illinois asks unanimous consent to take from the Speaker's table the bill S. 4046 and consider it, a similar House bill being reported. The Clerk will report it by title.

The Clerk read as follows:

A bill (S. 4046) authorizing the Henderson-Ohio River Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Henderson, Ky.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The SPEAKER. The Clerk will report the bill.

The Clerk read as follows:

*Be it enacted, etc.,* That in order to facilitate interstate commerce, improve the Postal Service, and provide for military and other purposes, the Henderson-Ohio River Bridge Co., its successors and assigns, be, and is hereby, authorized to construct, maintain, and operate a bridge and approaches thereto across the Ohio River, at a point suitable to the interests of navigation at or near Henderson, Henderson County, Ky., across said river to a point opposite in Vanderburgh County, Ind., in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906, and subject to the conditions and limitations contained in this act.

SEC. 2. There is hereby conferred upon Henderson-Ohio River Bridge Co., its successors and assigns, all such rights and powers to enter upon lands and to acquire, condemn, occupy, possess, and use real estate and other property needed for the location, construction, operation, and maintenance of such bridge and its approaches as are possessed by railroad corporations for railroad purposes or by bridge corporations for bridge purposes in the State in which such real estate or other property is situated upon making just compensation therefor, to be ascertained and paid according to the laws of such State, and the proceedings therefor shall be the same as in the condemnation or expropriation of property for public purposes in such State.

SEC. 3. The said Henderson-Ohio River Bridge Co., its successors and assigns, is hereby authorized to fix and charge tolls for transit over such bridge, and the rates of toll so fixed shall be the legal rates until changed by the Secretary of War under the authority contained in the act of March 23, 1906.

SEC. 4. From the tolls charged for the use of such bridge, the Henderson-Ohio River Bridge Co., its successors and assigns, shall pay all reasonable operating costs, taxes, assessments, insurance, cost of maintenance, repairs, necessary replacements, and interest on the bonds and dividends on the stock issued to procure necessary funds for the construction of such bridge and its approaches and other costs incidental thereto; all other funds received for the use of such bridge, after the payment of the foregoing costs and charges, shall be set aside in the manner hereinafter provided as a sinking fund for retiring the bonds and the stock issued and sold by the Henderson-Ohio River Bridge Co., its successors and assigns, for the purpose of providing the funds with which to construct said bridge and its approaches. Any mortgage or deed of trust issued by the Henderson-Ohio River Bridge Co., its successors and assigns, to secure funds for the construction of said bridge and its approaches, shall provide for the appointment of the Kentucky State Highway Commission, or such bank and trust company in Henderson County, Ky., as said commission may designate as trustee, and the net revenues received from the use of such bridge as provided for in this section, shall be paid to the trustee and used for the payment or redemption, at par, as soon as possible, of all bonds issued and sold in connection with the construction of such bridge; after all such bonds have been paid or retired, the trustee shall continue to act as such and shall apply the net proceeds from the use of such bridge as rapidly as possible to the retirement of the outstanding stock at par issued by the Henderson-Ohio River Bridge Co. in connection with the construction of such bridge. No bonds or stock issued and sold for the purpose of providing funds for the construction of said bridge, its approaches and appurtenances, shall bear interest or pay dividends at a rate exceeding 7 per centum per annum. Such bonds and stock so issued shall not exceed in the aggregate the total actual cost of constructing such bridge and its approaches and any real estate that may be necessarily required in connection therewith, and organization and financing charges, not exceeding 10 per centum of the actual cost of constructing such bridge and approaches and acquiring such real estate.

SEC. 5. When all of the bonds and stock issued and sold in connection with the construction of said bridge shall have been paid or redeemed, or shall have been called for payment or redemption, and the funds with which to redeem such as shall not have been presented for redemption shall have been provided, the bridge and its approaches and appurtenances shall thereupon be and become the property of the State of Kentucky, and the proper officials or agents of the Henderson-Ohio River Bridge Co., its successors and assigns, shall immediately, by proper deed of conveyance, convey, transfer, and assign to the State Highway Commission of the State of Kentucky, the said bridge and its approaches and all real estate, franchises, and other property necessarily held in connection therewith. Thereafter such bridge shall be maintained and operated free of tolls. An accurate record of the costs of the bridge, its approaches and appurtenances, the expenditures for maintaining, repairing, and operating the same and for taxes, insurance, betterments, and other necessary charges and of the daily tolls collected, shall be kept and shall be available for the information of all persons interested.

SEC. 6. After the completion of such bridge, the State of Kentucky, through its State highway commission, or, with the consent and approval of the State highway commission, the county of Henderson may, at any time, acquire and take over all right, title, and interest in such bridge and its approaches, and any interest in real property necessary therefor, by purchase or by condemnation, or expropriation, in accordance with the laws of the State of Kentucky governing the acquisition of private property for public purposes by condemnation or expropriation. If the bridge and its approaches and appurtenances are acquired by condemnation, the amount of damages or compensation to be allowed shall be such an amount as will equal the amount necessary to redeem and retire all the bonds and stock outstanding at the time of such condemnation proceedings.

SEC. 7. If such bridge shall at any time be taken over or acquired by the State of Kentucky, or by Henderson County, as provided by section 6 of this act, and if tolls are thereafter charged for the use thereof, the rates of toll shall be so adjusted as to provide a fund to repay for the reasonable cost of maintaining, repairing, and operating the bridge and its approaches under economic management, and to provide a sinking fund sufficient to amortize the amount paid therefor, including the reasonable interest and financing cost, as soon as possible under reasonable charges. After a sinking fund sufficient for such amortization shall have been so provided, such bridge shall thereafter be maintained and operated free of tolls.

SEC. 8. The right to sell, assign, transfer, and mortgage all the rights, powers, and privileges conferred by this act is hereby granted to Henderson-Ohio River Bridge Co., its successors and assigns, and any corporation to which or any person to whom such rights, powers, and privileges may be sold, assigned, or transferred, or who shall acquire the same by mortgage foreclosure or otherwise, is hereby authorized and empowered to exercise the same as fully as though conferred herein directly upon such corporation or person.

SEC. 9. The right to alter, amend, or repeal this act is hereby expressly reserved.

The SPEAKER. The question is on the third reading of the Senate bill.

The Senate bill was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider the vote whereby the bill was passed was laid on the table.

The SPEAKER. Without objection, the similar House bill will be laid on the table.

There was no objection.

RETURN OF A SENATE BILL

The SPEAKER. The Chair lays before the House the following order of the Senate, which the Clerk will report.

The Clerk read as follows:

IN THE SENATE OF THE UNITED STATES.

*Ordered,* That the House of Representatives be respectfully requested to return to the Senate the bill (S. 3723) entitled "An act to amend and reenact subdivision (a) of section 209 of the transportation act, 1920."

The SPEAKER. Without objection, the request is agreed to.

There was no objection.

RETURN OF A SENATE JOINT RESOLUTION

The SPEAKER. The Chair lays before the House the following order of the Senate, which the Clerk will report.

The Clerk read as follows:

IN THE SENATE OF THE UNITED STATES.

*Ordered,* That the House of Representatives be respectfully requested to return to the Senate the resolution (S. J. Res. 129) entitled "Joint resolution to provide for the eradication of the pink bollworm and authorizing an appropriation therefor."

The SPEAKER. Without objection, the request will be agreed to.

Mr. BUCHANAN. Mr. Speaker, I object.

The SPEAKER. The gentleman from Texas objects. The order will remain on the Speaker's table.

VETO MESSAGE FROM THE PRESIDENT—NATIONAL RIFLE MATCHES (H. DOC. NO. 251)

The SPEAKER laid before the House the following message from the President of the United States, which was read and, with the accompanying papers, referred to the Committee on Military Affairs and ordered to be printed.

*To the House of Representatives:*

Herewith is returned, without approval, H. R. 8550, a bill to amend section 133 of the national defense act, specifying the members of the National Board for the Promotion of Rifle Practice and directing that there shall be held an annual competition to be known as the national matches.

The bill provides a board to perform Federal functions at Federal expense, to be constituted of 5 officials of the Government and 51 members to be appointed by officers and agencies which are not a part of the Federal Government. The method of appointment of Federal officers is clearly defined by Article II, sections 1 and 2, of the Constitution of the United States.

I have been advised by the Attorney General that this bill is unconstitutional because it takes away from the executive branch of the Government and vests in persons not in any branch of the Federal service the power and duty to make appointments to and removals from posts in the Federal service.

The bill provides that the competition and school shall be held under such regulations as may be prescribed by the National Board for the Promotion of Rifle Practice, which regulations shall be subject to the approval of the Secretary of War. The effect of this provision is to take away from the proper Government officials the authority to make rules for the national matches and the small-arms firing school. The Secretary of War may approve or disapprove the rules and regulations prescribed by the national board but is apparently without the power to amend or to make new ones. The Secretary of War should continue to make the rules and regulations for these activities as he has done in the past, and this important function should not be delegated. The Secretary of War now has the advice of the National Board for the Promotion of Rifle Practice, which is limited to 21 members, and which functions at small expense in an entirely satisfactory manner. Through this board he is enabled to keep abreast of the needs of the citizen for this training.

A meeting of this board, consisting of 56 members, will cost approximately $7,500 plus $500 a day after the first day. The length of time that it will remain in session in order to carry out the duties prescribed in the bill can not be determined. This may vary from one day to an indeterminable number of days with the consequent additional expense. The executive committee of from seven to nine members, elected by the board, is given duties of a continuing nature and it is evident that it can not perform these duties without expenditures for travel and personal expenses in addition to those resulting from the annual meeting of the entire board.

A study of the appropriations made in recent years will show that exclusive of the sum, approximately $500,000 appropriated annually for the national matches, over $3,500,000 has been provided for small-arms ammunition for training annually in marksmanship the Army of the United States, the citizens' military training camps, the Reserve Officers' Training Corps, and some sixteen hundred rifle clubs.

The creation of a board charged with the duties prescribed in this bill is a wide departure from present law, and is in violation of sound principles of operation. This is further shown by the provision for the election by the board of a committee of from seven to nine members, charged with the executive functions of supervising and carrying out the regulations of the board. While it might be possible for this committee to designate one of its members to act for the committee, there is nothing in the bill which would prevent the committee from acting as a whole with the attendant increase in expense and confusion. The operation of this board as constituted by the bill will not result in any increase of efficiency over present procedure, while it must necessarily result in an appreciable increase in cost.

The bill authorizes the appropriation of an undetermined and indefinite amount annually as a part of the sum appropriated for national defense, while at the same time it places the expenditures of the appropriation under a group not a part of either the War or Navy Departments. I can not approve the principle of authorizing an appropriation for national defense unless the sums appropriated are to be expended under the immediate direction and supervision of those charged with the defense plans of the Nation.

To summarize, I consider the proposed legislation undesirable because it is unconstitutional in part; because it charges the War Department with the expense of certain activities over which the War Department will have little control, and takes from the War Department control it now exercises over certain matters affecting national defense; and because it authorizes an appropriation of an indefinite sum. Convinced as I am of the unwisdom of enacting this bill into law, I am constrained to return it without my approval.

CALVIN COOLIDGE.

THE WHITE HOUSE, *April 28, 1928.*

The bill is as follows:

*Be it enacted, etc.,* That the act entitled "An act for the promotion of rifle practice throughout the United States," approved February 14, 1927 (44 Stat. 1095), which adds an additional paragraph to section 113 of the national defense act, is hereby amended to read as follows: "That there shall be held an annual competition, known as the national matches, for the purpose of competing for a national trophy, medals, and other prizes to be provided, together with a small-arms firing school, which competition and school shall be held annually under such regulations as may be prescribed by the National Board for the Promotion of Rifle Practice, which regulations shall be subject to the approval of the Secretary of War."

SEC. 2. Hereafter the National Board for the Promotion of Rifle Practice shall consist of the Assistant Secretary of War, the Assistant Secretary of the Navy, one member of the Regular Army to be designated by the Secretary of War, one member from the Navy to be designated by the Secretary of the Navy, one member from the Marine Corps to be designated by the commandant of the United States Marine Corps, one member from the Militia Bureau to be designated by the chief of the bureau, one member from each State to be designated by the governor of the State, one member from the District of Columbia to be designated by the commanding general, District of Columbia, and one member from the National Rifle Association of America to be designated by the executive committee thereof. Members of said board shall hold office during the pleasure of the appointing power.

The Assistant Secretary of War shall be president of the board and the Assistant Secretary of the Navy shall be vice president and perform the duties of the president in his absence or upon his request.

Said board is charged with prescribing rules and regulations for the promotion of small-arms practice in the United States, for the conduct of the national matches and the Small-Arms Firing School, and also for the conduct of the office of the director of civilian marksmanship, subject to the approval of the Secretary of War.

Said board and its executive committee shall serve without pay except to receive actual traveling and hotel expenses while absent from their respective homes for the performance of their duties and under such regulations as the Secretary of War may direct.

Said board shall meet once annually upon the call of the president of the board, at such time and place as he may designate, for the performance of its duties as prescribed in this act.

Seventeen members shall constitute a quorum for the transaction of business at such meeting.

At this meeting of the board an executive committee shall be elected of not less than seven nor more than nine members, which said committee shall have supervision over, and carry out the regulations of the board relating to, small-arms practice, the national matches, and the Small-Arms Firing School, and the director of civilian marksmanship.

SEC. 3. The national matches contemplated in this act shall consist of rifle and pistol matches for the national trophy, medals, and other prizes mentioned in section 1 above, to be open to Army, Navy, Marine Corps, National Guard, or Organized Militia of the several States, Territories, and District of Columbia, rifle clubs, and civilians, together with a small-arms firing school to be connected therewith and competitions for which trophies and medals are provided by the National Rifle Association of America; and for the cost and expenditures required for and incident to the conduct of the same, including the personal expenses of the board and executive committee, the sum necessary for the above-named purposes is hereby authorized to be appropriated annually as a part of the total sum appropriated for the national defense: *Provided,* That no competitor shall be entitled to commutation of rations in excess of $1.50 per day, and when meals are furnished no greater expense than that sum per man per day for the period the contest is in progress: *Provided further,* That in lieu of traveling expense and commutation of rations while traveling the sum of 5 cents per mile may be paid to civilian competitors, and such travel pay for the return trip may be paid in advance of the performance of the travel.

SEC. 4. For the incidental expenses of the national board for the promotion of rifle practice, including books, pamphlets, badges, trophies, prizes, and medals to be expended for such purposes, the sum of not more than $7,500 is hereby authorized to be appropriated annually.

The SPEAKER. The message will be spread upon the Journal.

On motion of Mr. JAMES, the bill and message were referred to the Committee on Military Affairs of the House.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted—

To Mr. BULWINKLE, for two weeks, on account of personal business; and

To Mr. JOHNSON of Washington, for 12 days, on account of death of his mother at Los Angeles, Calif.

FUNERAL OF HON. MARTIN B. MADDEN

Mr. TILSON. Mr. Speaker, I ask immediate consideration of a resolution, a copy of which is at the Clerk's desk.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

House Resolution 178

*Resolved,* That a committee of the House be appointed to take order for superintending the funeral of Hon. MARTIN B. MADDEN in the House of Representatives at 12 o'clock meridian on Sunday, April 29, 1928, and that the House of Representatives attend the same.

*Resolved,* That as a further mark of respect the remains of Mr. MADDEN be removed from Washington to Chicago, Ill., in charge of the Sergeant at Arms, attended by the committee, who shall have full power

to carry these resolutions into effect, and that the necessary expenses in connection therewith be paid out of the contingent fund of the House.

*Resolved*, That the Clerk of the House communicate these proceedings to the Senate and invite the Vice President and the Senate to attend the funeral in the House of Representatives and to appoint a committee to act with the committee of the House.

*Resolved*, That invitations be extended to the President of the United States and the members of his Cabinet, the Chief Justice and Associate Justices of the Supreme Court of the United States, the diplomatic corps (through the Secretary of State), the General of the Army, and the Chief of Naval Operations to attend the funeral in the Hall of the House of Representatives.

Mr. TILSON. Mr. Speaker, I move the adoption of the resolution.

The resolution was agreed to.

The SPEAKER. The Chair appoints the following committee: D. R. ANTHONY, Jr., Kansas; BURTON L. FRENCH, Idaho; W. W. GRIEST, Pennsylvania; FRED A. BRITTEN, Illinois; LOUIS C. CRAMTON, Michigan; EDWARD E. DENISON, Illinois; EDWARD J. KING, Illinois; GEORGE H. TINKHAM, Massachusetts; EDWARD H. WASON, New Hampshire; THOMAS S. WILLIAMS, Illinois; WILLIAM R. WOOD, Indiana; MILTON W. SHREVE, Pennsylvania; ERNEST R. ACKERMAN, New Jersey; HENRY E. BARBOUR, California; CARL R. CHINDBLOM, Illinois; L. J. DICKINSON, Iowa; GUY U. HARDY, Colorado; FRANK MURPHY, Ohio; WALTER H. NEWTON, Minnesota; JOHN W. SUMMERS, Washington; RICHARD YATES, Illinois; FRANK CLAGUE, Minnesota; M. ALFRED MICHAELSON, Illinois; ELLIOTT W. SPROUL, Illinois; ROBERT L. BACON, New York; WILLIAM P. HOLADAY, Illinois; MORTON D. HULL, Illinois; JOHN TABER, New York; MAURICE H. THATCHER, Kentucky; GEORGE A. WELSH, Pennsylvania; CHARLES ADKINS, Illinois; JOHN C. ALLEN, Illinois; ED. M. IRWIN, Illinois; WILLIAM R. JOHNSON, Illinois; JOHN T. BUCKBEE, Illinois; HOMER W. HALL, Illinois; HENRY T. RAINEY, Illinois; ADOLPH J. SABATH, Illinois; JOSEPH W. BYRNS, Tennessee; EDWARD T. TAYLOR, Colorado; JAMES P. BUCHANAN, Texas; WILLIAM B. OLIVER, Alabama; ANTHONY J. GRIFFIN, New York; WILLIAM A. AYRES, Kansas; THOMAS W. HARRISON, Virginia; WILLIAM W. HASTINGS, Oklahoma; THOMAS H. CULLEN, New York; JOHN J. CASEY, Pennsylvania; ROSS A. COLLINS, Mississippi; STANLEY H. KUNZ, Illinois; JOHN N. SANDLIN, Louisiana; WILLIAM W. ARNOLD, Illinois; WILLIAM E. HULL, Illinois; HENRY R. RATHBONE, Illinois; FRANK R. REID, Illinois; ROBERT G. SIMMONS, Nebraska; THOMAS A. DOYLE, Illinois; FRED M. VINSON, Kentucky; J. EARL MAJOR, Illinois; and JAMES T. IGOE, Illinois.

ADJOURNMENT

Mr. TILSON. Mr. Speaker, in accordance with the resolution that has just been adopted, I move that the House do now adjourn until 12 o'clock to-morrow.

The motion was agreed to; accordingly (at 12 o'clock and 31 minutes p. m.) the House adjourned until to-morrow, Sunday, April 29, 1928, at 12 o'clock noon.

## COMMITTEE HEARINGS

Mr. TILSON submitted the following tentative list of committee hearings scheduled for Monday, April 30, 1928, as reported to the floor leader by clerks of the several committees:

COMMITTEE ON BANKING AND CURRENCY

(10.30 a. m.)

To amend the act approved December 23, 1913, known as the Federal reserve act; to define certain policies toward which the powers of the Federal reserve system shall be directed; to further promote the maintenance of a stable gold standard; to promote the stability of commerce, industry, agriculture, and employment; to assist in realizing a more stable purchasing power of the dollar (H. R. 11806).

COMMITTEE ON THE DISTRICT OF COLUMBIA—SUBCOMMITTEE ON EDUCATION

(7.30 p. m.)

To consider bills on the committee calendar.

COMMITTEE ON INSULAR AFFAIRS

(10.30 a. m.)

To amend the organic act of Porto Rico, approved March 2, 1917 (H. R. 7010).

COMMITTEE ON EDUCATION

(10.30 a. m.)

To create a department of education (H. R. 7).

COMMITTEE ON THE JUDICIARY

(10 a. m.)

To amend the act of October 28, 1919, known as the national prohibition act, as amended and supplemented, for the purpose of enforcing the eighteenth amendment to the Constitution more efficiently and preventing evasions thereof (H. R. 11410).

## REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. JOHNSON of Indiana: Committee on Interstate and Foreign Commerce. H. R. 12563. A bill authorizing the West Kentucky Bridge & Transportation Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Henderson, Ky.; with amendment (Rept. No. 1395). Referred to the House Calendar.

Mr. JOHNSON of Indiana: Committee on Interstate and Foreign Commerce. H. R. 12810. A bill authorizing the Henderson-Ohio River Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Henderson, Ky.; with amendment (Rept. No. 1396). Referred to the House Calendar.

Mr. PEERY: Committee on Interstate and Foreign Commerce. H. R. 12909. A bill granting the consent of Congress to the Highway Department of the State of Tennessee to construct a bridge across the French Broad River on the Newport-Asheville, North Carolina, road in Cocke County, Tenn.; with amendment (Rept. No. 1397). Referred to the House Calendar.

Mr. WYANT: Committee on Interstate and Foreign Commerce. H. R. 12913. A bill to extend the times for commencing and completing the construction of a bridge across the Allegheny River at or near the borough of Eldred, McKean County, Pa.; without amendment (Rept. No. 1398). Referred to the House Calendar.

Mr. DENISON: Committee on Interstate and Foreign Commerce. H. R. 12985. A bill authorizing J. T. Burnett, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Mississippi River; with amendment (Rept. No. 1399). Referred to the House Calendar.

Mr. NEWTON: Committee on Interstate and Foreign Commerce. H. R. 13069. A bill granting the consent of Congress to the State of Minnesota to construct, maintain, and operate a free highway bridge across the Mississippi River at or near Aitkin, Minn.; without amendment (Rept. No. 1400). Referred to the House Calendar.

Mr. VINSON of Georgia: Committee on Naval Affairs. H. R. 13252. A bill authorizing the attendance of the Marine Band at the Confederate Veterans' Reunion at Little Rock, Ark.; without amendment (Rept. No. 1401). Referred to the Committee of the Whole House on the state of the Union.

Mr. BURTON: Committee on Foreign Affairs. H. J. Res. 286. A joint resolution to provide for the expenses of participation by the United States in the International Conference for the Purpose of Revising the International Convention for the Protection of Literary and Artistic Works; without amendment (Rept. No. 1402). Referred to the Committee of the Whole House on the state of the Union.

## REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. VINSON of Georgia: Committee on Naval Affairs. H. R. 9300. A bill for the relief of Joseph N. Marin; with amendment (Rept. No. 1403). Referred to the Committee of the Whole House.

Mr. WILLIAMS of Missouri: Committee on Naval Affairs. H. R. 9597. A bill for the relief of Fred Elias Horton; without amendment (Rept. No. 1404). Referred to the Committee of the Whole House.

Mr. WILLIAMS of Missouri: Committee on Naval Affairs. H. R. 11045. A bill to confer jurisdiction upon the Court of Claims to hear and determine the claim of Clara Percy; without amendment (Rept. No. 1405). Referred to the Committee of the Whole House.

## CHANGE OF REFERENCE

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 2011) granting an increase of pension to Catherine Sperling; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 7825) to correct the military record of Michael S. Spillane; Committee on Military Affairs discharged, and referred to the Committee on Naval Affairs.

A bill (H. R. 12791) granting a pension to Agnes W. Case; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

A bill (H. R. 12854) granting a pension to Cordelia Stokes; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

## PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of Rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. DRIVER: A bill (H. R. 13380) authorizing D. T. Hargraves and John W. Dulaney, their heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Mississippi River at or near Helena, Ark.; to the Committee on Interstate and Foreign Commerce.

By Mr. SPEAKS: A bill (H. R. 13381) to amend the national defense act; to the Committee on Military Affairs.

By Mr. GARBER: A bill (H. R. 13382) to amend section 200 of the World War veterans' act of 1924; to the Committee on World War Veterans' Legislation.

By Mr. WHITE of Maine: A bill (H. R. 13383) to provide for a five-year construction and maintenance program for the United States Bureau of Fisheries; to the Committee on the Merchant Marine and Fisheries.

By Mr. LAGUARDIA: Resolution (H. Res. 179) directing the Postmaster General to furnish to the House of Representatives certain information for use of prohibition officials, and for other purposes; to the Committee on the Post Office and Post Roads.

Also, resolution (H. Res. 180) directing the Attorney General to furnish to the House of Representatives certain information concerning prohibition enforcement, and for other purposes; to the Committee on the Judiciary.

Also, resolution (H. Res. 181) directing the Secretary of the Treasury to furnish to the House of Representatives certain information concerning the enforcement of the prohibition act, and for other purposes; to the Committee on the Judiciary.

## PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. DEMPSEY: A bill (H. R. 13384) granting a pension to Belle M. Harris; to the Committee on Pensions.

Also, a bill (H. R. 13385) for the relief of Maj. Welton M. Modisette; to the Committee on War Claims.

By Mr. FOSS: A bill (H. R. 13386) granting an increase of pension to Hannah Connery; to the Committee on Invalid Pensions.

By Mr. GARDNER of Indiana: A bill (H. R. 13387) granting an increase of pension to Della Langdon; to the Committee on Invalid Pensions.

By Mr. GIFFORD: A bill (H. R. 13388) to remit the duty on a carillon of bells imported for St. Stephen's Church, Cohasset, Mass.; to the Committee on Ways and Means.

Also, a bill (H. R. 13389) to remit the duty on an addition to a carillon of bells imported for St. Stephen's Church, Cohasset, Mass.; to the Committee on Ways and Means.

By Mr. HICKEY: A bill (H. R. 13390) granting an increase of pension to Martha A. Harper; to the Committee on Invalid Pensions.

By Mr. KING: A bill (H. R. 13391) for the relief of J. W. Nelson; to the Committee on Claims.

By Mr. MAJOR of Missouri: A bill (H. R. 13392) granting a pension to Irene Lynch; to the Committee on Invalid Pensions.

By Mr. PURNELL: A bill (H. R. 13393) granting an increase of pension to Louelle Simpson; to the Committee on Invalid Pensions.

By Mr. SEARS of Florida: A bill (H. R. 13394) to authorize a preliminary examination and survey of the St. Johns River, Fla., in the general vicinity of Dames Point and New Berlin; to the Committee on Rivers and Harbors.

By Mr. THATCHER: A bill (H. R. 13395) granting an increase of pension to Mary Hughes; to the Committee on Invalid Pensions.

By Mr. VINSON of Kentucky: A bill (H. R. 13396) granting an increase of pension to Elizabeth Burgess; to the Committee on Invalid Pensions.

By Mr. WHITE of Colorado: A bill (H. R. 13397) authorizing the promotion on the retired list of the Navy of Herschel Paul Cook, lieutenant, junior grade; to the Committee on Naval Affairs.

By Mr. ZIHLMAN: A bill (H. R. 13398) granting an increase of pension to Emma E. Sinnisen; to the Committee on Invalid Pensions.

## PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

7298. Petition of employees of the United States navy yard, Portsmouth, N. H., urging that the present retirement law be so amended as to grant a maximum annuity of $1,200 per annum after 30 years of service; also that urging optional retirement after 30 years' service; to the Committee on Naval Affairs.

7299. Petition of the New Jersey Conference of the Methodist Episcopal Church, held in Atlantic City, N. J., that Congress consider the establishment of a bureau of peace to promote the best possible relationships with all nations; to the Committee on Foreign Affairs.

7300. Petition of citizens of Washington, D. C., protesting against the Lankford Sunday blue law; to the Committee on the District of Columbia.

7301. By Mr. COOPER of Wisconsin: Petition of residents of Beloit and other places in Wisconsin, protesting against the passage of the Lankford Sunday bill (H. R. 78) or any other compulsory Sunday observance legislation; to the Committee on the District of Columbia.

7302. By Mr. DAVENPORT: Petition of Byron S. Potts and other members of the Bacon Post, Veterans of the Civil War, at Utica, N. Y., urging the passage of a bill to increase the pensions of veterans of the Civil War and widows of veterans; to the Committee on Invalid Pensions.

7303. By Mr. GRIEST: Petition of Mina Rohrer, George E. Downey, Daisy M. Detterline, and other residents of Lancaster, Pa., urging enactment of a law providing increased rates of pension for Civil War survivors and Civil War widows; to the Committee on Invalid Pensions.

7304. By Mr. LOZIER: Petition of 42 citizens of Marceline, Mo., urging the enactment of more liberal pension laws; to the Committee on Invalid Pensions.

7305. Also, petition of 16 citizens of Hale, Mo., urging the enactment of more liberal pension laws; to the Committee on Invalid Pensions.

7306. By Mr. O'CONNELL: Petition of the General Harrison Gray Otis Post, No. 1537, Veterans of Foreign Wars of the United States, Los Angeles, Calif., favoring the passage of House bill 6523, the Wurzbach bill; to the Committee on Military Affairs.

7307. By Mr. HADLEY: Petition of residents of Washington State, protesting against the Lankford Sunday closing bill; to the Committee on the District of Columbia.

7308. By Mr. O'CONNELL: Petition of Harry Stamm, of Brooklyn, N. Y., and 12 other citizens of Brooklyn, N. Y., protesting against the passage of the Lankford bill for compulsory Sunday observance; to the Committee on the District of Columbia.

7309. Also, petition of the Ellay Co. (Inc.), of New York City, favoring the old rate of postage of 1 cent on third-class matter; to the Committee on the Post Office and Post Roads.

7310. By Mr. PORTER: Petition of citizens of Tarentum, Pa., favoring the Sproul bill (H. R. 11410) to amend the national prohibition act; to the Committee on the Judiciary.

7311. Also, resolution of the American Legion, Department of Pennsylvania, York, Pa., urging the enactment into law of legislation for the retirement of emergency Army officers; to the Committee on Military Affairs.

7312. By Mr. RATHBONE: Petition signed by approximately 80 residents of Chicago, Ill., urging that immediate steps be taken to bring to a vote a Civil War pension bill in order that relief may be accorded to needy and suffering veterans and widows of veterans; to the Committee on Invalid Pensions.

7313. By Mr. WINTER: Resolution re House bill 9956, from E. W. Powell, president Casper Lions Club, Casper, Wyo., and F. H. Healey, president Saratoga Lions Club, Saratoga, Wyo.; to the Committee on Irrigation and Reclamation.

# SENATE

## SUNDAY *April 29, 1928*

*(Legislative day of Saturday, April 28, 1928)*

The Senate reassembled at 11.45 o'clock a. m., on the expiration of the recess.

### FUNERAL OF THE LATE REPRESENTATIVE MADDEN

The VICE PRESIDENT. In accordance with Senate Resolution 211, the Senate will now proceed to the Hall of the House of Representatives to attend the funeral of the late Representative MARTIN B. MADDEN, of Illinois, and at the conclusion of the exercises will stand adjourned until 12 o'clock noon to-morrow.

The Senate, preceded by the Sergeant at Arms, the Vice President, and the Secretary, proceeded to the Hall of the House of Representatives; and on the conclusion of the exercises there, pursuant to the order heretofore entered, stood adjourned until to-morrow, Monday, April 30, 1928, at 12 o'clock meridian.

## HOUSE OF REPRESENTATIVES

SUNDAY *April 29, 1928*

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Almighty God, unto whom all hearts are open, all desires known, and from whom no secrets are hid, cleanse the thoughts of our hearts by the inspiration of Thy Holy Spirit that we may perfectly love Thee and worthily magnify Thy Holy Name. Amen.

Mr. TILSON. Mr. Speaker, I ask unanimous consent that the reading of the Journal be dispensed with.

The SPEAKER. The gentleman from Connecticut asks unanimous consent that the reading of the Journal may be dispensed with. Is there objection?

There was no objection.

### RECESS

Mr. TILSON. Mr. Speaker, I ask unanimous consent that the House stand in recess subject to the call of the Chair during the funeral services.

The SPEAKER. The gentleman from Connecticut asks unanimous consent that the House stand in recess subject to the call of the Chair. Is there objection?

There was no objection.

Accordingly, at 12 o'clock and 1 minute p. m., the House stood in recess.

### FUNERAL OF THE LATE REPRESENTATIVE MARTIN B. MADDEN

At 12.15 the Vice President and Members of the Senate entered the Chamber and occupied the seats assigned to them, the Vice President occupying a seat at the Speaker's table.

Then came members of the diplomatic corps, the Chief of Staff of the United States Army, the Chief of Naval Operations United States Navy, the Commandant of the Marine Corps, the Chief Justice and Justices of the Supreme Court, and the President of the United States with members of his Cabinet.

The body of the late Mr. MADDEN lay in state in the space in front of the Clerk's desk.

The male quartet of the Metropolitan Memorial Methodist Episcopal Church sang the hymn, "Some Blessed Day."

The Chaplain of the House offered the following prayer:

"There shall be no night there"—weird loneliness and awful silence are broken as our hearts move on through the stillness at the bidding of the voice divine. "O grave where is thy victory?" Through its gloom and anguish our faith arises and we feel ourselves immortal. O God we thank Thee for this great soul who has fallen amid his earthly labor and glory. How great are Thy mysteries and how inscrutable are Thy ways, yet Thy voice is heard. It is heard in solemn warning; it is heard in sweet encouragement to virtue; it is heard in the monitions of conscience and in the aspirations of our better natures. In all these ways Thou dost come to us with the sacred message of wisdom and love. He has left us blessed memory: His heights of thought were the hilltops of the common heart. His broad philanthropy reached over all classes with revealing benediction. His loftiness of patriotism fell upon the ears of the reluctant and stupid and summoned them to higher plane. His great nature touched poverty, toil, wealth, and station and took away their curse. We praise Thee for this statesman whose conscience was ever the pilot of his reason. Heavenly Father of love and mercy, no one but Thou canst know the pain that weighs upon her, as wife and mother, she conceals the grief in her pure, holy breast. His common lot, sorrows and joys she shared and blest him with the ascending power of angelic devotion. God bestow great comfort upon her and all members of the hearthstone. Help us all to rise above tempest and storm into the upper air of spiritual outlook, where there are palaces not made with hands and crowns of glory that never fade away. Through Jesus Christ, our Lord, Amen.

The Chaplain of the House read the burial office.

The male quartet sang the hymn, "Nearer My God, to Thee."

The SPEAKER. Eulogies will be pronounced by the Vice President of the United States and by Hon. JOSEPH W. BYRNS, the ranking minority member of the committee of which Mr. MADDEN was chairman.

The VICE PRESIDENT. We stand at the bier of one whose life has been chiefly devoted to public service. In the minds of all—rising even above the grief at the loss of a dear friend and associate—is the continuing thought of the greatness of that service and the self-sacrifice it entailed.

The life of our friend from his early days in poverty to the day of his death has been one of unremitting toil. No sooner had his industry and ability relieved him, in his earlier days, of the necessity of manual work than he turned with indefatigable industry to public service, for his city and State at first, and then for our Government. His life is the familiar American epic of the rise from humble and hard circumstances to the heights of power in our great Republic. But upon this solemn occasion we who have been his associates and know his work and its burdens, borne in their full measure at all times, especially during the last few years, when at one elbow sat public responsibility and at the other expected death, may draw from his life the lesson of true statesmanship.

In such an hour as this our inner minds form that last final judgment of the life, character, and accomplishments of a dead friend. It is probably the only entirely impartial judgment which we have ever passed upon him. We do not always give verbal expression of it, for, as the Romans say, such always must be good. But, as each one of us knows, the judgment of a life in retrospect is that which endures. "A tree is best measured when it is down."

The rise of a man to a position of power and continued usefulness in Congress is never an accident. For the making of a real career Congress is useful only to the man who is useful to Congress. Here the great law of compensation is always at work—swift and inexorable.

To him who does not recognize that true progress in life, under any condition, is inseparably associated with self-denial, Congress offers the temptation of quick notoriety at its heavy cost in loss of public respect.

The pitfalls in Congress are many for him who follows the easy quest of notoriety which, when not based upon accomplishment, is worth nothing. He who enters Congress primarily to work for a career is embarked upon a doubtful venture. Work is not an incident of a career, but a career is the incident of real work. This truth is evidenced by the life of our friend.

Mr. MADDEN was a man whose career of enduring public usefulness in these bodies was based upon toil, during a long period in which he remained in comparative obscurity. This was when he was acquainting himself with the actual business of Government which he proposed to know as he knew his own business.

When one has courage along with industry to inform himself, no mere eloquence in opposition can detract attention from his utterances or lessen their great influence. When MARTIN B. MADDEN rose in his seat to speak upon any question involving the greater business policies of the American Government he spent no time in decorating fact with rhetoric or digressive oratory, and yet no man in either House commanded to a greater degree the attention of his colleagues or the country at large.

We now remember the cry of the hostile crowd in the past withstood in the public interest, not as a political factor affecting political decisions, but only as that which demonstrates the possession of courage, strength, and character, devoted to the permanent public benefit, in him who has died.

We now see that after all the highest decoration one can carry to his grave is that of general public respect—that in the long run this comes only to the statesman who, standing for the ultimate public interest at political risk, is willing at times to defy the clamor of uninformed majorities until through facts and reason he wins them to his position.

We now realize that in the quiet of the night and in his committee room, and outside of office hours, the unremitting labor of this devoted public servant finally brings to him an inarticulate judgment shared by all—"Well done, thou good and faithful servant."

He died as he would have died and as we would have had him die—still at work, despite the feebleness of his advanced years and illness, at his desk in the Capitol and in the arms of a comrade in work. He died with the harness of battle upon him.

He died in the fullness of his moral strength and influence, with his mind, as always, upon the never-ending tasks before him and duty to be done. He died in the consciousness that the results of his constructive work are felt in a better government and in a happier life of our people.

Mr. BYRNS. It is difficult for me to suitably express myself on this sad occasion. MARTIN MADDEN was my friend. I loved him deeply. As I stand here to-day I am conscious of

a sense of great personal loss. My hand and heart reach out to his bereaved family with a sincere sympathy and understanding because my own grief is so poignant. There is not one of you who has come here to-day to mourn over him and pay tribute to his memory who feels otherwise. His honest, intelligent, and faithful service here commanded your respect. His personality and his great heart won your love.

We all know that a leader has fallen, a truly great man has passed away; a great legislator and statesman; a splendid, outstanding citizen; an able and highly successful business man; a devoted and tender husband and father; a good and intensely loyal friend. This epitomizes the life and record of Hon. MARTIN B. MADDEN, whose sudden death on April 27 deeply grieved his colleagues and shocked the entire country.

During the morning he had been busily engaged conducting hearings preliminary to the preparation of the last appropriation bill for the session. The committee had taken a short midday recess. Shortly before time for it to reassemble its great chairman, while sitting at his desk, suddenly received his final summons and his noble spirit took flight to the great beyond. He died as he would like to have died—at his post of duty, actively engaged in the service of his country, to which he had for so many years devoted his splendid talents.

No brave soldier who ever fell in battle more truly sacrificed himself for his country than did he, for his death was hastened by the herculean labors he performed as chairman of the great Committee on Appropriations, and his close attention and leadership in all the important legislation of the Congress. Only a short while before his death he came from a sick bed to confer with the President and other leaders of his party relative to one of the most important measures pending in Congress.

In the last few years of his life his family and friends often urged him to slow up in his public activities and to devote more attention to the conservation of his health. But that high sense of duty which controlled his every act and which was the guiding star of his whole career impelled him to drive onward at full speed until the very last. The arduous duties performed by him as chairman of the Appropriations Committee are not readily appreciated by the public generally. It is not a spectacular service nor one which is carried to the public on the front pages of the newspapers, but it is a service which demands constant, intelligent, and faithful labor. None save those who were associated with him in Congress or who were charged with the administration of our national affairs can appreciate to the fullest extent the value of his service—a service which entitles him to rank as one of the greatest of the many great men who have presided over the Committee on Appropriations in the years that have passed.

The committee room affords the best opportunity for close study of a colleague and even greater opportunity to know the character and worth of the man who presides over it as chairman. Any selfishness, littleness, or disposition to neglect his duty would be exposed. I have served under MARTIN MADDEN'S leadership for nearly nine years. I have had that close, intimate contact possible only under an association of this kind, and I voice the sentiments of every member of his committee when I say that these characteristics were foreign to his character. My affection and respect for him steadily grew with the years.

His service here has ceased, but as surely as this world of ours is constantly swinging forward into the dawn the soul of MARTIN MADDEN has gone forward into a broader and freer spiritual being, and somehow and somewhere will continue to serve.

He was an ardent Republican. He earnestly believed in the principles of his party, and because he believed in them he never lost an opportunity to fight for them. But at the same time he was broad-minded and tolerant in all of his views, and never allowed partisanship to interfere with his personal friendships or permitted it to influence his position on public questions which did not strictly involve matters of party policy.

He was honest, both intellectually and morally. He despised sham and duplicity. His sense of fairness was evidenced by his attitude in the committee. He insisted at all times that the committee hearings and the reports submitted should fully disclose all the facts and thus give to everyone who wished the fullest opportunity to know all the facts bearing on any and all items in appropriation bills.

He was always kind and considerate. He delighted to do his colleagues and his fellow men a favor and responded readily to every call which did not violate his sense of duty. He had the keen perspective and farseeing vision of a constructive statesman and a sound business man, but he stood like a stone wall against extravagance and wastefulness of public moneys, and it would be impossible to even conservatively estimate the many millions of dollars which were saved to the Treasury through his efforts.

Through his business acumen he amassed considerable wealth and through the medium of his financial power he brightened the lives of many who to-day mourn him as a benefactor.

He practiced in his daily life the religion taught and lived by the Man of Galilee. Just two weeks ago in this Chamber at almost this very hour in eulogizing a departed friend and colleague, he gave expression to his views on this subject when he said:

> I was taught to believe, and I still believe it, that we will meet again, and what a joy it is to breathe that thought. It is an inspiration to live right and we men who are open to the criticism of the unjust, as we are frequently, we men who give ourselves to the world, so to speak, particularly to our country, without hope of emolument or reward, do so because we are interested not in ourselves, not in our particular neighbor, but in the Nation, in the world and its advancement, in the movement forward of the human race. Most of us do not have to serve here for a living. Thank God we do not, but we choose to serve because we want a broader field in which to render the service we think our Nation needs than we could render in other fields.

As he said of his deceased friend we can truly say of him:

> He served at a great personal sacrifice. He served because he loved his country and because he loved his fellows, and he was willing to make any kind of a sacrifice that his life might not be lived in vain.

Paraphrasing what he said on that occasion we exclaim, Oh, what a man he was, and what a life he lived, and how we can afford to emulate him! It is men of his type who make for the richness of the patriotism, devotion, and unselfishness in men that build up the nations of the world and makes them move forward to better things—greater liberty, greater happiness, and greater prosperity for humanity.

Those of us who worship the Living God, although we can not always understand His ways, are fortified by our unswerving trust in Him and are comforted even in death. Though we lose those nearest and dearest to our hearts we are given the courage to say: Thy will be done. Fortified and sustained by "unfaltering trust" death is not hideous to one who lived a life like MARTIN MADDEN'S—rather is it beautiful—this step from this world to eternity. Liszt beautifully expressed this thought when he wrote his "Preludes," the theme of which is that each event and each period of our lives are but preludes to that vast and beautiful harmony which we call death. MARTIN MADDEN'S life was a series of such preludes.

And now we must say "Farewell"—the saddest word in our language. Good-by, dear friend. We will try to exemplify the courageous spirit manifested throughout your life in bearing the grief at our parting. And I must let these flowers with their petaled lips and perfumed breath speak in beauty and fragrance the sentiments which I am myself unable to utter.

The male quartet sang the hymn, "Beautiful Isle of Somewhere."

The CHAPLAIN. And now unto Him who is able to keep you from falling and present you faultless before the presence of His glory with great joy, unto the only wise God, our Savior, be glory and majesty, dominion and power, both now and ever. And now may grace, mercy, and peace from God the Father, Son, and Holy Spirit, abide with us and keep us always. Amen and amen.

The President of the United States, with members of his Cabinet, the Chief Justice and the Justices of the Supreme Court, the representatives of the Army and the Navy, members of the diplomatic corps, and the Vice President and Members of the Senate retired from the Chamber.

### AFTER RECESS

The House was called to order by the Speaker at 12.57 p. m.

Mr. TILSON. Mr. Speaker, I ask unanimous consent that the proceedings during the recess may be printed in the RECORD under the proceedings of to-day.

The SPEAKER. The gentleman from Connecticut asks unanimous consent that the proceedings during the recess be printed in the RECORD. Is there objection?

There was no objection.

### ADJOURNMENT

Mr. TILSON. Mr. Speaker, as a further mark of respect to our deceased colleague, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 59 minutes p. m.) the House adjourned until to-morrow, Monday, April 30, 1928, at 12 o'clock noon.

## SENATE

### MONDAY, *April 30, 1928*

The Chaplain, Rev. ZeBarney T. Phillips, D. D., offered the following prayer:

Eternal God, who hast formed and designed us for companionship with Thee, and hast called us to walk with Thee unafraid, show to us the life that serves Thee in the quiet discharge of each day's duty, that ennobles all our work by doing it as unto Thee. We ask Thee not to lift us out of toil but to prove Thy power within it; not for tasks more suited to our strength but for strength more suited to our tasks. Give to us the vision that moves, the strength that endures, that we may find a divine calling in the humblest claim of life and our abundant fruition in work well done; through Him who came to earth disguised in lowliness, Jesus Christ our Lord. Amen.

The Chief Clerk proceeded to read the Journal of the proceedings of Saturday last, when, on request of Mr. CURTIS and by unanimous consent, the further reading was dispensed with and the Journal was approved.

#### MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, announced that the House had passed a joint resolution (H. J. Res. 286) to provide for the expenses of participation by the United States in the International Conference for the Purpose of Revising the International Convention for the Protection of Literary and Artistic Works, in which it requested the concurrence of the Senate.

#### DEVELOPMENT OF THE CAPITOL GROUNDS (H. DOC. NO. 252)

The VICE PRESIDENT laid before the Senate a report of the Commission for the Enlarging of the Capitol Grounds recommending the passage of legislation authorizing the Architect of the Capitol to proceed with a plan, as outlined, for the development of the Capitol area, which was referred to the Committee on Public Buildings and Grounds, ordered to be printed as a document, and printed in the RECORD, as follows:

APRIL 24, 1928.

The SPEAKER OF THE HOUSE OF REPRESENTATIVES OF THE UNITED STATES.

SIR: Under the act entitled "An act to create a commission to be known as the Commission for the Enlarging of the Capitol Grounds, and for other purposes," approved April 11, 1928, there was created the following commission for enlarging the Capitol Grounds:

The Vice President of the United States, the Speaker of the House of Representatives of the United States, the chairman and ranking minority member of the Senate Committee on Public Buildings and Grounds, the chairman and ranking minority member of the House Committee on Public Buildings and Grounds, the minority leader of the Senate, the minority leader of the House of Representatives, and the Architect of the Capitol. In the act referred to, the duty placed upon the commission is as follows:

"The commission is authorized to consider plans and estimates for the creation of a park area to enlarge the Capitol Grounds, including the plans showing the original scheme for the development of this area and the alternative scheme for the development of this and added areas, and to recommend to the Congress such original and alternative plans or schemes with estimates of costs therefor, together with recommendations for the purchase of such other areas as may be considered necessary to give to the plans for the enlargement of the Capitol Grounds a suitable landscape treatment for the Capitol Building in relation to the landscape treatment with the proposed arrangement of the Mall area."

From February 12, 1901, up to the passage of the sundry civil act of June 25, 1910, the intent to set apart the area to the north of the Capitol is clearly set forth in the legislation which provided for relocation of railroad tracks and the combining in a union station of the two separate railroad stations furnishing means of reaching by train the National Capital. Sundry civil act of June 25, 1910, declared it to be the purpose of Congress to ultimately acquire all of the squares Nos. 632, 633, 634, 680, 681, 682, 683, 684, 685, 721, 722, and 723 in the city of Washington, District of Columbia.

After various delays owing to different causes, among them being the World War, the completion of this purchase was not consummated until payment of the final voucher August 17, 1927. The property thus acquired was undeveloped for the purposes of a park and contained not only temporary buildings known as the Government hotels but also many other buildings the removal of which was necessary in order that the ground purchased should be in a condition to be further developed for park purposes. During the year 1927, 34 houses in squares 633, 683, and 684 were razed, the foundations removed, and the excavations filled. There still remains to be razed the Maltby Building, the Government hotels, the Senate garage, and the buildings occupied by the Senate as folding rooms. When the buildings just referred to have been removed the necessary grading of the entire area can be undertaken. Legislative act approved February 23, 1927, provided for the removal of the buildings not occupied by Government activities and the preparation of plans for the development of this area as a park, thereby extending the present grounds of the Capitol.

In the performance of its duties the commission has considered two sets of plans prepared under the direction of the Architect of the Capitol. These plans and the relative cost of each are as follows:

Scheme A contemplates the treatment of this area as a park and the location of a new avenue commencing at the western fountain in front of the Union Station and running in a southwesterly direction and ending at the Peace Monument at the foot of the Capitol Grounds. This plan contemplates in its development the cutting off of a small portion of the northwest corner of the present Capitol Grounds. The cost of the development of this scheme, known as Scheme A, with its contemplated improvements, is $1,585,465. Its disadvantages are—

The cutting off of a section of the present Capitol Grounds.

The bisecting of the area acquired as indicated by the squares previously named making a suitable treatment of this acquired property extremely difficult.

The avenue as contemplated would cross B Street where there is a 7 per cent grade, making the traffic conditions dangerous.

Scheme B provides for an avenue starting from the western fountain in front of Union Station running in a southwesterly direction, crossing B Street near the corner of Second Street and joining Pennsylvania Avenue between Second and Third Streets NW., thereby suitably connecting with the plan for the development of the Mall. This scheme virtually enlarges the present Capitol Grounds by extending the line of traffic one square west, thus diverting traffic from its present proximity to the west boundary of the Capitol Grounds. It also provides for the closing of North Capitol Street at D Street and detours the traffic to New Jersey Avenue and Delaware Avenue leaving North Capitol Street open for a vista street. It makes possible the closing of C Street to vehicular travel if provision is made for retaining existing street-car lines. This scheme provides for the placing of tracks in a subway crossing under Delaware Avenue and passing them under a terrace in such a way that the grounds afford an unbroken aspect. Included in this rearrangement the street-car lines and tracks on Delaware Avenue are removed and replaced on First Street NE., making a direct line to the Union Station with a car stop beneath Delaware Avenue for the C Street line with a convenient subway connection with the basement in the Senate Office Building. By the closing of North Capitol Street and C Street it becomes possible to treat the area of four city blocks as a park worthy to be called an extension of the Capitol Grounds. Scheme B also provides for a shelter for automobiles used in connection with the Capitol in the form of an underground garage with its floor approximately at the level of C Street and extending from Delaware Avenue to New Jersey Avenue by which a space for parking automobiles and trucks is amply provided.

These studies have been discussed at length with the Federal City Park and Planning Commission and the Fine Arts Commission, and the location of the avenue as presented in Scheme B was approved by both commissions. It is true that this scheme involves the acquisition of some private property, particularly the triangular points of the corners of blocks 630 and 631 at the intersection of North Capitol and D Streets and New Jersey Avenue and C Street, respectively. The resulting advantage of this is that by clipping the corners of those blocks there are produced facades of buildings facing the Capitol Park instead of leaving sharp angles projecting into it.

Scheme B contemplates the acquisition of land at the north end of Union Square, comprising blocks 631, lot 1; block 630, lots 1, 2, and 818; reservation 12; block 574, lot 800; and the western half of block 633 and square 575.

Pursuant to the authority of law and having in mind the unquestioned desire of Congress for a proper and artistic development of the Capitol Grounds and their environs as a harmonious factor in relation to the beautification of the city of Washington, the commission recommends the adoption of Scheme B. This plan in detail and in point of superiority over any alternative plans is as follows:

It contemplates an avenue starting from the western fountain in front of Union Station proceeding in a southwesterly direction to that portion of Pennsylvania Avenue between Second and Third Streets, to be known as Union Square in the proposed development of the Mall area. This gives a marginal avenue with a direct connection to Pennsylvania Avenue in a formal and splendid manner. This avenue crosses B Street at a point where the grade is suitable for a street crossing. This deflects travel which would go directly to the northwestern corner of the Capitol Grounds if Scheme A had been recommended. By the adoption of Scheme B and the rearrangement of existing streets in the 12 squares now owned by the Government, it makes possible the treatment of a large area in a suitable manner which could not be done if this large area were bisected by an avenue as in Scheme A. It provides thereby for a suitable approach to the Capitol from the north, the removal of such car lines, the building of terraces, the lowering of street-car tracks so that there are no cars seen between

the Union Station and the Capitol, makes this view of the Capitol far more attractive than any other plan developed.

The cost of Scheme B is for improvements, $1,871,021; for acquisition of land, $3,041,393; total, $4,912,414.

The commission recommends the enactment of legislation which will authorize the Architect of the Capitol to proceed with the adopted plan as outlined herein. Its consummation involving as it does the purchase of land and buildings, perhaps condemnation proceedings, the removal of buildings, the cutting of new streets, the removal of tracks, etc., will require considerable time.

In order that the development of the Capitol Grounds may progress as the Congress evidently seriously intended as early as 1901, the commission urges early action on the recommendations herein contained.

Respectfully submitted.

CHARLES G. DAWES,
*Vice President of the United States.*
NICHOLAS LONGWORTH,
*Speaker of the House of Representatives of the United States.*
HENRY W. KEYES,
*Chairman Senate Committee on Public Buildings and Grounds.*
FRITZ G. LANHAM,
*Ranking Minority Member of the House Committee on Public Buildings and Grounds.*
RICHARD N. ELLIOTT,
*Chairman House Committee on Public Buildings and Grounds.*
JAS. A. REED,
*Ranking Minority Member of the Senate Committee on Public Buildings and Grounds.*
JOSEPH T. ROBINSON,
*Minority Leader of the United States Senate.*
FINIS J. GARRETT,
*Minority Leader of the House of Representatives.*
DAVID LYNN,
*Architect of the Capitol.*

---

MEMORANDUM

For the information of the Congress it is stated that certain parcels of land in which the title is vested in the District of Columbia have not been acquired by the commission, intrusted with the purchase of land within the 12 squares referred to, for the reason that there is no authority vested in the District of Columbia to convey the land in question. The parcels of land are as follows: Square 633. Lots 51, 52, 53, 67, 68, 70, 71, 72, 73, and 74, commonly known as the Arthur School property, containing 19,590 square feet, improved by a brick eight-room schoolhouse.

Square 722 contains parcels totaling 3,016 square feet, consisting of ground originally withheld by the District of Columbia for alley purposes.

Square 682, lot 12, a strip of ground 5 feet in width and taporing to zero. Area not given.

Square 721, a part of old E Street, a remainder created by readjustment of the street to conform to the contour lines of the Plaza. Area not given.

## CLAIM OF PRIVATE RALPH RHEES, UNITED STATES ARMY

The VICE PRESIDENT laid before the Senate a communication from the Comptroller General of the United States relative to the claim of Ralph Rhees, United States Army, which, with the accompanying report, was referred to the Committee on Claims.

## HOUSE JOINT RESOLUTION REFERRED

The joint resolution (H. J. Res. 286) to provide for the expenses of participation by the United States in the International Conference for the Purpose of Revising the International Convention for the Protection of Literary and Artistic Works was read twice by its title and referred to the Committee on Foreign Relations.

## EFFECT OF GRAIN GRADING UPON EXPORTS FROM AMERICAN PORTS

Mr. WALSH of Massachusetts. Mr. President, recently several Senators and representative citizens of commercial, maritime and port development associations of seaport States along the Atlantic coast from Maine to Virginia have been in conference seeking to find a solution of the disadvantages which Atlantic seaports in the United States experience owing to the diversion of American grain by export shipment through Montreal and other Canadian ports.

The extent to which our American ports have been affected by the difference in the systems of grain inspection in recent years is startling.

Our exports of grain vary enormously from about 135,000,000 bushels in some years to as low as 40,000,000 bushels. When our exports are exceedingly high American grain cleared through Canada average 35 to 40 per cent. In the low year of 1924–25 it was more than 50 per cent. For the fiscal year ended June 30, 1927, the amount of American grain that cleared the port of Montreal was approximately 67,000,000 bushels, and in the fiscal year of 1922 it was 34,000,000 bushels, nearly 100 per cent increase since the difference in the systems of grading grain was inaugurated. So long as there is an advantage whereby importers can dispose of No. 3 American wheat as No. 2 by export through Montreal they are going to do it. It is doubtful if we can meet the situation by lowering American grades, for most of the grain graded in Montreal now is American grain and Montreal can retaliate by further lowering the grades. We could respond to that only by continued lowering, and we would get to the point where American grain would be discredited and only Canadian grain remain.

Naturally the ports nearest the Canadian ports of Montreal, St. John, and Halifax have suffered most, but every port along the seaboard has felt, and is feeling, the effects of this discrimination in the grading of American grain for export.

One Atlantic port, which formerly had four trans-Atlantic lines engaged in this business, has now but one line, and its shipments of grain have been reduced to almost zero. It is only a matter of time, if the present tendency continues, when the larger part of the exportation of American grain will be through Canadian ports.

There are several reasons for this situation. It is due, in part at least, because of the different methods employed by Canadian officials in the grading of American grain shipped for export, from those employed by United States officials in grading grain that is exported through American ports.

A conference at which Secretary Jardine was present, held some weeks ago by the representatives of the ports concerned and the several Senators interested, resulted in Secretary Jardine stating that he would give the matter further careful consideration, for the matter has been for years before his department, and report later what, if anything, could be done to remove the obstacles that are resulting so disastrously in diminishing the exportation of American grain through our own ports.

Recently I received a letter from Secretary Jardine in which he states his conclusions. He does not think favorably of proposed legislation that was discussed at the conference held. He now suggests negotiations through the State Department.

I request, in order that all who have an interest may know what the present situation is, that the letter which Secretary Jardine addressed to me on April 12, stating his final conclusion, and letters written by me to Secretary Jardine and to Secretary Kellogg, be printed in the CONGRESSIONAL RECORD.

Mr. COPELAND. Mr. President, before the request is granted I desire to say that we ought to express our gratification for the able manner in which the Senator from Massachusetts has gone into this matter so very thoroughly. It is a matter of great concern when we find that 93,000,000 bushels of American wheat went out through Montreal, while we exported through our Atlantic ports less than 40,000,000 bushels. I am very happy that the energetic Senator from Massachusetts has moved in the matter. It is a question of great importance.

Mr. WALSH of Massachusetts. I will say to the Senator from New York that the figures he mentions are included in the letters which I have asked to have placed in the RECORD. I will also say to the Senator that in a few days I expect to address the Senate somewhat at length upon the subject, and also submit a resolution asking that some action on the subject be undertaken.

The VICE PRESIDENT. Without objection, the letters referred to by the Senator from Massachusetts will be printed in the RECORD.

The letters are as follows:

DEPARTMENT OF AGRICULTURE,
*Washington, April 12, 1928.*

Hon. DAVID I. WALSH,
*United States Senate.*

DEAR SENATOR WALSH: Following my recent conference with you and representatives of the North Atlantic ports I have given careful consideration to the difficulties growing out of the grading by Canadian officials of United States grain that is being exported through Montreal. I have also discussed the matter fully with the Secretary of State. In view of the fact that the grain involved is beyond the confines of the United States it is doubtful whether administrative action under existing law, such as the United States grain standards act or new legislation supplementing it, would be effective in caring for the situation. It does appear, however, that some good may be accomplished by closer negotiations with Canadian officials, and the Secretary of State has undertaken this.

I do not feel that a further conference with the interests represented at our meeting would serve any useful purpose. I shall be glad to let you know the outcome of the negotiations with the Canadian officials.

Sincerely yours,

W. M. JARDINE, *Secretary.*

---

APRIL 21, 1928.

Hon. WILLIAM M. JARDINE,

*Secretary of Agriculture, Washington, D. C.*

MY DEAR SECRETARY JARDINE: I acknowledge your letter of April 12.

I think all parties concerned recognize the difficulties inherent in the present situation, yet the fact remains that the consequences to our American ports and American commerce by reason of the diversion of our export grain trade to Canadian ports are so grave that it seems to me we should not lightly conclude that the only relief lies in the ability of our State Department to persuade Canada to rectify her existing grain regulations as will result in restoring to us the export trade Canada is now enjoying.

At our recent conference you pointed to the fact that since 1920 American grain cleared through Montreal for export has increased from about 5 per cent to about 35 per cent, and that it is tending to still greater increase. Others cited figures to show that export grain shipments through Boston and Portland, Me., had faded almost to zero.

Though rail rates play some part in this condition, our difficulty is largely due to the fact that American grain exported through Canada is not subject to the same inspection which is imposed on it here—that American wheat passes through Canadian ports at lower grades than through American ports—that the "dockage" imposed here and not imposed in Canada represents a difference of several cents a bushel to the profit of the exporter who ships through Montreal.

I note that you write that "some good may be accomplished by closer negotiations with Canadian officials." I trust that may prove to be true. But I believe that there should be concerted endeavors, in part by administrative action by your department, in part by pressure upon Canada through diplomatic channels, and in part, perhaps, by legislative action with a view toward retaliatory action to Canada and a withdrawal of some of the privileges we now accord to her exporters.

Unless there is some indication in the near future that the diplomatic negotiations to which you allude are to be productive of effective results, I shall feel obliged to ask Congress to canvass all aspects of the existing perils to American trade and commerce due to encroachments from Canada.

Sincerely yours,

DAVID I. WALSH.

---

APRIL 21, 1928.

Hon. FRANK B. KELLOGG,

*Secretary of State, State Department, Washington, D. C.*

MY DEAR SECRETARY KELLOGG: With other Senators whose constituents have similar concern to my own over the diversion to Canada of American export grain trade, which rightly belongs to our own ports and our own ships, I have recently been in consultation with Secretary of Agriculture Jardine on this subject with a view to discovering what steps, administrative or legislative, ought to be taken by this Government to counteract this increasingly serious situation.

Secretary Jardine now advises me that this subject is receiving the attention of your department, and that negotiations with Canada are now in progress on this score. I hope that a strong assertion of American interests in its own export trade may result in a modification by Canada of its present policy with respect to American grain shipments. I rely upon you to advise me as promptly as the circumstances permit of the success of these negotiations.

For your information I inclose copy of my own reply to Secretary Jardine's recent communication to me on this subject.

Sincerely yours,

DAVID I. WALSH.

BOULDER DAM

Mr. WALSH of Montana. Mr. President, a few days ago I had inserted in the RECORD a report of some of the testimony taken by the Federal Trade Commission relating to public utilities. Because no particular publicity has been given the matter by the press generally, I ask that there be inserted in the RECORD an article appearing in Saturday's Washington Herald setting forth in general some of the testimony adduced the day before. I desire to read a few extracts from it. The first is as follows:

Propaganda against the Boulder Dam bill proved the main, if not the exclusive, activity of the power people, whose funds include the $1,100,000 being spent by the National Electric Light Association this year and the $400,000 collected since last June 1 by the joint committee of utility associations, the more specialized agent of anti-Boulder Dam activity.

I call the attention of the Senate particularly to the following:

2. Judge Healy put into the record a letter by Oxley to the Pennsylvania State utility information director asking for a list of State legislators in Pennsylvania because "we have a particular piece of work which we wish to do with them."

I call attention also to the following:

4. The minutes of the National Electric Light Association's public policy committee, headed by Russell H. Ballard, president of the Southern California Edison Co., threw light on the motive for an annual payment of $30,000 a year to the Harvard University School of Business Administration. The committee is on record as approving this payment on the ground that it will result in a text-book from Harvard on public regulation of utilities and "a textbook covering this ground would better appear under academic auspices than as a publication of the association."

Again:

5. The public policy committee voted to add to the $150,000 appropriated by the Puget Sound Power & Light Co. to attempt a publicity campaign demonstrating the failure of the Seattle municipally owned electric light plant. The policy committee said:

"Seattle's rates are continually cited as lower than those charged by privately owned plants; the claim of successful results of such a policy in Seattle is dangerous and requires refutation."

The VICE PRESIDENT. Without objection, the matter referred to will be printed in the RECORD.

The article referred to is as follows:

POWER INQUIRY DIGS DEEPER IN PROPAGANDA'S FAR-FLUNG NET—HAND OF GIANT CORPORATIONS FASTENED ON NEWSPAPERS AND SCHOOLS, PROBERS FIND—METHODS UNPARALLELED

By Edwin J. Clapp

The hearing yesterday in the Federal Trade Commission's investigation of the power lobby brought out the unparalleled methods by which the public utility interests have got hold of the newspapers and schools which form the public opinion of the country, and the legislators who pass its laws.

In solemn review, Judge Healy, counsel of the commission, conducted a parade of subsidized professors and writers who prepared books and delivered lectures paid for by the power lobby, which then disseminated this literature through the country disguised as bona fide investigations by impartial scientific men.

STUCK TO PROPAGANDA

Propaganda against the Boulder Dam bill proved the main, if not the exclusive, activity of the power people, whose funds include the $1,100,000 being spent by the National Electric Light Association this year and the $400,000 collected since last June 1 by the joint committee of utility associations, the more specialized agent of anti-Boulder Dam activity.

Among the day's revelations of the marvelous workings of light and power in the year 1928 were the following:

1. George F. Oxley, publicity director for the National Electric Light Association, defended the practice of inspiring newspaper editorials with the novel explanation that "it is absolutely fair for me to put into the hands of the editor material so that he can reflect on his own views in editorials."

2. Judge Healy put into the record a letter by Oxley to the Pennsylvania State utility information director asking for a list of State legislators in Pennsylvania because "we have a particular piece of work which we wish to do with them."

$100 A WEEK FOR BOHN

3. Dr. Frank Bohn, a writer, was revealed as recipient of a retainer of $100 a week from the joint committee of National Utility Associations while he was publishing power articles in the Sunday edition of the New York Times of October 2, 1927, and October 30, 1927.

4. The minutes of the National Electric Light Association's public policy committee, headed by Russell H. Ballard, president of the Southern California Edison Co., threw light on the motive for an annual payment of $30,000 a year to the Harvard University School of Business Administration. The committee is on record as approving this payment on the ground that it will result in a textbook from Harvard on public regulation of utilities and "a textbook covering this ground would better appear under academic auspices than as a publication of the association."

5. The public policy committee voted to add to the $150,000 appropriated by the Puget Sound Power & Light Co. to attempt a publicity campaign demonstrating the failure of the Seattle municipally owned electric-light plant. The policy committee said:

"Seattle's rates are continually cited as lower than those charged by privately owned plants; the claim of successful results of such a policy in Seattle is dangerous and requires refutation."

6. Paul Clapp, managing director of the National Electric Light Association, testified to a swing around the circle in the Southwest and Southeast, organizing meetings of utility executives, subordinate officials, and employees to stir up "generally diffused" opposition to the Swing-Johnson bill for Boulder Dam.

7. Alfred Fisher, director of the Missouri committee on public-utility information, in 1926 reported to Oxley that "the most important work done by the Missouri committee last year was in directing the attention of the industry to textbooks in public schools. You will agree with me that it would be most unwise to give this work any publicity." He added: "It is a matter for executive session between leaders of the industry, writers of textbooks, and printers thereof."

8. Prof. Theodore J. Grayson, of the University of Pennsylvania, is shown as the recipient of $407.27 as "fees and expenses" for a public lecture delivered in New Orleans last October. The news report of the lecture, sent to editors by Grayson as a Pennsylvania professor, discloses that he classed Boulder Dam advocates with socialists. This designation would include such supporters of the legislation as the Los Angeles Chamber of Commerce, John Hays Hammond, Gen. George W. Goethals, and President Coolidge.

$291.50 FOR A LECTURE

Grayson received an additional $291.50 for a lecture at Richmond on December 1 last, and $288.29 for another address at Geneva, N. Y., on December 31. Judge Stephen B. Davis, New York head of the power lobby, in a letter to the Federal Trade Commission of March 21, 1928, wrote that "Mr. Grayson is an official of the New Jersey Public Utility Association as well as a college professor." The commission has also learned he is a Philadelphia lawyer, attorney for the New Jersey Water Service Co.

Doctor Bohn was shown to have been paid $100 a week from July 16 to November 23, 1927. Maj. J. S. S. Richardson, publicity director of the joint committee, testified Thursday Bohn was paid this sum for "editing." His activity during this period included an article, "Superpower era of electricity," published in the Sunday New York Times of October 2, 1927, and an article, "The struggle over Government versus private development of water power," in the Sunday New York Times of October 30, 1927. In the October 30 article Doctor Bohn carefully balanced the advantages of public versus private ownership, with the balance always slightly in favor of private ownership.

ADDRESSES SOUGHT

The doctor's services were further explained in a letter of September 16, 1927, written by George F. Oxley, of the National Electric Light Association, to Thorne Brown, director of the Mid West of the National Electric Light Association, and reading:

"I am taking up with the joint committee the question of whether it is possible to arrange for Mr. Frank Bohn to make two or three additional addresses while he is in your division, and I am asking Judge Davis to correspond with you direct."

Perhaps the most amusing exhibit in the hearing is a letter written by Prof. E. A. Stewart, of the University of Minnesota, in 1925, to Dr. S. S. Wyer, long-established writer against public ownership, whose wares have been broadcast by the National Electric Light Association and the joint committee. Stewart thanks Wyer for sending him a pamphlet disputing the success of the Government-owned power system of the Province of Ontario. The professor writes that after reading a few of the excerpts contained in Wyer's pamphlet, "I couldn't help but think of the song:

"'Hallelujah! Thine the glory,
Hallelujah, Amen.
Hallelujah, Thine the glory,
Revive us again!'"

TRIES IT HIMSELF

Professor Stewart became so affected by the Wyer effort that he has recently himself made an elaborate report on what he calls the failure of the Ontario plan for providing cheap electricity for farmers. The pamphlet is being given nation-wide distribution by a Minneapolis public utility.

Dr. S. S. Wyer is author of the latest anti-Boulder Dam pamphlet entitled "Study of the Boulder Dam Project," by Samuel S. Wyer, consulting engineer. This pamphlet, issued by the Ohio State Chamber of Commerce on January 30, 1928, and one of the exhibits introduced into the record, has been distributed broadcast through the country and put into the hands of every Representative and Senator.

The Ohio State Chamber of Commerce came into the picture yesterday when George B. Chandler, its secretary, was shown by exhibits and testimony to have labored for an anti-Boulder Dam resolution at a meeting of State chambers of commerce officials assembled in Atlantic City.

He actually succeeded in getting such a resolution considered favorably by the Connecticut Chamber of Commerce. However, they insisted upon expert advice as to what to do about Boulder Dam, and voted against it only after an adverse resolution had been prepared and submitted by Samuel Ferguson, president of the Hartford Electric Light Co.

WANTED AN INQUIRY

The next move for delaying action on Boulder Dam was prefigured by a resolution presented at the February 16, 1928, meeting of the public policy committee of the National Electric Light Association. The minutes of this session contain the following item:

"Mr. Paul A. Schollkopf, of the Niagara Falls Power Co., presented to the committee the desirability of securing an independent engineering investigation on the Colorado River. It was suggested that the United States Chamber of Commerce might properly set up a commission with the object in view of determining the soundest possible engineering treatment of the river, such a study to be started promptly in order that it may be completed early this fall."

The power lobby's method of working the newspapers is nicely illustrated in a letter of January 19, 1926, written by Oxley, of the light association, to Richardson, then head of the Pennsylvania public service information committee:

"Inclosed please find uncorrected proof of an editorial which will be published in the January 21 issue of the Progressive Labor World, which, of course, you know. Arrangements have been made to have the revised proofs of the editorial in the hands of Charles Penrose to-morrow.

"I thought it might be possible for you to call the editorial to the attention of some of your newspaper friends and perhaps the Associated Press representatives with a view to having them list at least a part of it for use in some other paper in the city."

GREENWOOD'S BOOK

Yesterday's hearings gave further information regarding the propaganda book, "Aladdin, U. S. A.," by Ernest Greenwood, former member of the District of Columbia school board. The book was financed by the National Electric Light Association, which advanced $5,000 in money to Greenwood and then purchased 5,000 copies for $7,500 from Harper & Bros., publishers, "in anticipation of reselling" to public utility companies.

Oxley, in a letter of January 8, 1928, "to member company executives," urged the wide distribution of the book and added the following quaint comment on its scientific value:

"Thomas A. Edison has written a foreword to the book and authorized the use of an autographed photograph as frontispiece. This, of course, will add to the value and convincing quality of the material in the book."

On January 13, 1928, Oxley again circularized "member company executives" with a "pamphlet reprint of an article by Ernest Greenwood which will appear in the February issue of the Industrial Digest." The magazine article, attached to Oxley's letter, was entitled "Panning public utilities," and the subtitle was "What is the basis of the popular pastime of picking on organizations with clean business records which always have paid dividends to their security holders?"

WOMAN URGES BOOK

Sophia Malicki, chairman of the women's committee of the National Electric Light Association, on March 22, 1928, addressed an appeal to "chairmen of women's committees":

"'Aladdin, U. S. A.,' by Ernest Greenwood, is a book every member of the electrical industry ought to read. Students and club members frequently ask for material on the industry; this book is an authoritative source. Teachers and librarians will appreciate having the book brought to their attention or given them."

Further data were produced with respect to the trip to Washington made by ex-Gov. James G. Scrugham, of Nevada, in January, to confer with Judge Stephen B. Davis, director of the joint committee of National Utility Associations, which is leading the fight against Boulder Dam. For this trip Governor Scrugham was paid $600 expense money. The controversy is still unsettled as to whether Scrugham invited himself to the conference or was invited by Judge Davis. Governor Scrugham has been an outstanding advocate of Boulder Dam legislation.

The exact date of the Scrugham-Davis conference was established as January 19 by an entry in an expense memorandum prepared by Judge Davis, accounting for a matter of $3,395.04 of special expenses from December 9, 1927, to January 25, 1928. Attention was called to the fact that from January 12 to January 27 Judge Davis and George B. Cortelyou, president of the Consolidated Gas Co., of New York, and chairman of the joint committee, were together in Washington, as shown by an item of $1,282.14, described as expended for "Mayflower Hotel—Mr. Cortelyou and Judge Davis, railroad tickets, meals, and incidentals."

Scrugham apparently arrived in Washington in the middle of this period. Davis and Cortelyou were obviously in Washington fighting the Walsh resolution for investigation of the so-called Power Trust, for the resolution was defeated after Senate committee hearings on January 16 to 21, inclusive.

Yesterday afternoon the commission's hearings adjourned until next Wednesday to give time to digest the trunk full of additional subpœnaed documents dumped in the hearing room yesterday.

ODDIE SCORES SCRUGHAM FOR POWER LOBBY PAY

Senator TASKER ODDIE, of Nevada, yesterday made a statement criticizing ex-Gov. James G. Scrugham, of Nevada, for accepting money from the power lobby:

"I was amazed that ex-Governor Scrugham should have accepted money from the power interests which are trying to defeat the Boulder Dam legislation.

"This partly accounts for some of the opposition on the part of Secretary Work and ex-Governor Scrugham to myself and to some of the important features of my stand on Boulder Dam legislation.

"Secretary Work and ex-Governor Scrugham have been working very closely together, and ex-Governor Scrugham is Secretary Work's personal representative on these matters in Nevada.

"Their attacks on my policy, in my opinion, were for the purpose of embarrassing the Boulder Dam legislation which we are trying to get through.

"I can see now where some of this influence came from."

Mr. ASHURST. Mr. President, following the example set by the Senator from Montana, who is a past master in filling the RECORD with articles from the press, the time has arrived when I should declare the fact that there is a more insidious lobby here for the Boulder Dam bill than there is against the Boulder Dam bill.

I have no criticism of the Senator from Montana for filling the RECORD. His resolution proposing to allow him to investigate the Power Trust was defeated and my colleague and I voted with him. Doubtless he feels that if he could have disseminated this information from his committee rather than have it filtered out through the Federal Trade Commission it might have some favorable effect upon certain presidential aspirations.

I ask the clerk to read from the Evening Tribune of San Diego, Calif., of date of April 20.

The VICE PRESIDENT. Without objection, the clerk will read, as requested.

The Chief Clerk read as follows:

[From the San Diego Tribune, April 20, 1928]

SEEK FUNDS HERE FOR BOULDER LOBBY

C. A. Hall and George Whitlock, of the American Conservation Club of Imperial Valley, are in San Diego seeking funds to help swell the $100,000 total necessary to maintain the lobby in Washington this year to "put through" the Boulder Canyon Dam legislation.

"The people of the valley can't carry all the load," declared Hall yesterday; "and they are appealing to San Diego County, which will benefit almost as much as Imperial from the dam construction, to help carry on the work."

I regret that the Senator's resolution to allow him to investigate the Power Trust was not adopted. The Senator is a thorough investigator and holds the scales fairly. I ask him now to hold the scales fairly on the Boulder Dam question and to print in the RECORD the views of both sides instead of one. A man fit to aspire to the Presidency ought not to present one side only of a great controversy.

Mr. WALSH of Montana. Mr. President, I merely desire to say that I am particularly interested in the investigation that is being conducted by the Federal Trade Commission. It is natural that I should be. But the Boulder Dam question is a mere incident of that investigation.

PRESIDENTIAL CAMPAIGN EXPENDITURES

Mr. ROBINSON of Arkansas. Mr. President, I desire to submit a resolution and ask its reference to the Committee to Audit and Control the Contingent Expenses of the Senate. The resolution provides for the appointment of a special committee of five Members of the Senate to inquire into expenditures in connection with the presidential campaign. It is believed that the committee created under similar resolutions previously adopted by the Senate have served a useful and a wholesome purpose and many Senators believe that such a resolution and such a committee would prove helpful in informing the public and the Senate in connection with this important subject.

I submit the resolution, which I believe to be in form identical with that proposed four years ago by the Senator from Idaho [Mr. BORAH] and adopted by the Senate, and ask that it be reported and referred to the Committee to Audit and Control the Contingent Expenses of the Senate.

The VICE PRESIDENT. The clerk will report the resolution.

The Chief Clerk read the resolution (S. Res. 214), as follows:

*Resolved*, That a special committee of five be appointed by the Presiding Officer of the Senate to investigate forthwith and report to the Senate as soon as possible the campaign expenditures of the various presidential candidates in both parties, the names of the persons, firms, or corporations subscribing, the amount contributed, the method of expenditure of said sums, and all facts in relation thereto, not only as to the subscriptions of money and expenditures thereof but as to the use of any other means or influence, including the promise or use of patronage and the providing of funds for setting up contesting delegations, and all other facts in relation thereto that would not only be of public interest but would aid the Congress in any necessary remedial legislation.

That said committee is hereby empowered to sit and act at such time and place as it may deem necessary; to require, by subpœna or otherwise, the attendance of witnesses, the production of books, papers, and documents; to employ stenographers at a cost of not exceeding $1 per printed page. The chairman of the committee or any member thereof may administer oaths to witnesses. Subpœnas for witnesses shall be issued under the signature of the chairman of the committee or subcommittee thereof. Every person who, having been summoned as a witness by authority of said committee or any subcommittee thereof, willfully makes default, or who, having appeared, refuses to answer any question pertinent to the investigation heretofore authorized shall be held to the penalties provided by section 102 of the Revised Statutes of the United States.

The expense thereof shall be paid from the contingent fund of the Senate on vouchers ordered by said committee, signed by the chairman thereof and approved by the Committee to Audit and Control the Contingent Expenses of the Senate.

The VICE PRESIDENT. The resolution will be referred to the Committee to Audit and Control the Contingent Expenses of the Senate.

PETITIONS AND MEMORIALS

Mr. WARREN presented a resolution adopted by the Laramie Council of Industry of Laramie, Wyo., favoring the passage of legislation to establish a mining experiment station in Wyoming, which was referred to the Committee on Mines and Mining.

Mr. JONES presented telegrams and letters in the nature of memorials from various organizations, attorneys, and citizens of the State of Washington, remonstrating against the passage of the bill (S. 3151) to limit the jurisdiction of district courts of the United States, which were ordered to lie on the table.

He also presented a resolution of the Seattle (Wash.) Chamber of Commerce, protesting against the passage of the bill (S. 3151) to limit the jurisdiction of district courts of the United States, which was ordered to lie on the table.

He also presented a resolution of the Seattle (Wash.) Chamber of Commerce, protesting against the passage of Senate bill 1093, the so-called Caraway bill, prohibiting the sale of cotton and grain in future markets, which was ordered to lie on the table.

He also presented a resolution of the Seattle (Wash.) Chamber of Commerce, protesting against the passage of Senate bill 1094, amending the practice and procedure in the Federal courts, which was ordered to lie on the table.

He also presented a resolution of the Seattle (Wash.) Chamber of Commerce, favoring the passage of House bill 5641, the so-called Parker-Watson bill, to limit the unification of carriers engaged in interstate commerce, and for other purposes, which was referred to the Committee on Interstate Commerce.

He also presented a resolution of the Seattle (Wash.) Chamber of Commerce, favoring the passage of legislation providing for aided and directed settlement on Federal reclamation projects, which was referred to the Committee on Irrigation and Reclamation.

Mr. CAPPER presented resolutions adopted by the Lions Club of Winfield, Kans., favoring the passage of the so-called Capper-Johnson universal draft bill, which were referred to the Committee on Military Affairs.

LANDOWNERS IN THE ATCHAFALAYA FLOOD WAY

Mr. STECK presented a letter from H. R. Trewin, secretary St. Martin Land Co., of Cedar Rapids, Iowa, relative to lands in the Atchafalaya flood way in connection with flood-control plans, which was referred to the Committee on Commerce.

JURISDICTION OF DISTRICT COURTS

Mr. SHORTRIDGE presented telegrams in the nature of memorials from Messrs. Brobeck, Phleger & Harrison; Miller & Boyken; Sloss & Ackerman; Francis V. Keesling; Herbert W. Clark; Ira S. Lillick, all attorneys at law, of San Francisco, and a letter in the nature of a memorial from William H. Barry, manager Master Printers Association, of Los Angeles, all in the State of California, remonstrating against the passage of the bill (S. 3151) to limit the jurisdiction of district courts of the United States, which were ordered to lie on the table and to be printed in the RECORD, as follows:

SAN FRANCISCO, CALIF., *April 12, 1928.*

Hon. SAMUEL M. SHORTRIDGE,
*United States Senate, Washington, D. C.:*

We are informed that Senate Judiciary Committee has approved Senate bill 3151, which would have the effect of depriving Federal courts of jurisdiction in equity to protect private litigants in their rights under Federal Constitution. We respectfully protest against this legislation as being unwise and dangerous and urge you to oppose its adoption.

BROBECK, PHLEGER & HARRISON.

---

SAN FRANCISCO, CALIF., *April 12, 1928.*

Hon. SAMUEL M. SHORTRIDGE,
*Senate Office Building, Washington, D. C.:*

As practicing attorneys in Federal court we desire to express our disapproval of Senate bill No. 3151, taking certain jurisdiction from United States district courts and giving it to State courts, and hope you will see fit to vigorously oppose passage in Senate.

MILLER & BOYKEN.

---

SAN FRANCISCO, CALIF., *April 12, 1928.*

Hon. SAMUEL M. SHORTRIDGE,
*United States Senator, Washington, D. C.:*

We earnestly hope and urge you will oppose passage of Senate bill 3151, favorably reported by Judiciary Committee. Proposed legislation would deprive Federal courts of jurisdiction in many cases in which resort to those courts has been shown by experience of over a century to be necessary to insure impartial administration of justice.

SLOSS & ACKERMAN.

---

SAN FRANCISCO, CALIF., *April 21, 1928.*

Hon. SAMUEL M. SHORTRIDGE,
*United States Senator, Washington, D. C.:*

I urge your opposition to Senate bill 3151, now in Senate Judiciary Committee, abolishing right to remove cases to Federal courts on ground of diversity of citizenship, because it is subversive of the principle which extends to citizens of diverse citizenship the protection of Federal courts.

FRANCIS V. KEESLING.

---

SAN FRANCISCO, CALIF., *April 12, 1928.*

Senator SAMUEL M. SHORTRIDGE,
*Senate Office Building, Washington, D. C.:*

We protest most earnestly against Senate bill 3151, attempting to deprive United States courts of jurisdiction which they have had for many years and giving this to State courts. Necessary result would be conflict of decisions in different States and would remove great bulwark of protection to property interests. Have canvassed sentiment among many prominent attorneys in San Francisco, and they are all unanimous in condemnation of bill. Would be great blow to stability and certainty of law and distinctly a backward rather than a forward step. My partners join me in asking you to use your utmost efforts to prevent the passage of this most pernicious bill.

HERBERT W. CLARK.

---

SAN FRANCISCO, CALIF., *April 13, 1928.*

Hon. SAMUEL M. SHORTRIDGE,
*The Senate, Washington, D. C.:*

In common with other lawyers to whom we have spoken and with what we understand is the consensus of opinion, we desire to most earnestly protest against adoption of Senate bill 3151, which we understand alters forum for constitutional questions. My six associates join me in this protest.

IRA S. LILLICK.

---

MASTER PRINTERS ASSOCIATION,
OFFICE OF SECRETARY-MANAGER,
*Los Angeles, April 11, 1928.*

Senator SAMUEL M. SHORTRIDGE,
*United States Senate, Washington, D. C.*

DEAR SIR: This association has been informed that S. 3151, by Senator NORRIS, of Nebraska, is another assault on our Federal judicial system. We are appealing to you as the only defender against radicalism that California has in the United States Senate to throw your strength against this revolutionary measure which, if enacted into law, would wreck the whole scheme of the Federal judicial system.

Very truly yours,

MASTER PRINTERS ASSOCIATION,
WM. H. BARRY, *Manager.*

Mr. FLETCHER. Mr. President, there is pending before the Senate a very important bill, S. 3151, to limit the jurisdiction of district courts of the United States. For general enlightenment on the subject I offer and ask to have printed in the RECORD an editorial appearing in the American Bar Association Journal of April, 1928; also an editorial appearing in the Florida Times-Union of April 28, 1928, and a letter from John J. Swearingen, of Bartow, Fla., on the same subject.

Mr. WALSH of Montana. Mr. President, will the Senator kindly tell us what the bill is?

Mr. FLETCHER. It is a bill reported from the Judiciary Committee, introduced by the Senator from Nebraska [Mr. NORRIS], to amend the code so as to limit the jurisdiction of Federal courts, particularly with reference to adverse citizenship.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

[From the American Bar Association Journal]

WHITTLING AWAY AT THE FEDERAL TRIBUNALS

Bills which vitally concern the administration of justice in the Federal courts are pending in Congress. They deserve and should receive the attention of the entire bar.

The Caraway bill is the effort, made familiar at previous sessions, to destroy the power of Federal judges to comment on the credibility of witnesses or the weight of evidence. It has been passed by the Senate and is pending before the House Judiciary Committee.

The American Bar Association is on record as being strongly against this measure. And with good reason. It runs counter to a principle which lies at the heart of the present general movement for the improvement of the administration of criminal justice. Restoration to the State judges of the common-law power of the judge to do exactly the thing complained of in this bill is recognized as a needed step by the various bodies that have been giving most attention to the subject.

If just verdicts are the objects of trials, why deprive the jury of the help it so plainly needs? Juries are not versed in the fine art of weighing the evidence. The judge by his comment has the opportunity to give them the valuable aid of his long experience in weighing and analyzing testimony; he can explain to them the processes by which they can find the truth and distinguish it from error.

The Federal judges have this power now and it works well. It is to a large extent the secret of the greater efficiency of the Federal courts as compared with a large majority of the State courts. The efficiency of English courts in the administration of criminal justice rests to a large extent on this power. To throw it away in the Federal district courts would be a step backward, and one that the Nation can not afford to have taken.

Two other pending bills would affect the jurisdiction of the United States district courts in cases where it is grounded on diversity of citizenship. One (S. 3151) would take away all jurisdiction in such cases, and it has been reported favorably by the Judiciary Committee of the Senate. The other (H. R. 6679) raises the amount necessary to give jurisdiction in such cases from $3,000 to $10,000, and the subcommittee of the Judiciary Committee has reported to that body in favor of an increase to $5,000.

The report of the Senate Judiciary Committee on the Senate bill to take this jurisdiction entirely away observes that "the only reason why this kind of jurisdiction was originally given to United States courts in preference to State courts was because it was believed that a prejudice would exist in State courts against nonresident litigants. Whatever reason may have existed for this belief, it is certain it has long since disappeared and there is no reason now why a nonresident litigant can not get the same justice in State courts that is secured by residents of the State."

In spite of the categorical way in which it is stated, probably very few practicing lawyers would agree with this generalization. In an address at the San Francisco meeting of the American Bar Association, Chief Justice Taft, while disclaiming any discussion of legislative policy, made the following pertinent remarks by way of comment on the proposal to relieve the Federal courts of congestion by taking away this jurisdiction:

"I venture to think that there may be a strong dissent from the view that danger of local prejudice in State courts against nonresidents is at an end. Litigants from the eastern part of the country who are expected to invest their capital in the West or South will hardly concede the proposition that their interests as creditors will be as sure of impartial judicial consideration in a Western or Southern State as in a Federal court.

"The material question is not so much whether the justice administered is actually impartial and fair, as it is whether it is thought to be so by those who are considering the wisdom of investing their capital in States where that capital is needed for the promotion of enterprises and industrial and commercial progress. No single element—and I want to emphasize this because I don't think it is always thought of—no single element in our governmental system has done so much to secure capital for the legitimate development of enterprises throughout the West and South as the existence of Federal courts there, with a jurisdiction to hear diverse citizenship cases."

The committee report in question further observes that "there is no logical reason why there should be an arbitrary distinction as to the amount in controversy. If there is any reason why the United States

district court should have jurisdiction of cases between citizens of different States, where the amount in controversy is over $3,000, it would seem only just and fair that it should likewise have similar jurisdiction where the amount is under $3,000."

Not necessarily. Assuming that there is a reason why the United States district courts should have jurisdiction in diverse citizenship cases—and a very good reason was suggested above—it does not by any means follow that a distinction as to jurisdictional amount is illogical or unfair. If the legislators are of the opinion that the danger of prejudice or partiality, for instance, may arise in the case of litigation involving fairly large amounts and is quite unlikely in the case of less important litigation, it is entirely logical and fair for it to decide, in the light of experience and all the facts obtainable, on the amount required to give jurisdiction. Legislation is familiar with such distinctions, which are not arbitrary but represent a working formula giving due weight to various factors. Congress has heretofore found the device worth while.

Another measure is known as the Shipstead injunction bill and its purpose is to add a new section to chapter 2 of the Judicial Code, reading as follows:

"Equity courts shall have jurisdiction to protect property when there is no remedy at law; for the purpose of determining such jurisdiction, nothing shall be held to be property unless it is tangible and transferable, and all laws and parts of laws inconsistent herewith are hereby repealed."

The proposal on its face would leave the equity courts free in a proper case to employ the writ of injunction to protect physical property—using the word tangible in its customary sense—but would deprive them of the authority to exercise this power where the property in question was intangible, though it might conceivably be much more valuable and more likely to suffer irreparable injury than the tangible property.

For example, the plant would have a right to this protection, but the right to carry on one's business, the right to work, the right to engage in an occupation or profession, the right to employ, would be deprived of it as not being "tangible property."

The bill also deprives the Federal courts of jurisdiction in equity suits on complaint of the United States as well as of private citizens. It undertakes to deprive these courts of jurisdiction in all cases where there is any remedy at law, notwithstanding that the remedy is inadequate. It does not apply alone to labor disputes, where the conflict over the use of injunctions is fiercest—but also deprives all intangible property of protection by means of injunctions.

A proposal so drastic in character—so narrow in its conception of the sort of "property" that is entitled to the full protection of the courts—so extensive in scope and in possible consequences, can not commend itself to the bar as a sober and reasoned effort to improve the administration of justice. It will also doubtless strike many members of the bar as something that can not be done—as an attempt to take away an inherent judicial power with which the legislature has no right to interfere.

As above suggested, the bar should give each of these measures its attention and express its opinion upon them personally and through its accredited organizations. The powers, jurisdiction, and functioning of the Federal courts are matters that peculiarly concern its members, and a strictly professional and impartial view is greatly needed to counteract the political atmosphere in which these proposed changes are brought forward.

---

[From the Florida Times Union, April 28, 1928]

NO DEMAND FOR CHANGE IN LAW

There is no demand whatever, so far as has been noted, for changing the law that for a century and a half has made effective the provision of the Constitution for the establishment and maintenance of Federal courts, which change is proposed in Senate bill 3151, introduced by Senator NORRIS, of Nebraska, and reported to the Senate by the Judiciary Committee of that legislative body.

On the other hand, there are emphatic protests against the bill, including that of the Chief Justice of the United States Supreme Court, who is reported to have said that this bill has features that can be regarded only as most undesirable and harmful. Similar criticism, more freely expressed, however, comes from prominent members of the bar and from individual attorneys at law who have made careful study of this proposed change in the law whereby it is proposed to limit and restrict the jurisdiction of the district courts of the United States to an extent regarded as highly prejudicial to the best interests of the people, and especially of those who have occasion to seek the protection of their interests through the Federal courts.

It is true that the Senate Judiciary Committee has reported the bill to the Senate where it now reposes, to be taken up at any time for final action. But, as called to public attention recently, the Judiciary Committee did not consider it worth while to give opportunity for a hearing of those opposed to the bill, Senator NORRIS, chairman of the Judiciary Committee, explaining that he thought hearings on the bill were not necessary. He further stated that the bill, for which he stands sponsor, is "purely a question of practice that the lawyers on the Judiciary Committee understand as well as other attorneys." To this, reply has been made to the effect that "anyone who read the list of the Senators who now compose the Judiciary Committee will note a sad falling off from the time when eminent lawyers like Edmunds and Thurman, to mention no more, were its ornament and protection."

Notwithstanding the statement made by Senator NORRIS, as above quoted, eminent lawyers, men gifted with understanding and also possessing a high sense of right and justice, have expressed their emphatic disapproval of the Norris bill, asserting, in the language of one such, who has made a painstaking and thorough study of this bill and its effect, that "the bill if enacted would inflict incalculable harm upon the citizens of this country," as was set forth in a preceding article published in these columns.

It is impossible here to discuss Senate bill 3151 in all its various details and to set forth the various forms of disaster it portends and threatens to bring upon the people in the form of revised or amended law that is wholly unnecessary. Moreover, in its present stage the bill is one calling for the immediate and serious attention of Members of Congress, Senators and Representatives from Florida, as from other States, who can not desire to see the interests of their constituents imperiled, their rights and privileges under present law swept away, with the jurisdiction of certain courts that stand as guardians of the property and investment rights of the people curtailed to an extent that makes such courts powerless to aid the people when the latter are called upon to defend their rights and privileges under the law that extends certain guaranties to them and that provides the ways and means by which such guaranties may be enforced legally and justly as well as expeditiously.

This newspaper, therefore, has served its readers and the people generally when it has called public attention to a bill so filled with danger as is Senate bill 3151, and it now remains for the people, through their representatives in Congress, to demand that this bill shall not be enacted into law. Immediate action by letter, telegram, or by personal appeal, however, is necessary, as final action on the bill is likely to be hastened in the rush incident to early adjournment of Congress.

---

BARTOW, FLA., *April 27, 1928.*

Hon. DUNCAN U. FLETCHER,
*Washington, D. C.*

DEAR SENATOR: The Associated Industries of Florida from Jacksonville have called our attention, as well as the other members of the bar, I presume, in Florida, to a proposed amendment to section 24 of Judicial Code pertaining to the original jurisdiction of United States district courts, in which said amendment the diversity of citizenship is stricken. That would practically eliminate the transfer of cases from the State to the Federal court, which, in the humble opinion of the writer, is not, for all the reasons with which you are familiar, and which I might repeat, altogether fair to many litigants who find themselves involved in litigation in the various State courts.

I always hesitate to impose my views on pending legislation on you gentlemen who are there on the job and make this your business; but when called on at times by those who feel the right so to do, we are more or less forced to pass our opinion on for what it is worth.

Thanking you, I am,

Yours very truly,

JOHN J. SWEARINGEN.

SHAKESPERIANA COLLECTION

Mr. FESS. Mr. President, the Capital of the United States is rapidly becoming one of the world's greatest centers of culture. One of the most recent evidences of that is the proposal of Mr. Henry C. Folger, of New York, to house permanently the most remarkable collection of Shakespeare writings that has ever been collected, including some of the original copies, such as the Merchant of Venice and others, valued, it is said, at $100,000. Mr. Folger has expressed a desire to deposit this great collection permanently in Washington. He proposes to erect a building east of the Library here in the Capital for a permanent housing and dedicate this remarkable collection to the culture of the American public.

Recently a rather descriptive account was given of this collection in the United States Daily. I think it ought to be published in the RECORD for a better dissemination than it has had. I therefore ask unanimous consent that it may be inserted in the RECORD at this point.

The VICE PRESIDENT. Without objection, it is so ordered.

The matter referred to is as follows:

[From the United States Daily, Washington, Friday, March 23, 1928]

HENRY C. FOLGER WILL ERECT BUILDING ADJACENT TO LIBRARY OF CONGRESS IN WASHINGTON

Plans of Henry C. Folger, of New York, to erect on land immediately adjacent to the proposed extension of the Library of Congress a building to house his collection of Shakesperiana, described as "one of the finest in existence," and to dedicate the building and collection to the American people was announced March 22 by the Library of Congress.

The building is to be located on the northern half of square 760, fronting on East Capitol Street. This area in the square was eliminated from a bill just introduced in Congress proposing the acquisition of the remainder of square 760 and all of square 761, to the rear of the Library, to be used for extension of the present Library structure.

GREAT SHAKESPERIANA COLLECTION

The full text of the announcement follows:

A prospect of extraordinary interest to scholars and to connoisseurs has just been disclosed in connection with a bill recently reported by the House Committee on the Library, the bill (H. R. 9355) for the acquisition of the two squares (760 and 761) to the rear of the Library, with a view to the erection thereon of a structure auxiliary to the present building.

It is that a considerable portion of the land originally included in the bill—in fact, the entire northern half of square 760, fronting on East Capitol Street and known as Grant Row—has been acquired by the owner of one of the finest existing collections of Shakesperiana, with the intention of constructing thereon a suitable building, placing in it his collection, and endowing it with an ample fund for its maintenance and further development, the whole dedicated to the public.

In reporting out the bill, therefore, the committee recommends that this tract be omitted from the area proposed to be acquired for the Government, the report explaining the omission by the statement that the tract "is to be developed in a project that will not merely not interfere with the utilization of the residue of the two squares for Library uses but be fully consistent with it and, indeed, prove cooperative with the larger purposes of the Library as an institution."

No further particulars accompany the reports, but they are now released by the librarian, Mr. Putnam.

20,000 VOLUMES IN LIBRARY

The collection itself—the result of years of patient effort and costly expenditure—though developed very quietly and held rather privately, has a world fame for its editions and its numerous variant copies of the works of Shakespeare himself, and of his Elizabethan contemporaries.

No catalogue of it has been before the public; but from time to time its treasures have been disclosed through some "census" of the existing Shakespeare rarities (quartos or first folios), or note of some extraordinary acquisition, as of a copy of the first "collected" edition preceding the first folio. Some years ago it was estimated to contain about 20,000 volumes; and in the quality of its items it is not surpassed even by the British Museum.

The building that Mr. Folger proposes for it will, he assures the committee, be in full harmony with the monumental character of the group with which it will be associated. This implies that, as seen from Capitol Square, it will prove a fitting vista through the gap formed by the Library of Congress on the south side of East Capitol Street and the proposed Supreme Court building on the north.

His further assurance of an ample endowment for its maintenance and the further development of the collection perfects the project in its general outlines.

In the completeness of its provisions, as well as in the distinction within its field of the subject matter involved, it has had no parallel in Washington since the establishment of the Freer Gallery. And the selection of Washington for it—as "the ideal place"—and this proximity to the Library of Congress as "the ideal site," carries extraordinary promise of what the National Capital and Capitol Hill may become as a center for cultural studies.

CONTROL NOT IMPORTANT

Asked whether the Folger Library would be under the general jurisdiction of the Library of Congress, as the Freer Gallery is of the Smithsonian, Mr. Putnam stated that Mr. Folger had not indicated such an intention. He added that the matter (of jurisdiction) was, however, relatively immaterial.

"What is of prime importance," he remarked, "is that this collection will, in its service to scholarship and to culture, be linked with the service of the National Library. Also, that the sort of material that it includes (the expensive rarities) is the sort that the Library of Congress could not possibly acquire out of the public funds.

"As an example, therefore, of the cooperation of individual citizens which may amplify and complement what the Government itself has developed here in the promotion of scholarship, it should exercise a far-reaching influence."

As to the effect of Mr. Folger's project upon the plans for the Library of Congress itself, Mr. Putnam pointed out that the immediate effect was to reduce the proposed acquisition by one-fourth, leaving, however, a residue (square 761 and one-half of square 760) as large as the area covered by the present Library Building.

It reduces also by $180,000 the amount proposed to be appropriated, leaving this as $600,000 instead of the $780,000 originally proposed. It will also simplify and economize the treatment of the proposed auxiliary library structure, the frontage on East Capitol Street being taken care of in a dignified way by the façade of the building to be erected by Mr. Folger.

In brief, Mr. Folger's project fits so neatly into the official one that if the two squares were already Government property, this northern section might well have been dedicated to it.

Mr. Folger (born in New York City in 1857) is a graduate of Amherst College (class of 1879), from which he has also a master's degree in arts and an honorary doctorate of letters, conferred in 1914. During law studies at Columbia he entered the service of the Standard Oil Co. of New Jersey, and from 1911 on was for some years president of the Standard Oil of New York.

His outside interest, amounting to an avocation, has been the study of Shakespeare and of the Elizabethan drama and the collection of this library of Shakespeariana. He has contributed many monographs to the critical literature of the subject.

REPORTS OF COMMITTEES

Mr. WATERMAN, from the Committee on Claims, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

A bill (S. 1643) for the relief of Joseph J. Baylin (Rept. No. 926); and

A bill (H. R. 4229) for the relief of Jennie Wyant and others (Rept. No. 927).

Mr. TYSON, from the Committee on Military Affairs, to which was referred the bill (S. 1587) for the relief of Nelson K. Holderman, reported adversely thereon and moved that the bill be indefinitely postponed, which was agreed to.

Mr. STECK, from the Committee on Military Affairs, to which was referred the bill (S. 2894) for the relief of Robert O. Edwards, reported it without amendment and submitted a report (No. 928) thereon.

He also, from the same committee, to which was referred the bill (H. R. 6908) for the relief of Michael Ilitz, reported it with an amendment and submitted a report (No. 929) thereon.

Mr. BLAINE, from the Committee on Military Affairs, to which was referred the bill (H. R. 7227) for the relief of William H. Dotson, reported it without amendment and submitted a report (No. 930) thereon.

He also, from the same committee, to which was referred the bill (S. 3690) to correct the military record of Harley O. Hacker, reported it with amendments and submitted a report (No. 931) thereon.

He also, from the same committee, to which was referred the bill (H. R. 7992) for the relief of Sally Mattie Macready, widow of Edward Daniel Macready, reported adversely thereon.

He also, from the Committee on the District of Columbia, to which was referred the bill (S. 3828) to amend Public Law No. 254, approved June 20, 1906, known as the organic school law, so as to relieve individual members of the Board of Education of personal liability for acts of the board, reported it with amendments and submitted a report (No. 932) thereon.

Mr. McNARY, from the Committee on Agriculture and Forestry, to which was referred the bill (S. 4135) to conserve the water resources and to encourage reforestation of the watersheds of Los Angeles County by the withdrawal of certain public lands included within the Angeles National Forest from location and entry under the mining laws, reported it without amendment and submitted a report (No. 933) thereon.

Mr. McNARY. From the Committee on Agriculture and Forestry I report back adversely the joint resolution (H. J. Res. 26) authorizing the Secretary of Agriculture to dispose of real property, located in Hernando County, Fla., known as the Brooksville Plant Introduction Garden, no longer required for plant introduction purposes, and I move that it be indefinitely postponed, a similar resolution, Senate Joint Resolution 95, having been previously approved by the President.

The motion was agreed to.

Mr. REED of Pennsylvania, from the Committee on Military Affairs, to which were referred the following bills, reported them severally without amendment and submitted reports thereon:

A bill (H. R. 244) to enable members of the Reserve Officers' Training Corps who have interrupted the course of training prescribed in the act of June 4, 1920, to resume such training and amending accordingly section 47c of that act (Rept. No. 934);

A bill (H. R. 4588) authorizing an appropriation for the repair and resurfacing of roads on the Fort Baker Military Reservation, Calif. (Rept. No. 935);

A bill (H. R. 5789) to provide for the gratuitous issue of service medals and similar devices, for the replacement of the same, and for other purposes (Rept. No. 936);

A bill (H. R. 5806) to authorize the purchase of real estate by the War Department (Rept. No. 937);

A bill (H. R. 6652) to fix the pay and allowances of chaplain at the United States Military Academy (Rept. No. 938);

A bill (H. R. 7752) to limit the issue of reserve supplies or equipment held by the War Department (Rept. No. 939);

A bill (H. R. 7937) to authorize mapping agencies of the Government to assist in preparation of military maps (Rept. No. 940);

A bill (H. R. 11808) to authorize an appropriation for the purchase of land at Selfridge Field, Mich. (Rept. No. 941); and

A bill (H. R. 11809) to authorize an appropriation to complete the purchase of real estate in Hawaii (Rept. No. 942).

Mr. REED of Pennsylvania, also, from the Committee on Military Affairs, to which was referred the bill (H. R. 8105) to provide for the membership of the Board of Visitors, United States Military Academy, and for other purposes, reported it with an amendment and submitted a report (No. 943) thereon.

Mr. BAYARD, from the Committee on Claims, to which were referred the following bills, reported them severally without amendment and submitted reports thereon:

A bill (H. R. 1537) for the relief of William R. Connolly (Rept. No. 944);

A bill (H. R. 6436) for the relief of Mary E. O'Connor (Rept. No. 945); and

A bill (H. R. 10192) for the relief of Lois Wilson (Rept. No. 946).

Mr. BAYARD also, from the Committee on Claims, to which was referred the bill (H. R. 2473) for the relief of Louie June, reported it with an amendment and submitted a report (No. 947) thereon.

Mr. BLACK, from the Committee on Military Affairs, to which was referred the bill (H. R. 1598) to provide for the retirement of August Wolters as a first sergeant in the United States Army, reported adversely thereon and moved that the bill be indefinitely postponed, which was agreed to.

He also, from the Committee on Claims, to which were referred the following bills, reported them severally without amendment and submitted reports thereon:

A bill (H. R. 3372) for the relief of George M. Browder and F. N. Browder (Rept. No. 948);

A bill (H. R. 3442) for the relief of Clifford J. Sanghove (Rept. No. 949);

A bill (H. R. 3936) for the relief of M. M. Edwards (Rept. No. 950); and

A bill (H. R. 7061) for the relief of William V. Tynes (Rept. No. 951).

Mr. MAYFIELD, from the Committee on Claims, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

A bill (H. R. 3216) for the relief of Margaret T. Head, administratrix (Rept. No. 952); and

A bill (H. R. 4993) for the relief of William Thurman Enoch (Rept. No. 953).

Mr. SWANSON, from the Committee on Naval Affairs, to which was referred the bill (H. R. 5968) for the relief of Byron Brown Ralston, reported it without amendment and submitted a report (No. 954) thereon.

Mr. SHORTRIDGE, from the Committee on Naval Affairs, to which was referred the bill (H. R. 4012) for the relief of Charles R. Sies, reported it without amendment.

Mr. CAPPER, from the Committee on Claims, to which were referred the following amendments, reported them severally without amendment and submitted reports thereon:

A bill (H. R. 1529) for the relief of the heirs of John Eimer (Rept. No. 955);

A bill (H. R. 5398) for the relief of the heirs of the late Dr. Thomas C. Longino (Rept. No. 956); and

A bill (H. R. 11741) for the relief of Thomas Edwin Huffman (Rept. No. 957).

Mr. HOWELL, from the Committee on Claims, to which was referred the bill (H. R. 8808) for the relief of Charles R. Wareham, reported it without amendment and submitted a report (No. 958) thereon.

He also, from the same committee, to which was referred the bill (S. 513) for the relief of the Hottum-Kennedy Dry Dock Co., of Memphis, Tenn., reported it with an amendment and submitted a report (No. 959) thereon.

Mr. WATERMAN, from the Committee on the Judiciary, to which was referred the bill (H. R. 8229) for the appointment of an additional circuit judge for the sixth judicial circuit, reported it without amendment.

### ELIZABETH A. MANION

Mr. FESS. From the Committee to Audit and Control the Contingent Expenses of the Senate I report back favorably without amendment Senate Resolution 149, to pay to Elizabeth A. Manion a sum equal to six months' compensation of her deceased sister, Mary Kenny.

Mr. BAYARD. I ask for the immediate consideration of the resolution.

The VICE PRESIDENT. Is there objection to the immediate consideration of the resolution?

There being no objection, the resolution was considered by the Senate and agreed to, as follows:

*Resolved*, That the Secretary of the Senate is hereby authorized and directed to pay from the contingent fund of the Senate to Elizabeth A. Manion, sister of Mary Kenny, who was an attendant in charge of the ladies' retiring room in the Senate Office Building, six months' compensation at the rate she was receiving by law at the time of her death, the said sum to be considered inclusive of funeral expenses and all other allowances.

### HEARINGS BEFORE THE COMMITTEE ON INTEROCEANIC CANALS

Mr. FESS. From the Committee to Audit and Control the Contingent Expenses of the Senate I report back favorably without amendment Senate Resolution 209 and ask unanimous consent for its immediate consideration.

The VICE PRESIDENT. Is there objection to the immediate consideration of the resolution?

There being no objection, the resolution was considered by the Senate and agreed to, as follows:

*Resolved*, That the Committee of Interoceanic Canals, or any subcommittee thereof, be, and hereby is, authorized during the Seventieth Congress to send for persons, books, and papers, to administer oaths, and to employ a stenographer at a cost not exceeding 25 cents per hundred words to report such hearings as may be had in connection with any subject which may be before said committee, the expenses thereof to be paid out of the contingent fund of the Senate; and that the committee, or any subcommittee thereof, may sit during the sessions or recesses of the Senate.

### INVESTIGATION OF SINKING OF SUBMARINE "S–4"

Mr. FESS. From the Committee to Audit and Control the Contingent Expenses of the Senate I report back favorably without amendment Senate Resolution 205, providing for an investigation of the sinking of the submarine *S–4*, and ask unanimous consent for its immediate consideration.

Mr. KING. Let the resolution be read. First I will inquire, Is the report of the committee a unanimous one?

Mr. FESS. It is.

Mr. KING. And does the Senator from Virginia [Mr. SWANSON] approve of it? I do not see him here.

Mr. FESS. If the Senator wishes, we will let it go over.

Mr. KING. I should not want to object if the Senator from Virginia, the ranking Democratic member of the committee, approves of it.

Mr. WARREN. Mr. President, may I ask the Senator what amount is designated as the limit of expense?

Mr. FESS. Ten thousand dollars.

Mr. WALSH of Massachusetts. Mr. President, what was the inquiry of the Senator from Utah?

Mr. KING. Whether the resolution is unanimously reported and whether it has the approval of the Senator from Virginia.

Mr. WALSH of Massachusetts. Let it be read.

Mr. McKELLAR. I ask to have the resolution read.

The VICE PRESIDENT. The resolution will be read.

The Chief Clerk read the resolution (S. Res. 205) submitted by Mr. ODDIE April 23, 1928, as follows:

*Resolved*, That the Committee on Naval Affairs or a duly authorized subcommittee thereof is hereby authorized and directed to make a full and complete investigation of the sinking of the submarine *S–4* in collision on December 17, 1927, with the United States Coast Guard destroyer *Paulding* off the Massachusetts coast, and the rescue and salvage operations carried on by the United States Navy subsequent thereto; and to report thereon to the Senate as soon as practicable, giving the results of its investigation and with such recommendations as it deems advisable. For the purposes of this resolution such committee or subcommittee is authorized to hold hearings, to sit and act at such times and places, to employ such experts and clerical, stenographic, and other assistance, to require by subpœna or otherwise the attendance of such witnesses and the production of such books, papers, and documents, to administer such oaths, and to take such testimony and make such expenditures as it deems advisable. The cost of such stenographic service to report such hearings shall not be in excess of 25 cents per hundred words. The expenses of such committee or subcommittee, which shall not be in excess of $10,000, shall be paid from the contingent fund of the Senate.

Mr. SWANSON entered the Chamber.

Mr. WALSH of Massachusetts. Mr. President, I will say to the Senator from Utah that the chairman of the Committee on Naval Affairs [Mr. HALE] has already appointed a subcommittee who are investigating the disaster to the submarine *S–4*. This

resolution provides the funds to enable that subcommittee to carry on the investigation, and is approved by the Committee to Audit and Control the Contingent Expenses of the Senate, of which I am a member, and from which the Senator from Ohio is now making the report.

The VICE PRESIDENT. Is there objection to the present consideration of the resolution?

The resolution was considered by unanimous consent and agreed to.

INVESTIGATION OF SALT CREEK OIL LEASES

Mr. FESS. From the Committee to Audit and Control the Contingent Expenses of the Senate I report back favorably, with an amendment, Senate Resolution 202, and ask the attention of the Senator from Nebraska [Mr. NORRIS] to it. The resolution is reported with an amendment in the nature of a substitute.

Mr. WARREN. May we have the amendment read?

The VICE PRESIDENT. The amendment, in the nature of a substitute, will be read.

The CHIEF CLERK. The committee proposes to strike out all after the word "*Resolved*" and to insert:

That the Committee on Public Lands and Surveys, or any subcommittee thereof, in addition to the authority conferred upon it by S. Res. 282, in the Sixty-seventh Congress, and S. Res. 101, in the Seventieth Congress, be, and it is hereby, authorized and directed to make a full and complete investigation as to the occupation, leasing of, and contracts for oil and oil lands in the Salt Creek field in the State of Wyoming, and any other adjacent Government oil lands, for the purpose of ascertaining whether said occupation, leases, or contracts, or any of them, were illegal or fraudulent, and whether the assigning of any such leases or contracts, or the operation under said leases or contracts, has given to any individual, agency, association, partnership, or corporation a monopoly in the production or distribution of oil, or whether the said leases or contracts or assignment of leases or contracts, or operation thereof has tended toward the creation or organization of any monopoly in the production or distribution of oil; and to ascertain and report to the Senate whether said occupation, leases, or contracts, or any of them, are illegal or fraudulent and could or should be annulled or canceled by the United States Government; and, if the said leases or contracts or the assignment of any of said leases or contracts or the operation thereof has been illegal or fraudulent, or has resulted in a monopoly or tended toward a monopoly, to report to the Senate what, if any, legislation should be enacted by Congress for the purpose of curing such evils.

The authority conferred upon said committee by said S. Res. 282, in the Sixty-seventh Congress, and S. Res. 101, in the Seventieth Congress, is hereby extended and continued for the purpose of the additional investigation herein provided for, to the same extent and as fully as though the said resolution were incorporated herein.

The said committee or subcommittee is hereby authorized to sit, act, and perform its duties at such times and places as it deems necessary or proper; to require by subpœna or otherwise the attendance of witnesses; to require the production of books, papers, documents, and other evidence; and to employ counsel, experts, and other assistants. The cost of stenographic service to report such hearings shall not exceed 25 cents per hundred words. The chairman of the committee or subcommittee, or any member thereof, may sign subpœnas and administer oaths to witnesses; and every person duly summoned before said committee or subcommittee who refuses or fails to obey the process of said committee or subcommittee, or appears and refuses to answer questions pertinent to the investigation, shall be punished as prescribed by law.

The cost of the aforementioned investigation and continued investigations shall be paid out of the contingent fund of the Senate on vouchers of the committee or subcommittee, signed by the chairman and approved by the Committee to Audit and Control the Contingent Expenses of the Senate, and shall not exceed the sum of $40,000, in addition to the amount heretofore authorized.

The VICE PRESIDENT. Is there objection to the immediate consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

Mr. WARREN. What is the amount that is still at the disposal of the committee in addition to the sum provided by this resolution?

Mr. FESS. My memory is that there is $8,000 still available.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

The resolution as amended was agreed to.

SENATOR FROM MAINE

Mr. FESS. From the Committee to Audit and Control the Contingent Expenses of the Senate I report back favorably without amendment Senate Resolution 174 and ask unanimous consent for its immediate consideration.

The resolution was read, considered by unanimous consent, and agreed to, as follows:

*Resolved*, That the Secretary of the Senate hereby is authorized and directed to pay from the appropriation for expenses of inquiries and investigations, fiscal year 1927, contingent fund of the Senate, to Hon. ARTHUR R. GOULD, a Senator from the State of Maine, $10,906.04, in full reimbursement for all expenses incurred, including fees and expenses of his attorneys, in defending charges made against him and ordered to be investigated by S. Res. 296, agreed to January 3, 1927.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SHORTRIDGE:

A bill (S. 4267) for the relief of Edward Hewitt; and

A bill (S. 4268) for the relief of George H. Clayberger; to the Committee on Military Affairs.

By Mr. SMOOT:

A bill (S. 4269) to amend the salary rates contained in the compensation schedules of the act of March 4, 1923, entitled "An act to provide for the classification of civilian positions within the District of Columbia and in the field services"; to the Committee on Civil Service.

By Mr. VANDENBERG:

A bill (S. 4270) to admit Stephen Komarik permanently to the United States; to the Committee on Immigration.

By Mr. TYDINGS:

A bill (S. 4271) creating a commission to investigate and report on the relocation of the food-distributing district of the District of Columbia to be moved to make way for the public-building program, and for other purposes; to the Committee on the District of Columbia.

A bill (S. 4272) to carry out the provisions of the Court of Claims in the case of Martha J. Briscoe, widow of John A. Briscoe; to the Committee on Claims.

By Mr. JONES:

A bill (S. 4273) authorizing certain Indian tribes and bands, or any of them, residing in the State of Washington, to present their claims to the Court of Claims; to the Committee on Indian Affairs.

By Mr. GOFF:

A bill (S. 4274) for the relief of James Evans; to the Committee on Military Affairs.

By Mr. McKELLAR:

A bill (S. 4275) interpreting the construction to be placed upon the words "child" and "children" as used in certain sections of the acts approved May 18, 1920, June 10, 1922, and June 1, 1926; to the Committee on Military Affairs.

By Mr. SWANSON:

A bill (S. 4276) granting a pension to Edith Bolling Wilson; to the Committee on Pensions.

By Mr. NEELY:

A bill (S. 4277) granting an increase of pension to David Klingensmith; to the Committee on Pensions.

By Mr. HALE:

A bill (S. 4278) granting an increase of pension to Sarah J. Skillings (with accompanying papers); to the Committee on Pensions.

By Mr. METCALF:

A bill (S. 4279) granting an increase of pension to Anna B. Hutchinson (with accompanying papers); and

A bill (S. 4280) granting an increase of pension to Elizabeth Meyer (with accompanying papers); to the Committee on Pensions.

By Mr. ROBINSON of Indiana:

A bill (S. 4281) granting a pension to Don I. Littell;

A bill (S. 4282) granting a pension to Francis Warren Lavely (with accompanying papers); and

A bill (S. 4283) granting an increase of pension to Lenna Longanecker (with accompanying papers); to the Committee on Pensions.

By Mr. EDWARDS:

A bill (S. 4285) granting a pension to Eliza S. Hull (with accompanying papers); and

A bill (S. 4286) granting a pension to Catherine Ryan (with accompanying papers); to the Committee on Pensions.

AMENDMENT OF TRANSPORTATION ACT OF 1920

Mr. COPELAND. Mr. President, the other day I entered a motion to reconsider the votes by which the bill (S. 3723) to amend and reenact subdivision (a) of section 209 of the transportation act, 1920, was read the third time and passed. I

desire to withdraw that motion, and to introduce a bill to cover the amendments I had in mind. I ask that the bill be referred to the Committee on Interstate Commerce, and request that there may be early action upon it.

The VICE PRESIDENT. Without objection, the motion to reconsider the votes by which Senate bill 3723 was read the third time and passed will be withdrawn, and the bill now introduced by the Senator from New York will be read twice by its title and referred as he has requested.

The bill (S. 4284) to amend and reenact subdivision (a) of section 209 of the transportation act, 1920, was read twice by its title and referred to the Committee on Interstate Commerce.

HERBERT HOOVER

Mr. BLEASE. Mr. President, I ask permission to have printed in the RECORD without reading an article from the China Weekly Review, published at Shanghai, China, Saturday, March 31, 1928; also an article from a paper published in this city called Politics, being an editorial entitled "Jekyll and Hyde"; also an article from the same paper entitled "Hoover no friend of the farmers"; and on page 2 of the same paper an article entitled "FESS defeated for delegate will still be the keynoter"; also an article entitled "Hoover's first vote cast for Woodrow Wilson in 1916." I shall not take the time of the Senate now, but later shall ask for a few moments to discuss one phase of the articles.

The VICE PRESIDENT. Without objection, it is so ordered. The articles are as follows:

[From the China Weekly Review, Shanghai, China, Saturday, March 31, 1928]

According to Mr. Hoover's biographical sketch which appears in the 1926–27 American Who's Who, his connection with China is indicated in the following sentence: "Professional work in mines, railways, metallurgical works in the United States, Mexico, Canada, Australia, Italy, Great Britain, South Africa, India, China, Russia, etc., 1895–1913." However, an earlier issue of the American Who's Who, the 1916–17 issue, contains more information, as the following excerpt shows: "Chief engineer, Chinese Imperial Bureau of Mines, 1899, doing extensive exploration in interior of China. Took part in the defense of Tientsin during Boxer disturbance, 1900. Representative of bondholders in construction of Ching Wang Tao Harbor, 1900; general manager Chinese Engineering & Mining Co., 1901." Hoover and his wife came to China prior to the Boxer uprising, and according to the report which has been widely published was employed by the Chinese to conduct a mining survey of Shansi, Shensi, and the Manchuria Provinces. He was about 25 years old at the time. Soon after his arrival in north China the Boxer trouble developed and he and Mrs. Hoover were bottled up in Tientsin and assisted in the defense of that city against the Boxer forces. Since there was general talk of foreign intervention and the division of China among the powers, the Chinese feared that the extensive coal beds at Chinwantao, popularly known as the Kaiping mines, would be seized by either the Russians or the Japanese. In order to prevent this the Chinese, in accordance with their usual practice in times of international crisis, transferred the title to the mines to Hoover, thus making them, technically at least, an American property and safe from seizure by the Russians or Japanese. The understanding which existed between the Chinese authorities of Chihli Province and Mr. Hoover at the time is not known, but according to report Mr. Hoover went to America for the purpose of obtaining capital for the development of the properties. Being unsuccessful in New York he proceeded to London, where the money was forthcoming and where the Chinese Engineering & Mining Co. (Ltd.) was incorporated. This organization was the father of the present Kailan Mining Administration, the largest coal-producing property in the Chinese Republic. The Kailan Mining Administration is a British corporation, which is supposed to contain a considerable Chinese share interest.

The only criticism which has ever been made regarding Mr. Hoover's record in China hinges on the organization of the Chinese Engineering & Mining Co. (Ltd.), which was incorporated in London for the purpose of taking over and developing the Kaiping coal mines. One of the few living Chinese officials who passed through the exciting Boxer events at Tientsin in 1900 and 1901 is Mr. Tong Shao-yi, former premier in the Peking Government and veteran member of the Kuomintang, who is now living in retirement in his home village in Kwangtung Province. Several years ago, when Hoover was first mentioned for the presidential nomination, the writer of these paragraphs, upon instructions of an American newspaper of which he was correspondent in China, interviewed Mr. Tong Shao-yi regarding Mr. Hoover's connection with the Kaiping mines. Mr. Tong talked very frankly on the subject and stated that the only criticism which any Chinese had in reference to Mr. Hoover's activities at the time was based on a complaint that he had incorporated the Chinese coal interests as a British property. Many Chinese, according to Mr. Tong, thought at the time that Mr. Hoover should have incorporated the properties under American law, or had simply retained the title in his own name until the subsidence of the Boxer trouble and then transferred the property back to the Chinese provincial authorities. One Chinese, Chang Yen-mao, did make a trip to London and, according to report, instituted an action in the British law courts to have the Kaiping mines returned to Chinese control. He lost his case and the British Chinese Engineering & Mining Co. immediately proceeded to develop the properties. This apparently is all there is to the story, except a rumor which has been circulated recently that Hoover became a British subject at the time, which, of course, has no basis in fact whatsoever, and which probably originated from the fact that he participated in the incorporation of the coal properties as a British enterprise. When Mr. Tong Shao-yi was asked flatly whether he approved or disapproved of Mr. Hoover's action at the time, Mr. Tong declined to make a statement.

---

[From Politics, Washington, D. C., April 28, 1928]

JEKYLL AND HYDE

In 1920 there was no concealment of the fact that the firm of Dr. Jekyll Hoover and Mr. Hyde Hoover belonged to the Democratic Party and, as has been previously related in these columns, ran as such in the presidential primaries of several States. In that same year there isn't the shadow of doubt that President Wilson wished a third nomination for himself and was not at all pleased that the San Francisco convention ignored his desire. Next to himself, his preference was for Herbert Hoover, who had consistently upheld all the Wilson policies, even going so far as to indorse the President's plea for a partisan Congress, though at a prior period there had been a statement from him to the effect that "politics was adjourned."

It goes without saying that Mr. Wilson must have entertained the belief that his protégé was a regular Democrat, else he could not have entertained the notion of putting him over as his own successor. It was all well enough to give a place in his Cabinet to Bainbridge Colby, a former henchman of Theodore Roosevelt, and a defeated candidate for the United States Senate on the Bull Moose ticket, or to give secondary offices to nondescripts and misfits like Dudley Field Malone, but the Presidency was a horse of another color. As great as was the power and prestige of the President, he was far too sagacious to have cherished the idea that he could put over the candidacy of any aspirant to the highest office in America about whose Democracy there was the least doubt.

The matter of Hoover's eligibility was discussed by members of the Wilson Cabinet, but while several of them were sympathetic in order to please their chief, there was no enthusiastic response from this source; not that any of them voiced hostility to him on the ground of his membership in the opposition party; they took it for granted that his Democracy was of the simon-pure brand. Hoover himself had so recently returned to America that he had not made up his mind in which camp to alight; his identification with a Democratic administration had not made him a zealous convert, and up to that time he had failed to score a big hit with the G. O. P. In fact, in a political way his mind was confused. In England he had favored the Liberal Party, and when asked here what his party affiliations were proclaimed himself a Liberal, either by reason of his constitutional tendency to avoid a straight-out committal or else because he was too new an inhabitant of the United States of America to recognize that there were differences between the two major organizations.

The country at large, though, had formed the very definite opinion that Hoover was a Democrat by reason of the favor he enjoyed at the White House. For the same identical reason multitudes of Americans to-day believe that he has the cordial though silent approval of President Coolidge and that sooner or later Mr. Coolidge will come out openly in an indorsement of the ex-Briton for the Presidency. So sure were the Democrats of Ohio, Vermont, and Michigan that he spoke their language they entered him in their State primaries, in 1920, and in Michigan he was such a red-hot favorite that he carried the State by a heavy vote over McAdoo, Bryan, and other competitors.

Hats off to the man who can turn such a trick as to "stand in" with two Chief Executives of warring parties and conflicting policies and adapt himself to both without turning a hair. Here is the chameleon outdone. In England a Liberal, in America a Democrat and a Republican by turns. In the vernacular of the sporting world Sir 'Erbert "plays both ends against the middle," and up to date he has worked it with amazing success without experiencing half the difficulty he encountered in getting possession of Chang Yen Mao's valuable coal properties. The Chinese went to the mat with him and got back their coal mines by decision of a London judge; over here they fall for him. Why not, seeing that he had the O. K. of a Democratic President and poses as the legatee of the present holder of that office?

The populace is ever prone to accept a tip from the most august quarter from which political suggestion can come. Andrew Jackson told his countrymen he wanted Martin Van Buren as his successor; Roosevelt did the same friendly act for Taft, and in both cases the result was victory. In these instances there was no hostile public criticism, but at the present time Messrs. Lowden, CURTIS, WATSON, and GOFF fail to see anything admirable in Hoover's retention in the Cabinet and the resulting advantage given him by his occupancy of this post of proximity to the White House.

It must be conceded that it is no ordinary politician that can win the imprimatur of two Chief Executives. Here we have Doctor Jekyll Hoover (Democrat) certified as proper timber to guide the destinies of the Nation in 1920 and eight years later find Mr. Hyde Hoover (Republican) pictured as worthy of G. O. P. support for the same great rôle. Was old P. T. Bœrnum much in error when he declared the American people loved to be humbugged?

In connection with his own success in humbuggery the shrewd Barnum made use of all the arts of publicity known in his day, but this modern disciple of his has gone the old master a lot better, with no very great difference in methods. Barnum was a wonderful advertiser and here is where his successor shines. Who but Hoover could have commandeered the claque that has given him the amazing amount of publicity he has been enjoying? What other candidate ever had such constant adulation of the press? "The little dogs and all, Tray, Blanche, and Sweetheart" have barked his praises in endless columns of the newspapers and in the pages of many magazines and yet not one of them barks that he has ever done anything for the party he claims to represent; not a yelp to tell of his sinister exploitation of luckless orientals; not a whining reminder that he tried to defeat every Republican who ran for Congress in 1918.

Meanwhile the "great English statesman" is said to be not altogether happy. Sustained by the supposedly overwhelming propaganda of his organized bureau of publicity he had not counted on the digging up of a record that should have been covered with the oblivion of vanished years. As smart as the claque was it could not forestall the exposé of those enterprises in the Far East. The claque and its hero are much put out about this, for it's deucedly annoying; so much so, in fact, that if the candidate had known of the revelations there is the best ground for believing he never would have stretched forth his hand for the prize he covets but will never obtain.

HOOVER NO FRIEND OF THE FARMERS

EDITOR POLITICS:

In the issue of the Enid Eagle, Friday, April 13, is an article headed "Jardine takes up defense of Secretary Hoover." He brands charges against Hoover of working a hardship on farmers as false. I am surprised at Jardine, as we farmers, upon whom hinge all other industries of our country, had perfect faith in him as our friend and coworker.

During the late war Mr. Hoover, as food administrator, worked a hardship on the entire farming interests of our country. Farmers remember when wheat was bringing $2.80 per bushel; Mr. Hoover put a minimum price on it which made the price of wheat in Enid, Okla., $1.80 per bushel. One dollar a bushel less, yet kept the price of flour up to high mark for many weeks after. One farmer, 10 miles southeast of Enid, lost by Hoover's reign $1,300 on his wheat crop. This is only one instance of many thousands who lost like amounts. Farmers were buying tons of mill feed, paying same price as before drop in wheat.

I had gone to raising hogs—had 75 head. Hogs were bringing on the market $23 per hundred, and corn on the Enid, Okla., market was $2.25 per bushel. Hoover put a minimum price of $15.50 per hundred on hogs. One bushel of corn puts on 10 pounds of pork. It took $2.25 worth of corn to put on $1.50 worth of pork. Yet Hoover kept on crying "Raise more hogs." It put me, and many others, out of business. Mr. Hoover now pretends to be the farmers' friend. It doesn't take a man with an extra large brain to see why. It worked a very great hardship on the farmers. Some were able to stand it. Many farms were mortgaged. Many could not make the riffle and were closed out. It would be hard to estimate the enormous loss to the farmers. Hoover is a man for the monopolies. These are facts that can not be denied.

R. K. WILSON.

FESS DEFEATED FOR DELEGATE WILL STILL BE THE KEYNOTER

Senator SIMEON D. FESS, of Ohio, chosen to make the keynote speech at the Republican National Convention in Kansas City June 12, failed to win a place among the delegates at large from his own State. His defeat, however, will not mean that his place will be taken by another. The permanent chairman of the convention necessarily must be a member of the convention, but the temporary organization can invite anyone to make the opening address. In 1924, for instance, Dr. Marion Burton was personally selected by President Coolidge to make the keynote address, and was formally invited by the convention. Doubtless this will be done in the case of Senator FESS.

As a candidate for delegate at large, FESS was pledged as a Willis delegate, with Senator CURTIS as his second choice. Since the death of Senator Willis, FESS has been looked upon as favorable to Secretary Hoover's nomination, notwithstanding his pledge to CURTIS. It is inconceivable that, in the circumstances, the Ohio Senator could or would use his position to favor the Commerce Secretary.

Ten years ago, when Hoover joined President Wilson in an appeal to the country for the election of a Democratic Congress, FESS, then chairman of the Republican congressional committee, in the strongest terms denounced Hoover, then food administrator, as an internationalist, questioning his Republicanism, and declaring the Republican Party could not nominate him. In a formal reply to the appeal of Hoover and Samuel Gompers, FESS, as head of the congressional committee, issued this unequivocal statement:

"American voters will not be deceived with specious appeals from Democratic headquarters that a Republican Congress will be interpreted in Europe as against the war. They know as well as Europe knows that every country fighting Germany has a coalition government, adopted since the war began, as an effective war measure, and that ours is the only great country at war which has been conducted on strictly party lines. Europe as well as America knows the attitude of Republicans, whose record is before the world, both on war and peace.

"As to Gompers's psychological appeals, no voter will be stampeded by a report made to order, both as to time and character, and both of which were not only expected but announced by us some days ago. As to Hoover's appeal in an attempt to capitalize the blood of our sons fighting and dying in France, the voters will properly interpret such prostitution of official station the day before election. The Food Administration need only fear such results of investigation as findings in the interest of public welfare compel it. The character of his appeal to be continued uninterrupted and the basis upon which he puts it arouse new interest in his department."

Is it possible that at this date Senator FESS can have changed his mind about the man he so bitterly denounced? Is it possible that the man who would have accepted the Democratic presidential nomination in 1920, and who carried the Democratic presidential primary in Michigan that year, can be regarded now by the man who will make the keynote speech of his party at Kansas City, as a true Republican?

A leopard can not change its spots.

HOOVER'S FIRST VOTE CAST FOR WOODROW WILSON IN 1916

Herbert Hoover's first vote in a national election in America was cast for Woodrow Wilson, Democratic candidate for President in 1916. This statement was made by Senator COLE BLEASE, of South Carolina, on the floor of the Senate. The South Carolinian quoted verbatim, he declared, from a statement made by a Senator when Hoover's name was up for confirmation as a member of President Harding's Cabinet. The statement said:

"This man, Herbert C. Hoover, has spent all his grown-up life in the employ of British corporations in England and Australia. He never voted in the United States until 1916 for Woodrow Wilson."

Senator BLEASE gave this as the first of four reasons why Hoover should never be President of the United States. The other reasons were:

Second. When Americans—in the United States—were paying 10 cents a pound loaf for green, soggy "substitute" bread, England, France, and Belgium were paying 3½ and 4 cents a pound loaf for all-flour, American wheat bread, furnished them by Herbert C. Hoover, the American.

Third. He never accounted for $11,000,000 of the $33,000,000 placed in his hands by the "American Charities (Inc.)" for the starving children of central Europe. Repeated efforts and interrogations by New York publications failed to elicit any response from Herbert C. Hoover or his subordinate in office.

Fourth. When newly appearing in American affairs he, with friends, speculated in American wheat up to $50,000,000 at a time in the Far East. No denial was ever made.

WHITE RIVER BRIDGE NEAR COTTER, ARK.

The VICE PRESIDENT laid before the Senate the bill (S. 3511) granting the consent of Congress to the State Highway Commission of Arkansas to construct, maintain, and operate a bridge across the White River at or near Cotter, Ark., which had been returned from the House of Representatives in compliance with the request of the Senate.

Mr. CARAWAY. Mr. President, a bill providing for the construction of that bridge has passed the House, and the Senate concurred in it after this bill had passed the Senate. I therefore ask that the votes by which this bill was read the third time and passed be reconsidered and that the bill be indefinitely postponed.

The VICE PRESIDENT. Without objection, the votes by which the bill was read the third time and passed are reconsidered, and the bill will be indefinitely postponed.

ANNUAL REPORT OF FEDERAL FARM LOAN BUREAU

Mr. BLEASE. Mr. President, I submit a resolution, which I ask to have read, and then I shall ask for its immediate consideration.

The VICE PRESIDENT. The resolution will be read.

The Chief Clerk read the resolution (S. Res. 215), as follows:

Whereas by act of Congress, July, 1916, known as the farm loan act, it becomes the duty of the Secretary of the Treasury to annually transmit to the Congress the annual report of the Federal Farm Loan Bureau of said department for the purpose of advising the Congress and the public of the true financial condition of the 12 district farmer-

owned Federal land banks and of the privately capitalized joint-stock land banks chartered under said act; and

Whereas said report has not to this late date been filed with Congress, whereas prior to 1927 said report was always available for the deliberation of Members early in January, that necessary remedies might be adopted to safeguard and strengthen a system intended for the financial support of American agriculture; and

Whereas we have reason to believe that the said Secretary of the Treasury now has available said annual report for the last fiscal year, and is again withholding same from the public until after the adjournment of this session of Congress, as he did in 1927, which is contrary to the intent of demanding an annual report, and which deprives thousands of farmer-owners of the 12 district land banks of knowledge of the real condition of their banks; and

Whereas a national scandal is now impending with respect to the financial condition of 6 of the 12 district Federal land banks, due to the failure of the political appointees who have been named to act for the Farm Loan Bureau in the operation of these banks, which the farmer stockholders now fully own; and

Whereas so grave has become the condition in one of these banks that the Committee on Banking and Currency is now considering a resolution which calls for a full investigation of the entire system as a result of startling revelations recently come to light; and

Whereas the financial welfare of thousands of farmer-owners of these district Federal land banks, whose banks are now manipulated by political appointees, is at stake, and their property may be so depressed that it become beyond repair unless Congress is immediately advised of the condition, permitting of necessary remedies; and

Whereas political appointees of the Farm Loan Bureau and the Treasury Department have assured Members of Congress, and are now carrying on a propaganda program among farm-paper and newspaper editors, in order to suppress the real truth being printed, or necessary legislative action taken by this session of Congress; said annual report being the only basis upon which intelligent conclusions may be reached: Therefore be it

*Resolved,* That the Secretary of the Treasury be, and is hereby, directed to immediately transmit to the Senate the annual report of the Farm Loan Bureau for the past fiscal year which he is now withholding from release unnecessarily.

Mr. CURTIS. Mr. President, I have no objection to the adoption of a resolution requesting the Secretary of the Treasury to make the report referred to; but I think it would be unfair to the Secretary to charge that he was unjustly withholding the report unless we had more facts. If the Senator will amend his resolution.

SEVERAL SENATORS. Let it go over.

Mr. CURTIS. Several Senators have asked that the resolution go over, under the rule. I will talk with the Senator about it. I ask that it go over, under the rule.

The VICE PRESIDENT. The resolution will go over, under the rule.

Mr. BLEASE. I ask that the letter which I send to the desk be printed in the RECORD following the resolution.

The VICE PRESIDENT. Without objection, it will be so ordered.

The letter is as follows:

[Extract from letter of farm borrower of Russianized Federal land bank]

WHERE IS THE FARM LOAN BOARD'S REPORT?

Members of the Senate and House should insist upon the Federal Farm Loan Bureau of the Treasury filing with them, in accordance with the farm loan act, the annual report of their administration of the 12 district Federal land banks, and of the transactions of the more than 50 privately capitalized joint stock land banks. This report has been withhheld more than four months, because the Farm Loan Bureau and Andrew W. Mellon, chairman ex officio of the board, fear to let the public know the deplorable facts while the Congress is in session.

SOVIETS FEAR FACTS

This same trick was played on Congress last year when the Farm Loan Bureau, under the domination of Mellon, neglected to file their report until after Congress adjourned, when it was too late for the representatives to take necessary action to remedy many failures of the political hirelings of Mellon, who are now engaged in wrecking the Federal farm loan system and who for the past few months have been busily engaged, under the guidance and leadership of Eugene Meyer, in passing out propaganda about the country to the effect that "everything is all right with the system." If that is so, where is their annual report? Why has not this report of their stewardship of the administration and supervision of the system long since been made public?

CONGRESS SHOULD ACT NOW

The Senate should adopt a resolution demanding that the Farm Loan Board's report be transmitted by Mellon, as becomes his public duty. No longer should the hirelings of the Treasury be permitted to suppress the report of their sovietized manipulations of the 12 district Federal land banks, which, in common with Russianized methods, they stole from the farmers, through a tricky piece of legislation, and which they now hold under their political domination contrary to the Constitution of the United States. By all means, Congress should act now if they wish to return to the folks "back home" with clean hands. No honest representative of the people can consistently say that he has done his best by his people and by the country at large if he is partner (through silence) in permitting his suppression of essential facts to continue longer.

Each and every year prior to 1927 the annual report of the Farm Loan Bureau was released by the Secretary of the Treasury early in the new year session, and printed as a public document and distributed. This year and last, due to the acknowledged miserable failure of the political manipulators of the system, this report has been suppressed and withheld by Mellon, until after the session of Congress adjourned, to permit of no possible action of remedy. How can honest legislators permit this to be repeated this year, in face of the nation-wide scandal now pending, and of the enormous amount of facts revealed by Senator BLEASE, calling for the most rigid investigation of the entire political banking system?

SCANDAL NOW PENDING IN BACKGROUND

Of the 12 district Federal land banks, the capital stock of which is owned by the farmer borrowers, who likewise assume all the liability, half, or 6 now find themselves confronted with a pending scandal. The Farm Loan Bureau and the political directors of these banks are hoping that they can keep the lid on until after Congress adjourns. Some of the most startling revelations are sure to result from facts which are now available, and only a little time will now be needed before the bomb explodes and these banks find their names on the front pages of the daily press, assuming news proportions along with Teapot Dome and Sinclair's oil manipulations. The politicians are anxious to stay on, yet wish to get out before the explosion. Such is the life of the political banker; he lives in deadly fear, both night and day.

In view of the pending scandal, the illegal manipulations of Mellon and his hireling—Dewey—of the Treasury, in closing up the Kansas City, Mo., joint stock land bank, of Department of Justice hirelings forcefully entering private chambers in the offices of this bank and stealing—that is the only word that accurately describes the act—stealing the papers of that bank, forcing it into the hands of a receiver, named by Mellon, who is and has been Mellon's tool in manipulating the affairs of that bank ever since—in view of these and many other illegal acts of the present gang in possession of the farmer's land-banking system, it becomes necessary that the report of the Farm Loan Board be immediately released by Mellon and that a searching investigation of the entire system be set in action immediately by the Senate, in accordance with Senator BLEASE's resolution.

MEYER PASSES OUT PROPAGANDA

Since the facts have been inserted in the CONGRESSIONAL RECORD by Senator BLEASE regarding the true conditions of the farm loan system—a deplorable situation, which is growing worse and worse each day—Farm Loan Commissioner Eugene Meyer and his political hirelings have been busy traveling about the country visiting farm-paper and other editors in an endeavor to suppress the news of their political shortcomings. In customary Republican paroxysms they have tried the slapping on the back of method of assuring one and all that "I am not only great, but also good." Few of the farm-paper editors can swallow this bitter dose—they hear too often and too much from their farmer readers "back home." Some of the larger papers did for a time fall for Meyer's propaganda, but the New York Times, in a notable exposure of the present political methods, revealed to Meyer just how much of his stock they would have; immediately after Meyer's agents visited their offices an exposure article appeared with a two-colmn blackface-type headline. As Abe Lincoln said, "You can't fool all of 'em all of the time."

Senators! Insist that Mellon release that annual report. He has smothered the true facts long enough. Give us facts, not propaganda!

EVA MAY DUNN

Mr. BORAH submitted the following resolution (S. Res. 216), which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

*Resolved,* That the Secretary of the Senate hereby is authorized and directed to pay from the appropriation for "Miscellaneous items, contingent fund of the Senate, fiscal year 1927," to Eva May Dunn, daughter of Reese R. Dutton, late an employee of the Senate, under supervision of the Sergeant at Arms, a sum equal to one year's compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

AMERICAN EXPORTS

Mr. McKELLAR. Mr. President, on yesterday the New York Times, one of our greatest newspapers, published a very interesting article on "What America sells abroad." A large number of products are set out. I thought at first that it referred only to manufactured products, but apparently it does not. It in-

cludes raw products as well. I ask that it be printed in the RECORD, together with a further statement.

Both cotton and lumber were left out of this enumeration entirely. I desire to call attention to the fact that cotton in 1926 constituted $814,400,000 of our exports, more than half as much again as any other product mentioned in the list, and likewise that our sales of lumber abroad amounted to $106,000,000.

The VICE PRESIDENT. Without objection, the article will be printed in the RECORD.

The matter referred to is as follows:

WHAT AMERICA SELLS ABROAD

The following table shows the relative amounts of various products sold by American concerns abroad. The figures do not include goods manufactured in foreign factories of American companies:

| Commodity | Value of exports (1926) | Proportion of world output from United States of America |
|---|---|---|
| 1. Petroleum and products | $556,000,000 | 70 |
| 2. Automobiles | 320,000,000 | 85 |
| 3. Machinery | 280,000,000 | (1) |
| Agricultural | 86,000,000 | 60 |
| Mining and pumping | 38,000,000 | (1) |
| Metal working | 19,000,000 | (1) |
| Printing | 11,000,000 | (1) |
| Textile | 10,000,000 | (1) |
| Sewing machines | 11,000,000 | (1) |
| Locomotives | 5,000,000 | (1) |
| Typesetting | 4,000,000 | (1) |
| Paper mill | 4,000,000 | (1) |
| Shoe | 1,000,000 | 65 |
| 4. Meat and products | 227,000,000 | (1) |
| 5. Metal (except iron and steel) | 200,000,000 | (1) |
| Copper | 121,000,000 | 55 |
| Lead | 13,000,000 | 40 |
| Zinc | 13,000,000 | (1) |
| Aluminum | 9,000,000 | (1) |
| 6. Steel | 174,000,000 | 52 |
| 7. Tobacco | 157,000,000 | (1) |
| 8. Chemicals | 105,000,000 | (1) |
| Medicinal preparations | 20,000,000 | (1) |
| Paints and pigments | 19,000,000 | (1) |
| Toilet preparations | 17,000,000 | (1) |
| 9. Electrical apparatus | 84,000,000 | 52 |
| 10. Rubber | 59,000,000 | (1) |
| 11. Office equipment | 36,000,000 | (1) |
| Typewriters | 19,000,000 | (1) |
| Calculating machines | 9,000,000 | (1) |
| Cash registers | 6,000,000 | (1) |
| 12. Moving pictures | 16,000,000 | 90 |
| 13. Cameras and supplies | 10,000,000 | (1) |
| 14. Safety razors | 10,000,000 | (1) |

(1) Indicates figures are not available.

ESTATE OF HALLER NUTT, DECEASED

Mr. STEPHENS. Mr. President, Order of Business 908, Senate bill 1769, is similar to a bill which has twice passed the Senate. It has the approval of the War Department and the Bureau of the Budget. I ask unanimous consent for its immediate consideration.

Mr. KING. Let it be read.

The VICE PRESIDENT. The Secretary will read the bill.

The Chief Clerk read the bill (S. 1769) for the relief of the legal representative of Haller Nutt, deceased, as follows:

*Be it enacted, etc.*, That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to Sargeant Prentiss Knut, administrator de bonis non cum testamento annexo of the estate of Haller Nutt, deceased, late of Natchez, Miss., out of any money in the Treasury not otherwise appropriated, the sum of $131,328, due the estate of the said Haller Nutt for one mill and 700 bales of cotton taken for use by the United States military authorities, in compliance with the findings of the Court of Claims reported to Congress February 18, 1915.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

RAILWAY RATES ON GRAIN

The VICE PRESIDENT. The Chair lays before the Senate a resolution coming over from a previous day, which will be stated.

The Chief Clerk read Senate Resolution 208, submitted by Mr. WALSH of Montana on the 27th instant, as follows:

*Resolved*, That the Secretary of Commerce be, and he hereby is, directed to transmit to the Senate information as follows:

1. What is the rate for the transportation of wheat by rail from the following points in the United States, to wit: Fargo, Devils Lake, Bismarck, Glasgow, Billings, Bozeman, Havre, Helena, and Kalispell to (a) Duluth, (b) New York, (c) Philadelphia, (d) Baltimore.

2. What is the rate from points in the western Provinces of Canada at distances from Fort William corresponding in distance from Duluth to the points west thereof first above listed to (a) Fort William, (b) Montreal.

3. What is the aggregate amount that would be realized annually by American shippers of (a) wheat, (b) of all grains over and above what they do realize during any 12-month period where the rates on such freight on American railroads are no higher than they are on the Canadian railroads.

4. To what extent are such lesser rates on the Canadian railroads (if they are less) due to charter provisions of said railroads and to what extent are such excessive rates on American railroads (if they are excessive) attributable to the act of Congress approved February 28, 1920.

Mr. WALSH of Massachusetts. Mr. President, I would like to offer a short amendment to the resolution. I move, on page 1, line 8, after the word "Baltimore," that the word "Boston" be inserted, so that the rates to and from Boston will be included.

The VICE PRESIDENT. The Secretary will state the amendment.

The CHIEF CLERK. On page 1, line 8, after the word "Baltimore," insert a comma and "(e) Boston."

Mr. WALSH of Montana. I have no objection to that.

Mr. JONES. Mr. President, may I ask the Senator from Montana if he does not think this inquiry should be directed to the Interstate Commerce Commission?

Mr. WALSH of Montana. If the Senator from Washington will pardon me, and if the Senator from Nebraska will give me his attention, I understand the Senator from Nebraska asked when the resolution was presented that Chicago be included also, and I am very glad to have that done. I ask that a similar amendment be made including Chicago.

Mr. JONES. I do not understand that the Secretary of Commerce has the data.

Mr. WALSH of Montana. I directed the inquiry to the Secretary of Commerce because the Commerce Department is our statistical department in relation to all commercial matters.

Mr. JONES. That is true, but I do not think they have data with reference to freight rates and charges.

Mr. WALSH of Montana. They can easily secure them. However, if it seems desirable, it is quite satisfactory to me to substitute the Interstate Commerce Commission.

Mr. JONES. I believe that would be better.

Mr. WALSH of Montana. Very well.

Mr. FLETCHER. Mr. President, I am inclined to think that is correct. I do not believe the Commerce Department can tell anything about the rates.

Mr. JONES. No; I think not.

Mr. FLETCHER. If we are going into a question of rates, we shall have to go to the Interstate Commerce Commission, or, perhaps, the Shipping Board might have the information.

Mr. NORBECK. Mr. President, if I understood this resolution as it was read, it also called upon the department to tell what the effect of the transportation act of 1920 was on rates, did it not?

Mr. WALSH of Montana. Only on wheat and other grain rates.

Mr. NORBECK. Is that included now?

Mr. WALSH of Montana. Yes.

Mr. NORBECK. Permit me to suggest that if we are to ask for the effect of Federal law on transportation, we should go a little further and ask the effect of all the laws instead of singling out the last one. I would like to offer an amendment that we also ask the effect of Federal legislation of the last 8 or 10 years, so as to include the Adamson law and the other laws.

I would also suggest another amendment; that is, that we inquire what effect the Government subsidies may have. I understand Canada at one time had a positive subsidy to the railroads in the hauling of the interior agricultural products.

Mr. WALSH of Monana. That part of it is covered by the resolution.

Mr. WALSH of Massachusetts. I hope the Senator from South Dakota will not press the matter to which he has just referred. An investigation is to be made along that line, going into the whole question of Canadian subsidies and Canadian preferential tariffs, and I hope the Senator will not confuse that with the resolution offered by the Senator from Montana,

which is simply to get information, which will be helpful in the other investigation that is to be made, and in which I know the Senator will be interested.

Mr. NORBECK. My suggestion as to the inquiry about the subsidy was dropped when the Senator from Montana assured me that it is already incorporated in his resolution.

Mr. WALSH of Massachusetts. I thought his resolution confined itself pretty closely to rates.

Mr. NORBECK. I offer this amendment, that they also make inquiry as to the effect of Federal laws and regulations enacted in the last 10 years on railroad rates.

Mr. WALSH of Montana. I trust the Senator from South Dakota will not press that request for an amendment to this resolution. I hoped to get it through without any opposition whatever.

I included the provision as to the act of 1920 because that deals particularly with rates. If we go into the question as to what effect general legislation will have upon the matter, I am sure the Interstate Commerce Commission will reply that the matter is too controversial to warrant them in expressing any views about the matter at all. Indeed, I entertained some doubt as to whether it would be proper to ask either the Secretary of Commerce or the Interstate Commerce Commission for information concerning the effect even of the act of 1920, which deals specifically with rates. The provisions are familiar to all. But if we go into the field into which the Senator from South Dakota desires to enter the Interstate Commerce Commission would be obliged to take into consideration also the effect of improvements in the art, the building of greater locomotives, and the reduction in the number of men employed. There are a thousand considerations that have influenced rates as a whole. I feel perfectly certain that the commission will be unable to answer questions of that character. At least, they have no information on file that will enable them to answer.

Mr. NORBECK. Mr. President, there has been an astonishing increase in railway rates in this country, and an absolute unwillingness on the part of Congress to discuss the causes underlying it. If the building of a large locomotive is a matter of inquiry, let us have it. If the question of higher wages is a proper matter of inquiry, let us know about it. Let us not be fooling ourselves all the time. Can we not have the facts or as much as they can furnish in some reasonable time?

Mr. WALSH of Montana. The trouble about it is that the commission would be obliged to say to us that they have no information upon the subject.

Mr. NORBECK. I am willing to modify the request so as to let them make brief statements on it without going into the details, but to give us information they may have available on those questions.

Mr. WALSH of Montana. If the Senator will put his amendment into form——

Mr. NORRIS. Mr. President, I would like to suggest to the Senator from South Dakota that there is really incorporated in the suggested amendment an important thing, about which I would very much like to have information, but it is a subject of investigation, it is a subject on which the views of men will disagree, and they will not agree as to what caused this or that.

I would be glad to have the judgment of the Interstate Commerce Commission, but I dislike to see the matter handled through an amendment to this resolution, which really has for its object ascertaining as to whether there is a difference in freight rates, particularly from the great West, on agricultural products, especially on wheat, between Canadian railroads and American railroads; and, if there is such a difference, the cause of it. The same things that have operated on railroads in the United States, speaking in a general way, have operated also on railroads in Canada. The question of larger locomotives and stronger bridges and heavier rails is the same on both sides of the line, and as to whether legislation has tended to increase rates or not is a question that can also be discussed as applying both to Canada and to the United States.

The interesting thing about the Senator's resolution is that it will result in our obtaining official acknowledgment of the fact that the rates in Canada, particularly on wheat, are lower than they are in the United States. I would like to have an official statement of that kind. Most of us know about it in a general way, but if we couple it up with the amendment that is suggested, I want to say to the Senator that it will delay it, in the first place, and, in the next place, it will bring into the resolution a controversial question that ought not to be in it.

Mr. NORBECK. I think there can be nothing more controversial than the Esch-Cummins Act, and the Senator from Montana has included that, but has left out all the Democratic legislation.

Mr. NORRIS. As I heard the resolution read, it seems to me the criticism that could be justly made to it is that it did refer to that act. I do not think we ought to refer to any act. Let us find out, first, whether the railroad rates are lower in Canada than they are here. Let us get that information.

Mr. NORBECK. That is exactly all we want. But I ask the Senator whether he will not broaden the resolution so as to include not only the rates on wheat but freight rates generally?

Mr. WALSH of Montana. I have not the slightest objection to that, but that is a rather large order.

Mr. NORBECK. If the Senator will do that, I will drop the other matter for the time being; but I want to push it later.

Mr. NORRIS. I hope the Senator from South Dakota will introduce a resolution along the lines he has suggested.

The PRESIDING OFFICER (Mr. MCNARY in the chair). The question is on agreeing to the resolution as modified.

Mr. JONES. Mr. President, I understand the resolution has been amended so as to direct the inquiry to the Interstate Commerce Commission.

The PRESIDING OFFICER. It was so modified.

The resolution was agreed to as modified, as follows:

*Resolved*, That the Interstate Commerce Commission be, and it is hereby, directed to transmit to the Senate information as follows:

1. What is the rate for the transportation of wheat by rail from the following points in the United States, to wit, Fargo, Devils Lake, Bismarck, Glasgow, Billings, Bozeman, Havre, Helena, and Kalispell to (a) Duluth, (b) New York, (c) Philadelphia, (d) Baltimore, (e) Boston, (f) Chicago.

2. What is the rate from points in the western Provinces of Canada at distances from Fort William corresponding in distance from Duluth to the points west thereof first above listed to (a) Fort William, (b) Montreal.

3. What is the aggregate amount that would be realized annually by American shippers of (a) wheat, (b) all grains over and above what they do realize during any 12-month period were the rates on such freight on American railroads no higher than they are on the Canadian railroads.

4. To what extent are such lesser rates on the Canadian railroads (if they are less) due to charter provisions of said railroads and to what extent are such excessive rates on American railroads (if they are excessive) attributable to the act of Congress approved February 28, 1920.

5. And any other information they may have with reference to freight rates generally on American as compared with Canadian railways.

### PROHIBITION ENFORCEMENT

Mr. BRUCE. Mr. President, anyone who is at all familiar with the operations of the Anti-Saloon League knows that the mainsprings of its activities are "boodle" and "bunk." It is a hybrid organization, partly ecclesiastical and partly political, ecclesiastical enough to be a menace to the State and political enough to be a discredit to the church.

Mr. CURTIS. Mr. President, I rise to a question of order.

The PRESIDING OFFICER. The Senator will state his point of order.

Mr. CURTIS. This being Monday morning and calendar day, I desire to know if debate is in order without unanimous consent?

The PRESIDING OFFICER. Not without unanimous consent.

Mr. CURTIS. I ask for the regular order.

The PRESIDING OFFICER. The regular order is demanded.

Mr. BRUCE. That is all right. Somehow or other that principle of unanimous consent is always invoked when any Senator has a word to say against the Anti-Saloon League.

### PRESIDENTIAL CAMPAIGN EXPENDITURES

Mr. FESS. From the Committee to Audit and Control the Contingent Expenses of the Senate I report back favorably Senate Resolution 214, submitted by the senior Senator from Arkansas [Mr. ROBINSON] this morning. I report it with an amendment and ask for its present consideration. I ask the attention of the Senator from Arkansas [Mr. ROBINSON].

The Senate, by unanimous consent, proceeded to consider the resolution.

The amendment was, to add at the end of the resolution:

The sum of $25,000 is authorized to be appropriated to carry out the purpose of the resolution.

Mr. ROBINSON of Arkansas. I have no objection to the amendment.

The PRESIDING OFFICER. Without objection, the amendment is agreed to.

Mr. BRUCE. Mr. President, I desire to speak on the resolution and continue my remarks, which were cut off so abruptly by the Senator from Kansas.

Mr. LA FOLLETTE. Regular order!

The PRESIDING OFFICER. The Senator has a right to debate the resolution.

Mr. BRUCE. Mr. President, I was saying that this organization, the Anti-Saloon League, is partly ecclesiastical and partly political.

As an illustration of the "bunk" that it is in the habit of endeavoring to palm off on the public I wish to call attention to an interview with Dr. Otto Melle, president of the Methodist Theological Seminary at Frankfort on the Main, in Germany, which is reported in the Baltimore Sun of the 25th instant. That report quotes Dr. F. Scott McBride, the present general superintendent of the Anti-Saloon League, who is rattling around at random in the shoes of the late Wayne B. Wheeler, as saying that Doctor Melle has just made the following statement:

I have been three days in Washington, and spent three days in New York before coming here, during all of which time I have not seen a person who appeared to have been drinking, nor have I been offered a glass of beer or wine.

Think of that! He was in Washington for two days, on or about the 25th of this month, and did not see a single drunken person and did not see a single evidence of inebriety.

On that very day—that is to say, the 25th instant—I called attention to a statement of the evening before in the Washington Star to this effect:

Sixty-four arrests on charges of sale, possession, and transportation of intoxicants were reported in Washington during the 48 hours which ended at 8 o'clock this morning.

So much for violations of the Volstead Act. The same statement further affirms that the seizures included 348 quarts of whisky, 152 quarts of brandy, 84 quarts of alcohol, 23 quarts of gin, 326 bottles of beer, 2,000 gallons of mash, and one still. The statement further affirms that 144 persons were arrested for intoxication during the two-day period.

Think of such an interview, which, if not positively mendacious, was utterly misleading, being formally put forth by McBride, the general superintendent of the Anti-Saloon League, for the purpose of influencing public opinion in this country. What faith, I ask, is to be placed in any statements of McBride or of the Anti-Saloon League if the columns of the press can be so shamefully perverted for such a deceptive purpose.

The PRESIDING OFFICER. The question is on agreeing to the resolution as amended.

The resolution as amended was agreed to, as follows:

*Resolved*, That a special committee of five be appointed by the Presiding Officer of the Senate to investigate forthwith and report to the Senate as soon as possible the campaign expenditures of the various presidential candidates in both parties, the names of the persons, firms, or corporations subscribing, the amount contributed, the method of expenditure of said sums, and all facts in relation thereto, not only as to the subscriptions of money and expenditures thereof but as to the use of any other means or influence, including the promise or use of patronage and the providing of funds for setting up contesting delegations, and all other facts in relation thereto that would not only be of public interest but would aid the Congress in any necessary remedial legislation.

That said committee is hereby empowered to sit and act at such time and place as it may deem necessary; to require, by subpœna or otherwise, the attendance of witnesses, the production of books, papers, and documents; to employ stenographers at a cost of not exceeding $1 per printed page. The chairman of the committee or any member thereof may administer oaths to witnesses. Subpœnas for witnesses shall be issued under the signature of the chairman of the committee or subcommittee thereof. Every person who, having been summoned as a witness by authority of said committee or any subcommittee thereof, willfully makes default, or who, having appeared, refuses to answer any question pertinent to the investigation heretofore authorized, shall be held to the penalties provided by section 102 of the Revised Statutes of the United States.

The expense thereof shall be paid from the contingent fund of the Senate on vouchers ordered by said committee, signed by the chairman thereof and approved by the Committee to Audit and Control the Contingent Expenses of the Senate.

The sum of $25,000 is authorized to be appropriated to carry out the purpose of the resolution.

## THE IMMIGRATION QUESTION

Mr. ROBINSON of Arkansas. Mr. President, I ask leave to have printed in the RECORD a statement recently published in the journal known as Southwestern Resources, under date of April 27, 1928, entitled "Uncalled-for denunciation of Senators," and relating particularly to the subject of immigration.

There being on objection, the article was ordered to be printed in the RECORD, as follows:

### UNCALLED-FOR DENUNCIATION OF SENATORS

On March 2 some members of the executive committee of the South Texas Chamber of Commerce got together in San Antonio (six men in all) and passed some resolutions denouncing United States Senators SHEPPARD and MAYFIELD "as not entitled to further public trust" because of action (or nonaction) on the subject of Mexican immigration.

There are a million or more people in the territory covered by the South Texas Chamber of Commerce, and the vast majority certainly do not approve of the resolutions these six men put forth in their name.

This is a similar case to that of the three tailors of Tooley Street that passed resolutions in the name of "We, the people of London."

These resolutions were as follows:

"Whereas neither of the United States Senators from Texas have seen fit to absolutely oppose before the Immigration Committee of the United States Senate the favorable reporting of legislation (popularly known as the Box bill) for the further restriction of Mexican immigration to the United States; and

"Whereas if this legislation is passed the entire population of the western and southwestern regions of the United States will suffer irreparable financial loss due to the fact that the regions mentioned are dependent on agricultural and stock raising for their commercial assistance and that these industries can not be maintained in their present state of development if deprived of this labor: Now, therefore, be it

"*Resolved by the executive committee of the chamber of commerce*, That in the judgment of said committee these men have failed in their obligations to the citizens of Texas and are not entitled to further public trust."

We are strongly against the Box bill limiting the immigration from Mexico as provided in that bill as any of the western or southwestern people, and have said so. But we realize that we are a very small minority of the people of the United States in this matter and are not able to force our desires on Congress or Congressmen.

We fully recognize the fact that if the Box bill is passed by the present Congress it will do enormous harm to west and southwest Texas, and we do not want it to pass. In this respect perhaps 75 per cent of the people of Texas and 90 per cent of the people of the United States are either against us or do not care whether the law is passed or not, and this is no time for us to become bellicose or unruly in our attitude on the bill. We positively can not accomplish anything by adopting that attitude.

If the members of the executive committee who passed the resolutions that our Senators "are not entitled to further public trust" would read the proceedings of Congress and the leading magazines and newspapers of other parts of the country they would at once come to the conclusion that we are up against a hard proposition. They would see further that diplomatic reasons alone are stemming the tide favoring the Box bill.

So we are in the nature of supplicants and not battlers in the front-line trenches.

Practically all the scientific and educational forces are against us, for the reason, as alleged, they see a future from a large immigration from Mexico similar to that realized from such an immigration from Asia and Africa.

The Box bill, we feel confident, will not be passed by the present Congress. but a bill of similar nature, permitting a larger percentage, perhaps, of immigration from countries of the Western Hemisphere than from Europe, as was provided, we believe, by the Watson bill, will inevitably become a law in the future.

We in this part of the country should therefore realize now that the thing to do is to provide ways and means for keeping the Mexican labor we have and that received during the next few years for longer terms by providing tenement, school, and social accommodations, as has already been done by several of our large farm and land developers.

Any plan for "seasonal" labor from a foreign country can not prove satisfactory to our people or to our Government. It would be a source of constant irritation for many reasons. So the thing to do is to get labor into this country and keep it here.

These resolutions denouncing our United States Senators will put us in a bad light in other parts of the country, for the people there will think our plea is purely one of selfish aggrandizement if we display an unruly temper, whereas the question is one of profound economic importance to us. We have begun developments of lands and farms, which will run through a term of years, founded upon getting Mexican labor, the only kind of labor suited for the work, and if we are suddenly shut off from this labor it will do a vast lot of harm to the country, and the bill should be put off for a couple of years and then the quota increased.

Senator SHEPPARD and Senator MAYFIELD have sedulously and continually worked for the benefit of our western and southwestern section, and we feel sure that they will do what they can for us in their capacity as representatives of all people of Texas.

PRESIDENTIAL CAMPAIGN EXPENDITURES

Mr. WALSH of Massachusetts. Mr. President, I observe in the resolution which the Senator from Arkansas [Mr. ROBINSON] submitted this morning, calling for an investigation into the expenditures of money in presidential campaigns, no reference to the amount of money that may be expended by candidates.

Mr. ROBINSON of Arkansas. The Committee to Audit and Control the Contingent Expenses of the Senate reported an amendment, to which I agreed, and which was adopted, carrying not to exceed $25,000 for that purpose.

Mr. WALSH of Massachusetts. As a member of the committee I approved of that amendment, but that is not the matter to which I am calling the Senator's attention. To my mind, no investigation into the use of money by a candidate for public office can be effective unless there is a limit upon the amount of money which he can use. I would like to see the Senator from Arkansas, or some other Senator who is not a candidate for office this year, present a resolution limiting the amount of money that a candidate for the Senate can use, so far as the Senate can express its sentiment upon that question. I think an attempt two years ago was made to fix such a limit, but the resolution was prevented from being adopted by a filibuster. It seems to me that the work of the committee investigating the use of funds to bring about the election of United States Senators could be made very much more effective if some limit was defined on the amount that could be used by a candidate, or by an organization which is promoting the candidacy of a particular candidate. I should like the Senator's view on that suggestion.

Mr. ROBINSON of Arkansas. I shall be glad to give consideration to the suggestion of the Senator from Massachusetts and confer with him and other Senators upon the very important subject about which he has just spoken.

The principle of the resolution which the Senate has just passed is that the public and the Senate, as well as other legislative agencies, are entitled to know what influences are being exerted to secure the selection of high public officers like the President of the United States. It is believed that publicity concerning that important question will be helpful in preventing the methods and practices which have prevailed in some previous campaigns and which ought never to occur in elections in any country, much less in the United States.

Mr. CARAWAY. Mr. President, I want to call the attention of the Senator from Massachusetts to the fact that, having served on the investigating committee in 1924, even a resolution limiting the amount that one might expend for his candidacy will utterly fail of its good intentions and purposes unless it takes into consideration two other things. One is the habit of grouping the expenses under a plan for supporting 5 or 6 or 8 or 10 candidates. Under the group system a million dollars may be expended, and when we try to find out if they have expended it to elect somebody to the Senate they will say that it included the State, county, and municipal tickets and therefore they can say they expended nothing for the senatorial candidate, although he was on the ticket and got the benefit of the entire expenditure. If the Senator has in view trying to prepare a resolution along the line suggested, I hope he will take that into consideration.

Mr. WALSH of Massachusetts. I appreciate the soundness of the suggestion the Senator from Arkansas makes. It is a common method devised to hide personal expenditures and expenses.

Mr. CARAWAY. Yes; and I call the Senator's attention to the fact that if the resolution is to be effective it must also take into consideration expenditures made by independent committees, in which case the candidate will declare he knew nothing about the expenditures and had nothing to do with them. I have in mind where more than a million dollars was expended, in effect to support one candidate, but was expended by independent committees to support two candidates. The resolution ought therefore to take into consideration that situation and make provision for limiting group expenses. It ought to be made unlawful to expend money by committees or individuals in aid of a candidate or the candidacy of a candidate without the written consent of that candidate so that the candidate can not say, "I have no knowledge of the expenditure." If those two things are not taken into account, such a resolution would be ineffective.

Mr. WALSH of Massachusetts. I wish the Senator might prepare such a resolution. I think it ought to be offered by some one who will not be a candidate in the approaching election. The Senator's experience on the previous committee investigating the elections of 1924 and 1926 ought to be very helpful.

Mr. CARAWAY. Those two things have been the means of enabling candidates and others to conceal every illegal and corrupt expenditure that they might have made.

Mr. WALSH of Massachusetts. Of course, the purpose of the resolution offered by the Senator's colleague is that it gives publicity to the use of money. It makes it possible for the committee to inquire where abuses are alleged to exist, and let the public know what is going on.

Mr. CARAWAY. I will say that I think it does more than that, and it is about all it does do. It shows what frightfully bad memories people who handle campaign funds have. I remember the president of one of the greatest railroads in this country who, when testifying, remembered where he lived and of what railroad he was president, but beyond that his memory was an absolute blank. How he ever got home I have no idea yet, without some one leading him home. I remember a man who lived in a very large city and whose uncle handles the money of the country. He knew who his kin people were. He knew the city in which he was born. He knew what his politics were. But beyond that his memory was as blank as that of a new-born babe.

These investigations do not bring results unless we are willing to go back in the investigation and try to ascertain how much the organized committees spent, because they would not admit they had any of the money. I remember laboring with Mr. Patten, of Chicago, who at one time had the reputation of cornering the wheat supply of the country. Patten's memory was so bad that he said he was a farmer. He told us with all solemnity that he reckoned that might be called his occupation. He did not know anything about the expenditures that his committee was making. I remember very distinctly that the very distinguished former Senator from the Senator's own State, Mr. Butler, was conscious of the fact that if he had money he could control the election, and he thought somebody in connection with the machinery of the party was going to have the money, but he did not know who it was.

Unless a resolution takes into consideration every item that is expended, whether expended by independent committees or by the candidates themselves, we shall sometimes be compelled to whitewash the most corrupt use of money.

Mr. WALSH of Massachusetts. Does not the Senator think that a resolution indicating that it is the sense of the Senate that not more than a certain sum shall be used would be beneficial in keeping down the use of money?

Mr. CARAWAY. I think it would; but I think that the resolution, as I said a moment ago, ought to provide that the use of money shall be considered whether it has been spent with or without the knowledge of the candidate. Charge the candidate with that knowledge. If his friends want to put him in a position where he may forfeit his seat by making undue and improper expenditures in his behalf, then it is for them to determine.

Mr. ROBINSON of Arkansas. Mr. President, of course that would have to be safeguarded so that some one who was an enemy of the candidate could not make expenditures in behalf of the candidate so as to charge him with those expenditures. It is going to be quite difficult to prepare a statute which will prove effective to prevent improper expenditures in these great campaigns.

Mr. WALSH of Massachusetts. I think it is impossible.

Mr. ROBINSON of Arkansas. But I believe that the resolution just passed is undoubtedly broad enough to comprehend the circumstances and the facts pointed out by my colleague the junior Senator from Arkansas. The question is whether the committee will be able to procure the information.

Mr. CARAWAY. The result will be that sometimes we shall be compelled actually to whitewash a corrupt use of money because we can not definitely connect the candidate with the expenditure.

The Senator from Kansas [Mr. CURTIS] has been on his feet for several minutes, and I presume he desires to ask for the regular order; so I desist.

Mr. CURTIS. Mr. President, I do not desire to cut the Senator off, but I think we ought to proceed with the regular order.

The PRESIDING OFFICER. The regular order is demanded.

PERSONAL EXPLANATION—BOULDER DAM

Mr. BRUCE. Mr. President, I rise to a question of personal privilege.

The PRESIDING OFFICER (Mr. WATERMAN in the chair). The Senator will state it.

Mr. BRUCE. In connection with the propagandist clippings inserted in the RECORD this morning by the Senator from Mon-

tana [Mr. WALSH], my attention is called to this statement in the Washington Herald. Speaking of the Boulder Dam bill the reporter says:

JOHNSON—

That is to say, the Senator from California, Mr. JOHNSON—

JOHNSON earlier had given evidence that he was fully aware of resumption of the filibuster which was employed in the last session by a handful of Senators to defeat the bill.

Then in large type, that kind of type which might technically be known as scandalous or sensational type in newspaper or printing-house jargon, the report adds:

BRUCE evades it.

Then the report continues:

When the bill came to the attention of the Senate yesterday afternoon for the third successive day, BRUCE, of Maryland, counted by the bill's foes as one of their number, asked for an opportunity to discuss another matter.

JOHNSON reminded BRUCE that the Senate allows two hours every day for discussion of extraneous matters, and said BRUCE should have availed himself of that time.

Of course, there is not the slightest foundation for the suggestion that I had any filibustering purpose in asking the Senator from California [Mr. JOHNSON] to give way to the Senator from New York [Mr. COPELAND] and myself for a few minutes, in order that we might discuss the motion of the Senator from New York for the reconsideration of a bill giving the Merchants & Miners Transportation Co. the benefit of the guarantee provisions of the transportation act of 1920, which had been passed by the Senate and had gone to the House, and on motion of the Senator from New York had been returned to the Senate, so that its text might be considered in connection with the motion of the Senator from New York to reconsider.

Perhaps some Senators will recall that when I made the request of the Senator from California I expressed my readiness to limit the discussion to a few minutes. Never in my life have I attempted to impose any filibustering obstacle in the pathway of any legislative measure, either in the General Assembly of Maryland or in this body. I had no intent, of course, to filibuster in relation to the bill to which I have referred when I made the request that I did of the Senator from California.

The very fact that I offered to limit discussion to a few minutes demonstrates beyond the cavil of doubt that I could not have harbored any such idea. If this is the best in the way of truthful inference that the Washington Herald can do, I hope that it will take my advice and renounce its character as a general newspaper organ and become the special organ of Mr. F. J. McBride, general superintendent of the Anti-Saloon League.

## THE CALENDAR

The PRESIDING OFFICER. The calendar, under Rule VIII, is in order, and the clerk will state the first bill on the calendar.

Mr. JONES. Mr. President, because the Senator from Connecticut [Mr. BINGHAM], who is now absent from the Chamber, desires to be here when the calendar is called, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

| | | | |
|---|---|---|---|
| Ashurst | Edwards | La Follette | Sheppard |
| Barkley | Fess | Locher | Shipstead |
| Bayard | Fletcher | McKellar | Shortridge |
| Bingham | Frazier | McMaster | Simmons |
| Black | George | McNary | Smith |
| Blaine | Gerry | Mayfield | Smoot |
| Blease | Glass | Metcalf | Steck |
| Borah | Goff | Moses | Steiwer |
| Bratton | Gooding | Neely | Stephens |
| Brookhart | Gould | Norbeck | Swanson |
| Broussard | Greene | Norris | Tydings |
| Bruce | Hale | Nye | Tyson |
| Capper | Harris | Oddie | Vandenberg |
| Caraway | Hayden | Overman | Wagner |
| Copeland | Heflin | Phipps | Walsh, Mass. |
| Couzens | Howell | Pittman | Walsh, Mont. |
| Curtis | Johnson | Ransdell | Warren |
| Cutting | Jones | Reed, Pa. | Waterman |
| Dale | Kendrick | Robinson, Ark. | Wheeler |
| Dill | Keyes | Sackett | |
| Edge | King | Schall | |

Mr. GERRY. I wish to announce that the senior Senator from Mississippi [Mr. HARRISON] and the junior Senator from Oklahoma [Mr. THOMAS] are detained from the Senate as members of the committee appointed to attend the funeral of the late Representative MARTIN B. MADDEN, of Illinois.

The PRESIDING OFFICER (Mr. WATERMAN in the chair). Eighty-two Senators have answered to their names. A quorum is present. The Secretary will state the first bill on the calendar.

The first business on the calendar was the bill (S. 1182) to provide for the naming of certain highways through State and Federal cooperation, and for other purposes.

Mr. McNARY. Mr. President, on two former occasions the junior Senator from Wisconsin [Mr. BLAINE] asked that this bill might go over. I fear that it would be unfair to him if I at this time should ask to have the bill considered; so, without any prejudice whatsoever, and probably with the privilege of calling it up later in the day, I ask that it go over at this time.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 2447) for the relief of the stockholders of the First National Bank of Newton, Mass., was announced as next in order.

Mr. KING. That bill has been objected to a number of times. The Senator from New Mexico heretofore has objected. I ask that it may go over.

The PRESIDING OFFICER. The bill will be passed over.

## LOUISE A. WOOD

The bill (S. 61) granting an increase of pension to Louise A. Wood was announced as next in order.

Mr. KING. Let that go over.

Mr. BINGHAM. Mr. President, will the Senator withhold his objection for a moment? I think it is not generally understood that Mrs. Wood is at the present time receiving from the United States Government a pension of $30 a month. The Republic of Cuba, in recognition of the services which General Wood rendered to Cuba, is giving Mrs. Wood a pension, if my recollection is correct, of about $500 a month. It seems to me that in a case of this kind, where we all recognize the tremendous services that General Wood rendered to the Republic in helping us toward preparedness in the days before the war, in his services in Cuba, in the Philippines, and afterwards as Chief of Staff, we owe his memory some special honor.

There is no question that if it had not been for General Wood's action in starting the Plattsburg camps there would have been many more, perhaps thousands more, of our boys killed at the front, due to bad leadership on the part of officers. As a matter of fact, hundreds and thousands of officers received proper training, due to General Wood's far-sighted statesmanship and ability. It seems to me that the least that can be done at the present time is for us to give adequate recognition to his widow.

I hope the Senator will withdraw his objection and permit the bill to pass.

Mr. COPELAND. Mr. President, I join the Senator from Connecticut in the sentiments he has expressed. I hope we may do honor to the memory of this great man by making ample provision for his widow. I hope the Senator will withdraw his objection, and let the bill pass.

Mr. SMOOT. Mr. President, I was a member of the Committee on Pensions for about 20 years. It was a rule of that committee that pensions granted to widows of generals of the Civil War should not exceed $75 per month. I do not know whether the committee has made any other ruling or not, but I do know that that was the rule while I was a member, for about 20 years.

If this bill becomes a law—and nothing in the world would please me better than to pay honor to the widow of General Wood—I can not see how we can avoid passing similar legislation for the widows of the Civil War and the other wars. We have gone this far with pensions, Mr. President. We grant the widow of a President of the United States a pension of $5,000.

Mr. ROBINSON of Arkansas. That is, in some instances.

Mr. SMOOT. I know of none, I will say to the Senator, with the exception of the one to which I am going to call attention in a moment.

Mr. ROBINSON of Arkansas. There is one surviving widow of a former President of the United States for whom no provision has been made.

Mr. SMOOT. I will state the reason, and I was going to refer to it, so that there would be no misunderstanding of the statement I made. President Harrison's second wife was not granted a pension of $5,000 because of the fact that she never was in the White House, and never was his wife while he was President.

Mr. ROBINSON of Arkansas. I desire to call the Senator's attention to the fact that there is another exception. That is the case of the widow of Woodrow Wilson.

Mr. SMOOT. Is that because she did not want it, or would not accept it?

Mr. ROBINSON of Arkansas. No, Mr. President; no provision has been made for her. The Senate passed a bill, but it never has passed the other body.

Mr. SMOOT. I understood—and not only that, but there will not be a question about it——

Mr. ROBINSON of Arkansas. Oh, well, but there was a question.

Mr. GLASS. There was a question about it.

Mr. ROBINSON of Arkansas. That is the difficulty. The bill passed this body, but it failed of passage in another body.

Mr. SMOOT. But I understood, Mr. President—I do not know whether it is so or not, but I have seen it in print—that Mrs. Woodrow Wilson requested that no action be taken on the bill.

Mr. ROBINSON of Arkansas. No.

Mr. SWANSON. No.

Mr. SMOOT. Then, if that is not so, a wrong has been done Mrs. Wilson, and it ought to be corrected.

Mr. ROBINSON of Arkansas. Oh, yes. We know that. We realize it fully. I feel quite resentful about it.

Mr. SMOOT. So would I, just as much as the Senator from Arkansas would. She is entitled to the pension if she is not drawing it and has not said that she would not accept it.

Mr. SWANSON. I introduced a bill for the purpose, and it was unanimously approved by the committee and by this body. It passed this body unanimously. There was not a dissenting vote here. It went to the House and met some opposition there that prevented its consideration.

Mr. SMOOT. I do not know what it was, Mr. President; but I will say that if that is the case there was a wrong done Mrs. Wilson which ought to be corrected.

Mr. ROBINSON of Arkansas. Mr. President, if some other Senator does not do it, I propose to introduce a general bill providing that all widows of former Presidents of the United States shall be entitled to a reasonable pension, or to some reasonable provision.

Mr. SMOOT. I will say to the Senator that I will support such a measure with all my heart. It ought to be done.

Mr. ROBINSON of Arkansas. I think we ought to do that.

Mr. FLETCHER. I think it has been the rule heretofore to grant pensions only when the President died in office.

Mr. SMOOT. Oh, no. Mrs. Roosevelt had a pension voted to her.

Mr. LA FOLLETTE. Mr. President, I call for the regular order.

Mr. FLETCHER. I think Mrs. Roosevelt's case was the only one.

Mr. SMOOT. No, Mr. President; I do not know anything about the rule of the House, but I will say to the Senator that the rule of the Senate for 21 years——

Mr. McKELLAR. I object to the further consideration of the bill.

The PRESIDING OFFICER. The bill will be passed over.

Mr. BINGHAM. Mr. President, I move that the Senate proceed to the consideration of the bill, notwithstanding the objection.

The PRESIDING OFFICER. The question is on the motion of the Senator from Connecticut.

The motion was rejected.

### DAVID M'D. SHEARER

The bill (S. 2720) for the relief of David McD. Shearer was considered as in Committee of the Whole, and was read, as follows:

*Be it enacted, etc.,* That the claim of David McD. Shearer for compensation for the adoption and use by the Government of the United States of certain inventions relating to reinforced concrete revetment and construction and laying of same, made by said David McD. Shearer, and for which letters patent of the United States, Nos. 1173879, 1173880, and 1229152 were issued to him, be, and the same is hereby, referred to the Court of Claims, which court is hereby vested with jurisdiction in the premises, and whose duty it shall be to hear and determine, first, whether the said David McD. Shearer was the first and original inventor of the inventions described in said letters patent or any of them; and if said court shall find that he was such first and original inventor of any of the same; then to determine, second, what amount of compensation, if any, he is justly entitled to receive from the United States for the use of his said inventions, or any of them, either before or since the date of said letters patent, up to the time of adjudication, and for a full and entire transfer of said several patents to the United States; and in determining the amount of compensation, if any, for the use of said inventions and transfer of said patents, the court shall take into consideration, as bearing on the question of reducing or increasing such compensation if, and so far as the facts may warrant, the facts, if proved, that while the said David McD. Shearer was engaged in perfecting the inventions he was in the service of the United States as a junior engineer superintendent in charge of willow-bank revetment construction under the Mississippi River Commission, and whether and, if at all, to what extent said inventions or any of them were discovered or developed during the working hours of his Government service, and to what extent his said inventions for protection of river channels and banks differ from the methods previously used in material, method of laying, permanency, and value, and whether and, if at all, to what extent the expense of making experiments, trials, and tests for the purpose of perfecting said inventions was paid by the United States, and if any such expense was incurred by the United States, whether and, if at all, to what extent the United States received compensation for such expense.

Either party may appeal to the Supreme Court of the United States upon any such question where appeals now lie in other cases, arising during the progress of the hearing of said claim, and from any judgment in said case, at any time within 90 days after the rendition thereof; and any judgment rendered in favor of the claimant shall be paid in the same manner as other judgments of the said Court of Claims; and the payment of such judgment shall vest the full and absolute right to said patents, and each of them, in the United States.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

### SINKING OF SUBMARINE "S–4"

The resolution (S. Res. 109) creating a committee of the Senate to investigate the sinking of the submarine *S–4* was announced as next in order.

Mr. JONES. Let that go over.

The PRESIDING OFFICER. The resolution will be passed over.

Mr. SWANSON subsequently said: Mr. President, Senate Resolution 109, creating a committee of the Senate to investigate the sinking of the submarine *S–4*, was disposed of to-day by the adoption of a resolution directing that the investigation be conducted. I ask that Senate Resolution 109 be indefinitely postponed.

The PRESIDING OFFICER. Without objection, it will be indefinitely postponed.

### MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the House had passed without amendment the bill (S. 4180) authorizing the attendance of the Marine Band at the Confederate Veterans' Reunion at Little Rock, Ark.

The message also announced that the House had agreed to the amendments of the Senate to the bill (H. R. 13331) to authorize the President to present the distinguished flying cross to Ehrenfried Gunther von Huenefeld, James C. FitzMaurice, and Hermann Koehl.

### BILLS AND JOINT RESOLUTION PASSED OVER

The bill (S. 1939) granting pensions and increase of pensions to widows and former widows of certain soldiers, sailors, and marines of the Civil War, and for other purposes, was announced as next in order.

Mr. KING. Mr. President, I have spoken to the Senator from South Dakota [Mr. NORBECK] concerning a possible amendment. He is not here, and I ask that the bill be passed over for the present.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 132) to authorize the President to appoint Le Roy K. Pemberton a first lieutenant, Officers' Reserve Corps, United States Army, was announced as next in order.

The PRESIDING OFFICER. This bill is reported adversely. Without objection, it will be indefinitely postponed.

Mr. JONES. No, Mr. President; the Senator from California [Mr. SHORTRIDGE] is interested in that measure and would like to have it remain on the calendar.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 2053) to establish a military record for Daniel P. Tafe was announced as next in order.

The PRESIDING OFFICER. This bill also is reported adversely.

Mr. REED of Pennsylvania. Let it go over.

Mr. JONES. I think the same request ought to be made there.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 141) for the relief of Felix Medler was announced as next in order.

The PRESIDING OFFICER. This bill also is reported adversely.

Mr. REED of Pennsylvania. Let it go over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 2787) providing for the appointment of governors of the non-Christian Provinces in the Philippine Islands by the Governor General without the consent of the Philippine Senate was announced as next in order.

Mr. LA FOLLETTE. Let that go over.

The PRESIDING OFFICER. The bill will be passed over.

The joint resolution (S. J. Res. 1) proposing an amendment to the Constitution of the United States prohibiting war was announced as next in order.

Mr. BAYARD. Let that go over.

The PRESIDING OFFICER. The joint resolution will be passed over.

Mr. FRAZIER. Mr. President, I move that the Senate proceed to the consideration of Senate Joint Resolution 1.

The PRESIDING OFFICER. The question is on the motion of the Senator from North Dakota.

The motion was rejected.

The bill (S. 133) for the relief of Kenneth B. Turner was announced as next in order.

The PRESIDING OFFICER. This bill is reported adversely.

Mr. REED of Pennsylvania. The Senator from California [Mr. SHORTRIDGE] has expressed a desire to discuss these four bills that are adversely reported. I ask, therefore, that this bill may go over.

The PRESIDING OFFICER. The bill will be passed over.

STANDARDS FOR HAMPERS, ROUND-STAVE BASKETS, ETC.

The bill (S. 2148) to fix standards for hampers, round-stave baskets, and splint baskets for fruits and vegetables, and for other purposes, was announced as next in order.

Mr. McKELLAR. Let that go over.

Mr. BAYARD. Mr. President, will the Senator withdraw his objection?

Mr. McKELLAR. I will withold it while the Senator makes a statement.

Mr. McNARY. Mr. President, with great care I have tried to meet every objection to this bill, and I know of no Senator who has given it any study who has any remaining objection. Has the Senator an objection unto himself?

Mr. McKELLAR. Yes; I have letters from many, many users of baskets and such containers as are here mentioned in my State, and they are unanimously opposed to it so far as I can find out.

Mr. McNARY. Is not that limited to the ⅝-bushel hamper? I can answer the question. It is.

Mr. McKELLAR. I am not sure about that. I can not say about it.

Mr. McNARY. I am sure about it.

Mr. McKELLAR. But I know that they are very much opposed to the terms of this bill. The Senator will recall that I objected once before in order to have an opportunity to look into it, and when I looked at my correspondence I found that every letter—and I have had many letters about it—was opposed to the bill.

Mr. GLASS. If the Senator will examine his correspondence, I imagine he will find that the objection was to the omission of the ⅝-bushel receptacle. The Virginia fruit growers raised the same objection, and I understand that has been remedied.

Mr. McNARY. Absolutely. That is precisely the situation in Tennessee. I am quite conversant with the proposition. I am not going to force the bill on the Senator by moving to take it up this morning; but about two weeks ago the Senator from Tennessee said that he would look over his correspondence and let me know. At the next opportunity I shall insist upon the bill coming before the Senate.

Mr. McKELLAR. All right.

The PRESIDING OFFICER. Does the Senator from Tennessee object?

Mr. McKELLAR. I do.

The PRESIDING OFFICER. The bill will be passed over.

BILLS PASSED OVER

The bill (S. 2149) authorizing and directing the Secretary of Agriculture to investigate all phases of crop insurance was announced as next in order.

Mr. McNARY. Mr. President, I want that bill to go over for the purpose of collecting some data which I desire to submit for the RECORD when I ask to have it considered.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 1414) for the prevention and removal of obstructions and burdens upon interstate commerce in cottonseed oil by regulating transactions on future exchanges, and for other purposes, was announced as next in order.

Mr. COPELAND. Mr. President, this bill involves certain matters which are now in process of adjustment. I ask that the bill be passed over for the present.

The PRESIDING OFFICER. The bill will be passed over.

EXTENSION OF CLASSIFIED SERVICE TO SERVICE POSTMASTERS

The bill (S. 1728) placing service postmasters in the classified service was announced as next in order.

Mr. BLEASE. Let that go over.

Mr. BRUCE. Mr. President, I was not in the Senate Chamber when the calendar was taken up. Is it in order to make a motion that this bill be taken up for consideration despite the objection?

The PRESIDING OFFICER. It is.

Mr. BRUCE. Then I move that it be taken up for consideration despite the objection.

The PRESIDING OFFICER. The question on the motion of the Senator from Maryland. [Putting the question.] By the sound the noes seem to have it.

Mr. JONES. I call for the yeas and nays.

The yeas and nays were ordered.

Mr. SIMMONS. Mr. President, before the vote is taken, I should like to know what this bill is about.

Mr. BRUCE. It is a bill to place service postmasters in the classified service. That is to say, it is a bill to provide that where a postmaster comes out of the classified service and is made a postmaster he shall not lose his classified status but shall be eligible to transfer to some position in the classified service.

Mr. SWANSON. Mr. President, it will take all day——

Mr. LA FOLLETTE. Mr. President, I rise to a point of order.

The PRESIDING OFFICER. The motion to take up the bill is not debatable.

Mr. BLEASE. Mr. President, allow me to say just a word. It may save some time.

Mr. JONES. I object.

Mr. LA FOLLETTE. I call for the regular order.

Mr. BLEASE. I just wish to say that if this bill is taken up, there will be nothing else done before 2 o'clock.

Mr. LA FOLLETTE. I demand the regular order.

Mr. BLEASE. That is all I wanted to say.

The PRESIDING OFFICER. The motion is not debatable. The roll will be called.

The legislative clerk proceeded to call the roll.

Mr. BRATTON (when his name was called). I have a general pair with the junior Senator from Indiana [Mr. ROBINSON]. In his absence, not knowing how he would vote, I withhold my vote.

Mr. CURTIS (when his name was called). I have a pair with the senior Senator from Arkansas [Mr. ROBINSON]. Not knowing how he would vote if present, I withhold my vote.

Mr. SMITH (when his name was called). I have a general pair with the senior Senator from Indiana [Mr. WATSON.] In his absence, I withhold my vote.

The roll call was concluded.

Mr. JONES. I desire to announce that the Senator from Delaware [Mr. DU PONT] is paired with the Senator from Florida [Mr. TRAMMELL].

I also desire to announce that the Senator from Illinois [Mr. DENEEN] is necessarily absent on business of the Senate.

Mr. BROUSSARD. I have a pair with the senior Senator from New Hampshire [Mr. MOSES]. I transfer that pair to the Senator from Oklahoma [Mr. THOMAS], and vote nay.

Mr. GERRY. I wish to announce the following general pairs:

The senior Senator from Missouri [Mr. REED] with the senior Senator from Massachusetts [Mr. GILLETT];

The senior Senator from Alabama [Mr. HEFLIN] with the senior Senator from Oklahoma [Mr. PINE];

The junior Senator from Missouri [Mr. HAWES] with the senior Senator from Vermont [Mr. GREENE]; and

The senior Senator from Mississippi [Mr. HARRISON] with the Senator from Illinois [Mr. DENEEN].

I am not advised how these Senators would vote on this question.

The result was announced—yeas 31, nays 25, as follows:

YEAS—31

| | | | |
|---|---|---|---|
| Blaine | Frazier | La Follette | Schall |
| Brookhart | Goff | McMaster | Shipstead |
| Bruce | Gooding | McNary | Steiwer |
| Capper | Hale | Metcalf | Stephens |
| Couzens | Harris | Norris | Vandenberg |
| Cutting | Howell | Nye | Walsh, Mass. |
| Dale | Jones | Oddie | Waterman |
| Edge | Kendrick | Sackett | |

NAYS—25

| | | | |
|---|---|---|---|
| Bayard | Fletcher | Phipps | Tydings |
| Bingham | Glass | Reed, Pa. | Tyson |
| Black | Hayden | Sheppard | Walsh, Mont. |
| Blease | King | Simmons | Warren |
| Borah | McKellar | Smoot | |
| Broussard | Mayfield | Steck | |
| Caraway | Overman | Swanson | |

NOT VOTING—38

| | | | |
|---|---|---|---|
| Ashurst | Curtis | Edwards | Gillett |
| Barkley | Deneen | Fess | Gould |
| Bratton | Dill | George | Greene |
| Copeland | du Pont | Gerry | Harrison |

| | | | |
|---|---|---|---|
| Hawes | Moses | Reed, Mo. | Trammell |
| Heflin | Neely | Robinson, Ark. | Wagner |
| Johnson | Norbeck | Robinson, Ind. | Watson |
| Keyes | Pine | Shortridge | Wheeler |
| Locher | Pittman | Smith | |
| McLean | Ransdell | Thomas | |

So the motion was agreed to; and the Senate, as in Committee of the Whole, proceeded to consider the bill (S. 1728) placing service postmasters in the classified service.

Mr. BLEASE. Mr. President, of course we have differences of opinion and all of us are credited with being honest in the opinions we have, but it is impossible for me to see how any man can vote for this bill who advocates civil service and advocates competency in office.

This bill is not a civil service bill under which a man would stand an examination, and after he stood his examination would be appointed to a post office. It provides that if a man is a postmaster without any civil-service examination whatever, without any test as to his competency, as to whether he can fill the position adequately or not——

Mr. BRUCE. Mr. President, may I interrupt the Senator for a moment? I do not think the Senator has grasped the meaning of the bill. It relates only to a person who has been promoted, appointed, or transferred from the classified civil service to the position of postmaster.

Mr. BLEASE. I grasp the situation exactly. The bill should be entitled "A bill to perpetuate Republican postmasters in office for life." That is what it means, nothing more and nothing less. That is God's plain-spoken truth.

Mr. BRUCE. If the Senator will permit me, I might say it is a bill to perpetuate the postmasters in their positions whether Republicans or Democrats.

Mr. BLEASE. How many Democratic postmasters have we?

Mr. BRUCE. How many were there during Mr. Wilson's time?

Mr. BLEASE. I am no defender of Mr. Wilson's administration, thank God.

Mr. BRUCE. How many were there during Mr. Cleveland's time?

Mr. BLEASE. I am not a defender of Cleveland. Ben Tillman gave him the devil from the time he got here until he left.

Mr. BRUCE. I am afraid the Senator's status as a Democrat is incapable of definition.

Mr. BLEASE. Probably it is. I am glad that it is, too, Mr. President, when I consider some things they have done in the past.

Mr. President, I want to read a letter I received regarding this bill. I have two or three of them to read, and I can assure any Senator who wants to go to lunch that it will be 2 o'clock before I get through.

This letter is as follows:

PITNEY-BOWES POSTAGE METER CO.,
*New York, April 25, 1928.*

Hon. COLE L. BLEASE,
*United States Senate, Washington, D. C.*

Reference Senate bill 3890.

DEAR SENATOR BLEASE: Ex-Congressman Frank Mondell, employed by the Standard Mailing Machines Co., of Everett, Mass., with Mr. Bascom Slemp to force the above-mentioned bill through Congress in opposition to the Post Office Department, stated at the hearings before the Senate Committee on Post Offices and Post Roads last Monday, April 23, that he was sending to each member of the committee copies of letters from users of the Standard Co.'s machines purporting to represent a public demand for the passage of this legislation.

To properly judge the value of these letters we attach photostatic copy of the circular appeal sent out by the Standard Mailing Machines Co. announcing the measures they have taken to promote this legislation, with a brief reply to the points raised.

We call your attention to the fact that the concerns who have written have no just cause for complaint, because their equipment was purchased with a full knowledge of the postal regulations (unless they were not properly represented to them), which have always required 300 pieces of nonmetered permit matter in one mailing.

The Standard Co. manufacture a postage-printing device offering no protective features whatever to the revenues of the Post Office Department, and so far as the collection of postage is concerned no different from hand stamps, printing presses, multigraphs, etc. They are endeavoring to have such devices recognized on terms of complete equality with devices known as postage meters specifically authorized by the Post Office Department for the advance collection of postage, operating under Government lock and seal, and inaccessible to the user. Such devices are in daily operation by over 200 nationally known concerns throughout the country, whose mailings would be unnecessarily curtailed by the passage of this bill. This system has operated for seven years without failure in any respect whatever.

Smaller devices to bring this meritorious system within the scope of smaller mailers are already approved by the Post Office Department. The passage of this bill would not only prevent this development but would break down the entire system as now operating.

The record of the hearings before the Senate committee fully exposes the futility of this legislation, but for your convenience we are inclosing a short summary of the objections to the bill.

Sincerely yours,

W. H. WHEELER, Jr.,
*Vice President and General Manager.*

I have also a letter from the Standard Mailing Machines Co., of Everett, Mass., which is signed by J. M. Holmes, president.

Mr. BLACK. Mr. President, will the Senator yield for a statement along the line he has suggested about the purpose of the bill?

Mr. BLEASE. I yield.

Mr. BLACK. Down in Alabama quite recently there was an examination held for a very small post office. One lady, who is very capable, stood the examination successfully. Unfortunately for her, however, she happens to be a Democrat. So, when the question of the appointment came up, we were informed that it is impossible, under the rules promulgated, for this lady to be appointed, even though she is the only one who has successfully passed the examination, because it is absolutely essential that they have three eligibles who have passed the examination before they make an appointment. If they do not have three, they have no right to appoint this one, even though she has met every test which they have proposed for her. Therefore she has not been appointed, and there will soon be a new examination, according to what rules I am not informed, but perhaps some of those tests may be a little more lenient the next time.

Mr. BLEASE. I thank the Senator. I can give him some similar instances in my own State.

Mr. BRUCE. Mr. President, if the Senator will permit me to interrupt, perhaps that lady was left alone because the other two dropped out for the very purpose of shutting her out from the fruits of her success.

Mr. BLACK. They attempted to stand the examination, and could not. They failed, but she passed; and now it is said that although she passed, she is not qualified until two others pass some kind of an examination.

Mr. BLEASE. Mr. President, I want particularly to read a section of this letter, because I may not have time to read it all.

Mr. BRUCE. May I interrupt the Senator again?

Mr. BLEASE. Certainly.

Mr. BRUCE. Does the Senator think there is anything unreasonable and unjust in a law which is careful to provide that before the appointing power makes an appointment there shall be at least three persons eligible, so that a proper opportunity to find just the right person shall be afforded?

Mr. BLACK. I think it is not just, when they have an examination and one meets all the tests they propose, to say to that one, "You shall not have the office." It leaves too much opportunity to do exactly what they are doing, to appoint those of the political persuasion they desire.

Mr. BRUCE. Then the Senator is quarreling with every civil service statute that has ever been enacted by Congress, because they all require that there shall be an examination, and then from an eligible list consisting of not less than a certain number of persons the choice shall be made. The idea is that the appointing power should have some little latitude of selection so as to get the proper person.

Mr. BLACK. I am quarreling with any system which permits any lady who stands the test, and needs the position, and is capable of filling it, to be deprived of getting the job by reason of those higher up hiding behind a rule of that kind. This is a very small post office. The probability is that it is impossible to get three to stand the test. I do not know whether they can or not. Certainly they have not done so up to date, and the whole object is to appoint a person of the particular persuasion that they desire. If that is quarreling with the system, then I am against the system.

Mr. BRUCE. The object of the law is to obtain the very best person who is available for the position, not from any chivalrous motive of any kind to bestow an office anywhere on a lady.

Mr. SMITH. Mr. President, if my colleague will allow me, I want to ask the Senator from Maryland if it is his idea that the written test is merely the mental test, and then the examining board should have some latitude in finding out the other qualifications, personal qualifications, that may enable one taking the examination to be placed ahead of the one who had the better mental qualifications; in other words, to give the examining board latitude to select the best person if he is mentally equipped, though he may not make as high a grade mentally as the other?

Mr. BRUCE. All that is foreign to the purpose of this bill. The bill simply provides that where some person has been examined and has been appointed as the result of ascertained merit, and has become the incumbent of a position under the civil-service system, then, when he is appointed to a postmastership, he shall not lose his civil-service status, but that he shall remain in the civil service without term, just as he was in the civil service without term before. In other words, it is to preserve the permanency of tenure, that is all, even after a man has become a postmaster, that he enjoyed in the classified service before he had become a postmaster.

Mr. SMITH. I understand thoroughly the purpose of the bill, but I was asking the Senator from Maryland——

The PRESIDING OFFICER. The hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business, which is Senate bill 728.

Mr. SMITH. I am inclined to agree with the Senator that we can not know what the proper qualifications may be simply by a mental examination or by an educational test, and I rather think that having two or three on the eligible list from which to select is in principle sound.

Mr. BRUCE. Absolutely. I am very much obliged to the Senator from South Carolina for making the suggestion he has. The very idea of having an eligible list is to give some latitude of selection to the appointing power, and especially to give an opportunity to the appointing power, among other things, to determine whether mere scholastic qualifications should be heeded.

Mr. SMITH. There might be some of them as to whom there is no evidence which can be presented by a mere mental examination, and the appointing power ought to have some latitude in which to find out what are the other qualifications.

Mr. BRUCE. I thank the Senator for his very apt suggestion.

Mr. BLEASE. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state the parliamentary inquiry.

Mr. BLEASE. Does the bill now take its place on the calendar again?

The PRESIDING OFFICER. The bill is now returned to the calendar.

Mr. BLEASE. There can be no further consideration of it to-day, the hour of 2 o'clock having been reached?

The PRESIDING OFFICER. The Senator from South Carolina is correct. The bill goes back to its place on the calendar.

BOULDER DAM

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 728) to provide for the construction of works for the protection and development of the lower Colorado River Basin, for the approval of the Colorado River compact, and for other purposes.

Mr. SMOOT addressed the Senate. After having spoken for 2 hours and 15 minutes, he yielded the floor for the day. His speech is published entire in the RECORD of May 1, commencing on page 7515.

EXECUTIVE SESSION

Mr. CURTIS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened, and (at 4 o'clock and 30 minutes p. m.) the Senate adjourned until to-morrow, Tuesday, May 1, 1928, at 12 o'clock meridian.

## NOMINATIONS

*Executive nominations received by the Senate April 30, 1928*

PROMOTIONS IN THE FOREIGN SERVICE

*From Foreign Service officer of class 2 to Foreign Service officer of class 1*

Clarence E. Gauss, of Connecticut.
Edward J. Norton, of Tennessee.

*From Foreign Service officer of class 3 to Foreign Service officer of class 2*

Willys R. Peck, of California.
Mahlon Fay Perkins, of California.

*From Foreign Service officer of class 4 to Foreign Service officer of class 3*

Coert du Bois, of California.
Dana G. Munro, of New Jersey.

*From Foreign Service officer of class 5 to Foreign Service officer of class 4*

John P. Hurley, of New York.
Herschel V. Johnson, of North Carolina.
O. Gaylord Marsh, of Washington.

*From Foreign Service officer of class 6 to Foreign Service officer of class 5*

Lucien Memminger, of South Carolina.
Jefferson Patterson, of Ohio.
R. A. Wallace Treat, of Ohio.

*From Foreign Service officer of class 7 to Foreign Service officer of class 6*

Raymond Davis, of Maine.
Donald R. Heath, of Kansas.
Renwick S. McNiece, of Utah.
George P. Shaw, of California.

*From Foreign Service officer of class 8 to Foreign Service officer of class 7*

Charles A. Bay, of Minnesota.
Herbert S. Bursley, of the District of Columbia.
Samuel J. Fletcher, of Maine.
Lynn W. Franklin, of Maryland.
Raymond H. Geist, of Ohio.
Stuart E. Grummon, of New Jersey.
Charles H. Heisler, of Delaware.
Walter H. McKinney, of Michigan.
Fletcher Warren, of Texas.

ASSISTANT COMMISSIONER OF INTERNAL REVENUE

Harris F. Mires, of Tacoma, Wash., to be assistant to the Commissioner of Internal Revenue, in place of Charles R. Nash, resigned.

COAST GUARD OF THE UNITED STATES

*To be lieutenants, junior grade*

Lieut. (Junior Grade) (temporary) Clifford D. Feak.
Lieut. (Junior Grade) (temporary) Eugene S. Endom.
Lieut. (Junior Grade) (temporary) Philip E. Shaw.
Lieut. (Junior Grade) (temporary) George N. Bernier.
Ensign (temporary) Leonard M. Melka.
Ensign (temporary) Earle G. Brooks.

*To be ensigns*

Ensign (temporary) Frank K. Johnson.
Ensign (temporary) Chester W. Thompson.
Ensign (temporary) Frederick G. Eastman.
Ensign (temporary) Leslie D. Edwards.
Ensign (temporary) Edwin C. Whitfield.
Ensign (temporary) DeEarle M. Logsdon.

The above-named officers have met the requirements for appointment in the regular Coast Guard as set forth in section 5 of the act of July 3, 1926.

*To be lieutenants (temporary)*

Lieut. (Junior Grade) (temporary) Chester McP. Anderson.
Lieut. (Junior Grade) (temporary) Arthur J. Craig.
Lieut. (Junior Grade) (temporary) Harold B. Adams.
Lieut. (Junior Grade) (temporary) William J. Austermann.
Lieut. (Junior Grade) (temporary) William H. Jacobson.
Lieut. (Junior Grade) (temporary) Edward S. Moale.

*To be lieutenants (junior grade) (temporary)*

Ensign (temporary) Edward W. Holtz.
Ensign (temporary) Ernest A. Ninness.
Ensign (temporary) Hugh V. Hopkins.
Ensign (temporary) Edward E. Hahn, jr.
Ensign (temporary) William Bowman.
Ensign (temporary) Archibald J. Maclean.
Ensign (temporary) Chester A. A. Anderson.
Ensign (temporary) Ellis P. Skolfield.
Ensign (temporary) Dorian E. Todd.

The above-named temporary commissioned officers are recommended for promotion in accordance with the provisions of section 4 (c) of the act approved April 21, 1924.

APPOINTMENTS IN THE REGULAR ARMY

*To be professor of chemistry, mineralogy, and geology at the United States Military Academy*

Lieut. Col. Chauncey Lee Fenton, Coast Artillery Corps, from October 17, 1928, vice Prof. Wirt Robinson, to be retired from active service October 16, 1928.

PROMOTIONS IN THE REGULAR ARMY

*To be colonels*

Lieut. Col. Harry Newton Cootes, Cavalry, from April 19, 1928.

Lieut. Col. Charles Haskell Morrow, Infantry, from April 23, 1928.

*To be lieutenant colonels*

Maj. Charles School Blakely, Field Artillery, from April 19, 1928.

Maj. Charles Thomas Smart, Infantry, from April 23, 1928.

Maj. George Bowditch Hunter, Cavalry, from April 23, 1928.

*To be majors*

Capt. Harry Langdon Reeder, Infantry, from April 19, 1928.
Capt. Jay Edward Gilfillan, Infantry, from April 23, 1928.
Capt. Richard Jaquelin Marshall, Quartermaster Corps, from April 23, 1928.
Capt. Leon Edward Ryder, Cavalry, from April 24, 1928.

*To be captains*

First Lieut. Kenyon Putnam Flagg, Coast Artillery Corps, from April 19, 1928.
First Lieut. Joseph Burske Hafer, Coast Artillery Corps, from April 23, 1928.
First Lieut. Edward Lucien Supple, Coast Artillery Corps, from April 23, 1928.
First Lieut. Samuel McCullough, Coast Artillery Corps, from April 24, 1928.

*To be first lieutenants*

Second Lieut. Russell Emerson Bates, Coast Artillery Corps, from April 19, 1928.
Second Lieut. Earl Shuman Gruver, Infantry, from April 22, 1928.
Second Lieut. Warren Cole Stout, Field Artillery, from April 23, 1928.
Second Lieut. David Barbour Barton, Signal Corps, from April 23, 1928.
Second Lieut. Paul Russell Covey, Field Artillery, from April 24, 1928.

## CONFIRMATIONS

*Executive nominations confirmed by the Senate April 30, 1928*

REAPPOINTMENT IN THE ARMY

GENERAL OFFICER

Brig. Gen. James Sumner Jones to be brigadier general, Adjutant General's Department Reserve.

POSTMASTERS

FLORIDA

James A. Zipperer, Madison.

ILLINOIS

Louis A. Luetgert, Elmhurst.
William R. Fletcher, Joliet.

INDIANA

Harley O. Poor, Etna Green.

KANSAS

Myron Johnson, Oakley.

KENTUCKY

James A. Hargan, Camp Knox.
Edward B. Ray, Canmer.
Sam H. Fisher, McRoberts.

MAINE

Ralph A. Bessey, Canton.

NEW HAMPSHIRE

Fred W. Smith, North Woodstock.

OHIO

Michael J. Meek, McDonald.
Harry L. McClarran, Wooster.

OREGON

Charles W. Perry, Richland.

PENNSYLVANIA

William T. Davies, Forest City.
Gertrude Klinefelter, Jonestown.
Frank P. Lightner, Loysville.

RHODE ISLAND

David Ross, Ashton.

TENNESSEE

Velnia T. Riley, Algood.
James F. Toney, jr., Erwin.
Alice L. Needham, Trimble.

TEXAS

Sol D. Smith, Granbury.
Olive Raoul, Gustine.
Daniel B. Gilmore, McGregor.
Duane B. Scarborough, Oakwood.
Thomas B. Higgins, Reagan.
Homer H. Turner, Rockdale.
Jesse L. Holcomb, Seminary Hill.
Clarence V. McMahan, Waco.
Alice Pipes, White Deer.

UTAH

Edward J. Young, jr., Vernal.

## HOUSE OF REPRESENTATIVES

MONDAY, *April 30, 1928*

The House met at 12 o'clock noon.

Rabbi William Franklin Rosenblum, of the Washington Hebrew Congregation, Washington, D. C., offered the following prayer:

O Lord, our God, master of the universe, in whose hands are the souls of all the living and the spirits of all flesh, Thou who knowest and orderest all things well, and before whose presence we bow in adoration and submission, hallowed be Thy name.

On this day we resume our labors of service to our country and to our Nation from which we paused to render tribute to a colleague and friend who has gone to sit in the assembly on high. His voice will no longer sound in these Halls, his presence no more abide in our midst, who but yesterday was eager and alert in the performance of his duties, even as we are at this hour.

O our God, now that Thy visitation is past, may we draw waters of chastening from the wells of salvation. May we reconsecrate ourselves to our work in meekness and in humility, and thus, in acknowledging our smallness in Thy sight, hallow ourselves and ennoble our deeds in the sight of our fellow men.

May our deliberations and decisions reflect our convictions. May we remain blind to artifice and blandishment, deaf to the sweet accents of flattery or the ominous murmurings of complaint. May we have regard only for the advancement of our Nation, the welfare of its citizens and the peace of humanity, and thus bear witness before all the world that Thou art our ruler, and that Thine is the power and the glory and the majesty. Amen. Amen.

The Journals of the proceedings of Saturday, April 28, and Sunday, April 29, were read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Craven, its principal clerk, announced that the Senate had passed with amendments, in which the concurrence of the House of Representatives was requested, a bill of the House of the following title:

H. R. 13331. An act to authorize the President to present the distinguished flying cross to Ehrenfried Gunther von Huenefeld, James C. FitzMaurice, and Hermann Koehl.

The message also announced that the Senate had passed without amendment a joint resolution of the House of the following title:

H. J. Res. 192. Joint resolution to provide for the coinage of a medal in commemoration of the achievements of Col. Charles A. Lindbergh.

The message further announced that the Senate had passed bills of the following titles, in which the concurrence of the House was requested:

S. 3723. An act to amend and reenact subdivision (a) of section 209 of the transportation act, 1920.

S. 3919. An act awarding a gold medal to Lincoln Ellsworth.

The message also announced that the Senate insists upon its amendments to the bill (H. R. 11026) entitled "An act to provide for the coordination of the public-health activities of the Government, and for other purposes," disagreed to by the House of Representatives, agrees to the conference asked by the House on the disagreeing votes of the two Houses thereon, and appoints Mr. JONES, Mr. MCNARY, and Mr. FLETCHER to be the conferrees on the part of the Senate.

The message further announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 10141) entitled "An act granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy, etc., and certain soldiers and sailors of wars other than the Civil War, and to widows of such soldiers and sailors."

The message also announced that the Senate did, on April 28, 1928, pass the following resolution:

*Resolved*, That the Senate accept the invitation of the House of Representatives to attend the funeral of Hon. MARTIN B. MADDEN, late a Representative from the State of Illinois, in the House of Representatives at 12 o'clock meridian on Sunday, April 29, 1928, and that a committee of 10 Senators be appointed by the Vice President to act with the committee appointed by the House of Representatives to take order for superintending the funeral.

The message further announced that pursuant to the foregoing resolution, the Vice President had appointed Mr. DENEEN, Mr. CURTIS, Mr. ROBINSON of Arkansas, Mr. WARREN, Mr. OVERMAN, Mr. SMOOT, Mr. WALSH of Montana, Mr. MCNARY, Mr. HARRISON, and Mr. STECK members of the committee on the part

of the Senate to act with the committee appointed by the House of Representatives to take order for superintending the funeral of the deceased.

SENATE BILLS REFERRED

Bills of the following titles were taken from the Speaker's table and, under the rule, referred to the appropriate committees, as follows:

S. 3693. An act authorizing the city of Council Bluffs, Iowa, and the city of Omaha, Nebr., or either of them, to construct, maintain, and operate a free highway bridge across the Missouri River between Council Bluffs, Iowa, and Omaha, Nebr.; to the Committee on Interstate and Foreign Commerce.

S. 3723. An act to amend and reenact subdivision (a) of section 209 of the transportation act, 1920; to the Committee on Interstate and Foreign Commerce.

ATTENDANCE OF MARINE BAND AT THE CONFEDERATE VETERANS' REUNION, LITTLE ROCK, ARK.

Mr. VINSON of Georgia. Mr. Speaker, I am directed by the ranking member of the Naval Affairs Committee in the city, Mr. DARROW, to ask unanimous consent to call up the bill (H. R. 13252) authorizing the attendance of the Marine Band at the Confederate veterans' reunion at Little Rock, Ark.

The SPEAKER. The gentleman from Georgia asks unanimous consent to call up the bill H. R. 13252 and consider the same. Is there objection?

There was no objection.

Mr. VINSON of Georgia. Mr. Speaker, I ask unanimous consent that a Senate bill—S. 4180—of the same purport be substituted for the House bill.

The SPEAKER. The gentleman from Georgia asks unanimous consent that a similar Senate bill be substituted for the House bill. Is there objection?

There was no objection.

The SPEAKER. The Clerk will report the bill.

The Clerk read the bill, as follows:

*Be it enacted, etc.*, That the President is authorized to permit the United States Marine Band to attend and give concerts at the Confederate Veterans' Reunion to be held at Little Rock, Ark., May 8 to 11, 1928.

SEC. 2. For the purpose of defraying the expenses of the band in attending such reunion there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $7,872, or so much thereof as may be necessary.

Mr. UNDERHILL. Mr. Speaker, as I caught the reading, the sum of $13,252 is appropriated and not authorized.

Mr. VINSON of Georgia. This is the Senate bill, and I am asking to substitute this for the House bill. The House bill authorizes the appropriation, but the Senate bill makes the appropriation. The Naval Committee of the House has not jurisdiction to make an appropriation.

Mr. LAGUARDIA. Has the Senate committee authority to appropriate money directly?

Mr. VINSON of Georgia. You will have to propound that to a better parliamentarian than I am.

Mr. UNDERHILL. I think I will offer an amendment. We ought not to establish a bad precedent. I have no objection to the appropriation.

Mr. GARNER of Texas. Will the gentleman yield?

Mr. UNDERHILL. I yield.

Mr. GARNER of Texas. The gentleman says he has no objection to making the appropriation. I think the gentleman's first suggestion is the one that has any merit; that is, making a bad precedent. But why make the authorization now and have an emergency bill come in to-morrow when you can make the appropriation now?

Mr. LAGUARDIA. For the orderly procedure.

Mr. GARNER of Texas. The Senate has the right to originate appropriation bills except revenue bills. The Constitution does not prohibit the Senate from making this appropriation.

Mr. RAGON. I think I can explain it, and give the reasons. The bill was introduced by Senator ROBINSON in the Senate last week, and at the same time he asked me to introduce one here. The matter was taken up with him three weeks ago. In the meantime we both became ill. I happened to get up sooner than he did, and he only returned to the Senate last Thursday or Friday.

Mr. UNDERHILL. How much delay will it incur?

Mr. RAGON. The delay may ruin us. The reunion is on the 8th. Little Rock is not a large city. The hotel facilities will be heavily taxed. I have had urgent wires the latter part of last week to give them information as to the number in attendance.

Mr. UNDERHILL. In view of the urgency, Mr. Speaker, I will not offer an amendment.

The bill was ordered to be read the third time, was read the third time, and passed.

A motion to reconsider the vote whereby the bill was passed was laid on the table.

ROSS F. COLLINS

Mr. VINSON of Georgia. Mr. Speaker, I ask unanimous consent to be permitted to file a supplemental report on the bill (H. R. 3221) for the relief of Ross F. Collins from the Committee on Naval Affairs.

The SPEAKER. Is there objection?

There was no objection.

REREFERENCE OF A BILL—JOINT-STOCK LAND BANKS

Mr. DYER. Mr. Speaker, the bill S. 4039, to exempt joint-stock land banks from the provisions of section 8 of the act entitled "An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes, approved October 15, 1914, as amended," was referred to the Committee on the Judiciary. I ask unanimous consent that this be rereferred to the Committee on Banking and Currency, in order to facilitate consideration of the legislation.

The SPEAKER. The gentleman from Missouri asks unanimous consent for rereference of a bill, the title of which the Clerk will report.

The Clerk reported the title of the bill.

The SPEAKER. Is there objection?

Mr. LAGUARDIA. Mr. Speaker, reserving the right to object, is this action taken through decision of the Committee on the Judiciary?

Mr. DYER. No; I am asking this upon my own motion. The legislation to which this referred was legislation from the Committee on Banking and Currency originally.

Mr. LAGUARDIA. I heard only the title read. I understand that it referred to some matters in restraint of trade.

Mr. DYER. I examined the bill in connection with the parliamentarian, and we are satisfied that the bill should go to the Committee on Banking and Currency.

The SPEAKER. Is there objection?

There was no objection.

PRESENTATION OF FLYING CROSS TO CERTAIN AVIATORS

Mr. TILSON. Mr. Speaker, by the request of the acting chairman of the Committee on Military Affairs and the ranking minority member of that committee, I ask unanimous consent to take from the Speaker's table the bill H. R. 13331, to authorize the President to present the distinguished-flying cross to Ehrenfried Gunther von Huenefeld, James C. FitzMaurice, and Hermann Koehl, with Senate amendments thereto, and concur in the Senate amendments.

The SPEAKER. The gentleman from Connecticut asks unanimous consent to take from the Speaker's table the bill H. R. 13331, with Senate amendments thereto, and concur in the Senate amendments. The Clerk will report the title of the bill.

The Clerk read the title of the bill.

The SPEAKER. The Clerk will report the Senate amendments.

The Clerk reported the Senate amendments.

Mr. TILSON. Mr. Speaker, this is a real emergency, because it is desired to have this bill passed before the flyers arrive on Wednesday next. In order to do this it should be passed to-day. This is simply a motion to concur in the Senate amendments, which add the names of the French and Italian flyers to those named in the House bill.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The question is on agreeing to the Senate amendments.

The Senate amendments were agreed to.

LEAVE OF ABSENCE

Mr. VESTAL. Mr. Speaker, I ask unanimous consent for leave of absence for 10 days for my colleague Mr. JOHNSON of Indiana, who has been called home on account of serious illness in his family.

The SPEAKER. Without objection, the leave is granted.

There was no objection.

EVENING SESSION

Mr. TILSON. Mr. Speaker, at the request of the chairman of the Committee on Agriculture, I ask unanimous consent that it be made in order for the Committee of the Whole House on the state of the Union, in consideration of the farm relief bill, at any time before 6 o'clock this afternoon, to recess until 8 o'clock to-night, and that between the hours of 8 o'clock and not later than 11 o'clock to-night general debate shall continue on the farm relief bill.

The SPEAKER. The gentleman from Connecticut asks unanimous consent that to-day it shall be in order for the Committee of the Whole House on the state of the Union to take a recess, not later than 6 o'clock, until 8 o'clock p. m., and to continue general debate upon the farm relief bill until not later than 11 o'clock p. m. Is there objection?

Mr. OLIVER of Alabama. Reserving the right to object, I take it that there will be no other business transacted than the discussion of the farm relief measure?

Mr. TILSON. There could be no other business transacted in the Committee of the Whole, but I undertake to say that no other business will be called up after the committee rises.

Mr. LAGUARDIA. And that this time be not deducted from the 12 hours provided under the rule?

Mr. TILSON. The time used this evening not to be deducted from the 12 hours provided under the rule, and the time consumed to be divided in the same manner that the time under the rule has been divided.

Mr. LAGUARDIA. That is, the three hours to-night?

Mr. TILSON. Yes; any extra time at the evening session.

The SPEAKER. The gentleman from Connecticut supplements his request by adding that the time during the evening session be not deducted from that allowed for general debate under the rules, and that the time be equally divided between those for and against, as under the rule. Is there objection?

There was no objection.

ORDER OF BUSINESS

Mr. FORT. Mr. Speaker, at the conclusion of the session of the Committee of the Whole House on the state of the Union on Friday last the gentleman from Michigan [Mr. KETCHAM] was engaged in speaking upon the farm relief bill. It has seemed to all who controlled the time that the last 15 minutes of Mr. KETCHAM'S time were useless to him, because of the very unfortunate occurrence of which the House then became advised. I ask unanimous consent that the time for general debate under the rule be extended 15 minutes, or, in other words, that the last 15 minutes of the time used by the gentleman from Michigan be not charged against the time to be controlled by him.

The SPEAKER. The Chair is advised that that time was not charged against the gentleman from Michigan.

Mr. FORT. The gentleman from Michigan informs me that it was so charged.

Mr. KETCHAM. Mr. Speaker, may I ask how much time remains of my time?

The SPEAKER. The gentleman has 16 minutes remaining, according to the timekeeper.

Mr. KETCHAM. Then it was charged against me, because under the request of the gentleman from New Jersey the time elapsed would have been only 30 minutes, whereas 44 minutes has elapsed according to the record of the timekeeper.

The SPEAKER. The Chair will first put the request of the gentleman from Connecticut. Is there objection to his request?

There was no objection.

The SPEAKER. The gentleman from New Jersey [Mr. FORT] asks unanimous consent that the time of the gentleman from Michigan [Mr. KETCHAM] be extended 15 minutes beyond the time allotted under the rule. Is there objection?

There was no objection.

THE AGRICULTURAL SURPLUS CONTROL BILL

Mr. HAUGEN. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill S. 3555.

The motion was agreed to.

The SPEAKER. The gentleman from Michigan [Mr. MAPES] will please take the chair.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union for the further consideration of the bill S. 3555, with Mr. MAPES in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the further consideration of the bill S. 3555, which the Clerk will report by title.

The Clerk read as follows:

A bill (S. 3555) to establish a Federal farm board to aid in the orderly marketing and in the control and disposition of the surplus of agricultural commodities in interstate and foreign commerce.

Mr. KETCHAM. Mr. Chairman, I yield myself 20 minutes of the time remaining to my credit—37 minutes.

The CHAIRMAN. The gentleman from Michigan is recognized for 20 minutes.

Mr. KETCHAM. Mr. Chairman and members of the committee, at the conclusion of the debate on Friday afternoon I had proceeded quite well along with an explanation of the details of the export debenture plan. I was, of course, as all of us were, very greatly shocked by the tragic event which caused a suspension of the proceedings for the day; and I am perfectly aware that whatever of continuity there may have been in the discussion was thereby destroyed. And so, for the purpose of getting the ideas in the bill before you in a very brief way I want to trespass upon your patience long enough to make just a few statements as to what the export debenture plan really is and what our plans are with reference to it.

I may state at the outset that my colleague from Texas [Mr. JONES] and myself have been continuously and enthusiastically in favor of some sort of farm-relief legislation that would cure the present price maladjustment under which agriculture is at present conducting its operations. For myself, and I think for the gentleman from Texas, I can say that we have on previous occasions supported the McNary-Haugen bill. So far as I am myself concerned, that is true. On two of the three times it has been before the House for consideration I have voted for it.

The reason why we are urging the export debenture plan at this time is simply because we believe that it is the only method by which we may write upon the statute books farm relief legislation at this session of Congress.

Now, that ground has been traveled over so much that I do not want to enlarge upon it, and I will simply dismiss it with one sentence. In the first place, granted that the bill passes both Houses, I think there can be no manner of question as to what its future will be at the other end of the Avenue should it contain the equalization fee. Granted, then, that it will be vetoed at the other end of the Avenue. That, of course, brings up the proposition as to whether or not a sufficient number of votes may be mustered in the opposite end of the Capitol to override that veto. If that shall not be done, that means an end to the legislation. If it shall be done, then that means that the bill will come back here for a similar vote.

I do not know what all of you believe, but it is my belief that the chances are very remote for any such action to be taken. And then, granted that that might possibly be done—and it is within the range of possibility—I think it has increasingly been the conviction of men of both Houses that the question of constitutionality would immediately be raised; and while not an attorney, and therefore venturing no opinion, but simply relying upon the judgment of those who have given it careful consideration, I think there is grave doubt as to its constitutionality. Whether that might be granted or not is another argument. But this may be said, that at least two years would go by before the question might be thoroughly tested in the courts and a decision rendered; even then, should a favorable decision be rendered, then additional months would be required to set the bill in operation. So viewing the whole situation in the most favorable light, at least two or three years more of our present condition must be pressed upon agriculture before a remedy can be applied.

Granted that the equalization fee shall not be the remedy agreed upon by the Congress to cure the situation that we have before us, Mr. Chairman and members of the committee, my colleague from Texas and myself, supported by the oldest and the strongest and the most conservative farm organization in the United States, are presenting for your consideration an alternative proposition that we have good reason to believe is sound; in fact, no word of challenge as to its constitutionality has been uttered. In the third place, we believe it is a practical proposition, and that it will cure within 60 days the present farm price disparity that is so greatly to the disadvantage of agriculture.

Mr. GARBER. Mr. Chairman, will the gentleman yield there?

Mr. KETCHAM. Yes.

Mr. GARBER. In regard to the soundness of your measure, I notice by your former argument that you suggested that the remedy only applied for the period necessary to tide over the present crisis. You would not advocate a policy of paying a continuous premium or subsidy to the producers of farm products out of the Treasury of the United States, would you? That, on the very face of it, to my mind is unsound—that is, when you get right down to a permanent policy to pursue.

Mr. KETCHAM. I think I can satisfy the gentleman by answering that particular thing in this way, and I should like to have him follow me. Our contention is that this condition is a temporary condition. My own belief and theory is that without any legislative enactment at all within five years—and certainly within eight years—agriculture, which is always slow to recover from war conditions, will restore of itself its price parity. Our bill is written upon this theory, and I want you to see it, that by certain legislative proposals we have placed the farmer at a disadvantage so far as his costs of pro-

duction are concerned. That has been done by action of the Congress. There can be no argument about that. It is our contention that if those different legislative acts were sound economically that the proposal we now offer is likewise sound, because it comes at the proposition in the only possible way it can be met and for the time being restores the price parity of the farmers of the United States, which, we maintain, has largely been destroyed by the legislative acts of this Congress itself. So it appears to us we are absolutely sound and that our position is practical, because we have grounded ourselves upon the position that the farmers are entitled, if you please, to the costs of production; and if we have raised their costs of production, then it seems to me that by legislation—and I believe this is the way—that disparity shall be removed and that disadvantage taken away. When the time comes that the price parity between agricultural commodities and others shall be realized, then automatically this device of ours fades out of the picture and no further inroads upon the Treasury shall be made.

So far as inroads upon the Treasury are concerned, may I just call the attention of the membership of the committee to this? What do we mean by inroads upon the Treasury? Taking money out of the Treasury and keeping money from coming into the Treasury. I will give two or three very simple illustrations. For instance, take the tariff on butter, for which I think all of us voted—a very fine, constructive piece of machinery to the advantage of agriculture. When the tariff was at 8 cents per pound we found butter coming in from the outside. Upon a proper showing by the Tariff Commission the President, by proclamation inreased the rate, as he is permitted to do under the flexible provisions of the tariff, from 8 to 12 cents. What did that do? It kept money out of the Treasury of the United States. It was for the advantage of the dairy farmer, without any manner of question, but was a disadvantage to the Treasury.

In one sense that proposition was in principle a subsidy to the dairy farmers and in 100 ways I might illustrate that so far as manufacturing is concerned. The whole theory upon which we have built up our American economic life to-day is grounded upon that thought. Here our scale of living is a higher one, and, therefore, various sections and various groups of our population must be taken into consideration, and so far as it is possible they must be put upon a level of opportunity. We believe that the proposition we have here this morning is the simplest, the most direct, the most positive, and the least objectionable of any of the plans that have been proposed for bringing price equality to the farmer.

Mr. COLE of Iowa. Will the gentleman yield?

Mr. KETCHAM. Yes.

Mr. COLE of Iowa. I do not want to be understood as being unfriendly to this legislation.

Mr. CLARKE. Which legislation?

Mr. COLE of Iowa. The debenture plan. Will the gentleman tell us how we can apply this to a particular line of products and not to all? How can you limit it to agricultural products? What is there to prevent other industries from coming in and using this as a precedent and asking the same favors for themselves?

Mr. KETCHAM. I will answer the gentleman's question by saying that already the rest of them have been taken in and we are enjoying the benefits to-day, and now all we are asking is that the farmer shall be placed upon the same parity with the rest.

Mr. COLE of Iowa. But for every bushel of grain exported we are going to give a rebate, a debenture. Now, why could not an automobile factory come in and ask a rebate, a debenture?

Mr. KETCHAM. I dare say it could, and if it were determined that the automobile industry had been placed in an unsatisfactory position by legislation I am very certain that fairness and justice in this body would say that is a thing that ought to be done for it if that were the only device by which the automobile industry might be put on a parity with the other industries of the country. My recollection is that we have just lifted $66,000,000 per year from automobile taxes.

Mr. COLE of Iowa. That becomes a question of argument. I think it could be proved that many industries at the present time are in a depressed and deflated condition, and under the precedent in this legislation, those concerned would be entitled to ask for the same benefits.

Mr. KETCHAM. I will have simply to say that for the moment—and I do not want you to lose sight of this—we are simply dealing with the one proposition of agriculture, and we are here advocating our plan, as I indicated a moment ago, as the simplest, the fairest, and most direct, and, yea, so far as the Treasury itself is concerned, the least expensive plan that has been proposed. This will develop a little later in the argument.

Mr. UNDERWOOD. Will the gentleman yield?

Mr. KETCHAM. I will yield to the gentleman for one brief question, and then I must hurry on.

Mr. UNDERWOOD. I am very much interested in the gentleman's plan. It has been charged in the debate here that the debenture plan, if put into effect, would result in wild speculation. It has been further alleged that the exporters and importers would divide the debenture and that very little would be reflected back to the producer in the price of his product. Can the gentleman answer these objections?

Mr. KETCHAM. I think I can answer the questions, at least satisfactorily to myself, and they are completely answered in my own mind. Whether the debenture plan is set up or whether the equalization-fee plan is set up, undoubtedly all the benefits that agriculture expects to accrue will not come back to them; but for the life of me I am unable to understand why under the export debenture plan there will not be as great certainty of the greatest amount of benefit to get back to the farmer as under the other plan; and, so far as the equalization plan is concerned, I think more of the benefit will get back, because no tremendously expensive machinery, involving the employment literally of thousands of people, is set up in connection with it. So I think the chances are much better under our plan for a greater share of the benefit getting back to the farmer himself.

Mr. UNDERWOOD. Will the gentleman yield further for one short question?

Mr. KETCHAM. For a short question.

Mr. UNDERWOOD. How would the debenture plan stabilize agriculture and take care of the surplus production we now have?

Mr. KETCHAM. The gentleman asks how the debenture plan would stabilize agriculture. May I say that, so far as my understanding of all these bills is concerned, stabilization, which refers to seasonal fluctuation, is cared for principally in the loan features. The gentleman is very familiar with the agricultural situation, representing a very great agricultural section, and knows that seasonal fluctuation of prices is one of the reasons agriculture is at a great disadvantage to-day.

The loan features of both the McNary-Haugen bill and the export debenture bill are calculated to minimize these seasonal fluctuations and stabilize the price so that through the year, if you please, there will be more nearly an average, which will be greatly to the advantage of the farmer, at least during the early part of the marketing period.

Mr. MORGAN and Mr. OLIVER of Alabama rose.

Mr. KETCHAM. I hesitate to refuse to yield because you are all so interested, but I think I will serve notice that after these two questions are answered I want to proceed with my statement.

Mr. MORGAN. The orderly marketing features of both plans would be virtually the same so far as taking care of the surplus and orderly marketing are concerned.

Mr. KETCHAM. The loan features of the two bills are practically the same.

Mr. OLIVER of Alabama. Assuming that the facts justify an operating period under the debenture plan and that the market price of cotton is 6 cents, and that it is found that the cost of producing it is 16 cents at home and the cost of producing it abroad is 14 cents, what would be the amount of the debenture under those facts that the gentleman's plan would authorize?

Mr. KETCHAM. If I caught the facts correctly, the difference between them, as already set up in the bill, would be 2 cents a pound.

Mr. OLIVER of Alabama. How would that affect in a helpful way a farmer raising cotton, when the difference between the cost of production and the market price is 10 cents?

Mr. KETCHAM. Under the debenture plan his price would be increased the first year 2 cents a pound without paying any fee or tax.

Mr. OLIVER of Alabama. I was under the impression the gentleman held out that his plan offered absolute relief and far better relief than the other plan to the cotton farmer.

Mr. KETCHAM. I think I have made no statement of that sort.

Mr. LAGUARDIA. How could such a condition be possible, if the cost abroad were 14 cents and here 16 cents and the market price 6 cents?

Mr. KETCHAM. I can not conceive of that condition.

Mr. LAGUARDIA. I can not, either.

Mr. KETCHAM. But the amount of increase would be $10 per bale under the bill.

Mr. JONES. Will the gentleman yield?

Mr. KETCHAM. Yes.

Mr. JONES. May I suggest to the gentleman that they hope the McNary-Haugen law will help out through the loan feature by enabling them to buy up the surplus at the low price and take it off the market and hold it and thus bring up the price, and in both instances the plans operate in the same way.

Mr. KETCHAM. In the concluding minutes I shall take I want to do just three things. First, I want to call your attention in a word to the splendid organization that has lent its support to this bill. I want to commend it for its very splendid attitude. This organization has come before us simply presenting its plan, with no orders to take this or nothing; a fine spirit, and I think every member of the committee recognizes the thoughtfulness and the fine attitude of the Grange as it appeared before our committee.

This organization is constituted of about 8,000 subordinate organizations in 33 States of the Union. It has at present 800,000 dues-paying members, the oldest and the largest of the farm organizations. I may say that possibly the sentiment of that organization can best be expressed in the words of the master of the National Grange in his concluding remarks:

Mr. KETCHAM. There are just two or three things by way of summarizing your argument that I would like to put to you in the form of questions. In the first place, just to get the picture of the situation that agriculture is in, I presume you have made a study of the indexes that are furnished by the Department of Labor as indicating the trend of prices in agriculture and all other commodities, and several other groups?

Mr. TABER. Yes.

Mr. KETCHAM. You are familiar, for instance, with the fact that the labor index is at present 228, that the transportation index is 157, and that the all-commodity index is 152, while the index of farm commodities at the farm is 138. Do you subscribe in that connection to the general opinion that that variation is attributable to a degree—quite a large degree—to legislative procedure—are there certain specific acts of Congress that, in other words, may have contributed to the making of the labor index what it is instead of what it would be had the laws previous to these particular enactments been enforced?

Mr. TABER. We fully subscribe to the notion that the commodity and labor price index as given by the Department of Labor reflects a true picture of our difficulty and reflects also that that difficulty has been contributed to in no small part by the actions of Congress itself and by legislative enactment.

Mr. KETCHAM. Do you share in the opinion that there was any malice or any intention on the part of Congress or in the thought of anyone that the results as indicated in these indexes would follow as a result of that action? Do you think it was injuriously directed toward the farmer?

Mr. TABER. We have never felt that Congress, business, or labor acted with a desire to injure agriculture. We have felt that their superior organization, their superior mobility, made it possible for them to secure benefits that did not accrue to other groups.

Mr. KETCHAM. Do you subscribe to the idea that as a result of these indexes, which, of course, indicate higher purchasing power, in general that contributes to national prosperity; in other words, the fact is you have no desire to see these men particularly crippled in the advantages that they enjoy?

Mr. TABER. Our policy has always been to build up agriculture and not to seek to interfere with wages or standards of other groups.

Mr. KETCHAM. Then, if I understand the purpose of your appearing here in the advocacy of this bill, it is that you believe that this bill will best take care of agriculture and place it, as reflected in the indexes, on a parallel with the other groups with which reference has been made?

Mr. TABER. Our whole purpose and our only purpose in appearing here and in advocating this legislation is the honest belief, founded on our best judgment and our experience, both in America and elsewhere, that this legislation more certainly, with less expense and less delay, would do the very thing that you have indicated—lift agriculture on a plane with labor, with transportation, with finance, and with industry; and we think, further, that it does it in harmony with precedents and in accordance with the established policy of the Government better than any other legislation proposed.

Mr. KETCHAM. One further question, Mr. Taber, and I think I am through: Supposing that this bill were passed by the Congress and approved by the President and were put into effect, and that following that agriculture did take its place; and then add the supposition that our population changes will keep on with their draft toward the cities and naturally, possibly, the need for this special kind of legislation would gradually disappear—what is the effect of this particular bill on that kind of a situation?

Mr. TABER. This bill is self-eliminating.

Mr. KETCHAM. "Self-eliminating" describes the situation, and still does not give agriculture a supreme advantage over others; but simply puts it into the picture, so that we can march down the road side by side, which is all any farmer asks.

Mr. TABER. That is correct; it does exactly that thing. As we approach the import basis on any commodity, the export debenture automatically, without any expense, without any difficulty, eliminates itself, and the system that is then prevailing for the protection of other groups will protect agriculture.

Mr. KETCHAM. I said that was the last question I had, but here is one other: You have stated that you preferred the form of organization set up in the bill—without a board and without what is referred to as the revolving fund or the stabilizing features of the other bill. In the spirit you manifested, which I want to compliment, you have said that if it be the judgment of this committee that these added features, such as board and loan features, ought to be incorporated, you would be glad to go along and would give that sort of an arrangement your support, although you preferred the provisions of this bill; is that correct?

Mr. TABER. That is a correct statement.

I wanted to give them to you because they reflect this sentiment very nicely. After thus giving his approval to the bill Mr. Louis J. Taber, the master of the National Grange, summarizing the whole proposition, said:

We favor the simple, nonsalaried, naked proposition, the export-debenture plan, because of the reasons we have indicated; but we realize, as we have said in the very beginning, the superior judgment of this committee, your long experience, your seven years' study of the problem, and if, in your superior judgment, you felt a salaried board was necessary; if, in your superior judgment, you felt a revolving fund was necessary; or if, in your superior judgment, you felt an export corporation was necessary, we naturally would acquiesce in your superior judgment, believing that your study and your experience brought you to this conclusion with the good of agriculture in mind. Naturally, we would go most enthusiastically along with the program in spite of the fact that it was not just what we asked for or just what we wanted.

I may say to you that the bill as outlined in that paragraph is the bill substantially we have before you. Now, I want to say another thing, and it is an emphasis of what I said in the first two or three minutes on the floor to-day. My colleagues and I who believe there is real merit in that plan come before you and ask for farm equality now. I undertook in my opening remarks to show you that the farm index to-day in contrast with 1913 was 138, all-commodities index 152, transportation 157, and labor 228. If I may use an illustration that will be timely because of the Olympic games this summer, one of the most spectacular events in these games is the 100-yard dash. What would you think if the man in charge came out and said, "Gentlemen, we are going to have a splendid contest, a hundred-yard dash, but we are going to handicap some of the folks. America will run scratch, Great Britain will start from the 10-yard line, France from the 14-yard line, and Germany from the 65-yard line." Unjust, unfair, and unthinkable, of course, but not unlike the economic situation of agriculture. We are asking the farmers to handicap themselves in this great economic struggle in which they are engaged. We put the farmers on scratch—and you all know what scratch is—and the nearest man to him is the one who represents that vast group in the all-commodity list. We give him 10 points start. Those engaged in transportation you would give 14 points start, and when you come to labor you give them 65 points start in the great race for economic independence. Absolutely unfair conditions and the results foretold before the race begins!

May I sum up the whole situation in a word: For four years we have been earnestly striving to enact legislation that will accomplish price equality for the farmer. In terms of the hundred-yard dash we have been either seeking to place all groups in the economic struggle on scratch together, or if this is impossible to put the farmer up on equal terms with the other groups. Those of us who favor the export-debenture plan earnestly urge this legislation in the belief that it will enable the farmer to start this year on equal terms with other groups. Ultimate price equality is the aim of the three leading proposals. We sincerely believe that our plan is the most effective and that above everything else it can become operative this year. The loan features of all bills make for stabilization, but we believe the export-debenture plan is the surest and quickest way of securing price equality at once.

Granted for the sake of argument that the equalization-fee plan will bring price equality, with court delays in the testing of the constitutionality of the fee requiring one or two years at the best, it will be 1930 or 1931 before the equalization fee could possibly be put into operation. Why handicap the farmers of the United States in 1928 and 1929 and possibly longer when the debenture plan, which we believe will do all that the equalization-fee plan can do, can be made effective for the

present crop year? "Do it now" is an appealing sentiment in this connection. In the great Northwest they also say, "Eventually, why not now?" [Applause.]

I want to conclude my remarks with another illustration which I think emphasizes the superiority of the export-debenture plan over that of the equalization-fee plan. When the World War broke out Uncle Sam sent word to Tom in the country, "Come to the colors," and Tom said, "It will be my great pleasure," and he came to the colors. Likewise said Uncle Sam to Dick in industry and to Harry in transportation, "Come to the colors," and they came. They were clothed, they were fed, and they were armed by Uncle Sam. They were the best clothed, the best fed, and the best armed men that the world has ever seen. Down the road they marched on terms of equality to join in winning the greatest victory ever achieved for humanity.

My colleagues, those of us who are advocating the export-debenture plan are asking that in the great struggle for economic independence Tom from the farm, Dick from industry, and Harry from transportation shall be equipped on terms of equality in order that they may march down the road together on equal terms, as they did in war times. The advocates of the equalization-fee plan propose to call Tom from the farm to one side and say to him, "Tom, we want to fix you out all right, so you can march with the other boys; but we are going to let you buy your own uniform," and "Tom, we are sorry, but we may not be able to arrange it so that you can buy it before 1929 or 1930." You are asking agriculture to bear an equalization fee so that he may march on terms of economic equality with his comrades. We do not treat industry so; we do not treat transportation so; and we do not treat labor so. Why shall not the farmer be given economic equality as is given to other groups of our people? Upon this basis we appeal to you for your favorable consideration of the export-debenture plan. [Applause.]

Mr. ASWELL. Mr. Chairman, I yield to the gentleman from Georgia [Mr. WRIGHT].

Mr. WRIGHT. Mr. Chairman, I shall not discuss the bill in detail at this time, but simply ask unanimous consent to print in the RECORD some proposed amendments, which I hope to be able to offer in respect to the equalization fee on cotton. If the general motion to strike out the equalization fee prevails, I shall not offer these amendments. I shall support the motion to strike out the equalization fee, if it be offered.

The CHAIRMAN. The gentleman from Georgia asks unanimous consent to extend his remarks in the RECORD by printing certain proposed amendments for information. Is there objection?

There was no objection.

The amendments referred to are as follows:

After the word "associations," in line 1 on page 37, add the following: "to banks and to associations or corporations organized by farmers or others, under the laws of any State."

After the word "associations," in line 9, paragraph 1, page 37, insert a comma and add the following: "banks, associations, or corporations organized by farmers or others, under the laws of any State."

Strike out section 6 of the bill.

After the last word in line 7 on page 47, add the following: "*Provided, however,* No equalization fee shall ever be estimated, levied, or collected on cotton."

After the word "commodity," in line 9 on page 47, add the words "except cotton."

After the word "period," in line 13 on page 48, add the following: "*Provided,* No equalization fee shall be collected on cotton."

After the word "States," in line 20 on page 49, add the following: "*Provided, however,* The provisions of paragraphs 1 and 2 and subdivisions f and g above shall not apply to cotton."

On page 50, strike out subparagraph 2.

Mr. ASWELL. Mr. Chairman, I now yield to the gentleman from Tennessee [Mr. GARRETT].

Mr. GARRETT of Tennessee. Mr. Chairman, if I could believe that the proposed measure rested upon sound constitutional and economic grounds and that its operation would be of benefit to agriculture, the great basic industry of America, I should not only most gladly support it but most earnestly urge it.

That individual fails wholly to understand the philosophy of our entire economic life who does not appreciate the fact that prosperous agriculture is essential to a full and rounded prosperity in all other lines of activity and industry. There is not a legitimate industry in America whose interests are, or can be, inimical to the farmers of the Nation enjoying prosperity. The Nation can never be happy as a whole, or safe as a whole, unless this condition exists.

Every demand of statesmanship, to say nothing of personal political ambitions, would dictate the support of legislation which would aid in promoting this condition.

But, sir, I have never been able to bring myself to the belief that the complicated system which it is proposed to found upon a stabilization fund, which fund is to be created by the levy of a tax, called an equalization fee, will prove workable in fact or beneficial to the farmer. Upon the contrary, it has been and is my firm belief that such a system would subject the agricultural interests to an exploitation exceeding anything that we have ever witnessed, and not only that but I fear it would lead almost if not quite to revolution.

I have never believed that it lay within the constitutional purview of Congress to authorize a board to levy a tax upon the agricultural products of individual producers and enforce its collection through the machinery of government as is proposed in this measure.

Let it be borne clearly in mind that the proposal of the bill is to clothe a board of 12 men with the power to levy a tax upon every bushel of wheat or corn, upon every bale of cotton, upon every pound of tobacco and meat—in short, upon some unit of every product of the farm. There is no limit placed upon the board's discretion as to the amount which it may levy, and the fund thus created is to be expended by the very board which levies it.

Think of what that means! If the plan shall be adopted and upheld by the courts, in what will it eventuate? Looking down the years it is perfectly easy to envision a situation where the whole agricultural industry of America will be thrown under governmental control, the farmer's freedom of contract destroyed, and the farm system completely revolutionized.

This fee is to be compulsory; it is not a matter of free action on the part of the farmer entering into a contract as he does when he joins a cooperative marketing association or other farm organization. It is to be levied upon him by a board and collected from him by the agencies of law.

Surely no one will deceive himself into the belief that this fee will not come from the farmer himself. It is immaterial at what point in the handling of the product the tax may be imposed, whether at the time of the first sale or when it is transported or when it is processed, it will be paid by the farmer who grows the product.

That I understand to be not only the admission of the proponents of the measure, but they claim it as a virtue, saying, in substance, it is simply a plan to enable the farmer to help himself.

If that be true, how is the farmer to be benefited by paying his own losses from his own pocket?

One of the favorite lines of argument by some of the advocates of this measure for years has been that government has aided other activities—the railroads and railroad workers and the banks—to say nothing of aid to manufacturers through the instrumentality of the tariff.

As for this latter those who think as I do feel that the cure lies in a revision of the tariff schedules so as to eliminate the favoritism of law and not in embracing this favoritism and trying to make it the basis of a permanent system. Vice can not well be made a foundation stone upon which to erect a structure of virtue.

So far as railroads and banks are concerned, in the first place entirely erroneous impressions have been created as to what has been done; and in the second place all who think for a moment will appreciate the fact that there is a vast difference in the relation of government to public-service corporations and to farmers.

The public-service corporations are subject to the highest measure of governmental control. Government can do anything it chooses with these except confiscate them.

Is it possible that there are any considerable numbers of people in America who believe that the farmers are ready to have their farms and industry placed in the category of a public-service corporation and made subject to governmental regulation and control?

If so, they will be rapidly undeceived once the effort is made.

Mr. Chairman, I shall undertake to make some analysis of this measure from the economic standpoint. I have stated the fundamental legal objection which lies in my mind. I appreciate the necessity for legislation and I regret profoundly the political influences which apparently have rendered legislation impossible. If we can strike the equalization fee from the bill, with some amendments to the other portions of the measure, I shall be very happy to support it. I should be very happy to support the debenture plan outlined by the gentleman from Michigan [Mr. KETCHAM], and the gentleman from Texas [Mr. JONES].

Mr. WOODRUFF. Mr. Chairman, will the gentleman yield?

Mr. GARRETT of Tennessee. Yes.

Mr. WOODRUFF. I have enjoyed the gentleman's interesting discussion of this bill. Does the gentleman think the McNary-Haugen bill with the equalization fee eliminated would still present a workable plan for farm relief?

Mr. GARRETT of Tennessee. I think it would.

Mr. LAGUARDIA. How would you finance it? Out of the Treasury?

Mr. GARRETT of Tennessee. That is a part of the bill.

Mr. ASWELL. Mr. Chairman, will the gentleman yield?

Mr. GARRETT of Tennessee. Yes.

Mr. ASWELL. It was testified by several witnesses before the committee that it would be a workable bill.

Mr. GARRETT of Tennessee. I have understood that there is no question about that.

Mr. LAGUARDIA. The gentleman in his address stressed the freedom of contract which the farmers have enjoyed. All that that freedom of contract has amounted to up to date, it seems, has been a sort of freedom to submit to foreclosure and to suffer great losses, has it not?

Mr. GARRETT of Tennessee. The gentleman understands that I am using that expression in a different sense from what evidently he has in mind.

I think, Mr. Chairman, it is very generally understood that the retention of the equalization fee feature of the bill has been forced by the influence, in the main, of the representatives of certain of the cooperative marketing organizations—cotton, tobacco, and wheat, in particular—who have been steadily and assiduously upon the job here since the Committee on Agriculture began their hearings.

I do not wish even to seem to antagonize the principle of cooperative marketing. Upon the contrary it has been my pleasure both as a citizen and as a legislator to encourage its organization and growth, because I regard the theory as sound, and its soundness is not destroyed by failures due to mismanagement or other causes.

But, sir, there is a vast difference between asking and advising a farmer voluntarily to join a cooperative marketing organization, and, as a legislator, voting to make him join, and that is what I am asked to do when requested to vote for that part of the bill embraced in sections 9, 10, and 11.

I quote them in full:

MARKETING AGREEMENTS

SEC. 9. (a) From time to time upon request of the advisory council for any agricultural commodity, or upon request of leading cooperative associations or other organizations of producers of any agricultural commodity, or upon its own motion, the board shall investigate the supply and marketing situation in respect of such agricultural commodity.

(b) Whenever upon such investigation the board finds—

First. That there is or may be during the ensuing year a seasonal or year's total surplus, produced in the United States and national in extent, that is in excess of the requirements for the orderly marketing of any agricultural commodity or in excess of the domestic requirements for the commodity;

Second. That the operation of the provisions of section 5 (relating to loans to cooperative associations or corporations created and controlled by one or more cooperative associations) will not be effective to control such surplus because of the inability or unwillingness of the cooperative associations engaged in handling the commodity, or corporations created and controlled by one or more such cooperative associations, to control such surplus with the assistance of such loans; and

Third. That the durability, the conditions of preparation, processing, and preserving, and the methods of marketing of the commodity are such that the commodity is adapted to marketing as authorized by this section—then the board, after publicly declaring its findings, shall arrange for marketing any part of the commodity by means of marketing agreements with cooperative associations engaged in handling the commodity or corporations created and controlled by one or more such cooperative associations. Such marketing shall continue during a marketing period which shall terminate at such time as, in the judgment of the board, such arrangements are no longer necessary or advisable for carrying out the policy declared in section 1.

(c) A marketing agreement shall provide either—

(1) For the withholding by a cooperative association, or corporation created and controlled by one or more cooperative associations, during such period as shall be provided in the agreement, of any part of the commodity delivered to such cooperative association or associations by its members. Any such agreement shall provide for the payment from the stabilization fund for the commodity of the costs arising out of such withholding; or

(2) For the purchase by a cooperative association, or corporation created and controlled by one or more cooperative associations, of any part of the commodity not delivered to such cooperative association or associations by its members, and for the withholding and disposal of the commodity so purchased. Any such marketing agreement shall provide for the payment from the stabilization fund for the commodity of the amount of the losses, costs, and charges arising out of the purchase, withholding, and disposal, or out of contracts therefor, and for the payment into the stabilization fund for the commodity of profits (after repaying all advances from the stabilization fund and deducting all costs and charges, provided for in the agreement) arising out of the purchase, withholding, and disposal, or out of contracts therefor.

(d) The board may, in its discretion, provide in any such marketing agreement for financing any withholding, purchase, or disposal under such agreement, through advances from the stabilization fund for the commodity. Such financing shall be upon such terms and conditions as the board may prescribe, but no such advance shall bear interest.

(e) If the board is of the opinion that there are two or more cooperative associations or corporations created and controlled by one or more cooperative associations capable of carrying out any marketing agreement, the board in entering into the agreement shall not unreasonably discriminate against any such association or corporation in favor of any other such association or corporation. If the board is of the opinion that there is no such cooperative association or corporation created and controlled by one or more cooperative associations capable of carrying out any marketing agreement for purchase, withholding, and disposal, then the board may enter into the agreement with other agencies but shall not unreasonably discriminate between such other agencies.

(f) During a marketing period fixed by the board for any commodity, the board may enter into marketing agreements for the purchase, withholding, and disposal of the food products of such commodity, and all provisions of this section applicable to marketing agreements for the purchase, withholding, and disposal of the commodity, shall apply to the agreements in respect of its food products.

(g) Any decision of the board relating to the commencement, extension, or termination of a marketing period shall require the affirmative vote of a majority of the appointed members in office.

(h) The powers of the board under this section in respect of any agricultural commodity shall be exercised in such manner, and the marketing agreements entered into by the board during any marketing period shall be upon such terms, as will, in the judgment of the board, carry out the policy declared by section 1.

(i) The United States shall not be liable, directly or indirectly, upon agreements under this Act in respect of agricultural commodities, in excess of the amounts available in the stabilization, premium insurance, and revolving funds.

EQUALIZATION FEE

SEC. 10. (a) In order to carry out marketing and nonpremium insurance agreements in respect of any agricultural commodity without loss to the revolving fund, each marketed unit of such agricultural commodity produced in the United States shall, throughout any marketing period in respect of such commodity, contribute ratably its equitable share of the losses, costs, and charges arising out of such agreements. Such contributions shall be made by means of an equalization fee apportioned and paid as a regulation of interstate and foreign commerce in the commodity. It shall be the duty of the board to apportion and collect such fee in respect of such commodity as hereinafter provided.

(b) Prior to the commencement of any marketing period in respect of any agricultural commodity, and thereafter from time to time during such marketing period, the board shall estimate the probable losses, costs, and charges to be paid under marketing agreements in respect of such commodity and under nonpremium insurance agreements in respect of such commodity as hereinafter provided. Upon the basis of such estimates, the board shall from time to time determine and publish the amount of the equalization fee (if any is required under such estimates) for each unit of weight, measure, or value designated by the board, to be collected upon such unit of such agricultural commodity during any part of the marketing period for the commodity. Such amount is referred to in this Act as the "equalization fee." At the time of determining and publishing any equalization fee the board shall specify the time during which the particular fee shall remain in effect and the place and manner of its payment and collection.

(c) Under such regulations as the board may prescribe, any equalization fee determined upon by the board shall be paid, in respect of each marketed unit of such commodity, upon one of the following: The transportation, processing, or sale of such unit. The equalization fee shall not be collected more than once in respect of any unit. The board shall determine, in the case of each class of transactions in the commodity, whether the equalization fee shall be paid upon transportation, processing, or sale. The board shall make such determination upon the basis of the most effective and economical means of collecting the fee with respect to each unit of the commodity marketed during the marketing period.

(d) Under such regulations as the board may prescribe, the equalization fee determined under this section for any agricultural commodity produced in the United States shall in addition be collected upon the importation of each designated unit of the agricultural commodity

imported into the United States for consumption therein, and an equalization fee, in an amount equivalent as nearly as may be, shall be collected upon the importation of any food product derived in whole or in part from the agricultural commodity and imported into the United States for consumption therein.

(e) The board may by regulation require any person engaged in the transportation, processing, or acquisition by purchase of any agricultural commodity produced in the United States, or in the importation of any agricultural commodity or food product thereof—

(1) To file returns under oath and to report, in respect of his transportation, processing, or acquisition of such commodity produced in the United States or in respect of his importation of the commodity or food product thereof, the amount of equalization fees payable thereon and such other facts as may be necessary for their payment or collection.

(2) To collect the equalization fee as directed by the board and to account therefor.

(f) The board, under regulations prescribed by it, is authorized to pay to any such person required to collect such fees a reasonable charge for his services.

(g) Every person who, in violation of the regulations prescribed by the board, fails to collect or account for any equalization fee shall be liable for its amount and to a penalty equal to one-half its amount. Such amount and penalty may be recovered together in a civil suit brought by the board in the name of the United States.

(h) As used in this section—

(1) In the case of grain the term "processing" means milling of grain for market or the first processing in any manner for market (other than cleaning or drying) of grain not so milled, and the term "sale" means a sale or other disposition in the United States of grain for milling or other processing for market, for resale, or for delivery by a common carrier—occurring during a marketing period in respect of grain.

(2) In the case of cotton the term "processing" means spinning, milling, or any manufacturing of cotton other than ginning, the term "sale" means a sale or other disposition in the United States of cotton for spinning, milling, or any manufacturing other than ginning, or for delivery outside the United States, and the term "transportation" means the acceptance of cotton by a common carrier for delivery to any person for spinning, milling, or any manufacturing of cotton other than ginning, or for delivery outside the United States—occurring during a marketing period in respect of cotton.

(3) In the case of livestock, the term "processing" means slaughter for market by a purchaser of livestock, and the term "sale" means a sale or other disposition in the United States of livestock destined for slaughter for market without intervening holding for feeding (other than feeding in transit) or fattening—occurring during a marketing period in respect of livestock.

(4) In the case of tobacco, the term "sale" means a sale or other disposition to any dealer in leaf tobacco or to any registered manufacturer of the products of tobacco. The term "tobacco" means leaf tobacco, stemmed or unstemmed.

(5) In the case of grain, livestock, and tobacco, the term "transportation" means the acceptance of a commodity by a common carrier for delivery.

(6) In the case of any agricultural commodity other than grain, cotton, livestock, or tobacco, the board shall, in connection with its specification of the place and manner of payment and collection of the equalization fee, further specify the particular type of processing, sale, or transportation in respect of which the equalization fee is to be paid and collected.

(7) The term "sale" does not include a transfer to a cooperative association for the purpose of sale or other disposition by such association on account of the transferor; nor a transfer of title in pursuance of a contract entered into before, and at a specified price determined before, the commencement of a marketing period in respect of the agricultural commodity. In case of the transfer of title in pursuance of a contract entered into after the commencement of a marketing period in respect of the agricultural commodity, but entered into at a time when, and at a specified price determined at a time during which a particular equalization fee is in effect, then the equalization fee applicable in respect of such transfer of title shall be the equalization fee in effect at the time when such specified price was determined.

STABILIZATION FUNDS

SEC. 11. (a) For each agricultural commodity as to which marketing agreements are made by the board, there shall be established, in accordance with regulations prescribed by the board, a stabilization fund. Such fund shall be administered by and exclusively under the control of the board, and the board shall have the exclusive power of expending the moneys in such fund.

(b) There shall be deposited to the credit of the stabilization fund for any agricultural commodity (1) advances from the revolving fund as hereinafter authorized, (2) profits arising out of marketing agreements in respect of the commodity, (3) repayments of advances for financing the purchase, withholding, or disposal of the commodity, and (4) equalization fees collected in respect of the commodity and its imported food products.

(c) In order to make the payments required by a marketing or nonpremium insurance agreement in respect of any agricultural commodity, and in order to pay the salaries and expenses of experts, the board may, in its discretion, advance to the stabilization fund for such commodity out of the revolving fund such amounts as may be necessary.

(d) The deposits to the credit of a stabilization fund shall be made in a public depositary of the United States. All general laws relating to the embezzlement, conversion, or to the improper handling, retention, use, or disposal of public moneys of the United States, shall apply to the profits and equalization fees payable to the credit of the stabilization fund and to moneys deposited to the credit of the fund or withdrawn therefrom but in the custody of any officer or employee of the United States.

(e) There shall be withdrawn from the stabilization fund for any agricultural commodity (1) the payments required by marketing or nonpremium insurance agreements in respect of the commodity, (2) the salaries and expenses of such experts as the board determines shall be payable from such fund, (3) repayments into the revolving fund of advances made from the revolving fund to the stabilization fund, together with interest on such amounts at the rate of 4 per centum per annum, and (4) service charges payable for the collection of equalization fees.

I have quoted these sections verbatim in order that those who may read these remarks may have the text before them and analyze it for themselves. They do not have to rely upon any interpretation except their own.

It is instantly observable that this gives to a board of 12 men the absolute power to lay a tax, as I have said, upon every bale of cotton, upon every bushel of wheat and corn, upon every pound of tobacco and meat sold by the producer, upon some unit of every agricultural product—and this tax will raise a fund which is to be under the absolute and practically unrestrained control of the board which levies the tax.

The fact that the bill may be amended so as to require the general board to have the advice of a commodity council of seven before functioning adds nothing to its virtues. By the provision of section 4 the advisory councils are to be chosen by the general board itself "from lists submitted by cooperative associations or other organizations representative of the producers of the commodity."

What does this mean? Take the case of cotton. It means that the cotton growers' associations of the different States who have never been able to obtain members sufficient to give them control of as much as 10 per cent of the cotton grown in any State will submit lists to the board of 12. From these lists the board must select seven individuals to act in an advisory capacity. These seven will naturally be from the organization.

The more than 90 per cent of cotton growers who are not members will have no voice whatever in the selection. It will rest with these 7 men to advise the 12, and the 12 may then lay the equalization fee in whatever amount they see proper upon every bale of cotton grown in the United States, and, as stated, this fee will come from the producer. It matters not at what stage of the handling it may be collected. If it be at the time of transportation, the railroad company will simply add the amount of the fee, $10 or $15 per bale, or whatever the amount may be, to the freight bill. The ginner, or whoever purchases the cotton from the farmer, will know in advance what the fee is to be and will deduct it from the price he pays the farmer.

The same conditions will apply to wheat, swine, cattle, tobacco, vegetables—to every commodity upon which the board may determine to function.

Think of what Congress is being asked to do! We are being asked deliberately to vote to force into a system called "agricultural relief" every farmer in America, when we know that the vast majority of those farmers, exercising their rights as American citizens, have declined to join of their own free wills.

For myself, and casting no aspersions upon those of my colleagues who take a different view, I can not feel that I have any moral right to vote to do this. I have no authority as a legislator to vote a farmer into a system which he has refused to join voluntarily.

The man not in Congress who believes in the efficacy of the system may feel at liberty to say, as so many of them have said, "We wish legislation which will force them in," but to a legislator charged with the responsibility of trying to treat all alike and preserve the fundamentals of individual freedom of action the matter appears in an entirely different light—at least it does to me.

The idea has been rather persistently advanced that the equalization fee feature of the proposed measure will never be used. If this be true why insert it? Its proponents say,

"simply to preserve the principle." It is the principle that I, for one, am combating, the principle of taxing the farmer by a board with whose selection he will have nothing to do.

But I can not escape the feeling that those who insist the fee will never be used are deceiving themselves and misleading others.

By the very terms of section 9, which I have quoted verbatim, the board, if it carries out the law, will have to levy it as to certain products—cotton, wheat, and swine in particular. And certain grades of tobacco are grown that only find a market abroad. Of these we always produce a surplus over the amount required for domestic consumption, and the board will have to so find.

Of cotton we always export more than we consume domestically, and the world price of cotton is fixed in the Liverpool market. Should it be possible under the system proposed by the equalization fee plan to raise the price to the farmer of the seven to eight million bales consumed at home, I can see no way whereby it would not be balanced by the losses on that sold abroad. The profit made upon the portion marketed here would be absorbed by the losses sustained upon that sold abroad, and these losses are to be paid out of the stabilization fund created by the equalization fee collected from the cotton grower.

If you succeed in raising the price of such wheat as is sold in the domestic market above the world price, just how much have you benefited agriculture as a whole? Forty per cent of the wheat sold in the American market is consumed by farmers themselves. I think there is not a Southern State which grows sufficient wheat to supply the needs of the people of that State. In Tennessee I feel quite sure the majority of the farmers are purchasers of their breadstuffs. How are they to be benefited by an increase in price upon this with no corresponding increase in the price of the products they themselves grow? Unless there can be assurance of a general raise in price levels on all products of the farm, agriculture as a whole can derive no benefit from an increase upon a single product, and the equalization fee system, in my judgment, offers no such assurance.

In its practical workings, my prediction is that it would prove the greatest disappointment to the farmer that he has ever experienced from any legislation supposed to be enacted in his behalf. It would not only be disappointing, but when you come to collect that equalization fee from him it would well-nigh excite him to revolution.

There are other phases I should like to dwell upon. The proposition is one of the most complicated ever presented. It is difficult to see through its many complications and ramifications, but I trust the farmers will not be misled by the catch phrases of "farm relief," "surplus control by an equalization fee," and similar expressions. I conceive it my duty to try and look it through to its results. I have tried to study it from the standpoint of the farmer himself. I think it is bad and must vote against it and take the consequences. So long as it is an untried theory there will probably be a demand for its trial, but if ever it be tried I feel confident that the experience under it will vindicate the position I have taken from the beginning and consistently maintained throughout the several years of its agitation.

With section 9 amended and with sections 10 and 11 eliminated there would remain, as I have said, a complete bill, and it is one which in my opinion is sound in principle, unobjectionable in policy, and promises genuine aid in relieving the distressing conditions which a series of untoward events have brought to agriculture.

I sincerely desire that we may have some sound legislation. So long as the equalization fee remains in the bill I do not believe that you will have the legislation. Even if it should be passed and approved by the Executive, I think it would be overthrown by the courts. It seems to me that it would be the part of wisdom, recognizing the objections, to manifest some spirit of compromise whereby we could bring about legislative action. [Applause.]

Mr. FORT. Mr. Chairman and gentlemen of the committee, for the fourth time in as many years the House is considering in Committee of the Whole a McNary-Haugen bill. The first two of these measures were defeated in the House. The third passed the House and the Senate and was vetoed by the President. At the beginning of the history of this legislative controversy it was seriously disputed by those unfamiliar with the conditions of American agriculture that any relief whatever was needed. It was further disputed, even though relief were needed, that the Government was the agency to extend that relief. As we approach this question to-day we find a very different attitude both in the House and in the country on these points. We have ceased to believe throughout the Nation that the troubles of American agriculture are purely a passing phase of the postwar deflation. We have come to realize and to accept as a fact that American agriculture unorganized and unfinanced can not, under existing conditions of commerce, compete on terms of equality in the markets of the world with buyers who to-day, as never before in history, are both firmly organized and firmly financed. Therefore there is no difference of opinion to-day in our committee, nor I believe in the House, as to the need of relief or as to the need of governmental assistance in procuring that relief.

The organization of agriculture is feeble to-day in most commodities of the soil. And yet it is true that the cooperative marketing form of agricultural organization has made tremendous strides in the past 10 years, until to-day in many minor commodities, where financing is not so difficult, where the producers are more centralized in location, the cooperative movement has afforded almost a complete cure for the problem of the producer.

But when you come to the great national crops of agriculture, to the wheat and the cotton and the corn and the pork and the tobacco, grown in many States and in many varieties, grown by millions of farmers, something must be done to bring that group of farmers or rather bring that diffused number of farmers into a group where their concentrated selling power may match the concentrated buying power of industry. I do not believe, as I stand here to-day, that that problem can be adequately solved at this stage without the assistance of the Federal Government.

We are agreed in the committee—and I think in the House and in the Nation—on the real essentials of farm relief. We are agreed that the farmer must have organization. We are agreed that that organization must have adequate financial stability. We are agreed that the Government should help create and should foster the organization. We are agreed that the Government should in some way or other assist in financing the organization when created. Those are the essentials. Those are the only reasons given why the Government should aid at all.

And yet, with complete agreement on the essentials, we sit here to-day debating whether we will give the relief. Why? Because of a complete nonessential of relief. A persistent propaganda has gone from one end of the Nation to the other that, without that nonessential, there can be no relief. If we are agreed that there should be organization and that there should be finance, why do we withhold from the American farmer the relief he needs and should have? Only because we differ on the form of financing—because we differ on the means to be used to get the money. And why do we differ? Politics; politics between farm organizations; politics within both political parties; politics between the political parties. Politics, and politics alone, is the reason that we sit here to-day, still withholding from the American farmer the relief that he deserves and ought to have.

Last year the McNary-Haugen bill was vetoed, almost entirely, so far as it compares with this year's bill, because it contained the equalization fee and the sections which depend upon the equalization fee. We all went home and were at home for months. When we all came back in December, the overwhelming majority of this House, after conferring with their constituents for months, favored the passage of a bill without the equalization fee. The bill, if it had come to debate in this House in December without the fee, would have passed almost unanimously. But now that we have been away from our constituents for six or eight months a persistent lobby has convinced many Members that nothing but the fee will suit the farmer. If I had a farmer district, I would rather go home in October with a $250,000,000 revolving fund for the stabilization of agriculture than with an oration on the need of the equalization fee.

Now, as I have said, we agree on the need. We agree on the form of organization that should be used. We agree on the amount of the financing. The first eight sections of this bill pending before you to-day meet every need of organization and finance. It could be improved in its language. To my way of thinking, the bill introduced last year by Senator CURTIS and Judge CRISP and this year by the gentleman from Georgia [Mr. CRISP] is a somewhat better bill. But the first eight sections of this bill are a complete legislative program, adequately financed for the organization of agriculture.

What are those eight sections? Well, first, they declare the policy of the Congress to be to facilitate the organization of cooperative associations. They declare the policy of Congress to be to prevent undue depression of price. They then provide for the appointment of a Federal farm board of 12, for advisory councils in each commodity of seven men picked from the producers of the commodity.

They give to those cooperative associations which we are trying to strengthen the most liberal and advanced lines of credit that have been advocated before our committee by any proponents of farm-relief legislation. They put at the disposal of the board money for many purposes; first, for the purpose of assisting any cooperative association or any corporation controlled or developed by any cooperative association in the handling of the surplus or in the orderly marketing of a commodity. For the purpose of developing continuity of service they propose loans of working capital for the cooperative associations or corporations created by them. They provide for loans for existing cooperatives or corporations which they control for aid in the acquisition of facilities for the handling and marketing of the crop. They furnish funds for the installation of agricultural credit corporations, as liberal a provision as has ever been put into a law, because it means the Government is ready to loan to the indorser the money it needs to make its indorsement good, and then to loan the borrower on the faith of the indorsement. And then they provide for loans for expenditure by cooperatives in federating and in consolidating and expanding their membership.

Nobody has asked any further provision. No suggestion has been made to the committee that Government money can be used to advantage in any other way. That is the language of the McNary-Haugen bill as modified by our committee, and the minority who oppose the bill have nevertheless helped to perfect these provisions.

Now, my friends, you are going to loan cooperatives the working capital with which to do business; you are going to loan the funds with which to handle the surplus, both for orderly marketing and for surplus-control purposes. You are financing them to the limit of what anyone has asked for any cooperative association or its controlled corporation. By the time you have finished reading section 5 you must conclude that it gives the cooperative associations every financial encouragement that this bill anywhere proposes should be given to them—and does it without the fee.

Mr. MORGAN. Mr. Chairman, will the gentleman yield?

Mr. FORT. Yes.

Mr. MORGAN. What has the gentleman got to say as to the argument presented that in case only the loan provision is provided in the bill the cooperatives will not avail themselves of hat fund?

Mr. FORT. I am coming to that a moment later and I would rather handle it when I reach it. Now, gentlemen, we have had three or four months' hearings and the only witnesses who appeared before our committee and talked practically on how this bill would operate and upheld the fee have been a Doctor Kilgor, a Mr. Stone, and a Mr. Bledsoe, all from the cotton section, all of them men of great ability. Each one of those men in the record of the hearings says that the loan provisions will do all for cotton that anything in the world would do, and they did not pretend to talk about any other commodity because they did not know. Their only reason for arguing for the equalization fee was not that the loans would not work but the fear that next year the Congress might not renew the loans.

There is not one word of testimony in the record from any witnesses that the bill, through the sections that I have analyzed, would not do all that the whole elaborate structure of the bill is claimed to do. There is not one word to challenge the workability of the proposal for financing by loans. The only question raised is the fear that the Treasury would not be reopened in a subsequent year if the operations resulted in great losses.

Now, my friends, there is one thing in this bill which deserves considerable attention. We have set out in the committee a complete plan for the organization of corporations to be owned and controlled by the cooperative associations. We have set out the restrictions upon the management of those corporations and have set up the method of their operation. Why? Because one of the troubles in the organization of agriculture has been the absence of faith on the part of the farmer in the cooperative organizations. We are providing here for a corporation which may have the minimum capital that the law permits, $1,000, or what you please, to which the Government will advance the necessary working capital, to which the Government will advance the necessary funds for the purchase and the carrying of commodities, and which the Government will supervise to the point, at least, of assuring the American farmer that his enterprise is being competently managed and honestly handled.

We believe, in the committee, that loans should be so made. Certainly for surplus control they must be so made, because under the Capper-Volstead Act no cooperative may handle more of any commodity for nonmembers than it handles for members. Therefore no cooperative can act to handle surplus in its own name, because the act of handling surplus necessitates the purchase of more of the nonmembers' commodity than the cooperative handles of its members' commodity. Therefore we have provided for a corporation not subject to the Capper-Volstead Act, but owned and inalienably controlled by the cooperative associations which organize it, for the purpose of forming a nucleus around and through which the operations can be carried on.

Then we go on in the bill and for the first time in the history of this legislation we put in provisions which recognize that the real source of all the trouble is overproduction.

Mr. WOODRUM. Will the gentleman yield?

Mr. FORT. Yes.

Mr. WOODRUM. As I understand, the loan feature of the bill only applies to cooperative associations or to corporations to be formed under the provisions of the bill?

Mr. FORT. It does.

Mr. WOODRUM. So that individual and independent farmers who are not members of cooperative associations or members of corporations would, of course, have no opportunity to get the benefits?

Mr. FORT. No; and under no other feature of the bill—not under the equalization fee or any other feature. It recognizes organizations only and must. If the gentleman from Virginia will permit, you can not handle a surplus through the individual operations of 2,000,000 farmers. You have got to unify and organize.

Mr. CRISP. And farmers who are not members will pay the tax, when levied, whether they are members or not?

Mr. FORT. That is true; and they will not share in the benefits to any like extent under the fee plan—if there are any benefits.

Mr. BRAND of Georgia. Will the gentleman yield?

Mr. FORT. Yes.

Mr. BRAND of Georgia. Why was it the committee provided in the bill that the corporations to be created by the cooperative association should be created and controlled by those associations.

Mr. FORT. To bar out the use of the packers' organizations and of the great millers as farm-aid agencies with Government money. At least, that was my reason.

Mr. BRAND of Georgia. Did the committee consider the propriety of allowing them to create corporations under the laws of the various States, independent of the cooperative associations?

Mr. FORT. Corporations formed by whom?

Mr. BRAND of Georgia. By the farmers, under the laws of the various States.

Mr. FORT. No; we did not, because, if the gentleman pleases, it is our theory, and it is so expressed in the bill, that the great object to be achieved is the fostering of cooperative marketing associations and we do not believe we will accomplish that by spreading our fire over 47 different kinds of corporations.

Mr. BRAND of Georgia. You take Georgia, for instance. About 90 per cent of the people do not belong to the cooperative associations and they are not eligible for any of the benefits of this bill.

Mr. FORT. They would secure the benefits of this bill, at least of the loan provisions, if the gentleman will permit me to go ahead and analyze how I think the bill will work.

Mr. ASWELL. If the gentleman will permit, I will say to the gentleman from Georgia that they do have a benefit. They have the right to pay the fees.

Mr. GARRETT of Tennessee. Will the gentleman yield?

Mr. FORT. Yes.

Mr. GARRETT of Tennessee. Will the gentleman elaborate just a bit upon the statement made a minute ago, a very important point to be brought out in connection with this measure, that under the equalization-fee plan, the nonmember would pay the tax but not receive the degree of benefit that a member would.

Mr. FORT. I am coming to that in a moment. I am just trying to analyze the provisions of what I think is a good measure up to the end of the eighth section. We have put in a provision, as I have said, for the curbing of production and for the creation and control of corporations to be owned by the cooperatives. Then we put in a provision for the first time in the legislation—and I may say here these provisions are taken almost if not quite verbatim from the bill introduced by the gentleman from Georgia, Judge CRISP—for investigation by the board of the existence or threat of surplus and the effect of surplus upon price.

Heretofore we have talked about surplus; we have talked about its effect on price and we know nothing as to its real action. We have charged this board, therefore, with the duty,

gentlemen, of ascertaining whether the effect of the surplus is to reduce the price below the average cost of production. Read in connection with the declaration of policy, which puts it upon the board to prevent undue depression of price, it seems to me we have charged the board here with the duty of utilizing its power to prevent a depression in price below the cost of the average production of the average producer. This is new.

We have put in provisions for the establishment of clearing houses and marketing associations for the handling of commodities by the farmer in the central markets.

Mr. LANKFORD. Will the gentleman yield there?

Mr. FORT. Yes.

Mr. LANKFORD. Does the gentleman purpose discussing further the question of control of production?

Mr. FORT. No.

Mr. LANKFORD. I would like the gentleman to elaborate on the matter of the control of production under the bill.

Mr. FORT. I can not do that within the time at my disposal now.

Mr. LANKFORD. I think that is the most important item in respect of all farm legislation.

Mr. FORT. I agree with the gentleman, but I do not think you can carry it out legislatively.

Mr. MORTON D. HULL. Will the gentleman explain the theory of the establishment of clearing houses and tell us just what is a clearing house?

Mr. FORT. The theory of the proponents of the bill, which was first advocated by the President's commission some three or four years ago, is, as I take it, to be the organization of associations in the terminal markets of the country, which will avoid the overstocking of a local market by clearing commodities away from the overstocked markets to markets where there is a shortage of the commodity, as is done by the successful cooperative associations in perishable products for themselves to-day.

Mr. MORTON D. HULL. It is a process of distribution.

Mr. FORT. It is a matter of distribution. This problem is half one of distribution.

Mr. LANKFORD. Will the gentleman yield for just one question?

Mr. FORT. Yes.

Mr. LANKFORD. The gentleman said he thought the question of production could not be controlled by legislation.

Mr. FORT. No.

Mr. LANKFORD. Will the gentleman briefly suggest how he thinks it can be done?

Mr. FORT. By education.

Mr. LANKFORD. Does the gentleman think it can be done as a matter of contract entered into by the farmers with each other and with the agency furnishing this assistance, under proper legislation?

Mr. FORT. I very much doubt it; at least, not unless it was voluntary.

Mr. LANKFORD. It would not be by contract, unless it was voluntary, would it?

Mr. KINDRED. In connection with the matter of distribution, would the gentleman tell us what will be the effect on consumers of the features of the bill which he has just discussed, as well as other features of the bill which the gentleman has not discussed?

Mr. FORT. I would rather not discuss this to-day from the consumers' viewpoint. I have done that more or less in my minority views on the bill; but, briefly, I will say to the gentleman, that, as the representative of a consumers' district, I believe that even though the cost of commodities is somewhat increased to the consumer, if that be necessary to furnish economic equality to agriculture, the consumer should be prepared and is prepared to pay the bill. [Applause.]

Mr. KINDRED. Has the gentleman made any approximate figures as to how much the increased cost will be to the consumers?

Mr. FORT. I have made some figures on wheat. Under the equalization-fee proposal in the bill I estimate the cost will be at least 60 cents a bushel, or something over 1 cent a loaf on bread.

Mr. WOODRUM. And what would be the effect without the equalization fee?

Mr. FORT. Without the fee it should make little difference, for this reason: Stabilization which is what the loaning features of the bill look toward, rather than price exaltation, will operate, if it be achieved, to iron out both the low and the excess high level of commodity prices which now prevail in the speculative market. It will operate to take the commodity off the markets in the harvesting season and carry it for the marketing season. Now, if this be true, the general average cost of the commodity in the markets of the world will not be so much enhanced, but the price which the producer gets in the season when he is selling will be higher, and the price that the speculator gets in the season when he is selling will be lower.

The consumer to-day buys his flour largely on the basis of the highest price at which wheat sells, whereas the speculator buys his wheat from the farmer largely at the low price at which wheat sells in the period of the harvesting. The proposal of the stabilization program, without doing violence to any sound, economic theory, looks toward translating to the producer the average price the consumer actually to-day pays.

The CHAIRMAN. The gentleman from New Jersey has consumed 30 minutes.

Mr. FORT. Mr. Chairman, I will use a few more minutes, but I am afraid I can not yield as liberally from now on.

Mr. CANNON. Will the gentleman yield for just one question?

Mr. FORT. Yes.

Mr. CANNON. I understand the gentleman holds that an increase of 60 cents in the price of a bushel of wheat means an increase of 1 cent in the price of a loaf of bread.

Mr. FORT. At least.

Mr. CANNON. Then how does the gentleman account for the fact that when wheat was selling at $2.40 a bushel bread was 10 cents a loaf. When it was 86 cents a bushel it was still 10 cents a loaf, and it has been 10 cents a loaf ever since the close of the war, regardless of the price of wheat received by the farmer. [Applause.]

Mr. FORT. If the gentleman please, he is talking of the speculative wheat market, uncontrolled and unstabilized, in which, as I have just stated, the consumer pays the price based on the highest price at which wheat sells, not on the average. He gets no benefit of the low price. The producer gets the low price when wheat sells in the harvesting season at the bottom. The consumer often pays a price based on the highest price at which wheat has sold.

Mr. CANNON. The price of wheat constantly fluctuates and has fluctuated from $2.80 to 85 cents, but whether wheat was high or low bread has consistently remained at the same price.

Mr. FORT. Perhaps they took some of the wheat out; I don't know.

Mr. LAGUARDIA. Would a difference of 60 cents a bushel be reflected in the price of bread?

Mr. FORT. I do not care to go into that question now. There is approximately a cent a loaf difference, if you figure the number of loaves of bread that are made out of a barrel of flour.

Mr. LAGUARDIA. That does not gibe with the information that I get.

Mr. FORT. Then they put less wheat in the bread, as I said a moment ago. Now, gentlemen, this bill up to the eighth section and after the twelfth section has good administrative features. It embodies provisions which we believe to be good for the prohibition of speculation by the board and its employees. They were taken largely from the bill of the gentleman from South Carolina [Mr. HARE]. There are other features which we believe to be good. Those of us who oppose the bill as a whole believe that if you strike out sections 9 to 12 you have a complete legislative program of genuine farm relief, unquestionably constitutional, which can and will become a law if it is passed by the Congress of the United States.

That is the situation we find ourselves in up to section 9. Now, what is section 9? We talk about the equalization fee, but the marketing agreements provided in section 9 are the real crux of the situation.

Mr. PURNELL. Will the gentleman yield?

Mr. FORT. I will.

Mr. PURNELL. The gentleman says that it will be a workable bill and that it is a workable plan up to that point.

Mr. FORT. With sections 9 to 12 out? I do, and I would be very glad to vote for the bill with sections 9 to 12 out.

Mr. WHITTINGTON. Will the gentleman yield?

Mr. FORT. I yield.

Mr. WHITTINGTON. If the bill with sections 9 to 12 out will give relief to agriculture, why would it be necessary to invoke sections 9 to 12?

Mr. FORT. I will answer that. We heard from the gentleman from Illinois, Mr. HULL, on Friday, great praise of a certain gentleman as the high priest of agriculture. Well, Mr. Lowden said to our committee two years ago that the utmost that could be done for agriculture was to stabilize the price at about the cost of production.

That we propose to do under the first eight sections of the bill, and can do. The gentleman has asked me about invoking section 9. I hope some Members have the bill in front of them, because there has been propaganda and deception in the House and the country as to section 9 and the equalization-fee sections

of the bill. Despite the assertions of the propagandists, it has never been intended by the proponents of the bill that the equalization fee should be postponed one minute if the bill became a law.

Let us forget the propaganda and look at the bill itself. It says that the board shall investigate the conditions surrounding the marketing of a commodity, and that whenever upon that investigation the board finds three facts it "shall" enter into a marketing agreement. The word "shall" is in the bill, on page 43, line 19, without option of any kind or description, when they find the three facts. The first of the three facts is whether there is an excess above the requirements for the orderly marketing of any agricultural commodity "or" an excess above the domestic requirements for the commodity. There is always a surplus above the domestic requirements of cotton; there is always a surplus above the domestic requirements of wheat; there is always a surplus above the domestic requirements of tobacco. There is always a surplus above the domestic requirements for pork products.

There is the first fact that if they find——

Mr. PURNELL. There is not always an excess of requirement for orderly marketing.

Mr. FORT. Not always, but the section is in the alternative. It says in excess of the requirements for the orderly marketing of any agricultural commodity "or"—not "and"—in excess of the domestic requirements for the commodity. There is always a surplus above domestic needs, so that fact has got to be found every year as to cotton, tobacco, wheat, and pork products.

Mr. WHITTINGTON. Is it necessary to find both of these facts?

Mr. FORT. No; it is in the alternative. You might find that there was no excess above the requirements for orderly marketing, but if there was an excess above the domestic requirements you would have to operate.

I shall read the third fact to be found. Second:

3. That the durability, the conditions of preparation, processing, and preserving and the methods of marketing of the commodity are such that the commodity is adapted to marketing as authorized by this section.

Has anybody any doubt that cotton or wheat are durable or that pork products are preservable by processing, or that tobacco is durable? That condition exists as to these things every year, just as the surplus does. There are two of the three facts, and when they find all three they have to operate through marketing agreements.

What is the third fact to be found? The third is:

2. That the operation of the provisions of section 5—relating to loans to cooperative associations or corporations created and controlled by one or more cooperative associations—will not be effective to control such surplus because of the inability or unwillingness of the cooperative associations engaged in handling the commodity, or corporations created and controlled by one or more such cooperative associations, to control such surplus with the assistance of such loans.

That sounds like something of a brake. But is it? What are the facts? First, no cooperative can control surplus, because no cooperative can buy more of the commodity than its own members turn into it. So no cooperative would be able to do it. The "inability" of every cooperative is thus taken care of. What about the unwillingness? Would any cooperative hesitate if it had the alternative between loans from the revolving fund at 4 per cent, with an eventual liability for repayment and loans from the equalization fee fund without interest, with a guaranty that their charges for services would be paid and their losses refunded? Anybody that might be able to operate under the loan section would be a fool to do it, if he had that alternative choice.

Incidentally, gentlemen, some people have said that this bill should be amended to take care of a situation where the farmer did not want the board to act. This language makes the board act if the cooperatives are all opposed to it and unwilling that it shall operate. They have to act if the cooperatives are "unwilling" and they find a surplus to exist that is preservable in its nature.

Mr. JOHNSON of Texas. Mr. Chairman, will the gentleman yield?

Mr. FORT. Yes.

Mr. JOHNSON of Texas. The bill which last passed the House had some provision whereby it left it to the producer of the various commodities to make a recommendation as to whether the equalization fee should be applied as to that particular commodity.

Mr. FORT. That is all out. On the contrary, the board must go ahead if the cooperatives are unwilling.

Mr. WILLIAMSON. Mr. Chairman, will the gentleman yield?

Mr. FORT. Yes.

Mr. WILLIAMSON. It seems to me that the gentleman misses the whole point of the bill. The purpose of the bill is, where these people refuse to cooperate, to compel them to do it by the equalization fee, thereby getting everybody in and each man paying his own share according to the amount of produce that he sells.

Mr. FORT. I do not miss that at all. I am talking upon the deception which has been "propagandaed" to this country, that this bill was not intended to operate on the equalization fee, that that feature is only a "pinch hitter," as the gentleman from Indiana [Mr. PURNELL] says. I say just as the gentleman from South Dakota says, that it would force the farmers in, and that it makes this the only way to operate. That is the purpose of it. I agree with the gentleman from South Dakota.

As to the corporations set up by cooperatives acting under this provision, they have the same power to decide which way they will operate. They have the same power to decide whether they will operate under the loan provisions and have to repay them; whether they will operate under the loan provisions that require them to submit some details of their management and handling of Government money to the board; where they have to take their losses if they have losses; or whether they will operate under the provisions of the marketing-agreement clause where they are guaranteed against loss, and where they are guaranteed an operating charge for their service. Unwilling? Of course, they would be unwilling. And I think I may say that a motion in committee to strike out the word "unwilling" failed.

In addition to that, if you will read this bill carefully, you will see that it differs in other ways from the old bill. A marketing agreement once entered into is permanent. It is permanent, that is, until the board thinks that it is no longer "necessary or advisable for the purpose of carrying out the policy declared in section 1." As the gentleman from Tennessee [Mr. GARRETT] so brilliantly said this morning, does anyone believe that the board would lightly use its powers, or easily give them up?

Mr. COOPER of Wisconsin. Mr. Chairman, the gentleman says that it is permanent. Will he point to us the language that contains such a provision?

Mr. FORT. The provision is to be found at the bottom of page 43, lines 23 and 24:

Such marketing shall continue during a marketing period which shall terminate at such time as, in the judgment of the board, such arrangements are no longer necessary or advisable for carrying out the policy declared in section 1.

Mr. ROMJUE. Mr. Chairman, will the gentleman yield?

Mr. FORT. Yes.

Mr. ROMJUE. The gentleman speaks of it as being permanent. The gentleman assumes that the board will exercise the law contrary to the best interests of the public?

Mr. FORT. No. I say they have to keep it up as long as they think it is necessary to carry out the policy declared in section 1.

Mr. ROMJUE. Does not the gentleman assume that these men who have been empowered and given this authority will want to exercise their power properly and in the interest of the public rather than that they will disregard the interest of the public?

Mr. FORT. I assume that in compliment to unknown gentlemen, but it is not the history of bureaucratic government. [Applause.]

Mr. MORGAN. Mr. Chairman, will the gentleman yield?

Mr. FORT. Yes.

Mr. MORGAN. I understand from the gentleman's argument that he contends that the benefits to the farmer under the loan feature would be equal to those under the equalization fee, where the equalization fee is assessed against the commodity?

Mr. FORT. I do; and they would not have to pay a fee in the bargain.

Now, I can not yield any more, because I have some ground still to traverse.

Mr. WOODRUM. Before the gentleman finishes his remarks I hope he will answer the question propounded by the gentleman from Tennessee [Mr. GARRETT].

Mr. FORT. If I can get by in my time with what I want to say, I will.

What is the difference between the marketing section and the loan-agreement section that I have just read? First, the loan section puts the farmer in business. The marketing-agreement section puts the Government in business. The loan section puts the whole control of the industry in the hands of the farmers

and leaves it there. The marketing-agreement section puts it all in the hands of a board, which this House this morning has been warned by the gentleman from Tennessee [Mr. GARRETT] eventually will be controlled by the 70 per cent of the American people who are consumers and not producers.

Both sections look to the repayment of Government advances only if there are sufficient profits resulting from the operation. The loan provision does not permit contracts with the great packers of America.

The marketing-agreement section still has that clause in it which has stayed in it through this whole legislation; that clause which the proponents of the bill have admitted before our committee is essential to the operation of their scheme, and passed it off that way; that clause to which, after four years' persistent opposition to this legislation in the committee, I have yet to hear from a packer or packer's representative the suggestion of one word of amendment. That packer's relief is in the marketing-agreement section. It is not in the loan section. Both sections are designed to stabilize prices, and, on the testimony given before the committee, one is as effective to accomplish it as the other.

Furthermore, the loan provision does not contemplate price fixing. The marketing-agreement provision can not operate without it. Under the marketing-agreement section the fee has to be estimated before operations begin. You can not estimate the fee unless you can estimate what the loss is going to be, and you can not estimate what the loss is going to be unless you decide in advance how much above the world price, if any, you are going to put the price of the commodity. That is sure.

It must be a price-fixing measure if it is going to deal equally with the producers. It must promise the same margin above the world price or else all pay the same fee, and some get less benefit from it than others.

It must be a price-fixing measure if the losses of the operation are to be limited in any conscionable manner. The board is surely not going to put a contract on the books with the packers or with any other organization or agency without any limitation of the prices at which that agency can deal in commodities with the Government's and the farmer's money. I do not believe one Member on this floor would vote for this bill if he believed that would happen. Of course, the board has got to limit its own loss by fixing the price. It can not operate otherwise.

Those are the differences between the loan section and the marketing agreement section. If the marketing agreement section goes out you do not need the equalization fee. Which is the intelligent program of farm relief?

Now we come to the equalization fee. They say that does not have to be put on. That is what they are telling the country and telling us. I have shown you that, as to at least four major commodities, the board will have to operate. Now, then, "in order to carry out marketing and nonpremium insurance agreements——"

Mr. GARBER. In what section is that?

Mr. FORT. Section 10, at the bottom of page 46. I read:

SEC. 10. (a) In order to carry out marketing and nonpremium insurance agreements in respect of any agricultural commodity without loss to the revolving fund, each marketed unit of such agricultural commodity produced in the United States shall, throughout any marketing period in respect of such commodity, contribute ratably its equitable share of the losses, costs, and charges arising out of such agreements. Such contributions shall be made by means of an equalization fee apportioned and paid as a regulation of interstate and foreign commerce in the commodity. It shall be the duty of the board to apportion and collect such fee in respect of such commodity as hereinafter provided.

And in the next clause—

Prior to the commencement of any marketing period in respect of any agricultural commodity, and thereafter from time to time during such marketing period, the board shall estimate the probable losses, costs, and charges to be paid under marketing agreements in respect of such commodity and under nonpremium insurance agreements in respect of such commodity as hereinafter provided. Upon the basis of such estimates, the board shall from time to time determine and publish the amount of the equalization fee (if any is required under such estimates) for each unit of weight, measure, or value designated by the board, to be collected upon such unit of such agricultural commodity during any part of the marketing period for the commodity.

Once entered into the marketing agreement, once finding a surplus over domestic requirements of a durable product, with the cooperatives unable or unwilling to handle the surplus, then the board "shall" estimate the loss; "shall" fix the fee; and each marketed unit of the commodity "shall" pay.

They have tried to say to this House that this is just a pinch hitter, sitting on the bench to be used when all else fails. The whole plan can operate only, and will operate only, under the fee.

Now, there are two or three other interesting things about it that I want to pass over very quickly. They found last year in the President's veto something they had overlooked—that you could not operate this thing unless you had some kind of way of preventing the manufactured products of commodities which had paid the fee in this country from coming in from foreign countries where there was no fee. So this year the bill puts the equalization fee on imports of any commodity on which the fee is levied in this country and on the food products—just the food products of such commodity. Gentlemen from the South, it is your first import duty on cotton.

If this bill passes as the result of these years of agitation for farm relief, you can go back home and say you have secured a duty on cotton; that at last the principle of protection is extended to that commodity. But not on goods made from the cotton—only on food products.

Mr. WHITTINGTON. Will the gentleman yield?

Mr. FORT. Yes.

Mr. WHITTINGTON. I am just wondering whether the tariff on the cotton goods would not protect the manufacturer as it now exists?

Mr. FORT. On the goods?

Mr. WHITTINGTON. Yes.

Mr. FORT. The tariff on cotton goods is fixed upon the basis that the cotton itself has not been raised in price in this country any more than abroad.

Mr. WHITTINGTON. At all events, the manufacturer would be protected by that provision in this bill.

Mr. FORT. So would the wheat man; but they have found they have got to put the fee on imports of all of these farm products.

Mr. WHITTINGTON. My question was limited to cotton.

Mr. FORT. And you are going to raise the price of cotton to the American consumer and not to the foreign consumer? Now, gentlemen, they not only put it in here as an import duty but they make it an ad valorem import duty if the board so chooses. They can base the equalization fee on "the unit of value." That is interesting, too. This thing is not a tax but it is an ad valorem duty on imports, and an ad valorem duty on imports is a device that I have never been able to understand to be simply a regulation of interstate commerce. They have to leave in that unit-of-value provision because some tobacco sells for a few cents a pound and some for a dollar or two, so the equalization fee on tobacco has to be on a value basis. That is one thing that has never been stressed very much. All of that, gentlemen, adds to the unconstitutionality of the bill. We are attempting to delegate to a board the power to put an import duty on cotton when Congress has put no duty on it. We have delegated to the President the right to change rates on definite schedules, on definite facts, but we have not delegated to the President the right to say that cotton should have a tariff or should not.

Now, gentlemen, the basis of the fee is an estimate, an estimate of probable losses, costs, and charges, under the marketing agreement. As I said before, that must mean price fixing before the fee is fixed—price fixing at least as to that part of the price that is embraced in the margin above the world price at which the commodity is going to sell. That much of the price has got to be fixed.

Mr. DOWELL. Will the gentleman yield?

Mr. FORT. Yes; for a question.

Mr. DOWELL. Is not that true also of the tariff?

Mr. FORT. No.

Mr. DOWELL. Does it not do identically the same thing?

Mr. FORT. That is a second question, but I do not think it does. The tariff does this, if the gentleman pleases: The tariff says to the American manufacturer or producer, "As long as you produce what is needed at home we will not let foreign stuff come in to compete with you unless it pays a duty equal to the amount by which your cost of production is above its cost of production." It does not say to the American manufacturer of automobiles, or whatever you please, "If you make four times as much as we need in America, we will guarantee you a price equal to the difference in the cost of production here and abroad."

Mr. DOWELL. But does it not by the act itself have a tendency to fix the price at a higher rate? Is not that why we adopt the policy of the tariff?

Mr. FORT. If it does, if the gentleman pleases, then the tariff must be effective on these agricultural commodities on which we are now saying we have got to make it effective.

The CHAIRMAN. The gentleman from New Jersey has consumed one hour.

Mr. FORT. I am going to have to take a few minutes more. Now, one other thing about this bill. We have been told in the past that this is a scheme, as it were, to "prime the pump" with money from the Treasury, and in the past that may have been true, because in the past the equalization fee estimate had to include enough to take care of the advances needed to carry the product as well as the probable losses, costs, and charges. This year the equalization fee pays no attention to advances. That word is out, so that this is a permanent Government financing scheme. Year after year and year after year, the advances must be renewed; and if the group which is carrying cotton still has $100,000,000 of Government money and too much cotton to put on the world market, the next year there will have to be a second advance of another $100,000,000 for that year's crop. Last year's bill and previous bills have required an estimate of the advances and provided for repaying them out of the fee, so that eventually it was a self-financing operation. What is the difference between that and the loan provisions? Under the loan provisions it is provided that the Treasury, out of the revolving fund, shall make advances to stabilize the crops of the farmers of America—the identical advances that the equalization-fee proponents expect the Treasury to make under their plan—but we do not ask the farmer to pay an equalization fee to get the loan.

In both proposals, unless the operation is profitable, the Treasury eventually stands the loss. There is nothing in this bill that permits the board, if they have made a low estimate one year, to put on a bigger fee the next year and repay the loss of the previous year's operation. Each operation, each equalization fee, stands on its own feet. Under the equalization-fee plan there is a loss; it is paid by the Treasury if they underestimate.

Under the loan provision, if they unwisely operate and have a loss, it is paid by the Treasury. They say they want this thing financed by the farmers' money out of the equalization fee. They object to the loan plan because they say it is a subsidy. It is the same thing under their own proposal. In neither case will the Treasury be repaid unless profits are made.

The stabilization-fund provision is immaterial, except as it depends on the other two.

The insurance provision, as presented to our committee by the very distinguished and able gentleman from Mississippi who appeared before us, had in it possibilities of great value, particularly to cotton. As drawn and put in the bill, differing, as it does, radically from their own proposal, it is an unworkable thing.

Insurance happens to be my business, gentlemen of the House, and this proposal is that the Government shall issue a policy guaranteeing a cooperative association that the price at which in its uncontrolled judgment it sells the commodity, will not be less than the price at which it received the commodity from its members.

We can insure, and I would support a proposal to insure, for an adequate premium, a cooperative association that the price average on the markets of the world for the eight-months' period from January 1 to August 31 would not be less than the average price that had prevailed August 31 to December 31, preceding. You can calculate a premium on that.

Mr. KETCHAM. Will the gentleman yield?

Mr. FORT. Yes.

Mr. KETCHAM. Is not that the identical provision in the export debenture bill?

Mr. FORT. I think it is. That bill, like this, has had several drafts.

Now, gentlemen, this is the premium insurance feature. I am perfectly willing to support a fair premium insurance plan.

Mr. JOHNSON of Texas. Would the insurance feature eliminate the necessity of hedging, as we know that term?

Mr. FORT. I do not think it would eliminate it, but it would supplement it.

Then they have stuck in a nonpremium insurance. This is something I do not claim to know anything about, and I do not know any other insurance man who does, if he can help it, except as he fails to collect sometimes; but nonpremium insurance means that the identical kind of policy I have described is going to be issued to the same cooperative association if the board thinks by doing it they will stabilize the price, and the losses are going to be paid out of the equalization fees contributed by all producers.

Mr. KETCHAM. Of all commodities?

Mr. FORT. No; of cotton or of wheat, for example.

Now, what is this? This is a straight minimum-price guarantee to an individual cooperative at the expense of all the producers. That is all it is. It is a guarantee to them that they will be able to sell the product—not only be able to, but will succeed in selling the product for more than it was worth when their members delivered it to them; and if they do not do it, then all producers of cotton contribute to pay their unfortunate loss.

If the average price when they took the cotton from their members on the markets of the world was 18 cents, and cotton went to 35 cents in the next seven months, but they played for 40 cents and missed their market, and the market broke, and they finally sold out for 17 cents, then the Government pays them that loss of a cent a pound out of the equalization fees paid by all producers.

If there was ever in the history of American legislation a heads-I-win, tails-you-lose proposition, that is it.

There could be a properly drawn insurance clause put in which would be effective and which would work.

Mr. McKEOWN. Will the gentleman yield there?

Mr. FORT. Yes.

Mr. McKEOWN. Have they any way by which they can force the cooperative to sell when the price goes up?

Mr. FORT. None whatever; not only that, but they have another little joker tucked in here somewhere that is not in the insurance provision, but the marketing-agreement provision, which would permit the Government to assume also the cost of carrying the cotton so that they would not even be coinsurers to the extent of the carrying charges.

Mr. WHITTINGTON. Will the gentleman yield for one question?

Mr. FORT. Yes.

Mr. WHITTINGTON. Is the nonpremium insurance any more price fixing than the equalization fee?

Mr. FORT. No.

Mr. WHITTINGTON. Because the one involves the other.

Mr. FORT. Absolutely; except it is price fixing for the benefit of individual cooperatives.

Mr. WHITTINGTON. And may I add it is only price fixing in case there is an equalization fee?

Mr. FORT. Only; so that somebody else pays the loss.

Mr. WHITTINGTON. But all get the benefit of it.

Mr. FORT. No.

Mr. WHITTINGTON. That is the language of the bill.

Mr. FORT. If the board thinks it will do some good for the others.

Mr. WHITTINGTON. Of course, somebody has got to think.

Mr. FORT. It may do some good for the others, but it may cost them more than it does them good.

Mr. LANKFORD. Will the gentleman yield for just one question on the insurance proposition?

Mr. FORT. I am sorry I can not yield.

Now, gentlemen, we have a loan provision, in which we have a complete piece of legislation; but we have tacked onto it sections 9 to 11, which are hopelessly impossible of economic use, and section 12, the insurance clause, that, in its present form, is as hopeless as the rest.

We have a bill that we know can not become a law in 1928. We have a situation where agriculture needs relief. We are told that if we do not adopt the equalization-fee plan American agriculture is ruined. A gentleman on my side of the aisle who—I think to his deep regret—feels compelled to vote for this bill, stated to me the other day that if the future of American agriculture depends upon the equalization-fee plan of farm relief, it is hanging on a very slender thread. If, gentlemen of the House, we can do nothing for agriculture unless we adopt a plan that we know to be unsound, that the majority of us believe to be unconstitutional, that all of us know will not become a law—if that is all we can do for American agriculture, then debate might as well end right here and now and let us go about doing some business of real service to the Nation. [Applause.]

Mr. WHITTINGTON. Will the gentleman yield? The gentleman from Tennessee asked a question, and the gentleman said that the small, independent farmer not a member of the cooperative association would be liable for the equalization fee and would not share in the benefits.

Mr. FORT. That is absolutely sound. If the plan works at all, it would raise the general price level, but, under the insurance feature, he would get no benefit.

Mr. GARRETT of Tennessee. Will the gentleman yield?

Mr. FORT. I will.

Mr. GARRETT of Tennessee. The gentleman from New Jersey did not state that the individual would get no benefit whatever, but he stated the benefit of the nonmember of the cooperative would not equal the benefit of the member of the cooperatives although he paid the same equalization fee.

Mr. WOODRUM. I asked the gentleman to elaborate on that.

Mr. FORT. Yes; I think I have done that running through, and I really do not want to consume more time of the House.

There is, however, another matter I want to bring to your attention.

The consumers of the country are in a majority and becoming increasingly in a majority. It does not seem to me that the farmers of America want to put their heads through a noose which can be pulled by the consumers. I have been told by gentlemen then on the Appropriations Committee that in this Congress in 1919 and 1920 for three months they held hearings where the consumers were demanding appropriations to reduce the cost of living, and that they granted them. With the increasing proportion of consumers to producers, does the farmer want to turn his entire business over to the control of the Government?

One other thing it does in line with what the gentleman from Tennessee asked me. Doctor Kilgore, Mr. Bledsoe, and Mr. Stone, who appeared before us, advocated the equalization fee. Why? Because they said it was unfair that the cooperative associations should handle the crop for the benefit of all producers and all producers not pay; that they wanted to make the noncooperatives pay the cost of operation. There in a nutshell is the whole animus back of the insistence for the equalization fee.

Until this year the bill has called for a board organized by methods which have been described as paralleling those of the soviet. This year that is not true. But still as we sit here to-day to consider this piece of legislation the impelling motive in the minds of those men who have been its fathers and who are to-day its chief advocates is to force all American agriculture into one big union, to make the strong carry the weak, to make the efficient farmer contribute his bit toward the price of the inefficient. This Nation is not yet ready for that type of legislation.

The gentleman from Iowa [Mr. DICKINSON], who is recognized here as the leading proponent of this bill, has said that it is parallel to the legislative check-off, to the system by which the laborer is required by legislation to pay dues to the union out of every pay-roll envelope, whether he wants to belong or not. It is a complete parallel, in my humble belief.

The measure I favor helps the farmer organize his own business; offers him the financial assistance he needs to do it and can become a law this year. The measure the majority of the committee favors transfers the control of his industry to the Government and eventually to the consumer; puts the Government in business; fixes the price of the fruits of his toil; makes him pay the cost of the whole operation, including profits to the packers and millers; gives to the members of the cooperative associations benefits at the cost of the nonmember; is unconstitutional and can not become a law. We offer the farmer relief; they use his necessity as a political plaything.

The question that is before you and all of us to-day is whether this Congress has the courage—as I know it has the wisdom—to refuse to be led into unsound and uneconomic paths—to refuse to give to the American farmer who needs relief dependence upon the Government—but to give him instead the help, the assistance, and the money of the United States that he may lift himself into that position of pride and independence in the industry of the world that he has traditionally occupied. [Applause.]

Mr. ALLEN. Mr. Chairman, my district is wholly agricultural; to be sure we have in this district the largest farm-implement factories in the country, as well as many other industries and the usual number of merchants, banks, and other activities which go to make up the business of a middle-western community; but the foundation or superstructure of them all is agriculture.

The merchants, bankers, manufacturers, labor, indeed, our whole people, have suffered with the farmers the burden of the great agricultural depression and they will fully recover from the effects of this depression only as agriculture recovers. The right foundation is essential to any structure.

Our industries, not only in my district but in the whole Middle West, are but vast commissaries built on service for and to the greatest of all agricultural sections—the Mississippi Valley. The eastern industrialists, although more remotely interested, are as certainly dependent upon the prosperity and stability in government of this great section as are the people in my own district. The question therefore becomes a national one in the deepest sense.

Red uprising rarely occurs in agricultural districts where people live in the open and commune with nature, but they occur in unhealthy and crowded industrial centers, where people are unable to think clearly and readily become the victims of unsound doctrines and teachings.

It is not my purpose in the limited time at my command to undertake to trace the history or the ups and downs of this legislation. I will leave that to others. I will say, however, that the original idea underlying all of this legislation was born in my State; yes, I may say, in my district. My State in its recent primaries spoke its approval of the purposes sought by this legislation in a manner which startled the Nation, if not, indeed, the whole world.

The underlying idea of this legislation is "justice," just common justice. An opportunity, if you please, for the farmers of America by their own efforts and at their own expense to acquire for themselves an American standard of living. To deny them this legislation with the equalization fee is equivalent to denying them a place in our protective system, and to say that farmers alone of all our major groups are to be compelled to accept standards of the rest of the world while other major groups—industry and labor—are to enjoy American standards.

Any Member of this House, any Executive, yes, and citizen of the United States, who takes such a position, after understanding these underlying principles, is assuming a grave responsibility, indeed, and one which can not be sustained in a nation built upon the foundation of justice after throwing off tyranny.

I shall vote for the measure before the House, and I hope every Member of this House will vote for it; in particular I appeal for support from my friends from New England and the East who have been so generously treated at the hands of the National Government.

Mr. KINCHELOE. Mr. Chairman, I yield 30 minutes to myself. I ask unanimous consent to extend my remarks in the RECORD and in the extension insert the names of the farm organizations of the United States that have expressed themselves in favor of the pending bill.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. KINCHELOE. Mr. Chairman and gentlemen of the committee, I am sure there has not been in my service in this House, and I doubt very seriously whether there has been in the service of the oldest Member in service here, a more important proposition which has confronted the American Congress than the agricultural problem to-day. The Agricultural Committee of the House sat for weeks and weeks and held hearings, both pro and con, upon practically every leading idea to help the American farmer. That there is an agricultural problem in this country, of course, no one will dispute. I think there are very good reasons why there is such a deplorable agricultural situation in the country. I heartily agree with the able gentleman from New Jersey [Mr. FORT] that the main cause of the deplorable condition of agriculture in this country is politics. I think it has been brought about by the Republican Party insisting on certain discriminatory legislation which has almost put agriculture into bankruptcy and with the creeping paralysis of to-day. They have always insisted on a high protective tariff for the benefit of the manufacturers in this country, and in the face of the fact that every financial panic which this country has ever witnessed has come under a high protective Republican tariff bill. The panic of 1873 came when the Morrill law, a high protective tariff act, was on the statute books. The panic of 1893 came when the McKinley law, a high protective law, was on the statute books. The panic of 1907 came when the Dingley law, a similar law, was on the statute books. The Republican Party came into power on the 4th of March, 1921, under the Underwood Tariff Act, a Democratic measure, and for eight years preceding the 4th of March, 1921, and under a Democratic administration, was the most prosperous times the American farmer has ever enjoyed.

Mr. SCHAFER. Mr. Chairman, will the gentleman yield?

Mr. KINCHELOE. No. Not now. I am going to try to give some information to this House. [Laughter.] During those eight years of Woodrow Wilson's administration the purchasing power of the farmers' dollar averaged $1.04. 4 cents above par. What it is to-day under the Fordney-McCumber Tariff Act, and what has it been for six years under a Republican administration? About 70 cents. What has happened? What has the farmer to do in order to survive, if he survives at all. He has to take his 70-cent dollar that he receives for his products and match it against the 100-cent dollar of the manufacture every time he buys a dollar's worth of manufactured products for himself and his family and his farm. Everything he sells in a world market. The price is not fixed in this country; it is fixed in the world market, by reason of the surplus he raises. Everything he buys, the price is fixed in a protected market under a Republican tariff act. As a result, over 700,000 farmers in the United States in the last five years, under this Republican administration, have gone into bankruptcy. That means a population of over two and a quarter million men, women, and children, who were happy, prosperous, and contented, living on the farms of this Nation under Woodrow Wil-

son's administration, have lost their homes and have gone into the cities and other congested parts of the United States in order to make a living.

The market value of the farm lands in this country on the 4th of March, 1921, was $79,000,000,000, and that after the deflation period, too. What is it to-day? Only $59,000,000,000. The market value of the farms of the country is $20,000,000,000 less than on the 4th of March, 1921. That sum of money represents more than the value of all of the railroads and rolling stock in the United States. That is what the farmer has lost. Certainly, he is in a bad condition. Not only that, but the other nations of the world are passing or going to pass retaliatory measures to protect themselves against this high protective tariff of the United States.

I want to read to you two short statements that appeared within the last 10 days. Speaking before the convention of the National Foreign Trade Council, Mr. Eugene P. Thomas, president of the United States Steel Products Co., declared that—

> Our exports must be increased in every possible way up to the point where we do not invite reprisals from our foreign competitors.

Another organization speaks also. The National Automobile Chamber of Commerce says:

> The greatest obstacle confronting American exporters of automobiles is the tariff wall being built up abroad in retaliation because of the high duties on foreign automobiles imported into the United States.

If I had my way about it I would not try to relieve the American farmer by the methods set out in this bill or any other farm bill which has been proposed before the Committee on Agriculture at this session. I would go back and do it in the Democratic way, as we always have done it, and I am not a free trader, nor has the Democratic Party ever declared for free trade. I would reduce some of these prohibitive tariff rates on steel, aluminum, cotton goods, woolen goods and textiles, and many other articles. By doing that the purchasing power of the farmers' dollar would increase. I would reduce the tariff so that the European manufacturer could ship his products over here and sell them in competition with the home manufacturers. If he did that, then the American farmer could buy the manufactured products that he needs cheaper. If he could buy them cheaper, he would buy more; if he could buy more there would be more manufactured; and if more were manufactured there would be more labor employed in this country, and you would not have 4,000,000 men under alleged prosperity walking the streets and the highways of this country looking for a job, like they are to-day. And yet, if you read the Washington Post, the Wall Street Journal, the Literary Digest, and other papers of their kind, you would conclude that we have great prosperity in this country under this Republican administration. The manufacturers protected by these prohibitive tariff rates are prosperous, all to the detriment and suffering of millions of laborers, including thousands of American farmers and their families.

As I say, I would reduce the prohibitive tariff on this stuff, and then when these European manufacturers brought their products over here and sold them and got American money for their products they could take that money and buy the surplus products of the American farmer and ship them back to Europe; and our foreign trade would be greater, and the surplus agricultural problem would thereby be greatly solved.

I would also reduce the freight rates on agricultural products in this country, so that the farmer could get them to the market cheaper. The American farmer to-day is getting about pre-war prices for his products, but if he has to buy manufactured products he pays higher prices than he did during the war. Consequently he gets hurt at both ends of the transaction and consequently is broke.

But I understand full well that this remedy can not be applied for the relief of the American farmer under this Republican administration. I remember when this Republican administration passed the emergency tariff act for farm products. Everybody knows who knows anything that it is an economic fallacy to put a tariff on any agricultural product where there is a surplus of that product produced in this country. How is it going to benefit the American farmer especially when he raises a surplus so large that the price here is controlling in a world's market? You have now come to the point where it is clearly demonstrated that tariff on farm products is a fallacy, and this legislation is trying to make it effective. If the American farmer could buy the manufactured products that he has to use for himself and his family and farm as he did before the war, he would be in better shape than he is in now.

Mr. WOODRUM. Mr. Chairman, will the gentleman yield?

Mr. KINCHELOE. Yes.

Mr. WOODRUM. The gentleman admits that sound Democratic principles can not be put into effect under a Republican administration. Does the gentleman contend that the equalization fee under the McNary-Haugen plan can be put into effect successfully under the present administration?

Mr. KINCHELOE. If the President vetoes the bill it is within the power of Congress by a two-thirds vote to override the veto. If the Congress does not override his veto, that is the responsibility of the Members of Congress.

Mr. SCHAFER. Mr. Chairman, will the gentleman yield?

Mr. KINCHELOE. Yes; I will take a chance. [Laughter.]

Mr. SCHAFER. If the pending bill should not be enacted into law it will not be entirely due to the Republican administration or Republican membership of the House, because the Democrats are as much divided on the proposition as the Republicans are.

Mr. KINCHELOE. That may be. If the President vetoes the bill, I am wondering whether the gentleman from Wisconsin is going to walk the plank and vote to sustain the President's veto.

Mr. SCHAFER. The gentleman is going to sustain his position better than the gentleman who is speaking has done.

Mr. KINCHELOE. If the gentleman from Kentucky thought his position on any public matter was indorsed and approved by the gentleman from Wisconsin he would be suspicious about his own position.

Now, I want to talk about this bill a little and see what it provides. The bill creates a farm board, one from each loan bank district, appointed by the President and confirmed by the Senate. That is the farm board. They shall draw a salary of $10,000 each.

The bill also provides for a commodity council of seven members for each commodity. The members of the commodity councils shall be selected by the farm loan board from the farm organizations of the country. I do not want to discuss that particularly now, but I want to say in that particular that this bill is not as good as last year's bill was. Under this bill the board has plenary power to declare an equalization fee on any commodity over the protest of the commodity council supposed to represent that commodity and every farmer raising the commodity.

Mr. JOHNSON of Texas. Mr. Chairman, will the gentleman yield?

Mr. KINCHELOE. Yes.

Mr. JOHNSON of Texas. Has not the gentleman an amendment that will be offered to that section that will remedy that defect?

Mr. KINCHELOE. Yes. I am going to offer it, and hope every Member who is a real friend of this bill will support it.

Mr. JOHNSON of Texas. I notice that only three members of this board are to be from cotton districts, and those three would be in a hopeless minority as to the equalization fee, whereas last year's bill provided otherwise.

Mr. KINCHELOE. Yes. That is true.

Mr. WILLIAMSON. Mr. Chairman, will the gentleman yield?

Mr. KINCHELOE. Yes.

Mr. WILLIAMSON. I am very much interested in what the gentleman is saying with reference to the commodity councils, but I am afraid that the insertion of such a provision would result in making the bill unconstitutional, inasmuch as it would be delegating the veto power to the board, which is not appointed by the President.

Mr. KINCHELOE. Oh, a man who does not favor a thing always claims that it is unconstitutional. I used to think that the flexible provision of the tariff bill was unconstitutional and still think so, but the Supreme Court the other day unanimously decided that the Congress had the right to delegate to the President its power to raise and lower tariff duties.

Mr. WILLIAMSON. This is different.

Mr. KINCHELOE. Yes. The tariff provision provides for tariff on certain products. This section provides for the farm loan board and the commodity council. I am frank to say that unless this amendment goes in the commodity council is useless and will not amount to anything. Then it provides for the loan feature, called the revolving fund, of $400,000,000 to this farm board, to be used in three ways, which I am going to discuss now. If the loan is not effective, then it provides for the levying of an equalization fee.

Now, section 5 of this bill provides for three kinds of loans to cooperative marketing associations or corporations formed by cooperators.

First, in assisting cooperative associations in controlling a seasonal or a year's total surplus, produced in the United States and either local or national in extent, that is in excess of the requirements for the orderly marketing of any agricultural commodity or in excess of the domestic requirements for such commodity. In other words, it can loan to the co-

operative associations on that commodity, or a corporation created by it, for the purpose of either taking the surplus off of the market and selling it in the world's market and taking the loss, or for the purpose of holding it in order to feed it through orderly channels into the domestic market to cover the lean years, because with agricultural commodities you are going to have gluts and lean years; the season controls those things and no human being has any control over it at all. That is one of the loans it is going to make, and it can loan the whole $400,000,000 if it wants to. In order to make these cooperative associations, or corporations created under them, strong enough to handle these commodities, loans are to be made for two other purposes, which I am going to get to.

People say that the solution of the agricultural problem is the cooperative marketing association. Why, certainly, if it could be 100 per cent that would be so, but a cooperative marketing association formed to handle farm products has no capital except its products. It has not a dollar except the loans it can procure on its commodities. Therefore it can not borrow 100 per cent of the value of those commodities, because nobody would loan that much to them. What is the result of that? The man who belongs to a cooperative association, when he delivers his stuff to the cooperative association, only gets about 60 or 65 per cent of his money down, while the fellow on the outside who is not a member of that cooperative association, and is raising products in competition with the man who is in, not only gets the benefit of the increase in the price of the product by reason of the cooperative marketing association, but he gets all of his money down. And that is what has broken down practically every cooperative marketing association in this country. I do not believe you are going to build any more cooperative associations in this country unless you have some financial agency which will be able to furnish enough capital to pay the farmer who belongs to the cooperative association all of his money down the day he delivers his commodity to the cooperative marketing association, and the first loan provisions in section 5 of the bill provides for that.

The second provision is for the purpose of developing continuity of cooperative services from the point of production to and including the point of terminal marketing if necessary.

Where that can be done you can cut out to a great extent the middleman and you can market the commodities direct from the producer to the consumer to a large extent, and therefore prevent the spread that has always militated against the farmers of this country as well as the consumers. This loan is to be used, first, for working capital for the cooperative association or corporation created and controlled by one or more cooperative associations or, second, for assisting the cooperative association or corporation created and controlled by one or more cooperative associations in the acquisition by purchase, construction, or otherwise of facilities and equipment, including terminal marketing facilities, for the preparing, handling, storing, processing, or sale or other disposition of agricultural commodities. It is provided that a loan of not exceeding $25,000,000 out of the $400,000,000 revolving fund shall be used for that purpose.

Mr. McKEOWN. Will the gentleman yield?

Mr. KINCHELOE. Yes.

Mr. McKEOWN. Is not the cooperative hampered on account of liens on its property and because its members can not sell to the extent of 100 per cent because the banks will not allow them to do so?

Mr. KINCHELOE. I do not think the cooperative associations in my State had any trouble in getting credit, but they can not get credit up to 100 per cent.

Mr. McKEOWN. I refer to a man who has a loan from a bank, and when he goes to sell to his cooperative organization he can not get 100 per cent because the bank will not allow him to sell.

Mr. KINCHELOE. Why, absolutely. The third purpose is for furnishing funds to the cooperative associations or corporation created and controlled by one or more cooperative associations for necessary expenditures in federating, consolidating, merging, or extending the membership of cooperative associations or corporations created and controlled by one or more cooperative associations, and they can borrow a maximum of $2,000,000 for that. You must have these last two loan provisions if you are to build up cooperative associations in this country or corporations created under them that will be able to handle these products so they will be strong and able to handle the business.

Now, before the board can levy the equalization fee they have got to resort to this loan provision, with a revolving fund of $400,000,000, and yet gentlemen who have spoken against this bill say that this is uneconomic and unsound and it will not work, but even the gentleman from New Jersey a while ago admitted that if you eliminate section 9 and section 10, which is the marketing agreement and the equalization fee, the bill is all right and will do the job.

If the opponents would support the bill with the equalization fee and the marketing-agreement provisions eliminated, and as they claim it would work, then this board will never have to levy the equalization fee on any commodity. I will tell you what I think about it. I think that a board of 12 outstanding men of this country, who have the interests of agriculture at heart, and with a capital of $400,000,000 behind them as a revolving fund, can manipulate this without levying the equalization fee on any commodity.

Mr. GILBERT. But the gentleman from New Jersey said that they would be required to levy the equalization fee on four commodities under the provisions of the bill.

Mr. KINCHELOE. I am going to get to that a little later, but will say right now that is not true, and no one can read it in the bill.

Mr. KETCHAM. Will the gentleman yield for one question?

Mr. KINCHELOE. Yes.

Mr. KETCHAM. While I agree with the statement the gentleman has just made, does he think the cooperative associations would take advantage of the revolving fund when it would cost them 4 per cent interest and when it would cost them nothing to use the equalization fee?

Mr. KINCHELOE. But if they borrowed this money for the purpose of taking off the surplus and handling it, they would have to resort to this $400,000,000, because nobody could touch that, and you could not get any other agency to do that.

Mr. KETCHAM. But the gentleman is making the argument, as I understand it, that those of us who rather fear the working of it ought to accept the equalization fee because we would never get to the equalization fee. My point is there never would be any chance for them to use the equalization fee.

Mr. KINCHELOE. That is my point, too; and these gentlemen who have spoken against the bill say the bill is all right if you will eliminate the equalization fee. My contention is, if it will work, then we will never get to the equalization fee, and the gentlemen ought not to be unduly alarmed.

Mr. KETCHAM. I think I inadvertently said the loan feature rather than the equalization-fee provision.

Mr. KINCHELOE. Yes.

Mr. PURNELL. Will the gentleman yield?

Mr. KINCHELOE. Yes.

Mr. PURNELL. In that connection, does not the gentleman also think that a board appointed by a President who is not friendly to the principle of the equalization fee will be composed of men who will not be seeking an opportunity to put into force the equalization fee?

Mr. KINCHELOE. I think it would be the last thing to which they would resort, and, in my judgment, when you take 12 outstanding men, one from each land-bank district of this country, with $400,000,000 as a revolving fund, I believe they would call in the grain-exchange people and would call in the brokers and these other people who operate between the consumer and the producer and say to them, "We do not propose to hurt your business. We want you to make a fair profit, but we have got a capital of $400,000,000 as a revolving fund here with which we propose to use to see that the American farmer gets a living price for his products, and if you cross us and interfere with our plans you will take the consequences."

Mr. MOORE of Virginia. Will my friend yield for a question?

Mr. KINCHELOE. Yes.

Mr. MOORE of Virginia. The gentleman expresses great confidence that if the bill should be passed the board would not be required to resort to the use of the equalization fee. If the gentleman has this confidence, why not pass the bill without the equalization fee, and then in the event it should conceivably happen that the bill as passed is found unworkable and the equalization fee necessary, then supplement the legislation?

Mr. KINCHELOE. Because it turned out this revolving fund is not sufficient I would not want to wait on Congress to act and have the farmers go further into bankruptcy, because if they did not act any quicker in amending this bill than they have in enacting it all of the farmers would be in bankruptcy before they got the equalization-fee amendment to the bill.

Mr. WHITTINGTON. And if the gentleman will permit, is not that substantially what is in this bill? You try out the loan feature before invoking the equalization-fee provision.

Mr. KINCHELOE. Yes; you have to try out the loan feature first.

Mr. WHITTINGTON. Is it not also true you have got to charge the cooperatives with bad faith before you ever invoke the equalization fee under the terms of the bill.

Mr. KINCHELOE. The cooperatives with these loans of $25,000,000 for the purpose of creating facilities and $2,000,000 for the purpose of a campaign to get as many farmers into the cooperatives as possible are going to do their best to handle the surplus without the imposition of any equalization fee at all.

But they say it is price fixing and they say a lobby is here in Washington in favor of it.

What else is the protective tariff proposition except price fixing? I remember a few days before the McNary-Haugen bill was vetoed by the President, exercising his powers under the flexible provision of the Fordney-McCumber Tariff Act, he increased the tariff on pig iron from 75 cents to $1.12½ per ton and in two weeks' time the price of pig iron increased in value 50 cents a ton. Of course, it is not price fixing when you touch the tariff, but it is when you touch the products of the farmer.

I got these statistics this morning and under the flexible provisions of the Fordney-McCumber Tariff Act the President has exercised this power to raise the tariff twenty times since the Fordney-McCumber Tariff Act has been on the statute books, and has lowered the tariff only five times.

I want to show you how much benefit it has been to the American farmer to lower the tariff on these five articles. The first one on which the tariff was lowered was mill feed and bran. The President lowered the tariff on that. The second one was bobwhite quail. [Laughter.] Everybody will concede this was a great thing to help the American farmer. The third was paintbrush handles, and the only reason the tariff was lowered on paintbrush handles and the only contention made was that the manufacturer of the paintbrush handles lived in the United States and got his handles from Canada, and consequently wanted a little lower tariff on his handles so he could get them in here and make a little more profit on them. The next one was cresylic acid, and the last one was phenol, which is carbolic acid.

These are the wonderful accomplishments in the lowering of the tariff which the President has exercised, and yet he has raised the tariff for the benefit of the manufacturers of this country 20 different times since there has been this law.

Now, I want to get back to the loan provision. If the loan provision is not successful, then they go into what is called a marketing agreement.

The CHAIRMAN. The gentleman has consumed 30 minutes.

Mr. KINCHELOE. Mr. Chairman, I yield myself 15 minutes more.

If this fails, then the board goes into a marketing agreement, and they have to find three things before they can levy an equalization fee. First, that there is or may be during the ensuing year a seasonal or year's total surplus national in extent in the United States that is in excess of the requirements for orderly marketing of any commodity or in excess of the domestic requirements for the commodities; second, and here is what I want to call special attention to because the gentleman from New Jersey [Mr. FORT] elaborated on it, that the operation provision of section 5, which is the loan provision, will not be effective to control such surpluses because of the inability or the unwillingness of the cooperative association engaged in handling the commodity or the corporation created by it to control the surplus with the assistance of such loans.

If it finds out after it has probably spent this $25,000,000 in loans trying to equip the cooperatives, or corporations created by it, is the proper way to handle the surplus, it has probably spent the $2,000,000 in trying to conduct a campaign to bring as many American farmers into the cooperatives as possible. In other words, if the cooperative association, or corporations created by it, have made an honest effort to handle the surplus products under the loan provision and has failed, when they find that fact and the further fact that the durability, the conditions of preparing, processing, and preserving, and the method of marketing of the commodity are such that the commodity is adapted to marketing as authorized by this section, then the board can levy an equalization fee.

Mr. McKEOWN. Will the gentleman yield?

Mr. KINCHELOE. Certainly.

Mr. McKEOWN. If the cooperative marketing associations are willing and able, they can never declare the equalization fee.

Mr. KINCHELOE. No; if they are able and willing to do it, there will be no equalization fee at all under this bill; but as I say when they find that the preparing and processing methods are such that the commodity is authorized, then they declare the equalization fee. They say that is unconstitutional. I do not know whether it is constitutional or not. I do not think anybody knows, because we are sailing on an uncharted sea in this legislation. The purpose of the fee is to make 100 per cent the cooperatives in this country, and it will make every man bear his proportion of the expense in proportion to the benefits he receives.

There is nothing new about that. I remember when the Federal reserve act was before Congress, statements came from every nook and corner of the country and in Congress that it was unconstitutional—that they had no power to require national banks to go into the scheme and subscribe 6 per cent of their capital stock to the Federal reserve bank. But the bill was passed, and it became the law, and the banks did go in, and they are now all in. It has never been declared unconstitutional, and everybody agrees that it is the greatest piece of legislation on the statute books in the United States to-day.

I remember when they passed the Esch-Cummins railroad bill that they said that you could not give the Interstate Commerce Commission the power to fix rates on railroads and compel the railroads to contribute—that you could not compel the big ones to contribute for the benefit of the little ones. Yet it went in and is on the statute books to-day and everybody agrees that we have the most highly efficient railroad system as in any country in the world. It follows, that when you increase the price of a commodity you increase the production. If they do, there are two recourses. If the equalization fee is in operation, the more they produce the bigger the equalization fee will be, and that fact will be brought home to every farmer that raises that commodity.

Another section under the loan provision provides that after the board gives out the facts and about how much ought to be raised, if the farmer disregards that and raises an amount in excess of that raised in the preceding five-year average period the board may withhold the loans.

Mr. McKEOWN. Does that notice come to the farmer before planting time?

Mr. KINCHELOE. Yes; he receives these estimates before he plants his crop.

Mr. McKEOWN. But suppose they do plant more?

Mr. KINCHELOE. If they plant more and raise more, the loan may be withheld. On the other hand, if the equalization fee operates, the more they raise the greater the equalization fee is going to be. I tell you, gentlemen, the time is coming in this country when you are not going to keep the red-blooded boys and girls on the farm of this Nation under present conditions. This farm problem is one which should deeply concern those who live in the cities, because the city people can not be prosperous long with a bankrupt agriculture.

Mr. McKEOWN. Does the bill contain the provision that if the part is unconstitutional it shall not affect the balance?

Mr. KINCHELOE. That is in one section of the bill.

Now gentlemen, I do not want to consume much more time. I say that prosperity can not come as long as you have 30,000,000 of the farm population of this country legislated against by discriminatory laws in the way of tariff, and other things they have to compete with. This country can never be prosperous until agriculture prospers. Agriculture is the biggest business in America. Agriculture is bigger than the railroads, the steel industry, and the automobile industry combined. The only thing they are asking for is that the strong arm of the Federal Government shall treat them like other industries and other things have been treated.

They say that it is unconstitutional and that nobody wants it. I am going to put in the RECORD the names of every marketing and cooperative association that is asking for this bill. Every cooperative association in the country, and every farm organization except the grange have declared for this bill, but the grange has expressed a preference for the debenture plan.

These organizations feel that this bill with the equalization fee in it will give the American farmers the relief so badly needed. I am frank to say that I do not know whether it will or not, but I have great hopes that it will, and I am so anxious to see rehabilitation of agriculture in this country so that the men and women on the farms of this Nation may be able to enjoy the prosperity of men and women in towns and cities of this country and thereby be able to give their children the same advantages for education as the children in towns and cities. I am going to support this bill and let it be tried.

The farmers are sincere in advocating this character of legislation. This bill has been debated even through the high schools throughout the United States. As long as there are discriminatory laws on the statute books in favor of industry, I am going to vote for discriminatory laws on the statute books for the benefit of the agricultural interests of the country.

My friends, the hope and perpetuity of this great Republic does not rest on a great standing Navy. Yet during the World War we had the greatest Navy that ever sailed the Seven Seas. The hope and perpetuity of this great Nation of ours does not rest upon a great standing Army, and yet during the World

War we mobilized the mightiest army that ever marched beneath the folds of their country's flag or ever answered to a bugle call—with 2,000,000 boys in France and 2,000,000 at home ready to go. The hope and perpetuity of this country rest upon the happiness and contentment and prosperity around the 20,000,000 firesides of this country without discrimination, and when that comes, there will be no trouble about the future of this great country in which we live. I thank you. [Applause.]

Mr. Chairman, under unanimous consent granted me I herewith insert the names of the various farm organizations of this country who have indorsed this bill:

The American Farm Bureau Federation, the Corn Belt Federation of Farm Organizations composed of the Missouri Farm Association, the National Producers Alliance, the Iowa Farm Union, the Iowa Farm Bureau, the Iowa State Grange, the Iowa Threshermen's Association, the Ottumwa Iowa Dairy Marketing Association, the Nebraska Farmers Union, the Nebraska Farm Bureau, the Kansas Farm Union, the Kansas Farm Bureau, the Minnesota Farmers Union, the Minnesota Farm Bureau, the Minnesota Wheat Growers, the South Dakota Producers Alliance, the South Dakota Wheat Growers Association, the South Dakota Farmers Union, the North Dakota Farmers Union, the North Dakota Wheat Growers Association, the Oklahoma Farmers Union, the Indiana Farm Bureau, the Central States Soft Wheat Growers Association, the Chicago Milk Producers Association, the Illinois Farmers Union, the Wisconsin Cooperative Creamery Association, the Wisconsin Farm Bureau, the Equity Cooperative Exchange, the Farmers Union Terminal Association, the South St. Paul Farmers Union Livestock Commission House, the Chicago Farmers Union Livestock Commission House, the Sioux City Farmers Union Livestock Commission House, the Kansas City Farmers Union Livestock Commission House, the Omaha Farmers Union Livestock Commission House, the American Council of Agriculture, the Minnesota Council of Agriculture, the Montana Farmers Union, the National Corn Growers Association, the Burley Tobacco Association, the Dark Tobacco Association, the National Farmers Union, and the American Cotton Growers Exchange.

Mr. JONES. Mr. Chairman and gentlemen of the House, I have always supported farm legislation. I have never offered an amendment to any of the pending bills that I did not think would improve the bills. I have never offered an amendment that was not offered in good faith. I have been on the Committee on Agriculture for a number of years and I have tried to study this problem with the hope of getting the best solution. It is the easier way to follow along and support the measure that has been given the approval of certain farm organizations, but I believe there is a better remedy, and I would be untrue to those I represent and to the interests that the Agricultural Committee is supposed to represent if I did not follow my honest convictions in that regard.

I listened with a great deal of interest to the speech of my colleague, Mr. KINCHELOE, and I agreed with most of those things he said about the tariff situation, but the old, old statement that there should be a tariff for all or a tariff for none is but another way of stating that every American citizen should be on the same dead level of equality with every other American. I think Abraham Lincoln it was who said that no nation could permanently endure half slave and half free, and it might be well added that no nation can permanently prosper with half or a certain section of its citizens laboring under the banner of protection and charging artificially higher prices than another great section is able to pay.

THE PROBLEM OF PRICE

The problem is one of price. If the farmer were on a price parity, the other phases of the problem could be easily solved. The cooperatives have faced great difficulties in undertaking to solve this problem.

They have been unable to get full results because the cooperative has been compelled to carry the noncooperative on its shoulders. That is, if the cooperative organization undertakes to buy up the surplus and take it off the market, the increased price inures to the benefit of the noncooperative, and that is the reason that I do not believe any strictly loan bill can solve this problem. It may assist in doing so, but if the noncooperative can stay on the outside and get the value of the increased price, why go inside and help pay the bill? That is what any cooperative organization is up against to-day. They are practically forced to carry the load at their own expense and give the outsider the benefit of it. You can not blame them for not wanting to do so.

BILLS PROVIDING EQUALITY

Of all the bills—and there have been hundreds of them introduced in the Agricultural Committee in the last few years—undertaking to solve that problem, there are, in my judgment, but two that do not overlook that fundamental difficulty. I do not believe that any bill can really succeed in full measure that overlooks it. There are but two that meet this question squarely, and those are the McNary-Haugen bill and the debenture plan. They both undertake to establish parity between the farmers and industry. I do not believe the McNary-Haugen bill will establish full equality. It will go a certain distance and therefore has merit. The theory of both bills is that by lifting the surplus the price of the domestic commodity will automatically rise to a higher level. Some one asked, How would the debenture plan accomplish that result? In exactly the same way, so far as the raising of the price is concerned. No one who has supported the McNary-Haugen bill expects the cooperatives to buy all of any commodity. Their only thought is that by levying this equalization fee they will be able to buy enough of the commodity to cause the demand to lift the domestic price to the higher level. If they undertook to buy the 800,000,000 bushels of wheat, it would take a billion dollars or more to do it. I do not think it would be necessary.

I think if they bought a reasonable amount of it a rise would automatically come because of the fact that you would have the surplus removed. Now, if by giving an extre premium, which you can do with only a part of the machinery that is required in the McNary-Haugen bill, you dispose of the surplus, you enhance the price which the cooperative or other exporters may pay for the product. It will follow as the night follows the day that the domestic price of the commodity will be brought up.

SIMILARITY OF PLANS

The two plans run along the same lines in the early features of the bill. The bill prepared by Mr. KETCHAM and myself provides for a board of 5 members instead of 12. I do not think the additional members would be necessary in this bill. It also provides for a very similar loan feature to the McNary-Haugen bill. It also provides for the insurance feature, not so elaborate but following along the same lines. Then it parts company in the manner of raising the funds with which the problem is going to be handled. Understand, both bills undertake to solve the question by handling the surplus. Both of them undertake to lift the domestic price of the commodity by handling the surplus of that commodity and letting the price rise up to meet the demand.

EXPORT PREMIUMS

The debenture plan provides that the debenture, as it is called, or an export premium of 21 cents a bushel, shall be given any cooperative association or farmer or other person who exports wheat. If the farmer or a cooperative organization of farmers exported a thousand bushels of wheat, it would be given a certificate of $210. That certificate would be acceptable in payment of any customs duties on any commodities brought into this country. It would not have the effect of reducing that duty, but it would simply have the effect of trapping parts of the fund on their way to the Treasury. That is all. It would leave the tariff where it is, and it would give the farmer what he has never had, namely, equality under the system that we have in this country.

NOT A SUBSIDY

Somebody suggested the other day that it is a subsidy to take 21 cents a bushel on wheat, $10 a bale on cotton, 7½ cents a bushel on corn, and 15 cents a bushel on oats and issue those certificates and give the farmer the benefit of it. I claim it is not a subsidy. It simply restores to the farmer what has been taken away from him by reason of the laws that have been enacted. Is it a subsidy when you pay back to a man money you have taken away from him? Is it a subsidy to the farmer to restore him to the equality that he had before we enacted laws that have favored certain sections and certain interests? It is simply putting the farmer on an equality with industry, on the same level of equality with others, and that is not a subsidy. That is simply restoring him to his rights, rights which every man under the flag should have.

What gives the wheat farmer and the cotton farmer and the other farmers of this country the price that they get to-day? It is the competition between the domestic and the export buyers. They pay only what they have to pay. They pay only what the demand and supply require them to pay. If you put a premium of any amount in favor of the exportation of that commodity, naturally the domestic buyer must pay that extra amount or not get the commodity. It operates exactly as the tariff, except in an inverse manner. It brings up the price of the commodity in the same fashion, and it is the one bill that it seems to me would really give full equality.

TWO PURPOSES

The two purposes of these measures, especially the McNary-Haugen measure, are to stabilize and to equalize. One reason why the farmer has been forced to market his commodity during the season of gathering is the fact that he has been pressed for money. Through the tariff and other measures, which the Congress has enacted—and I am not arguing the merits of them—

every thinking person must admit this—through the tariff measures and other measures which have been enacted he has been put on a disparity; he has been "hog-tied" for many years, and forced to sell his product the minute it came on the market. If he could get the same comparative level of prices that the other man gets, he would be able to market his products in an orderly manner, or in a manner much more nearly so, even if we did not provide the other fund or the other machinery of the bill.

It is not because the farmer has not sense enough to know how to market his product that he has had this trouble. It is because his products do not sell for enough money to enable him to carry out his plans. If they are paid proper prices they will be able to deal with their problems. If you adopt a fair system that make their returns as much as others get, the other problems will fade like the mist before the morning sun. I have not much patience with people who prate continuously of making farm life more attractive. Make it remunerative and they will make it attractive. They understand the advantages of better equipment, and they will get better equipment and modern conveniences if they have the money with which to get them.

Not a man who appeared before the committee supporting the McNary-Haugen bill or any other bill has denied that the export premium will put money into the farmer's product. Is not that what he wants?

Mr. McKEOWN. Mr. Chairman, will the gentleman yield?

Mr. JONES. Yes.

Mr. McKEOWN. What process would he go through in order to get cash on his debentures? How does that work?

Mr. JONES. Exactly as the McNary-Haugen bill would work. The exporter and the domestic buyer, we will say, for instance, are now paying $1.20 a bushel for wheat. If an equalization fee of 21 cents a bushel is paid for the exportation of wheat, the domestic price must meet the competition of the exporter, and the price rises 20 cents per bushel. It proved true in Germany, and it proved true in England and in Czechoslovakia and in Sweden. They have tried out this plan in all those countries.

Mr. McKEOWN. Instead of taking from the farmer the equalization fee, the money would be taken from the customs duties?

Mr. JONES. Yes. We collect approximately $600,000 per year in customs duties. Behind the tariff wall conservative estimates show that about $3,000,000,000 is collected from the American people by way of increased prices. I am not at this time arguing that it is too high or too low. The price is increased; otherwise there would be no demand for a tariff. I am not going into the question of the tariff, however, because it involves too much. But every man from the days of Alexander Hamilton, who is the patron saint of the tariff in this country—every thinking man must admit that the farmer does not get full advantage of the tariff measures that have been enacted. That is true because the farmer produces a surplus of most of the basic farm commodities—a surplus of wheat, a surplus of cotton, a surplus of practically all the basic commodities.

A man would be foolish to argue that a tariff is going to be of much assistance on those commodities of which we produce a surplus. The chairman of our committee, who votes for protection, made that open statement in the committee, as others have done. The tariff on wheat, while 42 cents a bushel, is practically reduced to 1 per cent of 42 cents, or less than one-half of a cent a bushel, because of the drawback provision. During the last five years we imported enough wheat to produce a revenue amounting to $20,000,000 or $25,000,000, but practically all of that was drawn back from the Treasury or was milled in bond.

Mr. AYRES. Will the gentleman yield?

Mr. JONES. Yes.

Mr. AYRES. Fifty-six million bushels were imported into this country in the last five years?

Mr. JONES. Yes. I have the figures; 56,409,926 bushels were brought in and milled in bond. This process kept out of the Treasury 41 cents per bushel, or $23,128,069.16, within the last five years.

Mr. AYRES. Fifty-six million bushels during the five years were imported for milling in bond, in round numbers, and 18,000,000 were imported into this country on which a duty was paid, but I understand much of that was refunded under the drawback provision.

Mr. BURTNESS. Will the gentleman yield?

Mr. JONES. Yes.

Mr. BURTNESS. The gentleman is not distinguishing between milling in bond and the drawback?

Mr. JONES. No; because there is essentially no difference if it is mixed with as much as 30 per cent American wheat and exported.

Mr. BURTNESS. Because if he is his figures are not correct.

Mr. JONES. I am just saying this in answer to those who have argued that this is a subsidy. It is no more of a subsidy than the drawback, and all millers either mill in bond and do not pay the money or they pay the customs duty and then go to the Treasury and draw it down. Ninety-nine per cent of the duty is thus avoided where they mix it with as much as 30 per cent of American wheat and export the flour.

Mr. CROWTHER. Will the gentleman yield?

Mr. JONES. Yes.

Mr. CROWTHER. The drawback principle is a fundamental that has been in all tariff bills that your side has written and that my side has written.

Mr. JONES. I do not dispute that proposition.

Mr. CROWTHER. I agree with the gentleman that there are some discriminatory features in the present wording of the act which I do not think should exist.

Mr. JONES. I thought the gentleman would agree to that.

Mr. CROWTHER. I think those features ought to be changed in writing another tariff bill, and if that were done it would come nearer reflecting the benefit of the tariff to the agriculturists.

Mr. JONES. The gentleman is a very ardent protectionist, and I thank him for his contribution. I want to read to him what the man who first advocated a tariff in this country said. Alexander Hamilton, in his Treasury report, submitted on December 5, 1791—his report on manufactures—made the following statement. After discussing the fact that a tariff would be of advantage to the manufactures in this country because it would aid in the promotion of "infant industries"—a term which has more or less fallen into disuse recently but still used to some extent—he said that a tariff would put agriculture at a disadvantage as compared to industry.

Whatever else you may say about him, he was a far-seeing man, a clear-headed man, a courageous man; he was intellectually honest and was fair in his conclusions. He was discussing that very proposition when he said:

> The true way to conciliate these two interests is to lay a duty on foreign manufactures of the material, the growth of which is desired to be encouraged, and to apply the produce of that duty by way of bounty.

He was referring to agricultural products.

Mr. CROWTHER. I hope while the gentleman is quoting from Alexander Hamilton he will put in a few excerpts from the sayings of James Buchanan and Thomas Jefferson, who were also very ardent protectionists.

Mr. JONES. I decline to yield further. I do not care to go into a discussion of the tariff except as it bears on this program. The first law of this kind that was ever enacted——

Mr. FORT. Will the gentleman yield?

Mr. JONES. Yes.

Mr. FORT. Is there any distinction in the gentleman's mind or in the quotation which he has just read from Mr. Hamilton between a subsidy or bounty on a product of which our production is deficient and a subsidy or bounty upon a product of which we produce more than we need?

Mr. JONES. Well, of course, there is a distinction, but if we are deficient on any commodity you will not need any bounty or any McNary-Haugen bill. As a matter of fact, the McNary-Haugen bill, while it covers all commodities, will probably not be invoked on anything of which we do not produce a surplus.

Mr. SUMNERS of Texas. Will the gentleman yield?

Mr. JONES. Yes.

Mr. SUMNERS of Texas. At the time Mr. Hamilton wrote that practically all of the exportations of this country were agricultural.

Mr. JONES. Yes; a large part of them.

Mr. SUMNERS of Texas. Practically all of them.

Mr. JONES. The first time, so far as I have been able to learn, that this principle was enacted into law was in England in 1673. I have a photostat copy of the law here. When prices were low and England was producing a surplus of corn—they called it corn, but the term as they used it included rye, barley, oats, and all other grains—in 1673 she put a bounty of 15 cents a bushel on wheat, 10 cents a bushel on rye, and 7½ cents a bushel on barley. That law was enacted to last for three years, during the depression, but it lasted for five years. In 1689 Parliament reenacted the law, reciting in the preamble:

> That the exportation of corn and grain into foreign parts when the price thereof is at a low rate in this kingdom has become a great

advantage not only to the owners of the land but to the trade of the kingdom in general, and therefore be it enacted, etc.

In other words, they said that inasmuch as the previous law had inured to the benefit of the owner of the land and to the trade in general, they would reenact that law. This law stayed on the statute books with some varying amendments for more than 100 years.

There came times when the price got so high because of shortage that they had to put a ban on exportation. There came times when they applied an import tariff. They have studied this problem a great deal over there. There came a time when they fixed limits within which it would be operative. They changed it two or three times.

However, this law remained on the statute books practically as I have given it here until 1765, but was made inoperative at times when the price was too high.

In 1773 Burke prepared a law which he thought would probably have permanent applications. In this law it was provided that a bounty should be allowed when wheat was $1.32 a bushel or less, and that the bounty should cease when wheat reached $1.44 per bushel; and when it got above $1.50 all duties would be removed from wheat coming in, so that wheat might be imported duty free. When it got below $1.32 all wheat was forbidden to come in for the purpose of sale in the domestic market.

This law was on the statute books until 1815, but in the meantime England became a great industrial country, having her far-flung possessions all over the world, and her population increased to the point that her people demanded so much of farm production that her limited acreage could not satisfy the demand. Therefore, England having fallen into the condition that my friend from New Jersey spoke of a while ago, the law was no longer needed, and in 1815 it was repealed—not because it did not work but because a condition had come about with the great growth of London and the industrial development of England that they needed all of the farm commodities they could possibly produce. So the problem solved itself by virtue of the development of the country.

DANGER OF OVERINDUSTRIALIZATION

I think one of the greatest dangers our country faces to-day is that of becoming overindustrialized. The tendency to centralize always carries with it the demand of groups for legislation especially caring for the interest of such groups. This leads not to democracy but away from it. This leads not to equal rights but to special privilege and decay of democratic principles.

Some one objects that this plan would keep money out of the Treasury. It would keep money out of the Treasury, yes; but so do some of our other laws. I have made some figures here on just two or three commodities that I want to call to the attention of the committee. I take it you would be interested in these figures.

MONEY KEPT OUT OF TREASURY

If this were the first proposition to keep money out of the Treasury, there might be some argument made against it, but my colleague, the gentleman from Michigan [Mr. KETCHAM], told you this morning about the effect of increasing the tariff rates on butter.

When tariff on butter was raised from 8 cents a pound to 12 cents a pound it had this effect: During the three years between January 1, 1923, and April 1, 1926, there were 50,000,000 pounds of butter brought into this country under a duty of 8 cents, which produced $4,018,000 in revenue or an average of $103,000 per month. During the 21 months following the raise to the 12-cent rate 11,900,000 pounds were brought in, producing a revenue of $68,000 a month. That raise kept out nearly $40,000 per month. I am not arguing whether it should be done; I am just saying it was done.

ALUMINUM TARIFF KEEPS MONEY OUT OF TREASURY

If butter were the only thing that had this effect, it would be a different proposition, but on aluminum what was the effect? On aluminum during the last three years of the old Underwood tariff law this Government received $619,149 in revenue. During the last three years of the present law it has received $228,140. The present law has more than doubled the rates, and it kept out of the Treasury during an equal period of time $391,140.

If it is all right, if it is just, if it is fair to keep money out of the Treasury for the benefit of the aluminum company, is it unfair to keep it out of the Treasury in order simply to put the farmer on the same level of equality that the others already possess, or to put him where they already stand? Is it any more unholy to restore to the farmer what you have taken away from him by law than it is give to Mr. Mellon a tariff measure not for the purpose of giving him equality but to enable his company to raise the price above the parity?

The CHAIRMAN. The gentleman from Texas has used 30 minutes.

Mr. JONES. Mr. Chairman, I yield myself 15 minutes more.

The increased tariff in behalf of Mr. Mellon's company was not for the purpose of giving equality but for the purpose of lifting that company above the general level. But you kept $391,000 out of the Treasury for him. Why is not it all right, just, and fair to restore the inequalities in this system? It will require less machinery. It will put money in the pockets of the farmers, and do it by making the present laws national in their scope. Is it unfair to make a law that has been operating sectionally a national law?

Mr. McKEOWN. Will the gentleman yield?

Mr. JONES. I yield.

Mr. McKEOWN. Are there any figures of the amount that will be kept out of the Treasury by your bill?

Mr. JONES. They were put into the RECORD by the gentleman from Michigan [Mr. KETCHAM] yesterday. It would be about $146,000,000 if it were fully operating at all times.

This plan is not new. It is not untried.

Mr. AYRES. Will the gentleman yield?

Mr. JONES. Yes.

Mr. AYRES. Has the gentleman the figures of drawbacks in reference to sugar and molasses, and so forth?

Mr. JONES. I have the figures, but I will not take the time to go over them. The drawbacks on the various things add up to a great many millions of dollars, and the principle is the same. There is practically no difference in the drawback or debenture—they are practically the same.

Mr. KETCHAM. Will the gentleman yield for one question?

Mr. JONES. I will.

Mr. KETCHAM. I do not know whether the gentleman has developed it, but the debenture plan would fit in to any tariff system.

Mr. JONES. I am glad that the gentleman has called that to my attention. It makes no difference whether we have a high tariff, a revenue tariff, or a low tariff—the rates can be so adjusted as to apply equitably to whatever tariff there is. Whatever the tariff provisions on the statute books may be they would not apply equitably unless some provision like this were enacted.

In Germany they issue what they call the Einfuhrscheine on the exportation of certain commodities, including rye, wheat, oats, barley, and legumes. It is an export certificate which is tenderable in payment of import duties.

This is the situation that has developed in Germany. They produce an exportable surplus of wheat in the northern or northeastern part of Germany, but they do not have an exportable surplus in the southern part. That works out in this way: The northeastern part of Germany is nearer to other outside markets and without paying high freight rates they can carry the commodities where they are needed, so they get an export certificate for shipping the product out. In many instances they bring the product back from outside contiguous countries to the southern part where it is needed and in that way they save paying the freight rates between the northern and southern parts of Germany.

Germany had the law on the statute books before the beginning of the present century, but in a little different form. They enacted the present law in 1902, and it proved so satisfactory that they reenacted it in 1926.

After 15 years of discussion the country of Sweden enacted a law which gives an export certificate on rye and wheat, the principal commodities of the country, making the certificate tenderable in payment of custom duties. In the same year Czechoslovakia enacted the law issuing export certificates on wheat, rye, barley, oats, buckwheat, millet, and other commodities, making them acceptable in payment of import duties.

Now, let me show you what the people say about the effect in Germany. Germany as a nation must always be reckoned with. She has some very intelligent people, some very progressive people, and has some great thinking people. A German student in one of the American universities was asked what was the effect of the establishment of this law in Germany. His reply was that it certainly puts money in the pockets of the farmers.

Doctor Grunzell, who is a student of agriculture in that country, says:

These import certificates were extensively employed in grain exportation, but in the case of flour the older provisions for manufacture in bond were found preferable. The immediate effect was that the prices of

grain in those parts of the country which depend on exportation for their market and which formerly had to contend with depressed prices rose to a point higher than the general world market price by approximately the amount of the import duty.

That is what he says was the effect. Of course, that would be the effect. Any man who has studied it knows that must be the effect of its application. Why can there be any objection to doing this thing? It was suggested in the program of Mr. Hamilton as necessary to the fair operation of any tariff system. The same proposition in a different form was offered by the Hon. William L. Wilson as an amendment to the McKinley tariff, and I understand it lacked only a few votes of carrying. He offered it in this form, that where farm commodities were exported they might be exchanged for other commodities, and those commodities brought in duty free. That is but another way of reaching the same end. Some one suggested a while ago that he was afraid there might be some sort of collusion whereby the farmer would not get the advantage of this debenture. In order to safeguard against the possibility of such a thing we put a provision in the bill for organizing an export corporation by the board, with full power to step in and buy, sell, and export any such commodities; and if there were any effort to take down a part of this debenture this corporation could step in immediately. I do not think it would be found necessary, but it would be like a musket behind the door. If they tried to discount too much, this corporation could see that the farmer received the full effect of the debenture. I do not think it will be necessary to use that power.

THE SWEDISH LAW

Let me show the effect in Sweden. The certificate there provides on its face that the Government of Sweden will pay them 98 cents on the dollar out of the customs duties if the receipts are available there, and I suppose they always are. They would be in this country. Hardly any of them come in for redemption in that way, because the importers would rather pay them 99 cents or 100 cents on the dollar. Rather than go to the bank and get a draft they simply take up one of these export certificates, and they practically get 100 cents on the dollar. At any rate the standing offer of the Government is always available.

Mr. BLACK of Texas. Mr. Chairman, will the gentleman yield?

Mr. JONES. Yes.

Mr. BLACK of Texas. Would it not be well to incorporate some provision of that sort into the debenture plan, so as to make certain that certificates would be redeemed?

Mr. JONES. I do not think it would be necessary. I thank the gentleman for his suggestion. Suppose the firm of Marshall Field wanted goods brought in here that required the payment of a thousand dollars; if they could buy one of these certificates for $990, do not you think that they would go out and buy them?

Mr. BLACK of Texas. I make the suggestion because the fact that it can be redeemed in that way would make it more certain to be negotiable.

Mr. JONES. It would not do any harm, and if necessary a similar plan could be worked out.

Mr. BURTNESS. Is there any likelihood whatsoever that under the so-called export-debenture plan the amount of export bounty could at any time exceed the amount of import duties received by the Government?

Mr. JONES. Oh, no.

Mr. BURTNESS. As a practical proposition, there would not be any chance of that?

Mr. JONES. No. Take the last five years' period. If this had been in force all of that time, it would have amounted to only $146,000,000.

Mr. BURTNESS. In view of the fact that they could never amount to that much, then why bother with these debentures? Why not simply take the money out of the Treasury in the first place and thus eliminate the scalping?

Mr. JONES. The gentleman has not thoroughly studied this measure. The history of the tariff system shows that the export-certificate plan is much less liable to result in retaliations. The certificate plan tends to encourage trade rather than to discourage it. I have not the time to go into those distinctions. It is a much better plan than we have adopted, because it ties onto the tariff system. It does not provide for the payment of a bounty except when they are being subjected to the inequities of the tariff system.

Mr. KETCHAM. And is it not true that with the new distinctions incorporated in the bill with reference to cotton and also to grain it would reduce those quite a considerable number of millions?

Mr. JONES. Yes. They are worth, as shown by the different nations that have tried them, practically 100 cents on the dollar, and they have no trouble with them at all.

For the first time in the history of the protective-tariff system a plan has been devised that is just and fair as between agriculture and industry. This plan was originally admitted to be the only means of doing justice in connection with the plan submitted by the man who originated the system. In this report of 1791 there are several recommendations. The program has been adopted, except that part that would do justice to the farmer. Mr. Hamilton said that the adoption of his system would work an injustice to the farmer, and that the only fair way to make up for that injustice would be to make him a part of the system. How could anyone object to that sort of a provision?

We would all like to see the farmer given equality. The working out of any complicated system of reaching that end must necessarily meet with many handicaps before the final end is reached.

The export-premium plan is the simplest that has been devised. It requires the least machinery. I would like to see the common sense of the Members on both sides of the aisle adopt a plan that history proves would give that equality.

I would like to see them test out a program that would put the farmer on the same basis as the other man and would treat all the citizens of this country alike.

I do not know whether or not the McNary-Haugen bill would work out like those who have been ardent advocates of it contend. I have very grave misgivings about certain features of it. But I have voted for it because I believed that by taking the step we can work out a program that would ultimately bring results. I have been favorable to farm relief. The McNary-Haugen bill has no precedent. Nothing like it has ever been enacted in the history of the world. I think it has merit, but I think the debenture plan has more of merit. That plan will bring the farmers to an equality with others. Why not enact it? [Applause.]

Mr. ASWELL. Mr. Chairman, I yield five minutes to the gentleman from New York [Mr. SOMERS].

The CHAIRMAN. The gentleman from New York is recognized for five minutes.

Mr. SOMERS of New York. Mr. Chairman, during my short but very happy service in this House it has been my privilege to have listened twice to debates on the McNary-Haugen bill.

The first debate was probably the finest I had ever heard, and as such it will linger long in my memory. Men fought for and against the bill with enthusiasm. Those who favored it were as sincere as those who opposed it, and the note of sincerity ran through every speech at that time. It was, indeed, fascinating to hear men plead the cause in which they honestly believed. However, in the present debate this note is missing in most of the speeches of the proponents of the bill. Even the chairman of the committee in opening the discussion fell short of his usual effectiveness. He reminded me of a sorrowing man, weeping tearfuly, bitterly, at the bedside of his dying child. Apparently he did not care particularly whether it was a good or a bad child, for he refused to comply with the request of my colleague from New York to discuss the merits of the measure. Evidently he was concerned only with the fact that he was losing the thing he had fathered. Let us have a look at this thing over which the sorrowing father weeps. Let us draw aside the sheets and see if it is worth saving. Lo and behold! The first glance reveals it to be a two-headed, indecent monstrosity. One head is normal; the other is ugly and unnecessary. It is called the equalization fee.

Aside from this unnecessary head, the child is physically sound, and if it could be relieved of this deformity it might grow up to fulfill the expectations of its family. [Laughter.] It was brought into this world to help the farmer, but if it were to live in its present condition it would be a source of constant embarrassment to the farmer and its vision would nauseate every man who to-day is trying to help it live. Aside from that, it would be a constant terror to the consumer. But it can not live. Even those who are anxious to protect it now, being too sensitive to kill it when they should have, realize that the chief exterminator of the imps of congressional indiscretions will eventually be forced to drive the veto through its heart.

Let us see just how vicious this thing may be. Under this bill a Federal farm board of 12 is created. It is given all sorts of arbitrary power to obtain information regarding agricultural productions. Its members will gather to themselves the most complete statistics on wheat, corn, cotton, and other commodities. It will have more information on conditions affecting these commodities than any person or group of persons in all the world. You can readily understand what an unscrupulous man on this board could do with such information. If a man were so inclined, having in his power the right to impose the equalization fee whenever he deemed it advisable, he would

be in a position to make himself rich beyond the dreams of avarice.

Political appointees, experience teaches us, are not always honest, and I warn you just as sure as the sun rises and sets, if you create this board, there will one day come into it a man who will betray his trust. Oh, you may say that there are provisions in the tale of this bill which will prevent this, but that is not speaking the exact truth. These provisions may keep a man from personally gambling with these conditions but they can not keep him from having his friends gamble for him. In other words, he will still be able to suck the eggs as long as he successfully hides the shell.

Again, this is a proposition of vicious class legislation. It proposes to tax 70 per cent of the people for the benefit of 30 per cent of the people.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. ASWELL. Mr. Chairman, I yield to the gentleman five minutes more.

The CHAIRMAN. The gentleman from New York is recognized for five minutes more.

Mr. SOMERS of New York. It violates all the traditions of the Democratic Party, and it imposes a terrific burden upon the people themselves. It will increase the cost of living at home, and through the doubling of surpluses it will decrease the cost of living abroad. Every inhabitant of every city in the United States, in addition to his present high rents and the present high cost of living, will find himself further taxed by the passage of this act. In these days, when prosperity is rapidly disappearing and the army of unemployed is constantly increasing, I deem it very unwise to attempt to draw *more taxation* from those who can hardly afford to meet the taxes already imposed.

I am interested in the farmer. I want to see him given the proper opportunities. He is evidently in a hole. It is our duty to rescue him. The gentleman from Georgia [Mr. CRISP] in the early stages of this debate suggested that we would aid the farmer by passing Muscle Shoals legislation. That seemed to me to be a good plan. It seems to be the logical thing to do. It is throwing a rope by which the farmer may pull himself out of the hole. That is much better than attempting to dig away the dirt around the circumference of the hole, as we are doing with this legislation, in order that the farmer may walk out. You want to remember it is difficult for the farmer to walk out. He is so shackeled by tariff laws and immigration laws and prohibition laws and transportation laws that it is all he can do to hobble along on the level. And it might be a good idea for this Congress to try to relieve him of some of these shackles so that he may take his place upon the road of prosperity with head high, shoulders straight, and free. [Applause.]

Mr. ASWELL. Mr. Chairman, how much time has the gentleman used?

Mr. SOMERS of New York. I yield back any time I have not used.

The CHAIRMAN. The gentleman yields three minutes.

Mr. ASWELL. Mr. Chairman, I yield 20 minutes to the gentleman from South Carolina [Mr. STEVENSON]. [Applause.]

Mr. STEVENSON. Mr. Chairman and gentlemen, I happen to be one of the class they are trying to relieve. The only industry I have, outside of being a politician, is being a farmer, and I am concerned about the effect of this legislation as at present constituted upon the class of farmers to which I belong, to wit, the cotton farmers.

It was stated the other day that this would not affect the cotton farmers unless the other provisions failed; in other words, that the equalization fee, which we apprehend will be a burden upon the cotton farmer, is only to act as a pinch hitter, and which was very properly characterized by the gentleman from Louisiana as something that would pinch the farmer and hit him at the same time, and that is what it will do to the cotton farmer, I am afraid.

The argument is advanced that they will first try out the question of the cooperatives handling the cotton, and if they can not do it, then a marketing period will be decreed. I want to call your attention, first, to a report of the committee as to what they say is a surplus, which is a misstatement. On the fifth page of the report of the committee they say:

> The term "surplus" in this connection is more definitely stated to mean "a seasonal or year's total surplus produced in the United States and either local or national in extent."

Well, now, let us see what the bill says:

> That is in excess of the requirements for the orderly marketing of any agricultural commodity or in excess of the domestic requirements for the commodity.

Now, when you come to cotton, what are the domestic requirements for the commodity? Take the experience of the last five years and you will find that the requirements range about seven and a half million bales as far as the domestic requirements of the commodity known as cotton are concerned. How much was the production? If you will look at the report of the Census Bureau, which is available to everybody, you will see that the production of 1926 was 17,755,000 bales; of 1925, 16,123,000 bales; of 1924, 13,639,000 bales; of 1923, 10,171,000 bales; and of 1922, 9,729,000 bales. Therefore there has not been a year in the last five years in which the production in America was not largely in excess of the domestic requirements.

What does this bill require this board to do as soon as they find that situation? The bill provides that they shall make an investigation and shall declare a marketing period whenever the yield or year's total surplus, produced in the United States and national in extent, is in excess of the requirements for the orderly marketing of any agricultural commodities or in excess of the domestic requirements for the commodity. It is provided that they shall declare a marketing period and make provision for a marketing period, and prior to the commencement of that marketing period with respect to that agricultural commodity, and thereafter from time to time during such marketing period, the board shall estimate the probable losses, costs, and charges to be paid under marketing agreements with respect to such commodities and under such nonpremium insurance agreements in respect of such commodity as hereinafter provided, and impose an equalization fee upon that commodity for the purpose of taking care of that estimate.

But they say they must try out this other proposition first. They must try out the cooperative proposition and let the cooperatives solve the proposition; but the law is mandatory, if written as it is here, that whenever it is discovered that there is an excess produced in this country over domestic requirements that they shall take steps to have it sold in this way; but they say that when it appears—

> that the operation of the provisions of section 5 (relating to loans to cooperative associations or corporations created and controlled by one or more cooperative associations) will not be effective to control such surplus because of the inability or unwillingness of the cooperative associations engaged in handling the commodity, or corporations created and controlled by one or more such cooperative associations, to control such surplus with the assistance of such loans—

They shall declare a marketing period.

Now, I want you to note the fact that this bill has been pushed and pushed in the cotton States on the ground that the cooperatives want to force every farmer in the cotton States into cooperative associations. I want to call your attention to the fact that we have been experimenting for seven years with cooperative associations in the cotton business. I have no criticism to make of them, but they have been so unfortunately managed that of the 25 per cent of cotton men in my county who went into the cooperative association five or six years ago there is not 5 per cent in now. The proposition is to fix it so that when the cooperatives come up and say they are unwilling or unable—they do not compel them to show they are unable—but if they say they are unwilling to undertake to handle this unless an equalization fee is placed upon it, then the board must do that and make every farmer who raises a bale of cotton contribute his part of the expense of this thing—in other words, force every farmer in the cotton States to become a member of a cotton cooperative association and bear a part of the burden he has tried to bear heretofore but found unsatisfactory.

The proposition is to force him into this thing, make him come in and bear the losses that may occur from the operations of this board here in Washington, with which he has had nothing to do.

The committee says in its report:

AIDS COOPERATIVES TO HANDLE SURPLUS

> To attract and to increase or even hold their membership, cooperative associations must be in position to secure for the producers they represent an effective bargaining power that influences the prices at which their commodities sell. They can not secure fair purchasing power for the farmers unless they can manage crop surpluses in the interest of orderly marketing. If they attempt this, the costs, losses, and risks of carrying over and of selling exportable surpluses of certain crops at competitive prices outside the United States must be borne by the members of the cooperatives, while the better prices are shared equally by the outsiders who, on the other hand, escape the inconveniences of deferred settlement and perhaps actual losses. This is destructive to the morale of cooperative enterprises.

* * * * * * *

Through the operation of the equalization fee, which requires every unit of a commodity to bear its share of the cost of its stabilization and protection, the effect of this plan is to provide 100 per cent cooperation of all producers in financing transactions necessary to the control and disposition of crop surpluses. It takes 100 per cent cooperation to deal effectively with the surplus, and it is impossible to get such complete cooperation otherwise than through Government action. Honest, able, and sincere men with extraordinary ability have attempted it and have failed.

So the proposition for the cotton people is to say to them, "You can go and join your cooperatives, or, if you do not, we will make you come in and bear your part of the expense whether you get any of the benefits or not." Now, what do they propose to do? They propose to impose a fee upon the farmers of the cotton States for the purpose of enabling the cooperatives and the agencies created by them to market the cotton as they see fit.

Now, let us see about that. They declare their findings and they direct the contracting of agreements with these agencies which are created to buy and hold the cotton. They have divided them into two classes. The fellow who belongs to the cooperative, they take his cotton and hold it, and he does not pay the equalization fee until the cotton is sold; but what about the men—and there are plenty of them in the cotton States—who do not wear anybody's collar and who decline to be forced into a cooperative association where they have not found things satisfactory before. What about him? He will say, "No; I want to act independently and sell my own cotton." He goes and sells it on the market, and they take the equalization fee right then and put it into the treasury of this concern. That is exactly what they do.

The man who can be bulldozed into signing with the cooperatives is going to have his cotton carried until it has gone either up or down, and does not have to pay the fee until the adventure has been successful or has been so unsuccessful that they sell him out, and they advance him part of the value of the cotton, and they advance it out of the appropriation made by Congress, which comes from all of us, and out of the equalization fee paid by those of us who sell our cotton independently, as we have been able to do in the past. We have not made fortunes out of it, but we are yet able to attend to our own business.

Now, how are you going to maintain the price? If this is going to equalize everybody, you must bear in mind that here is one party who puts his cotton into the cooperative and lets it stay there until the price raises—if it ever does—and here is another man who sells it and has to take the market price to-day. He sells it to the same crowd and pays in his equalization fee to help them hold it, and hold it for a profit which goes into this fund which they propose to build up and live off of.

Mr. QUIN. Does not the gentleman think that is an inducement for the gentlemen to come in?

Mr. STEVENSON. It is not only an inducement; it is a club. It is the biggest kind of club to force him into the cooperative; and for myself, I do not ever propose to say to my farmers that I voted for something to drive them into a corporation that they have heretofore found to be detrimental to their interests and that they have rejected and refused to sign up with any more.

This is the whole proposition, and my friend the gentleman from Mississippi [Mr. QUIN] will not go down and admit to his farmers that he did that either; or if he does, they will find another fellow to represent them up here in Congress.

Mr. QUIN. But we give them $400,000,000 to help all of them raise their prices.

Mr. STEVENSON. Well, we will see about that in a minute.

Now, here is the proposition. You are going to equalize everybody, and before they declare a marketing period they have got to ascertain whether there is probably an excess of production over domestic consumption. They have got to determine that before they start.

The cotton season opens the 1st of August. They start to work and they know beforehand there is going to be more cotton produced in this country than we will consume, because the history of the country has shown we have exported at least 55 per cent of all the bales that are made all over this country for all time almost. Therefore they do not have to have any long siege in determining whether they will declare a marketing period, because, so far as cotton is concerned, it is foreordained that they will have to do it by the very terms of this bill.

Well, they declare that period and cotton begins to move. The farmer says, "How much are you going to raise the price of cotton?" and they say, "You are going to put up $10 a bale," and the farmer says, "Well, you will certainly raise the price that much."

Now, how are you going to do it? How much cotton goes on the market during the months of September, October, and November, and do you know how much money it will take? You talk about $400,000,000. That is not all for cotton, is it? No; it will take $10,000,000 a day right straight along, day in and day out, for the months of September, October, November, and December, to handle the cotton that goes on the market, and if they are going to charge everybody an equalization fee then they are under obligation to raise the price for everybody, and they have got to buy up this cotton, because there is nobody who is going to buy above the world price except this crowd that is taking this money out of your pockets. They have got to buy it up, or else let these farmers who wanted to be independent or who were not in position to join the cooperatives have their cotton sold at whatever it will bring on the world market, and I say the result is that this crowd has got to put up at least $10,000,000 a day for 120 to 130 days during that period, and it is going to take a good deal more than the $400,000,000 before you get through with it when you divide it with the wheat fellows, the corn fellows, the hog fellows, the cow fellows, and all the balance of them.

You are not going to have the money to do this unless you take it out of the farmer who is selling his cotton upon the market, and what will be the result? There will be the devil to pay by the time you get through with it, I will tell you that right now, because they are not going to stand for it, and I do not blame them.

I have belonged to cooperatives, and, as I have said, I have no stones to throw at them. They had a difficult problem, but I will tell you now you can not force the American farmer, as I know him, into belonging to a cooperative if he does not want to any more than you can force him to belong to the Catholic Church or to the Ku-Klux Klan. [Laughter and applause.]

Our American people believe in choosing their associations, and they will do it as they please.

Now, what will happen? How much cotton is made in the world?

You talk about raising the price of cotton in this country. You have to raise it above the farm level; you ought to raise it above the world level or there is nothing in it.

Now, how much cotton have we raised during the last five years? Let us see. In 1922 there were 17,000,000 bales made in the world, 8,000,000 of which were made abroad. In 1923 there were 19,000,000 bales made, 9,000,000 made elsewhere than in the United States. In 1924 there were 23,000,000 bales made, 10,000,000 of which were made outside of the United States. In 1925 there were 26,000,000 made, 10,000,000 of which were made outside of the United States. In 1926 there were 27,000,000 bales made, and 10,000,000 bales made outside of the United States.

Now, are you going to put up the price in the United States 4 cents above what it is in the world market, and what will you have? Why, there is 10,000,000 bales waiting elsewhere and millions held that was taken out of this country that will come back the minute you put the price higher than the world price abroad.

Mr. BURTNESS. Will the gentleman yield?

Mr. STEVENSON. Yes.

Mr. BURTNESS. I am very much interested in the gentleman's speech, but I have misunderstood the theory of the cotton people who have been sponsoring the bill before the committee. They expect to stabilize the market of cotton in this country, and because so much was produced in the United States in the case of cotton where they could actually raise the world price.

Mr. STEVENSON. I do not yield any further. I get the gentleman's point. The gentlemen who have been advocating this before your committee, who have been preaching it from the housetops, are the cooperative people who want to force the people into the cooperative associations. They do not know and do not care what is made elsewhere, but when you have 10,000,000 bales made elsewhere do not you know that when you put the price higher than the world market do not you know that you can not dominate the world price? Do not you know that on any product that consumes only 35 per cent and has to export 65 per cent you can not dominate the world price. Liverpool is the center of the cotton market of the world. The equalization fee would raise the price for everyone else and take it out of the pockets of the farmers of this country.

The CHAIRMAN. The time of the gentleman from South Carolina has expired.

Mr. STEVENSON. I was promised more time if I had not got through.

Mr. KETCHAM. I have a few minutes of my own time which I will yield to the gentleman if he will arrange to have it transferred to me later.

Mr. STEVENSON. I will do that.

Mr. KETCHAM. I will yield the gentleman seven minutes.

Mr. STEVENSON. Oh, they say when we talk about raising the world price that is all folderol. What have they done about the equalization fee on cotton brought in from the outside? Well, they knew it would flow in here, that they could not keep it out when they began to keep the price up. Anybody knows that, and so they put an equalization fee on here, and when a man ships in cotton from the outside he may have to pay $10 equalization fee and you may raise the price in this country $10 a bale. But the minute it goes up to that the foreign cotton comes right in and fills the hole. There is no other explanation. It is all folly to talk about raising the price of cotton in the world with 10,000,000 bales made elsewhere. That is 40 per cent of all the cotton made in the world outside United States.

Now, let us look at it a minute. I go down and sell my cotton or my colored man does. And let me tell you something about selling cotton. I tried the cooperatives. My croppers said that we prefer to sell it on the market, and do you know what my colored men did? I am not saying it disrespectfully, but they beat the cooperatives 3 cents a pound for three years in succession in selling cotton, and when the colored people on my farm can do that I said "you go to it boys, I am not in the cooperatives any more," and I told the cooperatives so.

Mr. SCHAFER. The gentleman had better cotton.

Mr. STEVENSON. No; I did not—the cotton went to the gin side by side. The cropper and I got alternate bales. My colored men sold their cotton for 3 cents a pound higher on the average than it brought by putting it into the cooperatives. There is the proposition. If you will take the equalization fee out of the bill I am willing and will support it enthusiastically. Take the equalization fee out of the cotton business and I will support it. There is much can be accomplished by it, but I will not vote to coercing farmers into the cooperative and tax him to make him rich. It will not work with cotton.

Take wheat for instance, with a billion bushels raised. You could raise your price on account of the tariff probably 40 cents a bushel. Forty cents a bushel on 800,000,000 bushels would mean $320,000,000. You would pay an equalization fee which would amount to $80,000,000, and you would be "in" $240,000,000. That is all right, but let us take cotton. We spun 8,000,000 bales of the 1926 crop and sold 10,000,000 bales. Suppose you raise your price $20 a bale. We would make $160,000,000 on the bales that we sold here. We would take it out of the manufacturers or whoever got it. We would lose $20 a bale on 10,000,000 bales, which would be $200,000,000. You would put on an equalization fee sufficient to make it up, and we would be "out" $200,000,000 on what we sent abroad, and we would be "in" $160,000,000 on that we sold at home, so that on the whole proposition we would be "out" $40,000,000, and in addition $60,000,000 thereto on your flour that we would have to buy from you wheat men.

What is the equalization fee for? It is to pay the losses on the exported products. I now wish to quote a distinguished authority on this proposition, Mr. CHARLES ADKINS, of Illinois. I quote the following from the RECORD of January 6, 1928:

Mr. BLANTON. Neither the last McNary-Haugen bill nor any other McNary-Haugen bill has ever provided that the profit that may be made from marketing the surplus through this board shall be distributed back to the farmers or the producers who raise the commodity.

Mr. ADKINS. You just forget it, if you think there will ever be any profit from "ditching" this surplus on the foreign market, where the prices are lower than on our domestic market. This is why it is necessary to provide some means for taking care of the loss, and the only way you can do it is through an equalization fee.

If that is not good authority in this church, I do not know to whom to appeal, unless it is to Bishop HAUGEN. And he has never denied that statement. [Applause.]

Mr. PURNELL. Mr. Chairman, I yield myself 20 minutes. When the farm relief bill was before the House at the last session of Congress I prefaced my remarks with the statement that our Committee on Agriculture had just concluded the consideration of the greatest problem any committee of any Congress since the beginning of the Government has undertaken to solve. I can with equal propriety make the same statement to-day. Although the problem is still acute and agricultural conditions little improved, I think we can report progress in the matter of proposed legislation. The bill under consideration is the culmination of a long period of evolution, and, in my judgment, represents an economically sound and workable plan, which if enacted into law will result in placing our greatest American business—agriculture—upon an equality with industry and labor and thus establish and maintain a well-balanced permanent prosperity throughout the country that will not only insure the happiness of all our people, but will be the means of preserving our free institutions as well. I shall not discuss the general subject of agricultural degression. It has been discussed at length by the members of our committee at each session of Congress during the last four years as we have presented farm-relief measures for the consideration of this House. It is a condition which is universally accepted. The President, in various messages and speeches, has declared that there is a farm problem. In his veto message of last year he said—

That there is a real and vital agricultural problem is keenly appreciated by all informed men. The evidence is all too convincing that agriculture has not been receiving its fair share of the national income since the war. Farmers and business men directly dependent upon agriculture have suffered and in many cases still suffer from conditions beyond their control. They are entitled to and will have every consideration at the hands of the Government.

I shall only refer to a few witnesses who have offered conclusive evidence of the fact that a farm problem exists. I refer to the United States Chamber of Commerce and the National Industrial Conference Board, who, after a joint consideration of the subject, published a summary of their conclusions, in which, among other things, they said:

The evidence is clear that American agriculture has undergone a prolonged and trying readjustment to post-war conditions, in the course of which those engaged in it have suffered seriously in their relative economic prosperity in comparison with those engaged in other fields. On the human side it has been deprived of the energy, experience, and knowledge of many thousands of farmers who have lost their resources and have been persuaded or compelled to leave the farm for other occupations, while the land resources of the Nation have been impaired by neglect and by wasteful exploitation under the pressure to which those who have remained in the business have been subjected.

I also refer to the fact that the Association of Land Grant Colleges and Universities of the United States, on November 17, 1927, adopted a report prepared by a special committee of the association, in which, among other things, it said:

Incomes from farming since 1920 have not been sufficient to pay a fair return on the current value of capital used and a fair wage for the farmers' labor, or to permit farm people to maintain a standard of living comparable with other groups of like ability. Agriculture has received a much smaller share of the national income during this period than during the period prior to the World War; and in spite of the continued decline in the proportion of the population engaged in agricultural pursuits and the marked increases in efficiency in agricultural production, farmers in general have not been receiving as adequate rewards for their labor and their managerial efforts and for the use of their capital as have been received in most other industries. Farm returns for the country as a whole showed some improvement each year from the very unsatisfactory year of 1921 through the year 1925, but they declined again in 1926. The indications now (October, 1927) are that the agricultural income in 1927 may be slightly higher than in 1926. The continued low returns have resulted in a shrinkage in the value of farm property and a marked acceleration of the movement of population from farms to cities.

I also recall that there appeared before our committee spokesmen for practically every farm organization in the United States who stated without reservation that there still exists a farm problem.

I think we are all agreed that the one great problem is our agricultural surplus and how to deal with it. Whenever there is a surplus, that surplus fixes the price for the whole commodity, inasmuch as it is necessary for the producers of that surplus to sell it in foreign markets. It naturally follows that the price obtained by the American producer is the foreign price and that the foreign price determines the home market price.

The bill which we passed at the last session of Congress failed to meet Executive approval. Those who have been charged with the responsibility of drafting the present bill have had in mind the objections which were expressed by the President and have made an honest effort to eliminate the points which met with Executive disapproval. I shall confine my remarks very largely to a discussion of the changes in the bill and the manner in which our committee has attempted to meet these objections.

The bill declares it to be the policy of the Congress to promote the orderly marketing of agricultural commodities; to provide for the control and disposition of surplus; to preserve advantageous domestic markets; to prevent undue and excessive fluctuations in the markets; to minimize speculation and waste in marketing; and to further the organization of producers of such commodities into cooperative associations. Certainly, these objects are most laudable, and if carried out in any

measurable degree will tend toward a general uplift of our great basic industry.

This bill, as previous bills, creates a Federal farm board, but places no limitations or restrictions upon the President's power to appoint the board members other than to provide that one shall be appointed from each of the 12 Federal land-bank districts and that they shall be confirmed by the Senate. The former bill provided that nominations should be made by farm organizations to the President, whose power to appoint was limited to the list of such nominees. The President objected, and I think very properly, to this limitation on the authority of the Chief Executive.

The present bill applies to all agricultural commodities, whereas the former bill applied only to wheat, cotton, corn, tobacco, rice, and swine. This meets the objection which the President urged to this section, and the bill is no longer open to criticism upon the ground of discrimination against any product or any section.

A new section has been added to the bill providing for cooperative clearing houses and terminal market associations to stabilize the movement in commerce of agricultural commodities, which not only strengthens the bill but further meets the President's criticism on the ground that it applied to only a few commodities.

The former bill provided for State conventions to express the sentiment of producers as to the commencement and termination of operations with any commodities. The elimination of this provision from the bill removes another point of objection made by the President.

The present bill provides that if the board is of the opinion that there are two or more cooperative associations or corporations created and controlled by one or more cooperative associations capable of carrying out any marketing agreement, the board in entering into the agreement shall not unreasonably discriminate against any such association or corporation in favor of any other such association or corporation. It further provides that if the board is of the opinion that there is no such cooperative association or corporation created and controlled by one or more cooperative associations capable of carrying out any marketing agreement for purchase, withholding, and disposing, then the board may enter into an agreement with other agencies, but shall not unreasonably discriminate between such other agencies. The latter provision has been inserted to meet the objection of the President. In his veto message he charged that it would be possible to have "unreasonable discrimination" in making marketing agreements with agencies other than cooperatives.

The former bill authorized the issuance of a serial receipt to cotton producers, and not to other producers upon whose marketed products the equalization fee was collected. The President objected to this provision as constituting a discrimination in favor of one crop and against another. That special provision for cotton is omitted from the present bill.

A new section has been added to this bill which provides specifically that the United States shall not be liable directly or indirectly upon agreements under the act in respect of agricultural commodities in excess of the amounts available in the stabilization, premium insurance, and revolving funds. The former bill had no such limitation, and the President in his message called attention to the fact that there might be a further liability upon the part of the Federal Government.

The insurance provisions in the present bill are so amended and clarified as to meet the objections urged by the President. It was suggested by the President in his veto message that the insurance proposal in the other bill amounted to a Government agreement to pay the cooperative associations any loss which they might incur in withholding commodities from the market, no matter how high the prices might go in the meantime.

The present bill provides for the collection of a fee upon the importation of the commodity during a marketing period in respect of it and for the collection of an equivalent fee upon the importation of any food product manufactured in whole or in part from such commodity. The President suggested in his veto message that while the provision for collecting an equalization fee on processing would require millers, for example, to purchase their wheat at a price level that would include both tariff and equalization fee, nevertheless the flour manufactured therefrom would have to be sold in competition with manufactured flour that had paid the tariff but was manufactured from wheat that had paid no equalization fee. This, it was pointed out, would subject the millers to disadvantage in competition with flour imports. It was for the purpose of obviating this condition that the collection of a fee on importations under certain circumstances is authorized.

Thus have all the objections urged by the President been substantially met save the equalization fee, and it is set out in the bill specifically as an alternative remedy.

In other words, the board is not authorized to resort to the plan of operating through marketing agreements and equalization fees until the provisions for surplus control through loans to cooperative associations have proven ineffective. The board must find that there is a surplus, that loans to cooperatives are ineffective in controlling it, and that the commodity is adapted to the use of marketing agreements. These are all findings of fact to be made by the board itself before entering into marketing agreements with cooperative associations or corporations created and controlled by them.

When the board enters into any marketing agreement it makes the revolving fund responsible, through the stabilization fund for the commodities, for any losses which may be incurred under the agreement. Since the marketing agreements are to be resorted to only when the board finds them necessary to secure the regulation of interstate and foreign commerce intended by this measure, this contribution which each unit is required to make is known as the equalization fee and is provided as a necessary incident to the regulation of such commerce. The board is directed to establish a stabilization fund for each commodity dealt with through the marketing agreements, the money in such fund to be in the first instance advanced by the board out of the revolving fund.

The equalization fee is collected upon any commodity and deposited in the stabilization fund to make good any payments required under the marketing agreements, so that the advances from the revolving fund may be repaid as equalization fees are received. It is provided that these advancements shall be returned to the revolving fund, together with 4 per cent interest.

Those who are opposed to surplus-control legislation have singled out the equalization fee as the most vital point of objection. It remains the only point of objection in the bill. Much of the opposition to the equalization-fee provisions comes not from the farmers themselves but from those who apparently oppose any farm-relief legislation. Whatever fee may be collected will be paid by the farmers themselves, and strange as it may seem, little, if any, reflected in the prices to be paid by the consumer. It is the first time I have ever known of any group appearing before Congress asking for relief and offering to pay the cost of that relief out of their own pockets rather than out of the Federal Treasury.

It is argued that it is unconstitutional. That question would of necessity have to be determined by the Supreme Court. No man can now say it is or is not constitutional. Able and conscientious lawyers differ on this question, as they have differed on all major pieces of legislation heretofore passed. It is said that such a plan as is proposed by the equalization fee is without precedent. The principle is as old as government itself. In its practical effect there is little, if any, difference between the principle involved in the equalization fee and those employed in local improvements under paving, drainage, or irrigation projects. The recapture clause in the transportation act of 1920 applied the equalization-fee principle to the railroads. In the Federal reserve act, as well as the transportation act, Congress employed the principle of requiring contributions to be made under certain circumstances in the interest of the contributors. Under the provisions of the Federal reserve act every national bank is required to be a member of the Federal reserve bank of the district in which it is located and is required to subscribe to the capital stock of its Federal reserve bank in a sum equal to 6 per cent of its paid-in capital stock and surplus. The national bank that fails or refuses to join the Federal reserve system forfeits its charter.

The equalization fee provision has been placed in this bill at the request of the farmers themselves. I regard it as an expression not only of their desire to pay their own way but as evidence of their unwillingness to ask for or accept a subsidy from their Government.

Opponents of the equalization-fee plan contend that it is not only unworkable but in violation of the Constitution. This bill has been very carefully drawn so as to provide two distinct and entirely separable remedies. It is provided that the board shall first try to bring about the desired relief through loans to cooperative associations at a low rate of interest. This plan has frequently been suggested by the Secretary of Agriculture and many others who do not approve the equalization-fee plan. The alternative plan, in case of failure of the first remedy to accomplish the purposes of this act, is the making of marketing agreements by the board which shall provide that the cost and losses on transactions authorized under the agreements shall be paid by the commodity whose producers receive the direct benefits. The bill is so drawn that if any court in any proceeding

should restrain the board from entering into marketing agreements financed by the equalization fee or if the Supreme Court of the United States should hold such provisions to be in conflict with the Constitution, the bill would still present a workable whole and the board could proceed under the first plan without interruption.

In conclusion, I should like to suggest that if this bill becomes a law it will be one or two years at least before the board can become thoroughly organized and conversant with its duties to such an extent as to successfully put in operation and try out the first plan set out in this bill for bringing about agricultural relief. In my judgment, another two years would elapse before the board could definitely determine that loans through cooperative associations, as provided in section 5 of this bill, had failed to accomplish the purposes of this measure. I wish to further suggest that if this bill becomes a law the board appointed under its provisions will be composed of men who will bend every effort toward making the first plan provided by this bill effective in order that they may not be called upon to put in operation the alternative plan. If, as its opponents contend, this bill is unconstitutional, ample opportunity will be given to determine that fact before it could work any hardship upon either producer or consumer or do any violence to any of the rights guaranteed to all our people under the Constitution. [Applause.]

I wish to suggest further just one thought which is prompted by a speech on the floor this afternoon. Who would appoint this board? The President of the United States, without any limitation whatever. If this bill were to be signed within the next 10 days or 2 weeks, our own President Coolidge, for whom I have the highest regard and whose sympathy with agriculture I do not question, would appoint this Federal farm board. I repeat, it would take a year and maybe two years before that board appointed by him without restriction could orient itself and find out its duties and begin intelligently to handle this question, and I undertake to say that after they had organized and had gotten started and had tried to stabilize agriculture under section 5 of the bill it would take another two years before they would find out that the thing would not work, if it did not work. We have been told time and time again by the Secretary of Agriculture, and we have been told by gentlemen on the floor of this House who sympathize with other bills similar to that in character, that through these loaning provisions to cooperative associations we may stabilize and strengthen agriculture. Follow my thought, if I have not muddied the water too much to express it intelligently: The two years having elapsed, and another two years in which to perhaps find out the thing is not workable, it is not unreasonable to assume that within that time the constitutionality of this alternative plan which I still designate as a "pinch hitter" can be determined.

Mr. SCHAFER. Mr. Chairman, will the gentleman yield?

Mr. PURNELL. I am very sorry, but I promised more time than I have. I yielded back for this addition the time I have not occupied of the last five minutes.

The CHAIRMAN. The gentleman yields back three minutes.

Mr. PURNELL. Mr. Chairman, I yield nine minutes to the gentleman from North Dakota [Mr. HALL].

Mr. HALL of North Dakota. Mr. Chairman, the subject of legislation in behalf of agriculture has been before the country for many years and particularly has it been one of the major subjects during the past seven years. Hundreds of speeches have been made in this Chamber on the subject of doing something which would more nearly place the farming classes upon an equality with the industries and labor. Paper enough has been used in the publication of speeches and articles on the subject to cover every foot of farm land on the continent and we have not yet received that for which we have so long sought. The Agricultural Committees of the Senate and House have favorably reported the bill now under consideration with the recommendation that the bill be passed, and the Senate has passed it in most of its essential parts.

I am convinced that finance, industry, and labor recognize that agriculture is in a bad way. The banking business has been caused to shift its operations since the deflation in land values and produce prices. Many banks have been forced to close. Industry is beginning to feel the reaction, and labor has recognized the peril for many years.

The farmer is convinced that with a little help in the way of laws and extension of credits that agriculture can work out a solution to the problem. He sees the railroads protected and encouraged at an enormous Government outlay. He sees industry protected by tariff rates and trade rules and practices, but not much for him. He finds labor protected from competition by the high wall of the immigration act. The farmer is not greatly opposed to this, but he is sure that he has been slighted and almost entirely forgotten in the great scheme of things.

The railways complain of high taxes and tell us that for every tick of your watch the railroads pay $11 in taxes. That may be true, and if it is, then for every tick of your watch the farmers of America are paying $26 in taxes.

It is time that industry and labor should be awake. The farm buildings of America have an estimated value of $12,000,000,000. The life of a farm building is about 50 years, so there is an annual market for about $300,000,000 a year worth of lumber, hardware, building materials, and labor. There is almost $3,000,000,000 invested in farm machinery, which has to be renewed every 10 years, or at the rate of $200,000,000 a year. Industry and labor should study the situation.

This McNary-Haugen bill endeavors to set up a Federal farm board of 12 men to be appointed by the President; one man from each of the Federal land bank districts, with the Secretary of Agriculture an ex officio member.

The general purposes of the measure are:

First, to preserve advantageous domestic markets for the commodity.

Second, to prevent surpluses from unduly depressing the price obtained for the commodity and from causing undue and excessive fluctuation in its market.

Third, to minimize speculation and waste in marketing the commodity.

Fourth, to further the organization of agricultural producers into cooperative marketing associations.

You are all quite familiar with the general provisions of the bill.

Mr. Chairman, I want to direct my remarks to the minority report against the bill as submitted on the 11th day of April by Congressman JOHN C. KETCHAM, of Michigan, and Congressman MARVIN JONES of Texas, members of the House Committee on Agriculture, which deals with the question of agricultural surplus control in two parts: First, an outline of the reasons for their dissent from the majority approval of the Haugen bill, and, secondly, a brief of arguments in favor of the export debenture plan.

This minority report in its opening statements clashes with the facts when it says:

> H. R. 12687 with its equalization fee feature can not apparently receive the approval of the Chief Executive, whereas the export debenture plan has no such handicap.

No one in Washington really believes that the President would sign the export debenture bill. The proponents of the debenture plan in this minority report admit that it would take approximately $146,000,000 annually from the United States Treasury by reducing customs income. That is, the adoption of the debenture plan would keep out of the Treasury $146,000,000 annually, based on a normal crop production. Other estimates show a greater loss to the Treasury. How would such an annual cut in income square with the administration's program for tax reduction?

The most important objections in the President's message accompanying his veto of the McNary-Haugen bill last year also apply against the debenture plan. The debenture plan would apply only to those crops of which we produce an exportable surplus. This was one of the chief objections of the President against the McNary-Haugen bill of the last session. The debenture plan would have the effect of furnishing American farm supplies to foreign consumers at prices lower than those obtaining in the domestic market, to which the President strenuously objected. The debenture plan offers an indirect subsidy to agriculture, which the President has repeatedly condemned and which the farmers do not want.

In his message to Congress on December 6, 1927, President Coolidge said:

> The most effective means of dealing with surplus crops is to reduce the surplus acreage * * *. It can not be sound for all of the people to hire some of the people to produce a crop which neither the producer nor the rest of the people want.

In the same message he pointed out that a "Government subsidy would be bound to result in disaster."

In outlining their "reasons for dissatisfaction with H. R. 12687," the Haugen bill, Congressmen KETCHAM and JONES list first its alleged unconstitutionality. I am not a lawyer, but it seems to me that if there is any one thing certain about legislation of the character either of the debenture plan or of the Haugen bill, it is that the constitutional question is certain to be raised in a court action. You may depend upon it that the debenture plan, if it should be enacted, would be attacked in court just as quickly as would the Haugen bill. American cotton manufacturers, for example, who would be compelled to buy

their raw material on a higher basis than that at which their foreign competitors secure their supply, would be certain to enjoin the plan.

The general constitutional questions involved in either plan can not be settled here. Their supporters in Congress believe in the constitutionality of their respective proposals. The final decision will rest with the Supreme Court of the United States.

Mr. BURTNESS. Mr. Chairman, will the gentleman yield?

Mr. HALL of North Dakota. Yes.

Mr. BURTNESS. I notice in the Haugen bill, section 18, provision is made that if any section of the law should be declared unconstitutional, that would not apply to other provisions of the law?

Mr. HALL of North Dakota. That is true.

Mr. BURTNESS. So the situation, therefore, is this, that even if the equalization fee is declared unconstitutional the rest of the law would remain in effect.

Mr. HALL of North Dakota. That is correct.

Mr. BURTNESS. And if the Attorney General and the President were correct when the veto was made that the equalization fee is unconstitutional, then even if this bill is signed, when a decision of the court to the effect that the equalization fee is unconstitutional is made, that would not in any way affect any of the rest of the bill, and a great many of the most ardent opponents of this bill and of the equalization fee have stated on the floor of the House that the bill without the equalization fee would work and be applicable. Am I correct?

Mr. HALL of North Dakota. Certainly.

Mr. BURTNESS. Does the gentleman see any reason for not supporting the bill upon the part of anyone who believes the equalization fee is unconstitutional if he likewise believes that the bill otherwise would work?

Mr. HALL of North Dakota. Not so; not at all.

Aside from the quotation from the opinion of the Attorney General, which is completely answered in the brief on the legal phases of the Haugen bill, contained in the majority report, pages 36 to 46, inclusive, this minority report quotes some unnamed authority—the quotation is from the speech of Senator WALSH of Montana—as asserting—

> that the public funds can not be taken out of the Public Treasury, funds contributed by all the taxpayers, and turned over to a private individual or association of private business.

This particular constitutional objection would apply against the revolving fund authorized to be appropriated in the Ketcham bill just as certainly as it would apply against the Haugen bill. There is absolutely no difference, therefore, there is no point to this objection in the minority report.

The minority views consider in some detail the provision in the Haugen bill which require the board to find that the loan provisions have been ineffective in controlling the surplus before it can enter into marketing agreements with reference to any crop, to be financed from the equalization fee. The minority report assumes that loans will be ineffective in controlling the surplus, therefore, it proceeds to the conclusion that, "Government purchase and exportation of the surplus" is the direct purpose of the Haugen bill.

As a matter of fact there is no Government purchasing or exportation provided in the Haugen bill. The Government board, under the present bill, has two main functions—to administer special loans to cooperatives, and to make marketing agreements with them for handling surpluses. Both functions are intended to assist in developing strong business agencies representing and controlled by farmers.

Under the present bill there is no Government corporation to buy or sell. The extent of Government participation is to collect the common fund from the producers of a commodity through equalization fees and to make it available to meet the costs and losses of surplus control contracts.

Cooperative associations or corporations created by them, or other existing agencies where there are no cooperatives, would do the buying, storing, and selling involved. The Government agency proposed by this bill would, of course, be a new factor in business, but then the farmer says, the Government is already "in business" in almost innumerable ways, so why draw the line when he is to be the beneficiary?

Another reason for dissent outlined in the minority report, already referred to, is that the Haugen bill faces a certainty of presidential veto. It is no more certain that the President would veto the Haugen bill in its revised form than that he would veto the debenture bill.

Certainly the probability of the veto can not be raised as an objection exclusively to the Haugen bill, in view of the President's many statements which would seem to disapprove directly of the principles of the debenture plan.

It is also objected that years of delay would follow the enactment of the Haugen bill before its provisions could be made effective. On this point it should be observed that no problem is settled permanently until it is settled right. Certainly any far-reaching legislation would have to undergo a period of test as to its constitutionality—the debenture plan just the same as the Haugen bill. But that is not the real heart of the matter. The question for Congress to determine is, What is the proper and effective method of meeting the agricultural problem? The only enduring form of relief is that which permits agriculture to pay its own way. No subsidy, direct or indirect, open or disguised, will be long tolerated by the American people—and that is one of the fundamental objections to the debenture plan.

It is objected further that the equalization fee adds another tax to the farmers who are already overburdened with taxation. Certainly this objection is poorly founded and far-fetched. The collection of the equalization fee is indirect. If the net result of operations under the Haugen bill is to increase and stabilize farm prices, as both the friends and opponents in their arguments have conceded, there is no ground to charge that the farmer's taxes are increased thereby.

The equalization fee in this bill will have the effect of discouraging increased production.

The cost of disposing the surplus is assessed back against the grower through the equalization fee. If the growers increase their acreage—and their surplus—because of better prices, the equalization fee will also increase in size and thus discourage production. It will serve as a deterrent to increased surpluses.

The argument that—

> the proponents have singled out the farmer and imposed upon him an equalization fee in order that he may get what is said to be the other end of the tariff while the manufacturer gets his protection without any fee at all—

is specious and unsound. If manufacturers produce a surplus, its disposition requires that the costs and charges involved in handling it, and the loss if it is sold abroad at less than the domestic tariff-protected price, shall be absorbed by the industry that has produced the surplus. That is precisely what the bill proposes for agricultural surplus crops. Economically the course of the manufacturing industry with a surplus, and that of agricultural producers under the proposed bill, would be identical. The cases are on all fours, except that the farmers, who because of their numbers lack the power to act cohesively, and who because of their lack of control over the forces of production, can not control the volume of the aggregate output, would be given by the Haugen bill the necessary supplemental power to do what industry in practice now does for itself.

In listing the advantages of the export-debenture plan the minority report first explains that the provisions for a farm board and a revolving fund for loans to cooperative associations are included in both bills.

The argument on the debenture plan itself is largely an explanation of how the plan is expected to operate. There is no occasion for discussing this explanation in detail, but some of the disadvantages of the debenture plan may be briefly mentioned.

From the standpoint of the Corn Belt the debenture plan set forth in this bill has practically nothing to offer. The livestock debenture rates are so small that the advantage would probably be absorbed by the packers and exporters. Corn is not primarily an export crops. The foreign market for our corn is limited, and the domestic price is not controlled definitely by the price for an exportable surplus. The problem with corn, as with cotton, is to provide a sound and workable method for controlling the marketing of the surplus in the interest of producers, not of stimulating the domestic price by forcing an increased exportation by means of a premium or bounty.

As far as cotton is concerned, a 2-cent export premium would undoubtedly work to bring about substantially a 2-cent difference between domestic and world prices. That is, compared with the present relationship between foreign and domestic price for raw cotton, this act in effect would tend to raise the cost of cotton to domestic buyers 2 cents per pound over the cost of cotton to foreign buyers. This does not mean, however, that the 2-cent premium on cotton exports would result in an absolute raise of 2 cents per pound in the domestic market for raw cotton. American cotton exports amount to approximately two-thirds of the world's international trade in cotton. If exports were stimulated by the 2-cent bounty, it is a question whether the result would be to raise domestic prices 2 cents per pound or to lower the world price 2 cents per pound. Probably in operation the 2 cents per pound premium on cotton would depress the world price some and raise the domestic price

some. The measure of difference between them would be 2 cents per pound compared with the present relationship between world and domestic prices.

The debenture bill authorizing issuance of export debentures at half the rate of the existing duties on swine and pork, cattle and beef, corn, rice, and wheat and flour. In addition it authorizes the issuance of debentures on cotton at the rate of 2 cents per pound and on tobacco at 10 per cent ad valorem.

In addition to these listed commodities, the bill authorizes the board to designate any other agricultural commodities as "debenturable" whenever certain findings are made, the debenture in each case being limited to the amount of the tariff.

It is impossible to estimate the total value of the export debentures which would be issued under this plan because no one can foretell what additional commodities might be made debenturable by action of the board. Also, it is impossible to predict what the increase in the volume of our exports would be under the stimulus of export to bounties of debentures. Certainly the total diversion from the Treasury on account of export debentures would be no less than the $146,000,000 estimated by the members of the committee who submitted the minority report.

If the debenture plan had been applied to the wheat surpluses during the years 1924 to 1927, the gain in price at 21 cents per bushel would have amounted to $705,268,280; and the cost of the operations to the Government would have been $142,488,630, or a gain of $526,783,640. Under the equalization-fee plan the net gain would have been $906,949,742, or an advantage to the wheat farmer of $398,166,092 over the debenture plan. If the debenture plan had been in operation during those four years on corn, the advance in corn prices would have totaled $802,866,000. The cost to the Government would have been $4,999,500, or a net gain of $797,875,500, whereas by the equalization fee in operation the advance in values would have reached $1,690,046,033, or a gain of $892,170,533, a difference in favor of the equalization-fee plan as against the debenture plan of $94,295,033. Therefore, I feel that the equalization-fee plan is much to be preferred. [Applause.]

The CHAIRMAN. The time of the gentleman from North Dakota has expired.

Mr. PURNELL. Mr. Chairman, I yield 15 minutes to the gentleman from Minnesota [Mr. ANDRESEN].

The CHAIRMAN. The gentleman from Minnesota is recognized for 15 minutes.

Mr. ANDRESEN. Mr. Chairman and gentlemen of the committee, there is no man on the Committee on Agriculture more qualified to speak about the contents of the bill than my colleague from Indiana [Mr. PURNELL]. I hope that the Members will read his explanation of the bill in the RECORD, because he has been the man selected by the committee to give the details and explain the workings of the bill.

The main controversy involved in the bill is the controversy concerning the equalization fee. Our good friend from New Jersey [Mr. FORT] and other opponents have agreed that the bill is workable without the fee, and they will vote for the bill if we only agree to accept this modification. They approve the bill up to and including section 8.

Mr. FORT. The gentleman also agrees that it is a workable bill?

Mr. ANDRESEN. Yes. But it is necessary to have the equalization fee in the event the loan provision proves ineffective. The provision is sound and should be a part of the law. The loan provision to cooperatives, together with the equalization, will encourage cooperation and will assist the farmers in building up their own business marketing organization. The equalization fee is the pinch hitter to be used in case of real emergency.

The Committee on Agriculture of the House has worked diligently for months in an effort to bring before Congress a bill which should be enacted into law and a piece of legislation that will be of real benefit to agriculture. It is without doubt the best farm relief bill offered by the committee since farm legislation became the important question before Congress.

Agriculture, the basic industry of this country, is entitled to a square deal, and that is all that the proponents are asking in the bill under consideration.

I have just read with a great deal of interest an editorial from the New York World commenting on farm legislation, as follows:

> If Congress could draft a plan of farm relief which the East believed would bring all the benefit the sponsors of the McNary-Haugen plan claim for their measure it is a safe wager that eastern industrialists would urge its adoption. The plain truth of the matter is that the western Congressmen have failed to convince the business leaders, even of their own section, that they have found a remedy for the ills of agriculture.

The position taken by this paper evidently expresses the view of certain business interests and professional speculators throughout the country—particularly in the East. If the farmers of the United States would be compelled to first submit a plan of farm relief legislation to these business interests no legislation of real benefit would ever be enacted.

The agricultural sections of this country are never consulted by the business groups when it comes to matters of legislation affecting industry or banking, and it would therefore seem logical that the farmers and their representatives should play the important rôle in the shaping of farm legislation.

A survey of the agricultural States discloses the fact that the majority of business men in agricultural sections favor the enactment of the McNary-Haugen bill as it is now before the House. Retailers, wholesalers, bankers, and other professional men throughout the Middle West have generally gone on record for the enactment of this bill. They realize that their success and prosperity are largely dependent upon farming, and consequently they have now joined hands with the farmers to bring about the enactment of beneficial farm legislation.

The present bill has been approved by the majority of farm organizations of the country and we believe that these organizations, through their representatives, speak for the American farmer. Many farmers have appeared before the committee in approval of the bill.

The proponents of farm legislation are of the opinion that the McNary-Haugen bill now under consideration meets the majority of the objections of the presidential veto of last year. The only controversial point in question is the equalization fee. The objection to the fee is met with the provision that the board shall not put it into operation until such time as the loaning and cooperative features have proved ineffective to handle the marketing of the surplus.

Mr. WINTER. Mr. Chairman, will the gentleman yield?

Mr. ANDRESEN. Yes.

Mr. WINTER. Before the gentleman leaves the equalization-fee matter, which he has just mentioned, I want to say that the inquiries of the gentleman from North Dakota [Mr. BURTNESS] were very pertinent in that regard. It is clear to me that those Members who are convinced and clear in their own minds that the equalization fee is unconstitutional are perfectly justified in opposing the bill on that ground, and equally and obviously so those who are clear in their minds and convinced that the bill is constitutional will be fully justified in voting for it. But probably there are Members of the House who are doubtful on that point. Those Members who are doubtful on the ground of the constitutionality of the equalization fee are certainly justified in taking the same position that the Supreme Court will take when it decides that section, and that is that if it not clear that it is unconstitutional they will sustain it and hold it to be constitutional.

Mr. ANDRESEN. The gentleman is correct, and any doubt as to the constitutionality of the fee by Members should be resolved in favor of the bill.

The bill not only has the approval of the American farmer but it also meets the requirements and fulfills the pledges of the Republican and Democratic Parties, as set forth in the 1924 platforms of both parties. Since both parties have agreed to aid agriculture, the question of farm relief can not be considered as a political issue, and it is now up to both sides of the House to support this measure in order to carry out the pledges and promises to the greatest industry in this country. The ultimate welfare of nearly 30,000,000 people hangs in the balance pending a satisfactory solution of this great economic question, and it is therefore high time that Congress takes some definite action in the solution of this great question, in order to avoid the repetition of the last four years.

If the leaders in Congress and Government would have shown the same constructive interest in the question of farm-relief legislation as they have in the matter of flood control and other legislation, a satisfactory solution would have been reached long ago. There has been no spirit of get together on their part, and they have yet to make the offer to sit down and across the table work out a common problem.

Many bitter critics of farm relief, both in and out of Congress, deal in generalities, denouncing the bill before us, but these same critics have nothing to offer as a suggestion toward the solution of the farm problem. They admit, however, that we have a real problem to solve, and since they have offered nothing, they should at least be willing to try out the solution offered by the farmers themselves.

The general policy of the bill is to promote orderly marketing of all agricultural commodities. It is not a price-fixing meas-

ure, and it only seeks to give the farmer or producer the benefit of existing tariff schedudes on his products.

I might say in regard to the tariff, to which reference was made a few moments ago, particularly as to the recent tariff bill, the Fordney-McCumber Act, it has been claimed that this measure is of no benefit to agriculture. If it were not for that tariff act you would see millions of bushels of wheat shipped in from Canada, and other agricultural commodities shipped in from other countries, to come in competition with cur own production. The agricultural schedules of our tariff bill do at least this, that they prevent the importation of these commodities to any great extent.

Mr. KINCHELOE. Mr. Chairman, will the gentleman yield there?

Mr. ANDRESEN. Yes.

Mr. KINCHELOE. Is it not a fact that for a time last year wheat was higher in price in Winnipeg, Canada, than it was in Minneapolis?

Mr. ANDRESEN. Yes. I realize that that was the fact, but the reason why it was higher in Canada than in Minneapolis was largely due to the cooperative pool that is operating up in Canada, where the pool controls the greater portion of Canadian wheat.

Mr. KINCHELOE. The gentleman believes that that was what affected the price?

Mr. ANDRESEN. Partly. That shows what can be done under this bill. Under section 5 the cooperatives could form a corporation and create a pool of American wheat just as they do in Canada, and the equalization fee will automatically bring all domestic wheat under control of the pool.

Mr. MORTON D. HULL. May I ask the gentleman if that is the law in Canada?

Mr. ANDRESEN. I presume there is a law in Canada permitting the pool.

Mr. MORTON D. HULL. Can they not do the same thing here now?

Mr. ANDRESEN. Yes; they could do the same thing, but at present there is no governmental supervision over it, and they can not function as a farm organization should unless the Government is back of them. If the Government assumes the supervision of the work, it will be more effective and the producers will have confidence in cooperation.

Mr. BURTNESS. Mr. Chairman, will the gentleman yield there?

Mr. ANDRESEN. Yes.

Mr. BURTNESS. Is not this also largely due to two other factors, one of them being a reduction of freight rates in Canada from the farm to the terminal, and the other a very large wheat crop in the so-called spring-wheat area of the United States, with the result that we in the United States were under the necessity of importing wheat—more of the protein wheat—than the millers of the country needed?

Mr. ANDRESEN. Yes.

Mr. KINCHELOE. And therefore, if the gentleman will yield, this provision for the exclusion of the protein wheat should be stricken out?

Mr. ANDRESEN. I think not. I know we can produce all the wheat we need in this country without competition from any foreign country.

I might also say in connection with the statement of the gentleman from North Dakota [Mr. BURTNESS] that a large number of speculators have gone up into the Canadian market and speculated and probably forced the price up to a large extent.

The manufacturer who can control his production enjoys the benefit of a high protective tariff. Labor has its restricted immigration which brings about a higher wage level. The railroads and other public service corporations, as well as financial interests, are the beneficiaries of legislation backed up by favorable court interpretations, so that they are all generally recognized through operation of law as being entitled to a profit and fair return upon their investment. This is all the farmer is asking in the present legislation, and he is willing to finance his own operation as provided in the bill.

When the last tariff law was enacted it was intended to be particularly favorable to agricultural products. Unfortunately, on account of large surpluses of certain products, the farmers have received only a small benefit, and they have been compelled on account of the surpluses to compete in a world market. This world market fixes not only the price of the surplus but also regulates the price of the large portion of the crop sold in domestic consumption.

The farmers have been continually encouraged by the Government to raise a surplus, and therefore this legislation seeks to bring about the readjustment so that the American producer will have his proper place in our economic life. It attempts to give him an American price for the portion of his crop sold and consumed in this country.

Congress can not legislate prosperity for any inefficient producer, laborer, or business man; but Congress can and should encourage honest and efficient effort on the part of our citizens as long as we proceed under the theory of the protection of American institutions.

Statistics disclose that there are nearly 6,000,000 farms in the United States having a population of nearly 30,000,000 people, and consequently the farmer becomes an important factor in our economic life. His producing or purchasing power is the determining factor in the welfare and prosperity of the entire country.

The farmers are the only annual producers of new wealth. Billions of dollars' worth of new wealth is annually taken from old Mother Earth by the toil and effort of the farmers. Their purchasing power is greater than any other single group. They need equipment and machinery in their business, and they are entitled to have and enjoy the luxuries and comforts of an American standard of living.

Thousands of cities and villages in this country and their inhabitants are to a large extent dependent upon the purchasing power of the farmers. If agriculture prospers, these people prosper.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. PURNELL. Mr. Chairman, I yield to the gentleman three minutes more.

The CHAIRMAN. The gentleman from Minnesota is recognized for three minutes more.

Mr. ANDRESEN. The agricultural problem is not a local or class question. It is a nation-wide problem, and it is a pleasure to note that the entire country has at last come to the realization that something must be done for agriculture.

Secretary Jardine recently stated in an article in the Washington Star:

> Farm relief is not a war cry. It is a national need. Not for nothing has that need been widely studied and discussed during the last few years—so studied and discussed that it is everywhere awakening city people to an interest in what used to be thought only a farmer's problem. City people are beginning to understand that the farm problem is also their problem, to realize that efficient and prosperous agriculture is fundamental to general national prosperity. It is well that it is so.
>
> For understanding and sympathetic interest of city people are necessary to secure legislation helpful to agriculture.
>
> No one understands better than the farmer that national legislation is no panacea for all ills, yet there is real opportunity for helpfulness by the enactment of carefully studied programs both by the National Congress and by the legislatures of the separate States.

I agree with the Secretary and believe that he should fall in line and give sympathetic support to the bill before us. The McNary-Haugen bill has taken in all of the principles advocated by the Secretary, and it has gone a step further to provide for an equalization fee to be paid by the farmers, in the event the other provisions prove ineffective.

The President, who has indicated a sympathetic interest toward agriculture, should approve the bill for the following reasons:

First. The majority of his objections to the bill passed in the Sixty-ninth Congress have been met.

Second. The equalization fee, to which he objected, does not go into effect until the loaning and cooperative features have proved ineffective.

Third. It fulfills the pledge of the Republican Party.

Fourth. The President selects the members of the Federal farm board, who are responsible for the administration of the act, and I assume that he would appoint qualified men as members of the board—men who would be sympathetic to agriculture and who would administer the law in a businesslike way. He should sign the bill, so that a fair trial may be given to the only piece of legislation which has the approval of the majority of the farmers of this country.

In conclusion, I want to say that I represent an agricultural district. I have just received a telegram from Mr. George W. Freeman, secretary of the Goodhue County Farm Bureau, in which he says:

> ZUMBROTA, MINN., *April 30, 1928.*
>
> Hon. A. H. ANDRESEN,
> *Congressman:*
>
> Goodhue County Farm Bureau passed resolution favoring McNary-Haugen bill.
>
> GEO. W. FREEMAN, *Secretary.*

I would also like to inform the membership of the House that every county in my district, which is an agricultural district, has gone on record, in convention assembled, in favor of the

McNary-Haugen bill; that the State Republican convention recently held in my State adopted a resolution unanimously favoring the McNary-Haugen bill with the equalization fee—I said unanimously; probably I should have stated that there was 1 county delegation in my State out of the 86 counties which did not support this bill; otherwise I think you will find the State of Minnesota to be unanimous on the proposition of the McNary-Haugen bill. [Applause.]

RECESS

Mr. PURNELL. Mr. Chairman, under the previous order of the House, I move that the committee do now take a recess until 8 o'clock p. m.

The motion was agreed to; accordingly (at 5 o'clock and 11 minutes p. m.) the committee stood in recess until 8 o'clock p. m.

EVENING SESSION

At 8 o'clock p. m. the Committee of the Whole House on the state of the Union resumed its session.

Mr. HAUGEN. Mr. Chairman, I yield 30 minutes to the gentleman from Iowa [Mr. ROBINSON].

Mr. ROBINSON of Iowa. Mr. Chairman and colleagues, everyone agrees that one of our greatest national problems is the successful handling of our agricultural surpluses.

The bill we are now considering, which is H. R. 12687, by my distinguished colleague from Iowa, Mr. HAUGEN, under Senate title S. 3555 will help solve this problem.

If economic conditions arise under which a large and most important section of the people are in distress and unable, as individuals, to correct the trouble it clearly becomes the duty of the Government to provide the needed machinery to enable the individuals to act together in a collective way to overcome the harmful condition. Governments are organized to do for the governed what they, acting individually, can not do for themselves.

The absolute necessity of a change in the agricultural situation seems to be admitted by all—any difference of opinion is regarding the methods to be adopted. This problem might well be called everybody's problem, for it is that very thing. There is no business or profession in the Nation that is not vitally affected by the failure or the success of agriculture.

It has been all too easy to feel and think that the severe depression in Agriculture is entirely a farmer's problem, and to permit him to bear the burden of it, and to work out his own salvation or to perish in the attempt and go down and cut and let others take his place. If this were true, it would be all wrong; but it is not true, for already there is something knocking at the door that shelters and protects business, industry, labor, and profession, and calling in a voice that grows more insistent the longer it is ignored. This problem is also your problem. The injustice that has been done agriculture is now reacting upon you. It will continue in ever-increasing amount until this wrong is righted. For your own best interest act now and help correct this wrongful situation.

Mr. CLARKE. Will the gentleman permit a question?

Mr. ROBINSON of Iowa. With pleasure.

Mr. CLARKE. Does not the gentleman think his suggestion, which I regard as the highly important germ of his argument, is this—act now.

Mr. ROBINSON of Iowa. From my genial friend from New York I would expect that to be a strong point.

Mr. CLARKE. Then what can the distinguished and extremely capable Representative from Iowa expect with a presidential veto staring him in the face while the gentleman is recommending to his constituents especially acting now?

Mr. ROBINSON of Iowa. Will my colleague permit me to say it does not stare me in the face; I see it one year in the rear. We have gone by it.

Agriculture, industry, labor, interdependent, are so closely associated together under our national policy of an American standard of living—of a protected home market for labor, for industry, and for agriculture, which shall be better and higher than exists anywhere else—that harm to one soon becomes harmful to all.

United, we stand a self-sustaining prosperous nation; divided, we fail to measure up to the possibilities that are ours—of bringing to everybody, to all our people in every line of activity, a degree of prosperity, happiness, and success that the world has not previously known; and I ask for agriculture only what I would gladly ask for labor or for industry were they in the same need, for failure of any one of these three would be disastrous to all. A homely illustration, but worthy of consideration: "Which leg of a three-legged stool is the most important?"

This problem of agriculture is not a local one—not a State problem, but is a governmental, a national problem. It can be, and it must be, solved.

The agriculture problem is in reality a group of problems, involving among others:

First, greater efficiency.

Second, control of overproduction.

Third, orderly marketing.

Fourth, removal of surplus from competition in the home market.

All for the purpose of securing a fair price for our products. We have in the past given much attention to the production side of agriculture and have succeeded to a remarkable degree. The business side, the marketing side, is the one that now needs improvement.

The McNary-Haugen bill, if enacted into law, will solve some of these problems. Even doubters must admit that it is an attempt in the right direction and is well worthy of a sincere, thorough trial. Of this we can all be sure: That the problem will not be solved without national legislation and that control of surplus, which is absolutely necessary to success, can be brought about in no other way than by national authority.

This bill might well be called a marketing bill, for it deals primarily with the disposal of farm products. It is called the surplus control act because it provides therefor.

What is the purpose of the bill? It is to give agriculture the opportunity to do just what other lines of business and industry do, and rightly do; that is, to have control of the surplus supply of their product and thus to have a protected, higher home market for the amount of their product used at home and the power to dispose of their surplus products on the world's markets without reducing the home market. The purpose of this legislation is also to stabilize the prices of farm products by removing the surplus from competition in the domestic or home market. We are now producing and for many years have produced a larger amount of food and other agricultural products than we need or can profitably use at home. There are nations that need these surplus farm products; there are world markets on which they can be sold, but their prices are fixed by lower standards of living than ours, by lower production costs, by cheaper labor, by economies we are not willing to exercise, and in most instances by cheaper land. Their ability to pay is less than ours. We can not meet this competition and maintain our American standard of living. We can not sell our entire farm production at a price based on this world price, and why should we do so? The exportable price of any commodity should not necessarily determine the home price.

There is no greater reason for the farmer selling his products on the American market at the lower world price than for the manufacturer to sell his goods in America at the low world price. American labor—American manufacture; both entitled to the American home-protected price for their products. Is American agriculture any less so? And it should be said to the high credit of American labor that the Federation of Labor agrees with this and has indorsed and approved this legislation.

Does anyone question the statement that the world market price does, with certain minor limitations, control the home market price of agricultural products in which an uncontrolled surplus exists, with the result that the producer in America receives a price based on the cheaper production standards of the world, though his cost of production is much higher? The governor of the Federal reserve bank in Philadelphia in an address recently said:

> When one realizes the vast exports this country makes to Europe every year and takes into consideration the fact that the export price of cotton, grain, and other surplus crops practically fixes the price on the whole crop—

And so forth.

Just what we have been claiming. Just what we say is wrong, unfair, and ruinous to American agriculture.

Do we permit the price of manufactured commodities in England to fix the price we pay our factories in this country? We do not, and we should not. But we do ask them to cable us each day the price they will pay for our wheat, for flour, for cotton, for meat products, and our price here at home is largely based on the price they name.

Do we permit the price of manufactured articles in efficient, hard-working Germany to fix the price we pay our manufacturers in this country? We do not, and we should not. But we do ask them to wire us each day the price they will pay for our lard, our hog products, and other farm products; and our market here at home, for what is consumed at home, is largely based on their price less transportation charges.

Why should the wage of labor abroad affect or control the wage of our home labor? It should not. If labor is underpaid, as it is in most countries in the world, that is no reason why it should be underpaid in America. If manufactured articles are made and sold in other parts of the world for less than the cost

of production in America, that is no reason why our manufacturers should sell their products at a loss here at home. Does not the same reasoning apply to farm products and their producers?

We can afford, if necessary, to sell our surplus on the world market at a price the other nations can pay, provided we can have our own home domestic market, based on our home cost of production, and in fair proportion to the home price of other commodities. It is said, and the statistics show, that we consume from 85 to 90 per cent of our farm products, except cotton, at home. If we can receive for this amount, used at home, the protected home price, we can sell the balance or surplus of 10 to 15 per cent on the world markets and succeed; but if we permit the low world price received for our surplus to control and fix the home price and consequently we are compelled to sell our entire farm product at the low world price, we are placed at a disadvantage with industry. We find the purchasing power or value of our farm products reduced below par. We find our cost of production increased above par. We find that success is impossible and failure certain. There is no competitive business that can survive under similar conditions.

We hear much about the law of supply and demand and its application to our problems by those opposed to this bill. How can the law of supply and demand work or function when everybody knows there is a supply exceeding the demand? The law of supply and demand is a fine old law. We are all for it; but we are not for the law of oversupply and consequent underdemand.

Remove the exportable surplus from competition in the home market, and then the law of supply and demand can function; and it will determine the home price, and with orderly marketing, brought about by cooperation, this price will be approximately what it should be, for it will be in proportion to the price of other things; and that is all we ask.

How shall this problem of surplus be handled?

Shall we prevent a surplus of food products by reducing acreage and breeding? Or shall we provide a means for taking care of any reasonable surplus that may arise by removing it from competition in the home market, as provided in the Haugen bill?

Some say control production as does the manufacturer, limit the acreage to the amount that will produce the quantity desired, forgetting that even if this could be done, which I think is very doubtful, control of production goes far beyond this. Until man can control the elements, the things that an all-wise Providence now seems to have reserved to Himself—sunshine and rain, heat and cold, wind and storm, drought and flood, insects and pests, boll weevil and corn borer, and the other things that are beyond his power, he can not safely attempt to closely control the production of food by limitation of acreage. Nothing in a material way is so essential, so absolutely necessary, to an individual or to a nation as their food supply.

More nations have been conquered by hunger than by armed forces. Abundance of food supplies is necessary to national safety. The dread of hunger is born in the human race. We are constantly providing against it. America has never known hunger or famine, but other parts of the world have; and it is a fearful thing.

If there is to be any favored business or class it should be the food producers, for they are more necessary than any other. No argument is needed to prove that the food supply sustains a more vital relation to a nation than any other product. A nation's safety lies in a food surplus. From a consumer's viewpoint, nothing could be more dangerous than limiting production each year to that year's consumption. It would mean at times a shortage and an excessive price, neither of which should occur. Our national and our personal safety and comfort demand a reasonable surplus production of food. Are we then not under obligation to care for it and to prevent its becoming harmful and a loss to the producer?

In 1923 Iowa produced 436,000,000 bushels of corn, in 1924 Iowa produced 305,000,000 bushels of corn, in 1925 Iowa produced 492,000,000 bushels of corn, on practically the same number of acres—a difference of 187,000,000 bushels in one year.

The United States produced, in 1923, 3,000,000,000 bushels of corn; 1924, 2,300,000,000 bushels of corn; 1925, 2,900,000,000 bushels of corn—a difference of six and seven hundred million bushels, with no very great difference in the acreage.

Suppose we had reduced the acreage at the close of 1923, when we had the large crop, or increased the acreage at the close of 1924, when we had a short crop. What might not have happened?

Is it not much safer, much better, to control the surplus when it comes than to attempt to control it by limitation of acreage before we know there will be any surplus? An ordinary American-controlled surplus, as I see it, is not a thing to fear, not something that will harm us, but quite the opposite.

Such a surplus properly controlled and handled need not be harmful, but helpful. But a surplus uncontrolled is harmful. It demoralizes our markets and causes loss instead of profit. The Haugen bill proposes a workable plan of surplus control.

May I ask a question and also answer it? The question is: Is an exportable surplus in any commodity desirable?

If the answer is "yes," as I think it must be, may I then ask, Why should not agriculture produce its share of the surplus? I call your careful attention to these figures.

We imported into the United States from foreign countries during the year 1927 commodities that cost us $4,184,378,182; and in the year 1926 the amount was $4,431,000,000, the difference being caused by a lower price for rubber and coffee in 1927.

It is interesting to note that this included in 1927, 61,000,000 bunches of bananas, and yet we sing, "Yes; we have no bananas"; and that rubber and raw silk are our largest imports in both years. Our imports for a number of years have been about $4,000,000,000 each year. We are steadily increasing the quantity we import.

How shall we pay for these goods? If with money, in a few years we will be broke and bankrupt. We can not do that. We do pay for these imported goods by exports—of what? Of the surplus commodities we produce; that is what we are now doing. We would not send these commodities out of our country if they were needed here. The very fact that they are sent proves that they are surplus. Why should not agriculture share in the benefit received from producing this surplus?

Wealth, to a considerable extent, remains in the section of the country in which it is produced. Our oil fields, our mines, our great automobile and steel plants, our great factories and industries prove that where wealth is produced or created, there in that general section of our country much of it remains.

Agricultural communities should share in this prosperity, this production and accumulation of wealth, and at the same time help pay the Nation's import bill by furnishing their share of export products.

What reason can be given for reducing farm production to a place where there is no surplus? I know but one: The maintenance of the home market at its proper price level without the lowering influence of a surplus that must be sold on a low world market.

This is not a sufficient reason, and it disappears when we bring about surplus control as provided in the Haugen bill.

This is in accord with American tradition. From the beginning our national policy has been to encourage production—to encourage the growth and development of industry, of commerce, of agriculture. We must not now discourage the growth of agriculture and encourage only industry and commerce.

What objections are urged against this legislation?

First. That it will increase the price of farm products and consequently increase the cost of living.

This is an admission that the legislation will be effective—will work—and will bring to the farmer the price he is entitled to receive, and we agree with the objection up to this point.

The farmer produces the unfinished "raw product." Industry makes of it the finished product, and business delivers it to the consumer. It is the price of the finished product, delivered, that affects the cost of living. Experience of the past few years clearly shows that the price of the raw product may go up or down without greatly changing the price of the finished product, and often not changing it at all. The cost of the raw material, the farm product that enters into a package of oatmeal, corn meal, a loaf of bread, the wool or the cotton that enters into a garment, the price of the hide that enters into the shoe, are but a small part of the price of the finished product; and a fair increase of price to the farmer for his raw material need increase the price of the finished product but a very small amount, if any. However, if it should be found that there is some slight increase, it is only correcting an existing inequality, a present unfairness, and should be done.

Eventually industry will have to pay its "board bill," whether it be higher or lower; why not now? It will be easier to pay as we go along.

Second. The objection is also urged that an increased price to the farmer will increase production to such an extent that his loss on the surplus will overcome the profit on the amount sold on the home market. Two safeguards are in the bill to prevent this:

A. The power given the farm board in section 6 to refuse loans in case of undue increase of acreage.

B. The equalization fee that says to every producer: "If you produce excessively you lose the benefit of this legislation."

Third. Unconstitutionality. What does this mean? By some it is defined about this way: "Unconstitutional—the legislation

we do not desire and do not approve of. Constitutional—the legislation that we want and believe in."

Let us not overemphasize this matter. That which at one time has been declared to be unconstitutional has at a later time, with slight modifications, been declared to be constitutional. We have great courts, good men and true, specialists in such matters, to determine them for us.

If legislation is desirable, if it will promote the welfare of the people, if it will accomplish good, if it is correcting a harmful condition and an inequality that should not exist, surely some constitutional method of procedure can be found.

Fourth. The charge is made that it is "price-fixing" legislation. No proof of this can be given. It is "price-influencing" legislation. It is intended to give the farmer the benefit of the protected home market. It does not fix prices. It attempts to enable the American farmer to receive an American price for his products. That is why I am so strongly for it.

The equalization fee seems to be chosen for the real point of attack. What is the equalization fee? It was well defined by Senator CARAWAY a few days ago, when he said:

> The equalization fee is the means of saying that everybody who is engaged in an industry shall bear his proper proportion of the cost of making that industry successful.

The equalization fee charges every producer his share of the cost of selling the surplus crops on the world market and in that way keeping the home market for the amount consumed at home at a home-market price.

It charges back to the producer of the particular crop directly benefited the cost of such benefit, the cost of marketing his surplus production. The more surplus the more expense to be charged; and right there you have one good, powerful reason why he will not intentionally largely overproduce—that is, the reason of self-interest. It is not a tax; it is an expense of marketing and can be done under Government supervision better and more safely than in any other way.

What is the equalization fee? Is it not cooperation in action? The history of cooperative marketing has been that it became cooperation of only a part of the producers. All producers received the benefit of the increased prices caused by the cooperation, but only a part paid the cost that was necessary to bring about the benefit. Naturally this part grew less and less, and sometimes it resulted in the burden increasing to such extent that the cooperation ceased. Under this proposed legislation the cooperation will include all who receive the benefit, as it should do. Some may call it compulsory or enforced cooperation, and I have no fault to find with the statement. We must have cooperation of all producers to make it successful.

Enforced cooperation runs all through our form of government. What are taxes except enforced cooperation, payment for the innumerable benefits brought us by our Government? Who pays taxes as a matter of choice? Is there such a thing as a welcome tax? We pay taxes not from choice but from necessity, recognizing that the benefit received in return therefor far exceeds the value of the payment made.

What is our State and National Government but enforced cooperation? Our Government, the greatest Government, the greatest blessing that has ever come to any nation, the marvel and the pride of the world—but it is enforced cooperation. If so large a benefit in government, why should it not, in a modified form, be of benefit in our marketing operations?

If the removing of the surplus from competition in the home market will so increase the price of the product sold in the home market that the producer can pay the expense of the transaction and have a good profit remaining, is it not a wise thing to do and good business? In what essential way does it differ from other marketing expense, such as transportation, storage, cost of selling, which we have long recognized as a part of business?

Stabilization of prices will be one of the large benefits of this legislation.

It has been pointed out during the debate on this bill that prices for farm products are now higher than a short time ago. In my section this is true of hogs and corn, the major part of both having previously been marketed by the producer. Corn has advanced to a fair price at a time when we have none to sell. Hogs are advancing to a fair price, where they should have been during the entire marketing season, but at a time when the larger part of the crop has already been marketed at a lower price. We are glad to see these increased prices. They will be of help to a few of our farmers, but what we need, what we should have in all fairness, is a right price when we have the product to sell.

The supply of hogs and hog products and of corn was well known prior to the advance. How does it benefit the producer, the farmer, in whose interest we are asking this legislation, to advance prices after his products have left his hands? Our trouble is low prices when the large part of the crop is being marketed. The very nature of the farmer's business requires that the larger part of his products become ready for market at certain fixed times. When a car of hogs or cattle are fat and ready for market, they can not be long delayed, except at a loss, be the price what it may. Seasonal price slumps of large amount should not be permitted. Orderly cooperative marketing under the direction and advice of the Federal farm board can be of large help here.

It is not a question only of a satisfactory price this year, but every year. We want prices stabilized on a fair basis.

Large crops and small crops, good crops and poor crops will continue in spite of all we can do, and surpluses will come. They should be cared for and controlled and made a blessing. It is almost unthinkable that a large crop should bring a smaller return to the producer than a small crop, yet this very thing has happened. When Providence and nature smile upon us and we have bountiful harvest, we should have a bountiful return for it; and some organization, large enough, strong enough, with knowledge enough, with money and credit enough, should be provided with power to care for and control this surplus crop until in the natural course of events our home country or the world needs it; and in the meantime it should not be permitted to spoil the home market. It should not be necessary to have a short crop, a partial crop failure, either at home or abroad, for us to receive a price for the product used at home that shall have a fair relation to cost of production and to the price of other commodities.

I am convinced that the enactment into law of the McNary-Haugen surplus control bill will do more to bring prosperity to agriculture than any other legislation now before Congress. I do not expect it to cure all our farm and business troubles. It will not at once restore prosperity, but it will start us on the right road. It will change the outlook. It will bring back the morale to many a discouraged landowner and farmer. It will place within his hands the power to make his future a success.

We are building in America a standard of life unknown elsewhere.

A wage standard.

A business standard.

An educational standard.

A standard of living, of comfort and happiness, of conduct and morals the highest and best in all the world.

Protection is the accepted policy of our Nation.

Agriculture.

Industry.

Labor—all worthy, all equal, all entitled to the same protection. It is our duty to see that they receive it. [Applause.]

Mr. ASWELL. Mr. Chairman, I yield 20 minutes to the gentleman from New York [Mr. GRIFFIN].

Mr. GRIFFIN. Mr. Chairman and colleagues, we have listened during the course of this debate to the statements repeatedly made that the farmers of the country are suffering from some vague and indefinite injustice, and that they are the victims of intentional discrimination. There is nothing to warrant these assumptions.

The farmer and the man in the factory are not only brothers under the skin but they are affected in the same way by the economic conditions which prevail in our country. If the farmer has a problem it is not his alone; it is a national problem; it is a problem for the entire people of the United States.

The farmer is a consumer just as much as the man who works in a factory, just as much as the man who works in the counting house; in fact, the circumstance that the farmer is a consumer is responsible for the conditions of which he complains.

This is an economic problem which confronts us and one which goes back, with many ramifications, for many years.

It is well to remember that complaints are coming mostly from the one-crop growers—the grain, cotton, and tobacco agriculturists. The general farmer who raises diversified crops has not complained. His condition is better than it ever has been before in our history. The one-crop farmer complains that he can not dispose of his surplus. Wheat, corn, cotton, tobacco, pork, and beef exported meet with the competition of foreign producers and the American producer must sell abroad at prices fixed by the foreign markets.

Now, let us be frank. Is that difficulty any different from that which confronts the American manufacturer? He also has to sell his surplus abroad at prices fixed by foreign markets; yet he is able to do so successfully; he looks upon the foreign sales as velvet and is doing all he can to enlarge such sales.

The American manufacturer produces his surplus with the intent to go into the foreign market and, protected as he is by

the high tariff, is able to get enough profit out of his domestic sales to more than counterbalance the reduced prices he gets for his exported commodities. He does this automatically.

THE FARMER'S PROBLEM

But with the farmer the case is different. Remember, he is a consumer also. He must buy not only clothing and hardware and his other innumerable needs from American manufacturers, protected by high tariffs, at artificially inflated prices, but when he comes to sell he must submit to prices fixed by the competition of the world.

A partial remedy is possible by having the farmer consent to the same policy that has been adopted by the manufacturers—that is, fight for a tariff on foreign agricultural productions which will enable him to command the home market.

But there is the rub. He is not content with the home market alone. He knows the financial advantage of the surplus to the manufacturers and he wants his share.

Now, how do the sponsors of this bill propose to meet the problem?

THE POLICY OF THE M'NARY-HAUGEN BILL

In order to comprehend their point of view let us look at the first paragraph of the bill, which purports to enunciate their policy. It constitutes a most amazing aggregation of economic absurdities which might very well furnish the theme for a Gilbert and Sullivan opera. All of the principles of political economy which experience and scholarship have come universally to recognize, all of the policies of this Nation which have been laboriously worked out and crystallized into law for the protection of the consumer against monopoly are airily discarded, and in their place it is proposed to set up a paternalistic socialistic system of elaborate machinery, not for the benefit of all, at which socialistic programs usually aim, but for the benefit of a chosen specially favored class.

Let us run through this astounding confession of vicious purposes as revealed in this "declaration of policy."

First. To prevent suppression of commerce with foreign nations in agricultural commodities.

This, of course, is merely a demagogic rhetorical intimation that somebody has been trying to suppress our commerce with foreign nations in agricultural commodities—a thing that no man or group has either the will or the power to effect. It is mere buncombe.

Second. To prevent unjust discrimination against such foreign commerce.

More buncombe! No one discriminates against our foreign commerce except in ways they have a perfect right to follow and in precisely the same manner that they discriminate against the commerce of other nations.

Third. To provide for the control and disposition of surpluses of such "agricultural" commodities.

The answer to this absurd and arrogant assumption of paternalistic power is: Why should the Government assume control of agricultural surpluses in preference to surpluses in all other dustries?

If the suggestion were made, for instance, that the Government should purchase and attempt to control the surplus in shoes, clothing, tools, hardware, and automobiles we would all agree that such a proposal was virtually sovietism in its worst form. And yet this bill proposes to purchase the surpluses of food commodities—grains, meats, and dairy products in all their ramified forms and processes.

Fourth. To preserve advantageous domestic markets for such "agricultural" products. Advantageous to whom? The consumers? No! Advantageous to the producers. In other words, mulct the consumers generally!

Fifth. To prevent such surpluses from unduly depressing the prices obtained for such "agricultural" commodities.

In other words, defy the law of supply and demand and keep up prices artificially!

Sixth. To further the organization of producers of such "agricultural" commodities into cooperative associations.

In other words, have the Government help in the organization of monopolies to fix prices and restrict trade in defiance of its past history as exemplified in the Sherman Antitrust Acts and other statutes in which we have always deemed it wise to prohibit monopolistic control of prices.

Those six propositions might well be engraved in the six angles of the soviet star.

INCONSISTENCY OF THE NAME

Then, again, its official name—the name by which it is to be dubbed, if it ever becomes a law, is a contradiction and an absurdity. Under section 21 of the bill we read:

This act may be cited as the "surplus control act."

And yet on page 34, under the general powers of the board, we find, among other things, that they may advise—

through their organizations or otherwise in the development of suitable programs of planting or breeding, so that burdensome crop surpluses may be avoided or minimized, in order that they may secure such benefits.

Well, if the production of surpluses should be "avoided or minimized" why go to all the pains of erecting this complicated machinery in order to dispose of surpluses?

Again, on page 36 of the bill we find this among the powers of the commodity advisory councils, they are to have the power—we are told—

to cooperate with the board in advising the producers through their organizations or otherwise in the development of suitable programs of planting or breeding so that burdensome crop surpluses may be avoided or minimized, in order to secure the maximum benefits under this act.

Again we note that surpluses are to be "avoided and minimized." Why, then, may I ask, do they create a revolving fund of $400,000,000 to buy and juggle with surpluses?

As we have seen, one of the basic principles of the bill is to prevent surpluses from unduly depressing the prices obtained for such agricultural commodities. In other words they want to defy the law of supply and demand. It is fundamental that if there are more goods on the market than there is a demand for, the price is going to come down. What do they propose to do? Build up a machinery to invert the laws of nature, the laws of political economy. In other words, have the Government help in the organization of monopolies to fix prices and restrict trade in defiance of the whole antitrust history of this country. If this is to be a surplus control act, why not strike out all the rest of the bill? If the supporters of this bill are honest in their belief that crop surpluses are to be avoided or minimized, why not confine the legislation to that one object?

That, however, would never do. They really do not want to avoid or minimize surpluses. They know that is going to be a hard task. What they want is to turn the surpluses into a profit and to get Uncle Sam to take the responsibility of marketing the surpluses for them.

THE REAL ENEMY OF THE FARMER IS THE TARIFF

The farmer in the United States for many years has practically fed the world. In 1901 the exports of farm products of the United States were 65 per cent of our total exports. In 1913, under the discriminatory provisions of the Payne-Aldrich Act, our exports of agricultural products had dropped to only 43 per cent of our total exports. In 1913 we put into effect the Underwood-Simmons Tariff Act and immediately our foreign export trade began to increase, so that in 1919 our exports of agricultural products had increased to 50 per cent of the total exports. Before the passage of the Fordney Tariff Act the excess of our exports over imports ran over $2,000,000,000 a year. In 1926 this excess of exports over imports; in other words, the balance of trade, had dropped to $287,444,000.

PENALTY FOR OUR POLICY OF ISOLATION

This is the penalty for our isolation as a Nation. If we erect a barrier around our boundaries, so as to practically constitute an embargo to the entrance of the products of other nations, we must expect to suffer from it.

Mr. CLARKE. Will the gentleman yield?

Mr. GRIFFIN. I yield to the gentleman.

Mr. CLARKE. Does not the whole question, with its ramifications, go back to Alexander Hamilton as to the policy of the Government in protecting its own citizens in what it produces as against foreign markets?

Mr. GRIFFIN. That is what I am saying——

Mr. CLARKE. Then come, brother, let us go on together. [Laughter.]

Mr. GRIFFIN. But it is a mistaken policy, one that has brought about the economic troubles of the farmer. In other words, we have so inflated the prices of everything in this country to-day that it is impossible for the farmer to sell his wheat or his grain; it is impossible for the shipbuilder to build ships; it is impossible almost to enter any field in competition with our rivals abroad.

TRADING BY FORCED DRAFT

Of course, it is true that we do trade; but we trade, as it were, under forced draft. We have established a Bureau of Foreign and Domestic Commerce. In 1920 the appropriation for that bureau was only $1,085,460, and in the current bill for this year it is over $4,546,857.

THE FARMER'S SURPLUS

What are the attachés doing? They are trying to help the manufacturers sell their goods abroad. Are they doing any-

thing for the farmer? They may be, but they never succeed, because they have run up against an economic impasse. The farmer buys in a protected market, and he has to sell, except in the home market, in competition with the world. Thus arises the surplus problem, which this bill attempts to solve.

What does the manufacturer do? If he has a surplus, that surplus is "velvet." He sends it abroad, and, although he gets a lower price than he exacts from the American people, nevertheless, he has a safe margin of profit. It is well known that American typewriters, sewing machines, hardware—all have two prices—one price for the American consumer, who is fool enough to put the instrumentality of the tariff in the hands of the manufacturer, and the other, the export price, at which he sells in the foreign countries. He can manufacture the surplus without additional expense, because it is produced with the same overhead costs, and thus the surplus that goes abroad to be sold is practically all profit.

THE FARMER OUGHT TO FIGHT THE TARIFF BARONS AND NOT THE CONSUMERS

The farmer can control the home market by resorting to the same expedient as the manufacturers—namely, by tariffs. If he is persuaded that the tariff is the best thing for his trouble he ought to go the whole way and fight for more and higher tariffs.

But the trouble is that he is not persuaded of the economic soundness of the tariff. He knows the full extent of its inequalities—for he is a consumer as well as a producer—and he knows that the tariff makes the consumers its victims. The farmer, therefore, being one of the greatest sufferers from the high protective system, is not anxious to avail himself of its economic handicap and thus put an additional burden on his back; but on the other hand he has been voting with the Republican Party for years and he knows its only excuse for existence is to maintain a high tariff wall for the benefit of the manufacturers—its chief campaign contributors—so he is in a dilemma and wants to find a way out. He does not want to repudiate his party, although he knows its tariff policies have brought him to the verge of ruin; so under the goading of half-baked economists he has been induced to accept this ingenious piece of folly of farm boards and equalization fees as his salvation.

SECTION 9 PUTS THE GOVERNMENT IN BUSINESS

I am surprised to see many gentlemen support this bill who have bitterly denounced putting the Government in business, and yet here they are standing behind a socialistic proposition which mandatorily compels the Government of the United States to assume the burden of taking the surplus off the producers' hands and selling it abroad.

The most amazing part of this bill is section 9, the so-called marketing provision. This is nothing more nor less than putting the Government in business, enabling an irresponsible and perhaps biased or interested group of men to corner the food products of the country, withhold them from the market, and thus artificially raise the prices of the fundamental foods of the consumers—wheat, corn, rice, beef, and pork—and, unless the bill is amended eliminating fruits and vegetables they, too, will be put under their domination and control. Such a conception of the functions of government is diabolical and subversive of all of the traditions of a free people. This unlimited power, vested in this board and its subsidiary commodity councils, carries with it the germ of revolution and if ever exercised will surely lead to food riots and general disorder.

The burden of the attacks directed against this bill seems to have been concentrated against section 10, providing for the so-called equalization fee, and section 11, providing for the so-called stabilization funds. They are certainly bad enough but are not comparable in any sense to the iniquity of section 9, which puts in the hands of a group of men the power to buy up food commodities in the name of the Government, withhold them from sale until a scarcity has been artificially created, and then exact exorbitant prices from the unfortunate consumers. Such a policy is little short of sovietism. A revolving fund is created, taken out of the United States Treasury, and out of the taxpayers' pockets, of course, to enable the Government to corner the foodstuffs of the people.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. KINCHELOE. Mr. Chairman, I yield 10 minutes to the gentleman from Mississippi [Mr. QUIN]. [Applause.]

The CHAIRMAN. The gentleman from Mississippi is recognized.

Mr. QUIN. Mr. Chairman, I would like to know if my good friend from Iowa [Mr. HAUGEN], the chairman of the Committee on Agriculture, can yield me some time?

Mr. HAUGEN. I yield to the gentleman five minutes.

The CHAIRMAN. The gentleman from Mississippi is recognized for 15 minutes.

Mr. QUIN. Mr. Chairman and gentlemen, I thank you for this little opportunity to speak a word in behalf of the farmers of the United States. It seems in my conception that somebody should stand up and say a word for him to-night. This afternoon I sat in amazement and heard a distinguished gentleman who I thought was a friend of the farmer speaking before this House and this audience and telling you that this bill would oppress the farmer, and especially the cotton farmer, the chief type of farmer that we have in the section of country from which I come.

I heard a gentleman from New York City to-night tell you what a socialistic bill this is. Is it possible that these gentlemen, through these years of agricultural depression, through these long, weary months that the people of the United States have been anxiously waiting for Congress to act in behalf of the agriculturists of this Republic—is it possible that the vision of these distinguished gentlemen is so short and so beclouded that they forget the real issue before this Congress?

The gentleman from Indiana [Mr. PURNELL], a member of this committee, expressed my sentiments exactly when he said this is the most important measure before the American Congress. [Applause.] Yet, while men should be standing with their loins girded and their armor on to fight the battles of the farmer, some Members get on this floor and endeavor to defeat this legislation. All this trickery and legerdemain that has been brought forward is fooling no one except themselves.

Do you know that the special-privilege interests of this country are able to obstruct legislation through committee work? Yet, alone and unaided, the people who are earning their living through the sweat of their faces, the men in the workshops, in the factories, on the railroads, in the stores, and in the fields of this country, the people who toil by day and by night in order to keep the wheels of commerce going and to keep the flag floating over this Capitol seem to receive scant consideration at this hour. [Applause.]

There never has been a time since I took the oath of office before the Speaker's stand yonder to support the Constitution of this Republic and obey its laws as a Member of this House when I have not come forward with my voice and my vote for the men and the women who toil in factories, in the field, and everywhere else. [Applause.] At this hour I would be ashamed of myself if I did not raise my voice in behalf of this bill, to endeavor to give the farmers of this Republic a square deal. They have never had it since the Civil War. Since the year 1865 the farmers of the United States have been handicapped. They are handicapped now.

No people work harder than do the farming class of this country. It matters not whence they come, whether from the wheat fields of the Northwest or the Corn Belt of the Middle West or the cotton fields of Dixie; the farmers, their wives, and children, according to my idea, work harder than any other people in this country and they receive less for their toil. Why, it is nothing unusual for a man and his wife and all his children from 5 years up to go to the fields before sunup and work all day long except one hour at noon, when they go home to eat their dinner and then return to work in the field as long as they can see; and all that they have is some common clothes to wear and the food they raise on their own farm, a little money to pay the preacher, and maybe a long stick of candy and a box of apples for Christmas, and that man's wife is lucky if she has a $10 dress and a $3 hat on her head. Those children go barefoot except on Sunday and in cold weather. And yet it is stated here to-night that there will be no farm relief.

Yes; we should pass this bill. We take the $400,000,000 loan and the equalization fee. Who is afraid of the equalization fee? I will tell you from the cotton-growers' standpoint. It is the spinner, running the factory, spinning the yarn to be made into cloth. He is the man who is afraid of it. It is not the man back in the field raising this cotton that is afraid of the equalization fee. Why is it that the same interests that oppose the equalization fee are against the whole bill?

Some of these gentlemen come before you and try to camouflage the situation and say the bill is all right—if you cut out the equalization fee. The equalization fee stands as the emergency asset. Every farmer knows that his cotton or his wheat or any other farm commodity will, with this emergency asset standing up there, be certain to bring its proper price. That would stabilize it. That will put the real vitals into this bill. Yet some gentlemen seem to be afraid that the farmer will object to it. They need not be uneasy about the farmer objecting to it. If we happen here to make a mistake in endeavoring to help him, he will know that we are honest and that the act that we pass can be repealed if it works against him.

Every farmer in the United States knows that something ought to be done. The representatives of the farm organizations that were before this Agricultural Committee, who have been hounded down and classed as lobbyists because they come here and endeavor to get legislation for that poor class of people that work 15 hours a day, are denounced as lobbyists, as doing something wrong, because they come before the Commitee of the American Congress and ask for simple justice.

Gentlemen of the House, it is time that the American people should consider seriously the question of their rights. [Applause.] The poor farmer is not organized. That is what is the matter.

One distinguished gentleman from South Carolina said this afternoon the cooperatives can not do anything. Why is it they are afraid of cooperatives? If 98 per cent of the farmers in the United States belonged to cooperative associations they could control the markets, just like union labor controls certain specific industrial lines of this country to-day. Why, do you not know that the railway employees would be working for half pay if they did not have the splendid and strong organization they have? It is the unified efforts of all the railway employees of the United States that has enabled that class of labor to receive just compensation for the arduous toil they are engaged in. [Applause.] I wish to heaven the farmers of the United States were situated so they could organize in one great, strong union in order to protect themselves against the enemies within as well as against the enemies without.

What are these men who work to produce the raiment which clothes the world, who work to produce the food with which to feed humanity and beasts alike, asking at your hands? Nothing but justice.

The gentleman from New York calls it socialistic. He thinks it is socialistic to put up an equalization fee which the farmers pay out of their own pockets in order that the products of their labor shall bring a just and fair price. Who is it that thinks it is unjust for the powerful Government of the United States to put up $400,000,000 as a revolving fund and loan it to the cooperative marketing associations of the United States, representing these poor farmers, at the rate of 4 per cent, in order that they may stabilize prices of their farm products and receive just pay for their labor?

Who is it on that side of the argument who objects to this when they have voted to plunder, exploit, and rob the people for all these years? Some of these gentlemen who voted to give a great subsidy to the private ocean shipping interests of this country, these gentlemen who voted for the transportation act in order that the railway business of this country would be protected and have an actual guaranty of 5½ or 6 per cent upon their capital stock, water and all; these gentlemen who cast those votes rise up in their might against the farmers of the United States receiving a simple law which will give them the right through their organizations to have $400,000,000 at their command in order that their crops may be marketed in an orderly way, fed into the markets as they really need them, permit prices to be stabilized, and the farmers receive somewhere in the neighborhood of what their labor is worth? Who is it that would object to the equalization fee being put into this bill when we know it will give the producers of farm products a fair price for their labor?

Some seem to think we would dump it over in Europe or in China at a cheaper price. They need not fear about what somebody else is going to get. Let us take care of the United States. [Applause.] I want to take care of these people in the United States who are supporting this Government.

The basic industry is agriculture. The basic industry on which the structure of all other industries rests is agriculture. It is the farmer who causes the railroads to be able to thread the United States and bear the products of the farms to the markets of the world. It is the farmer who enables the ships to cross the sea carrying cargoes from this country and bringing back to the United States the goods and wares we need.

It is the farmer who does all of that, and when you come to the last analysis he is the great burden bearer of all of this country, not only of the United States but of the entire world. Yet men rise up and say we have got the farmer poor and let us keep him poor. Is it possible that they object to this legislation because of the fear that the farmer may become independent? We all know now the hardships and struggles he goes through. Any man who is acquainted with farm life must realize that the farmer of this country is a real patriot, that he is the man who stands ready to bare his breast in time of danger to his country, that he is the man who stands ready to maintain the hearthstone, that he is the man who stands ready to support the Government in the wisdom of God for the benefit of all the people, that he is the man who protects the temple of justice, and that he is the man who causes our churches to maintain their dignity and supremacy. The farm people of this country are the salt of the earth, and, as Members of Congress representing all the people, it is our sacred duty under our oaths to see that they get justice, and justice in a measure is in the bill that is before us now. I hope it will pass this Congress by a three-fourths' majority. [Applause.]

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. KINCHELOE. Mr. Chairman, I yield 10 minutes to the gentleman from Nebraska [Mr. NORTON].

Mr. NORTON of Nebraska. Mr. Chairman, ladies and gentlemen, much has been said, and more can be said, upon the subject of farm relief. That we have a farm problem in this country is now generally conceded; it is seldom denied. In fact, it seems to be the common practice now to express sympathy for the farmer. But he is not asking for sympathy. He is not a subject of charity. He is not asking for gifts or for special privileges. He is only asking for fair play and an equal opportunity with others. He knows what he wants, and he will fight for it to the end. If he ultimately fails in that effort, he alone will not be the loser. What are some of the facts with reference to the present agricultural situation?

In less than eight years farm values including land, improvements, livestock, and equipment have decreased more than $20,000,000,000, estimated by some to be thirty billion, while industrial, financial, and transportation values have increased more than $50,0000,000,000 during the same period of time. Since the war 3,000,000 acres of land have been abandoned, and annually more than 2,000,000 farm people have left the farms and have drifted to the cities. Why have these people left the farms? In view of the situation how could they have done otherwise? Hundreds of thousands have lost their homes through foreclosures, there being an average of 170,000 such foreclosures annually. Farm mortgages have mounted from three and one-half billion dollars in 1910 to twelve and one-quarter billion dollars in 1928.

I grant that some sections of the country have enjoyed prosperity in recent years, especially industrial and financial centers, but unfortunately that prosperity has not been shared by the farmers. As further evidence of that, permit me to call your attention to the fact that of the more than 4,000 bank failures which have occurred in this country since the war, more than 95 per cent have been in rural communities.

Although bank deposits have increased from $21,359,842,316 in 1914 to $57,820,730,000 in 1928, and the American capitalists have increased their foreign investments from $2,000,000,000 in 1914 to $12,500,000,000 in 1928, the great majority of American farmers have been struggling to secure an income each year that would be sufficient to pay operating expenses, to pay their interest on an increasing indebtedness, to pay their rapidly increasing taxes, and have something left with which to clothe and feed themselves and the other members of their families.

There are those who maintain that the economic situation is becoming more favorable to agriculture, and that the farmers will soon be enjoying their fair share of the economic income of the Nation. I wish that that were true, but unfortunately the facts do not so indicate. If that is true, then why is it that, according to the reports of the Department of Agriculture, the farmers' income in 1927 was 20 per cent less than in 1926? If that is true, then why is it that there were more bank failures in 1927 than during any year previous to that in the history of this country? And remember, as I have already stated, that 95 per cent of those failures were in rural communities. Furthermore, how can the farmers be prosperous in view of the comparatively small income that they are now receiving? According to the 1926 Agriculture Yearbook, issued by the Department of Agriculture, the total value of farm products has dropped from $14,775,000,000 in 1919 to $8,415,000,000 in 1926, a reduction of 43 per cent, and since the income of the farmers in 1927 was 20 per cent less than in 1926, the total income for last year was less than one-half of the income for 1919. Again, according to the same report, in 1925 there were 6,371,640 farms that were being operated. These farms had an average valuation of $9,000, and an average income for that year of $1,200. After deducting interest on the investment, less than $700 remained with which to pay taxes, to pay the cost of upkeep and equipment and to meet the living expenses of the family. Who would say that such an insufficient income can be construed as being indicative of great prosperity among the farmers? I fear that had it not been for the cows and the chickens, the butter and eggs, the story to be told would be an even more distressing one.

Now, then, who is to blame for this situation? There are those who are unkind enough to say that the farmers them-

selves are to blame. Those who would thus indict the farmers insist that they were guilty of great extravagance and reckless management of their own affairs during the war, and likewise during the years immediately following the war. They would have us believe that the farmers have brought this condition on through what they have done or have failed to do in various ways. For instance, they point to the investment of money in high-priced land. In answer to that it must be remembered that only a comparatively small per cent of the farmers, who have suffered during the agricultural depression, did invest money in land during the recent period of inflation. Then, they charge that the farmers have invested too much money in automobiles; but who would grant that means of transportation to others and deny it to the farmers? Especially, in view of the fact that the farmers have been content to use the less expensive makes of automobiles. Besides, is it not true that with them the automobile is more of a necessity and less of a luxury than with many others engaged in other occupations? Not content with that, some of these critics maintain that the farmers have failed to adopt business methods that would result in efficient production, and that in face of the fact that the American farmers are known to be more efficient and to be producing more per capita than the farmers of other countries. It has been stated that the farmers have failed to properly organize, and I grant that to a certain extent that is true. However, I fear that some of those who offer that criticism may have had little or no experience in the effort to secure effective and desirable organizations among farmers, and for that reason are not familiar with the difficulties to be encountered. In the first place, the farmer, by training, experience, environment, and the peculiar type of his particular vocation, is an individualist. He is not inclined to surrender to collective management any part of that which he has previously directed in person. Besides, he has experienced so many difficulties, and often failures, in his effort to secure proper organization that he has become discouraged to a certain extent. Even so, the farmers have strived, although with only limited success, to effect through organization and the use of cooperative methods a solution of their problems. But the present situation, as I view it, is not primarily the result of what the farmers have done or may have failed to do, but is very largely due to forces beyond their control.

We have been passing through a period of readjustment, during which industrialization has been taking place. Industries that are representative of great wealth have become organized along lines of mass effort and control. On every hand efforts have been put forth and are still being put forth to secure the benefits and advantages that can be enjoyed through combination and cooperative effort. That is true of the manufacturing industries, of the large banking institutions, of certain distributing and merchandising establishments, of the railroads, of organized labor, and, to a greater or less degree, of other activities as well. With this trend the farmers have been unable to keep apace, but their failure is not due so much to the lack of effort on their part as to the fact that they have been denied opportunities and privileges which others have enjoyed. In other words, by law we have extended aid to other industries, but have denied similar aid to the farmers. If the farmers were given a fair field in which to operate and were given an equal chance with all others, they would in time effect a solution of their problem; but denied that measure of justice, we can not hope or expect that they will succeed to the degree that they deserve.

Wherein, then, lies the real trouble—the main cause of the present agricultural situation? During the war the farmers responded to the demands of the Nation and as a patriotic duty did their part by increasing the production of foodstuffs sufficient to satisfy the needs of more than 4,000,000 American soldier boys, to aid in supplying food to the Allies, and to furnish the required food for home consumption. They plowed up their pastures and meadows in order to increase the production of grain, and did everything in every other way possible to help increase the desired production of other food products as well. But after the war ended, then what happened? The farmers found their industry in a state of overproduction, not overproduction in the sense that there was no desire or need for their products, but overproduction in the true sense that economic demand did not exist. Consequently, when the deflation was brought on in 1920 and the farmers were forced to unload this great surplus in order to meet the demands for liquidation the crash came and the crisis began. But why did the farmers suffer more as the result of deflation than others? Because they were in no position to protect themselves. Then, as now, they had no voice in fixing the price of their commodities. Then, as now, they were compelled to pay the price asked of them for the things they bought and accept the price offered them for the things they sold. Had the farmers been properly organized at that time, or had the Government done what it ought to have done, and what it did do to support the railroads and certain other industries of the Nation, it could have saved the situation. [Applause.]

When I say that the farmers have been discriminated against, have been denied equality of opportunity and a fair field in which to operate, I realize that I am entering upon a much-discussed subject, and yet one that involves a situation which is properly subject to attack. It is a well-known fact, conceded on every hand, that the protective tariff has enabled the manufacturers of this country to raise the price of their product to the American consumers and to realize great profits as a result thereof. Legislation did that. It is equally well known that the "guarantee provision" of the transportation act, enacted after the war, resulted in the direct payment of more than $500,000,000 by the Government to the railroads and a further guarantee in pursuance of which the Interstate Commerce Commission has maintained rates that have been remunerative to the railroads. Legislation did that. Much as the Federal reserve system was fought by some of the leading bankers and certain other big financial interests of this country at the time of its enactment, it has proved a boon to the banking industry, especially to the larger banks and other large financial institutions of the Nation. Legislation did that. It is everywhere recognized that the Adamson law, in providing shorter hours and more favorably working conditions, and the immigration bill, in limiting the admission of immigrant labor that would compete with American labor, has greatly benefited organized labor. As a result American labor is enjoying a higher standard of living, to which it is justly entitled. Legislation did that. Legislation has very materially aided each of these and many others that I might mention, and yet we are told that the Congress can not legislate prosperity for any class, group, or interest. For that matter, the farmers are not asking for special privilege or for subsidy; they are simply demanding that the special privileges and subsidies that are granted other industries shall not be permitted to operate unfairly against their own progress and prosperity.

In other words, by law we have placed these other interests upon a higher economic level where they are permitted to operate in a protected and privileged field. If the farmers could limit their production to the actual demands of home consumption, or if through cooperative effort they could control, withhold from sale or market in an orderly manner their surplus, they, too, could enjoy similar protection and the same advantages now enjoyed by others. In the absence of such conditions, however, the farmers have been forced to sell their products, in most instances, in an open market in competition with the world, where the price received for the surplus has decided the price to be received for the entire commodity. That is, with all other American consumers the farmers have bought in a closed and protected market, and have been forced to sell in an open and unprotected market. What has been the result of that policy? It has resulted in bankruptcy and financial ruin for many and has seriously reduced the purchasing power of all American farmers.

What can Congress do to effectively aid in a proper solution of this problem? As I view it, two lines of procedure are open. Congress by accepting one or the other can aid in an effort to equalize the situation. That end can be achieved by bringing the other industries down upon a lower economic level as the result of withdrawing some of the advantages which have been granted them in the past, or by passing legislation which will aid in raising the agricultural industry to that higher level where the other industries now operate, so that the farmers may enjoy equal protection with the others.

The first plan proposed will involve a downward revision of the tariff on manufactured products, a reduction of freight rates with special reference to farm products, a more equal distribution of the tax burden and other similar economic changes which will aid in reducing the cost of living, the cost of production, and the cost of the delivery of farm products. The other course that is open is to be found in the enactment of legislation such as is proposed in the pending measure, the McNary-Haugen bill. Since there seems to be no apparent disposition on the part of the Congress to employ the former method, it is to be hoped that, in an earnest endeavor to work out a solution of the farm problem, the pending measure will be passed and approved so that the farmers of the Nation may receive the benefits to be gained thereby, and the relief too long delayed already. [Applause.]

This measure, if enacted into law, will enable the American farmers to secure the benefit of the tariff on farm products, a benefit generally not realized at the present time. Then the farmers will be permitted to sell in a closed market all except

that smaller per cent of their commodity which must then, as now, be sold in foreign markets. However, since only about 10 per cent of the agricultural products, produced in this country, are sold in foreign markets, the benefits to be realized from the operation of this law, if enacted, will be very great. The farmers are not asking for a subsidy, and this bill does not provide for one. Through the equalization fee the farmers will be able to finance their own operations and to achieve what they have so long desired and have so long strived to secure, a marketing machine that will permit of the orderly merchandising of their products. All that the farmers are asking that the Government do for them, even in this instance, is to loan them the necessary money, at a reasonable rate of interest, so as to enable them to finance their operations and to remove present discriminations that impede their progress. Ultimately, then, out of this favorable action, if granted by the Congress, can be perfected farmer owned and farmer controlled marketing machines that will be effective in the orderly sale of farm products.

On the other hand, what solution is offered by those who oppose legislation like that proposed in the pending measure? Some suggest that, since the farmer is primarily a producer, he should devote himself exclusively to the immediate requirements of his particular vocation, that of production, leaving all other matters of concern to him, including that of distribution, to other agencies. For that purpose, better business methods, more efficient production, involving rotation and diversification, are proposed. I fear, however, that those who advance this thought, as the basis of a solution, fail to take into account the effect such a policy, if carried to its logical conclusion, might have upon the welfare of agriculture. While it is to be conceded that all of these are necessary and desirable, it must be remembered that a very great increase in production, resulting from such a course, will aggravate the situation all the more, unless some plan is devised that will properly care for the marketing of the increased surplus that will naturally follow.

Rural credit and cooperative marketing have been widely discussed as means to be employed in a solution of the farm problem. Every true friend of the farmer is in favor of both. However, in view of present conditions, he is mindful of the limited extent to which either or both can be employed in an effort to solve the problem.

As to rural credit, that means alone will never relieve the agricultural situation. The War Finance Corporation was created for that purpose but failed to accomplish the desired result. Likewise, the intermediate credit law has been enacted for that purpose, but apparently is not relieving the situation. Unfortunately, the farmer who is most in need of credit can not secure it, while every farmer who can do so is endeavoring to reduce his obligations rather than to increase them. Therefore, although legitimate credit is not only desirable but necessary for agricultural operations and marketing purposes, that means alone will never relieve the situation.

Cooperative marketing, on the other hand, with the aid of a proper credit system, would result in a proper solution of the problem were it not for some of the difficulties which I have already enumerated, together with the further fact, recognized by every careful student of the problem, that cooperatives can not control the surplus and influence the market in a desired manner as long as a considerable per cent of the producers of any given commodity remain on the outside and fail to join in the cooperative effort. That has been the situation in the past; that is the situation to-day; and this bill, if enacted into law, will aid cooperatives in the future in their effort to remedy that situation.

In discussing the farm problem I have had particularly in mind the farmers of the Middle West, with whom and with whose activities I am most familiar. The situation elsewhere may be somewhat different, but in the main the underlying fundamental conditions are everywhere the same. Although I have discussed this subject as though it very largely involves the welfare of agriculture and that alone, I realize, as others do, that a proper solution of the farm problem will result in relative benefits to the other people of this country as well.

Who will deny that the agricultural depression has not had its deterring effect on the other industries of the Nation? When the farmers' buying power is destroyed the merchant, the banker, the professional man, others in the rural town are affected first, but that injury is later reflected elsewhere throughout the land. We are told that there are about 4,000,000 unemployed in the cities of this country at the present time, and yet that number is probably the direct result of the drift from the farms to the cities in recent years. Whenever you destroy the buying power of the farmers you have materially reduced or destroyed the market for a considerable part of the manufactured products of the country. Labor realizes that fact, and as a result thereof, organized labor has indorsed legislation, such as is proposed in this measure. Other organizations, national in character, have done likewise. The leading farm organizations of this country, with one exception, and that organization is not opposed to the purposes of this measure, but prefers another method, have indorsed this measure. Therefore, in view of the depressed condition of agriculture, and the need of immediate relief, I sincerely hope that the pending measure, which has such general support of the agricultural sections of the country, and much support elsewhere may be passed and approved, and the urgent demands for agricultural relief granted. [Applause.]

Mr. ASWELL. Mr. Chairman, I yield 10 minutes to the gentleman from Oklahoma [Mr. McKEOWN]. [Applause.]

Mr. McKEOWN. Mr. Chairman, on the 7th day of December last, at the first opportunity, I made a short talk to the House of Representatives upon the question of passing a bill that would be effective; that is to say, that the farmers in my country were anxious that Congress would give careful attention to this question and pass a bill that would be approved and become law.

I appeared before the Committee on Agriculture and I want to take this opportunity to say that I never saw a set of men who tried more conscientiously to do their duty. I want to say a word for the gentlemen who come from the Mid West country who are members of this committee. They worked under great pressure and under great difficulty. I compliment them upon the work they have done on the committee, but there is one thing I can not agree with.

I said then, as I say now, I would not vote for a proposition that I felt would endanger this bill in its passage. I know the committee has worked out a plan that is in the alternative, but for one I am impelled to vote to strike out the equalization fee. [Applause.]

I am going to do this for this reason: You have given us a splendid piece of work and if we are to work under this plan we can go ahead and it will take a year or more to try it out. The President of the United States has said he is opposed to the equalization fee, and some may say, "You are kotowing to the President if you yield your opinion." If I believed as those of you believe who sincerely feel that the equalization fee is the only salvation for these people, then I would vote like you will vote, but I can not see the necessity of the equalization fee in this bill at this particular moment because it will take a year or more to try out the alternative plan which you have given us, and the Congress will be in session and if the plan does not work, then we can put into effect the equalization-fee plan.

I differ from the Attorney General, and I told the committee I differed from him, but the President will listen to the Attorney General who is a very fine lawyer and a splendid and honest man. I can say this much for the Attorney General. The President will listen to the Attorney General and will not take my opinion on the question of the constitutionality of this provision.

Mr. GASQUE. Will the gentleman yield?

Mr. McKEOWN. Yes.

Mr. GASQUE. Will the gentleman tell us why they did not put an equalization-fee provision in the tariff law and in the railroad law?

Mr. McKEOWN. Well, I will say to my friend from South Carolina I do not think there is such a bugaboo about the equalization fee. I think these gentlemen have studied this plan very thoroughly in their own minds, and in the absence of the money which you will have to provide for them to operate, you would be bound to have an equalization fee. However, you have already provided for $400,000,000 as a revolving fund for them to operate with and in order for them to see if the plan will work, and it will take at least a year to put that into effect.

Mr. CLARKE. Will the gentleman yield right there?

Mr. McKEOWN. Yes.

Mr. CLARKE. Would you not put in the equalization fee in giving equality to every line of industry in keeping with the tariff proposition and the theory of this Government since the time of Alexander Hamilton?

Mr. McKEOWN. I will say to the gentleman that, of course, my views on the tariff are quite different from his. I do not agree with the gentleman with respect to the tariff, and I think that is what has got us into a lot of trouble; but, of course, the gentleman will not agree with me about that.

However, this is a business proposition, and I do not blame anybody for putting in this alternative plan, because they are trying to safeguard the farmer. But here is what I do say.

No man has carte blanche on all the sense in this country and nobody has proven to me beyond controversy that this bill will be no good without the equalization-fee provision.

Mr. JOHNSON of Texas. Will the gentleman yield?

Mr. McKEOWN. Yes.

Mr. JOHNSON of Texas. What about the substitution of the export-debenture plan of KETCHAM-JONES for the equalization-fee provision?

Mr. McKEOWN. Well, if I were writing the bill, of course, I would have two alternatives instead of one. That is what I would do about it.

Mr. CLARKE. I make the point of order he would "ketcham" coming and going under that.

Mr. McKEOWN. Yes; but here we are dealing with a proposition face to face, and if every man in this House is satisfied the President will veto this bill then, of course, there is only one alternative, and that is to pass the bill over the President's veto. I would not hesitate to vote for the bill with the equalization fee in it, but I do not want to be actuated by any political feeling. It is no satisfaction to me to embarrass the President personally, and therefore I am contending here that the bill ought to pass without the equalization fee, for the reason that you will then have met every objection that has been made to it and you will put into effect in one year the same proposition that you have in the bill here. If it does not work, you can bring it back.

Gentlemen, this matter of doing something for the farmer is a serious proposition. This is a big question and this committee has labored for four years to my knowledge as earnestly and as conscientiously as any set of men have ever worked in this House.

I am going to say that if you do not strike out the equalization-fee provision I will vote for the bill, because I am going to yield to the better judgment of a majority of the men in this House, because the conditions are such that we are bound to have some relief as soon as we can.

Mr. SPROUL of Kansas. Will the gentleman yield?

Mr. McKEOWN. I yield.

Mr. SPROUL of Kansas. Has the farmer of the country manifested a desire to have the equalization fee stricken out?

Mr. McKEOWN. As far as the farmers I represent—the every-day farmer on his plantation without any connection with any organization—I do not think has expressed any opinion at all, and I think he is more interested in relief than in the equalization fee.

Mr. MORGAN. Will the gentleman yield?

Mr. McKEOWN. I do.

Mr. MORGAN. As I understand the gentleman's argument, it is based on the principle that if the bill passes without the equalization fee, we will have farm legislation with a revolving fund?

Mr. McKEOWN. Yes.

Mr. MORGAN. With a board of finance, and in case the equalization fee is incorporated and vetoed it will probably delay for two years farm relief?

Mr. McKEOWN. Yes; under the bill with the equalization fee in it you will not have to use it for a year; you can not use it for a year. If you can not use it for a year, why take the chance at this critical period of putting it in and getting no legislation at all unless you can pass it over the veto?

I can not conclude my remarks without mentioning the faithfulness of my old colleague, Hon. Charles I. Stengle, who has personally, and with his paper, the National Farm News, been standing by the farmers of America throughout this long battle, and I am hoping that the efforts of those who have toiled so long in behalf of the American farmer, making every effort to secure for agriculture a fair deal in the economic situation in America, may be crowned with success by the passage of a real agricultural bill.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

Mr. FORT. Mr. Chairman, may I ask the amount of time that has been consumed?

Mr. ASWELL. Under the rule the gentleman from New Jersey [Mr. FORT] is entitled to one-half the time against the bill. I would like to yield that half of my time now.

The CHAIRMAN. If the time is divided as heretofore under the rule and the general agreement entered into in the House the three hours would be divided as follows: The gentleman from Iowa [Mr. HAUGEN], the gentleman from Louisiana [Mr. ASWELL], the gentleman from New Jersey [Mr. FORT], and the gentleman from Kentucky [Mr. KINCHELOE] would have 37½ minutes each, and the gentleman from Michigan [Mr. KETCHAM] and the gentleman from Texas [Mr. JONES] would have 15 minutes each.

Mr. PURNELL. The rule provides for an equal distribution of time, and there is nothing said in the rule as to a subsequent division of time.

The CHAIRMAN. The understanding and agreement of the House before the House went in to committee was that the division should be in a certain way. As stated by the gentleman from Louisiana [Mr. ASWELL]—

> Mr. Speaker, I will say to the gentleman that general debate runs for 12 hours, 1 hour of which will be assigned to the gentleman from Michigan [Mr. KETCHAM] and 1 hour to the gentleman from Texas [Mr. JONES]. That leaves 10 hours to be equally divided between the chairman and myself, and I am to yield one-half of my time to the gentleman from New Jersey, and the gentleman from Iowa [Mr. HAUGEN] is to yield one-half of his time to the gentleman from Kentucky [Mr. KINCHELOE].

The CHAIRMAN. The Chair will recognize the gentleman from Iowa to yield some of his time?

Mr. HAUGEN. I yield to the gentleman from South Dakota. I think I have already yielded about 25 minutes.

The CHAIRMAN. The gentleman from South Dakota [Mr. WILLIAMSON] is recognized.

Mr. ASWELL. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. ASWELL. I would like to know how much time the gentleman from New Jersey [Mr. FORT] has been yielded during this discussion.

The CHAIRMAN. The Chair has not yielded him any.

Mr. ASWELL. I wish to yield to him half the time that I have. How much time have I?

The CHAIRMAN. The gentleman has 7½ minutes of his own and 15 minutes from the gentleman from Texas [Mr. JONES], making 22½ minutes in all.

Mr. ASWELL. How much does the gentleman from New Jersey [Mr. FORT] have?

The CHAIRMAN. He has 37½ minutes.

Mr. WILLIAMSON. Mr. Chairman, I do not wish to have all this time taken out of my time.

The CHAIRMAN. The gentleman from South Dakota is recognized for 10 minutes.

Mr. WILLIAMSON. Mr. Chairman and gentlemen of the committee, no physician can bring about the cure of a patient without knowing what ails him. His first job is to correctly diagnose the case.

In 1920 agriculture was stricken with an all but mortal illness, an illness aggravated and made infinitely worse by the policy of deflation purposely adopted and ruthlessly carried out by the Federal Reserve Board. The incoming administration attempted to stem the debacle by calling Congress into special session on April 4, 1921. Within a month the new Congress—the first of which I had the honor to be a Member—reenacted the emergency agricultural tariff law which had been enacted by a Republican Congress and vetoed by President Wilson a few months before.

This checked the incoming flood of agricultural products and at once resulted in stiffening the prices of those products of which we did not produce an exportable surplus. It also slowed up the downward trend of other products covered by the bill. To improve the credit situation, which by this time had become desperate in the typically agricultural sections of the country, the Congress promptly restored the War Finance Corporation, capitalized at a billion dollars from the Federal Treasury, and directed that agency to render all possible aid to the agricultural and livestock industries of the Nation. The corporation extended hundreds of millions of credit as directed by Congress, but was unable to materially check the disastrous trend that had been set in motion to force liquidation. In spite of all that could be done, frightful losses continued all through the Corn Belt and among the farmers and stockmen of the Middle West. With the financial ruin of the farmer, came disaster to thousands of banks and merchants throughout the agricultural area.

I think I know something about farming. I did not learn it behind a desk, but behind the plow. My father was a pioneer homesteader in Dakota territory and I followed in his footsteps and became a pioneer homesteader in my district 20 years later. I own and operate several farms and am familiar with the losses agriculture has sustained in my section.

DIFFICULTIES ENCOUNTERED

The fight made for agriculture during the last seven years by Members of Congress from the Middle West has had no parallel in the legislative history of this country. It has been a fight against tremendous odds by a handful of devoted men whose consistent and constructive efforts have won the admiration and respect of their bitterest foes. Greatly outnumbered, they have

by their determination, their unity of purpose and compelling logic forced the Congress and the country to recognize that there is a real farm problem that must be solved in the interest of justice to the agricultural producer. More and more it has dawned upon the people engaged in industry that the prosperity of business can not permanently continue unless agriculture can be put on its feet, but conviction has not reached the point where the representatives of these sections are willing to accept the solution that has been worked out by those who are the most immediately concerned and who have given the most thought and study to remedial legislation.

Then, too, agriculture has been handicapped by too many doctors and too many remedies, which in a measure have prevented that driving, cohesive force necessary to quick action. The solution of the problem tackled was fraught with great difficulties. The interests of the farmers of one section of our vast country clashed with the interests of other sections. A solution that looked promising to one class of producers was declared by other producers to be valueless or ruinous to them. Differences of tariff views and other economic questions entered, to say nothing of politics. Out of the innumerable conferences, investigations, and proposals there finally came a half dozen outstanding bills which have received the thoughtful study and attention of Members of Congress. From these have been evolved the bill now before the House which bears the name of the two distinguished chairmen of the agricultural committees of the House and Senate.

CONTROLLING FACTORS, NUMEROUS AND COMPLEX

The factors that control the farm problem are too numerous and complex to be settled in a single piece of legislation. Neither this bill nor any other which we may work out can permanently bring that stability and measure of continued prosperity to agriculture to which it is entitled. What we need in this country is a definite agricultural policy. To find and establish this should be the final goal of the best brains in agriculture and its representatives here in Congress.

An analysis of the situation would seem to indicate that the following are among the chief symptoms that still keep agriculture rheumatic:

First. High production costs.
Second. Comparatively low price levels for farm products.
Third. High taxes and interest rates.
Fourth. Long haul to market.
Fifth. High freight rates.
Sixth. High prices for farm machinery and other operating utilities.
Seventh. Heavy indebtedness.
Eighth. Deflation.
Ninth. Inadequate credit facilities.
Tenth. Lack of effective marketing organizations for surplus products.

While the above are not all of the unfavorable symptoms, they are sufficient for this discussion and to illustrate the necessity of a well-worked out governmental policy toward agriculture.

The farmer is still producing at close to the war-time costs in spite of improved machinery and increased efficiency. For the year 1927 the average price he received for what he produced stood at 131 as compared with pre-war prices. That figure was far below the index-price figure for nonagricultural commodities, which averaged 152 above the pre-war level. His taxes have increased from $344,000,000 in 1914 to $870,000,000 for 1927, an increase of over 250 per cent. Interest rates are still high throughout the agricultural area and freight rates are in many cases exorbitant.

REDUCTION OF FREIGHT RATES NEEDED

Three years ago Congress passed the Hoch-Smith resolution, directing the Interstate Commerce Commission to make a readjustment of freight rates, with a view to relieving the depressed condition of agriculture. While some relief has been accorded, it has been wholly inadequate. We, who live in the Middle West, have a long way to market. It is one of our greatest handicaps. There should be a further and drastic reduction in freight rates on bulky farm products from this area. Every effort has been made to bring this about, but so far with meager results. It will not do, gentlemen, to balk the farmer at every turn. He has not been getting a square deal. He is not getting it now. If you who represent the industrial sections will not aid us, who represent the farming section, you are due for a rude awakening. The farmer does not want to tear at the throat of your prosperity, but he wants to share in it. He is infinitely more interested in lifting himself to your lever than in bringing you down to his. He wants to pursue that course. We, who represent him here, have fought along this line. We are doing so now, but if you are determined to give him little or nothing of what he asks, he can and will eventually tear down the pillars that sustain your structure, though it bring added hardship on himself.

FARMERS ENORMOUSLY INDEBTED

The farmers of America are enormously indebted. They still owe from twelve to fifteen billions of dollars upon a total land value of not to exceed fifty-eight billion. Hence, they are intensely interested in bringing prices of farm products to a parity with nonagricultural commodities. Bringing farm prices up means more to them than bringing other commodities down. They need a reasonably high price level to pay their debts. They can not work out on a continued low commodity price. You have a chance to aid them by getting back of the Haugen-McNary bill. Every consideration of fairness and justice demands this. It is backed by practically every farm organization in the country. The farmer is just as much entitled to the benefit of the tariff as anybody else. This bill seeks to give it to him. He should be permitted to try out the marketing system created by the measure.

The purchasing power of union workers' wages was 37 per cent greater in 1925 than in 1913. It still stands at about that figure. The income of business, industry, railways, and public utilities is well above the pre-war level, while the purchasing power of the farmer's dollar as measured by the selling value of his commodities is now only about 90 per cent of the pre-war level. The average for 1927 was 86 per cent of the 1910 to 1914 base. Can you wonder that he is dissatisfied and demanding relief? Place him on a parity with industry and labor and you will hear no more kicks.

PROTECTIVE TARIFF AND THE FARMER

We are reminded here that the farmer shares in the protective tariff. Let me remind you that the protective system developed in the United States is much broader than the tariff. The tariff protects the manufacturing industry; the immigration and other laws protect labor; the Esch-Cummins and interstate commerce laws protect the railroads, and the Federal reserve act protects the banking business.

The farmer can not any more compete with cheap labor abroad than can anybody else. It is true that he has the largest protection in the present tariff law that he has ever enjoyed. Without it he would be completely ruined. Thanks to the "farm bloc," which I had the honor to help organize, he has the largest free list of the things that he must buy that he has ever enjoyed. But he is largely cheated out of the benefits that should accrue to him on this account by combinations and monopolies. This is especially true of farm machinery.

Democrats have twitted us for supporting the ruling of the Speaker on the McMaster resolution. Well, what was this resolution? Here it is in the form introduced:

*Resolved*, That the United States Senate favors an immediate lowering of tariff schedules and tariff legislation, embodying lowered schedules, should be considered and enacted during the present session of Congress: Be it further

*Resolved*, That a copy of this resolution be transmitted to the House of Representatives.

The plain import of this language includes farm schedules as well as others. There are no qualifying words. Of course, nearly all the Democrats were for it. Agriculture never has had any protection while they were in power, and the sudden disaster that came to that industry as soon as shipping became available after the war was due in very great measure to lack of protection against cheap agricultural imports.

During the debate in the Senate, however, it was soon discovered that this resolution had a decided back wallop. After several days' discussion it took this form:

*Resolved*, That many of the rates in existing tariff schedules are excessive, and that the Senate favors an immediate revision downward of such excessive rates, establishing a closer parity between agriculture and industry, believing it will result to the general benefit of all.

*Resolved further*, That such tariff revision should be considered and enacted during the present session of Congress; and

*Resolved further*, That a copy of this resolution be transmitted to the House of Representatives.

This had no back kick. It was perfectly safe to vote for it. Everybody could heartily join in nursing it along. It attacked no specific schedules. It gave no information. It was quite innocuous. We agree with the general sentiment expressed, but passing resolutions never changed a tariff law or altered a single schedule. To deal effectively with the tariff we must attack schedules and rates. That is what we of the Middle West have sought to do in the House, but we are a mere handful as compared with the Members representing the industrial sections and so far it has not been possible to secure many of the ad-

justments that we have sought. However, it seems reasonably certain that the next Congress will undertake revision.

When this resolution came over to the House the Democratic leaders saw a fine chance to start a little political fireworks and were not slow to seize the opportunity and so moved to refer it to the Committee on Ways and Means. Of course they knew this was contrary to the standing rules of the House, but what is the law of the House when there appears to be a chance to make some political medicine! The Speaker held that the resolution was transmitted to the House for the information of its Members and that it should be held there in accordance with the disposition of other resolutions of this character time out of mind. Upon appeal from the Chair his ruling was sustained. There was no vote on the resolution, nor was it tabled.

A mere inspection of the resolution must make it perfectly clear that the House could not vote upon it. It simply purported to express a sentiment or opinion of the Senate with respect to tariff revision and was transmitted to the House for its information. It was a Senate resolution, not a joint one. From a parliamentary standpoint it has exactly the same status as a Senate resolution advising the House that the Senate is in session and ready for the transaction of business or any other unilateral resolution of this sort.

It is a favorite pastime of a certain type of political demagogue to charge all of those who believe in the Republican principle of protection with being tools of Wall Street. There is not an informed man in this Chamber who does not know that Wall Street and the international bankers who have loaned billions of dollars to Europe and other foreign countries are in favor of a drastic tariff reduction. They reason, and correctly from their viewpoint, that the more foreign countries can import to this country the more certain they will be to get their money back. These people, if they had their way, would remove the farm schedules entirely. What concern have the denizens of Wall Street shown for the farmers of the country just so they can line their pockets? Of all charges this is in a class by itself for absurdity. So far as I am concerned I shall fight them to the last ditch. I do not propose to stand for a reduction of any of the farm schedules, if I can prevent it. A tariff sufficient to make good the difference in the cost of production here and abroad is the only safe criterion by which we can proceed.

FARMERS' FREE LIST

The idea that a drastic reduction of the tariff can materially help the farmer is largely illusory. This must be perfectly apparent when it is remembered that the great bulk of his purchases—those that require large expenditures—are on the free list. Among these are:

Plows, tooth harrows, disk harrows, headers, harvesters, reapers, drills, planters, mowers, horse rakes, cultivators, threshing machines, cotton gins, wagons, carts, cream separators under $50, breeding animals, pedigreed; cinchona bark and a long list of chemicals, binding twine, borax, cement, common brick, chrome ore, coal, cobalt ore, cocoa or cocoa beans, coffee, blue vitriol, tar, tea, barbed wire, wool used for carpets, copperas, gloves from leather, guano, explosives, with the exception of a few specially provided for; gunpowder, hones, whetstones, iodine, crude rubber, leather and products of leather usually used on farms, boots and shoes of leather, band and sewing-machine needles, oil cake and oil-cake meal, petroleum, kerosene, benzine, naphtha, gasoline, paraffin, pads for horses, crude phosphates, quinine, rennet, sheep dip, shingles, tapioca, turpentine, and lumber generally.

FARMERS' INTEREST IN TARIFF REVISION

Everybody knows that the prices of many of these articles are too high, but the tariff is not a factor. The tariff on woolen goods is quite as important to the woolgrowers as to the manufacturer. Of what possible value could a tariff be upon raw wool imports if woolen goods were on the free list? Such a policy would not only ruin the manufacturer and throw tens of thousands of employees out upon the streets to seek the soup kitchens, and thereby destroy the farmer's best market for his products, but would ruin the sheepmen, who would no longer have a market for their wool at any price. The same is true of the tariff upon cotton textiles. The cotton grower is quite as much interested in it as the manufacturer. Paint, which is over three-fourths pure linseed oil, falls in the same class. If paint came in free, what would become of the flax grower? And of what value would the present tariff of 40 cents a bushel be? He now receives a large benefit from this tariff, as we are on a import basis on flax. The whole question resolves itself down to the proposition of whether we believe in an American standard of living or whether we are going to force labor to accept the pitiful wage scale of Europe and submit to peasantry for our farmers. For my part I prefer our American standards. They are worth fighting for, but we want an American standard for the farmer also. He is more entitled to it than industry and just as much entitled to it as labor. Labor has indorsed our program. Industry should do the same.

I have from time to time introduced tariff bills to help the development of the feldspar industry in my State, to afford better protection to our alfalfa-seed growers, and the like. There are now pending before the Ways and Means Committee of the House several bills seeking to aid agriculture by readjustments and increased schedules on agricultural products. The milling in bond provision for wheat should be abolished, and the free importation of mixed oils, to the great detriment of our flaxseed growers, should be stopped. These bills have my earnest backing and are being supported by all midwestern Congressmen. Not only that, but just as soon as tariff revision can be undertaken we are going to insist that all schedules that are too high are reduced, that the tariff is removed entirely where not needed, and that there be such a complete readjustment all along the line as will give to the agricultural industry a square deal. To accomplish this end we of the Mid West propose to form any kind of a combination that will secure justice to the farmer. We are better organized and occupy more powerful committee assignments than our section has ever had. Most of us have been here long enough to know how to push our fight effectively, and will continue it if returned. Unity of effort here and backing from home will finally put across this program.

No one to-day who knows anything about the conditions under which agricultural products, livestock, and wool are produced in foreign lands believes that agriculture in this country can survive free imports. South America, New Zealand, Australia, and Russia can and will put the American farmers out of business if the farm schedules are removed, or even lowered to any considerable extent. The agricultural schedules in the present tariff law are the most favorable the farmers have ever enjoyed. The bill we are now considering is bottomed upon them. Remove tariff protection and it would have little value. The measure seeks to give the American producer the full benefit of the schedules by removing the surplus so as to permit the price of those farm products consumed at home to rise behind the tariff wall to a point approximating the foreign price plus the tariff on the product with respect to which an operating period is declared.

COOPERATIVES AND FARMERS' SURPLUS

The rise of cooperatives throughout the United States in recent years has been quite remarkable. On January 1, 1928, there were listed with the Division of Cooperative Marketing in the United States Department of Agriculture 11,340 farmers' cooperative associations. It is estimated by the department that the aggregate volume of business done by these cooperative associations, both marketing and purchasing, during the five years from 1923 to 1927, inclusive, is about $11,000,000,000. A rather complete survey made of farmers' cooperative business in 1925 showed a total volume of $2,400,000,000 for that year.

Gratifying as this showing is, however, it has been found impossible to extend any of them to a point where the surplus situation can be taken care of. This the bill before us seeks to help them do. Now, the burdens of cooperation are borne by the members alone, and outsiders largely reap the benefits without making any contribution. Under this bill all of the beneficiaries would share proportionately in carrying the overhead on any surplus product in which the farm board was operating. Corporations are permitted to sell their surplus abroad at a lower price than at home. That is what this bill proposes to do. Why should not the farmers be given the same privilege and be allowed to spread any loss on exports over the enhanced price received for the much greater bulk of the crop sold at home?

OPERATION OF EQUALIZATION FEE

Senator GOODING, of Idaho, in a recent speech in the Senate explained the manner in which the equalization fee would operate in actual practice, as follows:

Let me tell what happens to the farmer. The average production of wheat in America is about 800,000,000 bushels per year. We export 200,000,000 bushels a year. That is about the average export, and I am going to take the average. I will take round figures, because they will be easier for me to explain in relation to the benefit of the equalization fee as it will be put in force by the board.

In my State for the last two years the price of wheat to the farmer has averaged $1 a bushel, and I am going to take $1 a bushel, because that is a round number. What the bill proposes to do is to increase the price of wheat by the amount of the tariff, 42 cents per bushel. Wheat in my State is worth a dollar per bushel for export into foreign markets. That means, for the 200,000,000 bushels of wheat that will be exported and taken off the market to export, that the board will lose

$84,000,000; but in order to make up that loss they will levy an equalization fee of 12 cents a bushel, which will raise $96,000,000, or $12,000,000 more than the loss in the sale of the 200,000,000 bushels of wheat on the foreign market. This means that the farmer will have left 30 cents a bushel, because he is able to take off from this market the surplus and sell it abroad and bring the price of wheat up to the world price plus the tariff. He can not get the 42 cents but he can get the 30 cents, which means in round numbers that the farmer will make off of his crop of 800,000,000 bushels $240,000,000. In other words, instead of selling his wheat for $1 per bushel in Idaho, if this bill passes with its equalization fee, he will receive $1.30 per bushel and even that does not bring him within 10 cents of the actual cost of production as found by his Government that he is entitled to. Surely everybody ought to be willing to give any producer or any manufacturer the cost of production. There is something wrong in any man's system when he is not willing to give at least that much.

The farmers over the country are not asking the taxpayers to assume the hazard of loss on exports. They are willing to carry that risk and take the chance. Why should they not be allowed to do so?

PRODUCERS MUST CONTROL SALES ORGANIZATION

Under proper management the present bill will be a great stimulus to the cooperatives. These should be given every possible encouragement with a view to eventually turning the whole organization over to the farmers themselves. I am still of the opinion that the producers themselves must in the end be put in charge of their sales organization. Our agricultural colleges are devoting most of their time to better production methods. Is it not time they proceed to train young men in cooperative methods and salesmanship? This is quite as essential. We are yearly recruiting from the farm the best brains of the country for business and the professions. Why not train and recruit some of them to handle the farmers' own business?

We need these brains for agriculture and they should be so thoroughly trained that they can go out and compete successfully with the best that is to be found in business and industry.

DIRECT BUYING—CAPPER-HOPE BILL

To illustrate how difficult it is to legislate effectively let me call your attention to the packers and stockyards act that we passed in 1921. This act was designed to put an end to many abuses that had developed at the terminal markets. It was attacked in the courts but finally sustained and enforcement attempted. Now the packers are successfully avoiding some of its most valuable features by dividing up the territory and sending out their men to buy direct from the farmers. Their excuse is to eliminate the middleman and save freight for the producer. The actual effect seems to be to eliminate competition by keeping the hogs away from the terminals. While pretending to pay top-notch prices these have already been depressed by lack of competitive buying at the great centers. Not only are hogs kept from the concentration points, but the big packers having gotten a sufficient number of hogs by direct buying to keep their killers busy arrange to buy from the commission firms on different days so as to avoid bidding against each other. Wallace P. Neff, editor of the Kansas City Daily Drovers Telegram, at the hearing on the Capper-Hope bill before the Senate Committee on Agriculture, testified that as a result of this new development the price of hogs during the year 1927 was held approximately $3 a hundred below what the market would have been under competitive conditions. While this statement is not susceptible of exact proof, he cited figures which tended strongly to prove his assertion. The Capper-Hope bill seeks to head off this development. If the packers will not play the game on the square it is up to us to make them do so. I repeat, that the farmers' most effective weapon is organized marketing. It is his surest road to a permanent solution. The Haugen bill seeks to aid him in achieving this great result.

WATER TRANSPORTATION

A moment ago I called your attention to some of the difficulties encountered by the agricultural industry in the Middle West. We are in the country of the long haul and the high freight rate. A good part of the value of our products at the terminals is eaten up by the charges for taking it there. As already stated, it has proved impossible to get the freight-rate structure lowered so as to give us that relief which is essential to our prosperity and well-being. Failing in a direct attack we are proceeding by an outflanking movement. I have reference to the Great Lakes-St. Lawrence deep waterway proposal and the inland waterways' development.

Some years ago, in company with Hon. Frank O. Lowden, now candidate for President, Hon. W. H. McMASTER, then Governor of South Dakota, and a number of Senators, Congressmen, and others, I made a trip over the proposed St. Lawrence deep-waterway canal all the way from Niagara Falls to Quebec. I have made a careful study of the engineering features and am satisfied that the proposal is entirely feasible and that it can be completed at a reasonable cost. Every commission of experts that has examined the project has found in its favor as against every other plan for a canal connecting the Great Lakes with the Atlantic Ocean.

With direct water connection by ocean-going vessels between Duluth, Chicago, and other inland ports and Europe, we can greatly decrease freight rates on farm products exported abroad. It has been estimated that the saving on wheat alone would be close to 10 cents a bushel. As the domestic price is governed by the London price, less freight and handling charges, this would mean an increase in price of 10 cents a bushel on our average annual production of 800,000,000 bushels, which would place $80,000,000 annually in the farmer's pocket that he does not now get. That certainly is worth while. He would also be a large gainer on a good many other products.

DEVELOPMENT OF INDUSTRY IN MIDDLE WEST

Making navigable our inland waterways to the Gulf of Mexico and developing our barge lines will also greatly reduce freight rates by direct competition with the railways. This development is now well under way and is being pushed with all possible vigor. Its completion will not only reduce the freight on outgoing products but will greatly reduce the freight rates on cotton, coal, lumber, and the like that must find their way into the interior. It not only means much to agriculture but will permit industries to develop in the Middle West. In turn, this industrial development will aid the producer by bringing the consumer to his door. It will enable the farmer to successfully produce many things for which he now has no market. Industry is revolutionizing the South. Prosperity has come to her people. Give us cheap transportation and power and the Middle West will speedily come to its own. [Applause.]

The CHAIRMAN. The time of the gentleman from South Dakota has expired.

Mr. HAUGEN. Mr. Chairman, I yield to the gentleman from South Dakota [Mr. CHRISTOPHERSON].

The CHAIRMAN. The gentleman from South Dakota is recognized.

Mr. CHRISTOPHERSON. Mr. Chairman, the question of parity for agriculture with other industries is one that has been before Congress for some years. Both sides of the question have been thoroughly discussed in Congress as well as in the press and the public forum.

At first it was urged that it was not a national problem; rather, one that would soon solve itself, but that expectation has not materialized. It is now generally conceded that the agricultural industry—the production of food for the Nation—is laboring under a handicap and has been for a number of years. This fact was recognized by both major political parties in their platform declarations in 1924.

The presence of the problem is therefore acknowledged and the only question is as to how best to solve it. Naturally, a question that affects directly the rural population of our land, and indirectly all citizens, would bring forth many different theories and opinions for its solution.

Coming from a fine agricultural district, it is not strange that I sensed, in its early stages, the depression that beset the farmers, and I had the pleasure and privilege of offering the first farm relief measure, namely, the Lyon stabilization plan, introduced in the House in 1920. The House Committee on Agriculture very graciously held hearings upon this bill and accorded me the opportunity of presenting such facts as I then had bearing upon the situation.

Later other plans were proposed, and since that time the Committee on Agriculture certainly has been both patient and painstaking in the lengthy, careful, and exhaustive consideration it has given the subject. In the hearings conducted by this committee in the past few years may be found most illuminating data and information relating to the entire industry, including production costs, marketing, and so forth.

In time the committee reported what is generally known as the McNary-Haugen bill, first considered in this House in 1924, and in 1927 it passed both Houses of Congress.

Now, again, we have this bill before us for consideration in a somewhat modified form, and as its provisions have been so thoroughly analyzed by others I shall not attempt to shed any further light upon the bill itself. Everyone here is familiar with its provisions.

I simply wish to appeal to you from the industrial centers of our country who may have some honest doubts as to the benefits of this proposed legislation. I ask you to give us the benefit of the doubt; help us give this measure such a majority that there can be no question about it becoming a law. Let us enact it into a live, effective statute at this session. Per-

haps it is not perfect; few important statutes are perfect to begin with. But if put in operation experience will quickly point out the defects and a subsequent Congress will then amend it in conformity with the knowledge gained by its operation.

It is my belief that the bill will be of immediate help when enacted into law. It will bring to an end the long discussion of this vexatious question. It will put this program to the test; and should it fail to bring about the equality that we hope for and believe will result, no great harm could result; while if it accomplishes what we confidently hope, then one of the most difficult problems that has confronted us for many years will have been solved. It will restore the agricultural industry to a fair degree of prosperity. It will bring peace and contentment to the large number of our people engaged in the production of the Nation's food supply. And, incidentally, let me remind you who come from the industrial centers, that you are also interested in this restoration of agriculture. When we enjoy prosperity we purchase more of your manufactured wares; we are better customers; and the added prosperity will be enjoyed by all.

This problem has been before Congress for many years. Let us approve the bill by such a majority as to insure its enactment and give it a fair trial.

Mr. HAUGEN. Mr. Chairman, I yield 10 minutes to the gentleman from Nebraska [Mr. SEARS].

The CHAIRMAN. The gentleman from Nebraska is recognized for 10 minutes.

Mr. SEARS of Nebraska. Mr. Chairman, while I have reduced to writing what I intended to say on this question, so that I would not wobble too much, I can not dispose of it in 10 minutes, so I will avail myself of the leave to extend my remarks and print the address that I have prepared. But in addition I wish to say a word.

Several years ago I came to the conclusion that something must be done to stabilize the price of farm products. What made me think that, gentlemen, was this: I think that three years ago Secretary Jardine, our Secretary of Agriculture, stated that we had a shortage along in the summer of about 75,000,000 bushels of wheat. Now, one would think that according to the normal carrying out of the law of supply and demand, inasmuch as some of the far-away fields of production were not known and it was not known what they would produce that year, that would have the tendency to raise the price of wheat. On the contrary, the price went down half a dollar a bushel.

There are three kinds of wheat growers who must sell from the machine. One is the ordinary wheat grower. He does not know what the price will be in the future. He has to sell at once because he has been waiting for that crop to get some money. Another is the tenant farmer. The other is the one who has mortgaged his crop.

Now, Mr. Chairman, those three classes should be looked after, so that they will become useful citizens, so that they can educate their families properly and pay their debts and own their farms themselves. But as soon as those three classes had sold their wheat from the machine, which they were compelled to do, up went the price higher than it was before.

Now, it seemed to me that something must be done to prevent that evil from happening, that condition from becoming a permanent one in the country, so that those men would become citizens who would be valuable to themselves and their communities and not be robbed, as they were that year, of about $350,000,000.

Now, that $350,000,000 was the difference to those men of what was between adversity and prosperity. To the men who raised that wheat it meant $25 to the acre. It seems to me that something ought to be done. I do not know whether or not the McNary-Haugen bill will work out as some enthusiastical people believe. I have never said I was sure about it. But I have great confidence in many who have clear minds and warm hearts. If it fails, it will show what legislatively can succeed.

I think that is the only word I can give to you to-night. The rest I will put in the RECORD, and I hope that a few of you will take time enough and consideration enough to believe that there is some thought and some value there, so that you will read it in the RECORD of our daily proceedings. [Applause.]

I can not talk further on the subject of the McNary-Haugen bill without laying a foundation for an argument as to why something akin to the McNary-Haugen bill should not be passed. I want you to know the conditions out in the great Northwest section as I know them. Many of you do not as yet. The people of this Nation have never been fair to the great section lying east of the Rocky Mountains. They may have thought they were fair. They may not have thought anything about it. But still they have been more unfair to that great section than to any other. Even a barrel hoop will turn under too much pressure. And the innocent rabbit has been stated as one that at last would fight the bulldog at no matter what result.

Every section of our country demands fairness under the Great Compact. At one time many in New England were talking of seceding in the early days of the Union because they thought they were being treated unfairly under the compact. Later, the Southern States attempted to secede, because they thought they were being treated unfairly under the compact. And at least this is true that any section of the country that thinks it is being treated unfairly should state its grievances, either real or imagined.

Every section of our country except the great Northwest has been helped in its development along the lines of its best prospective. We fought a war for sailors' rights, and because the shipping business was great in New England. We have developed all our harbors around our coasts for the benefit of the respective sections. We have ornamented this city with hundreds of millions of dollars of benefits. We have expended hundred of millions of dollars in the lower Mississippi, including upkeep, and such. We have taken care of the Ohio River and the Great Lakes. We have encouraged corporate life until it has reached out and taken possession of every line of activity in the United States, and so that in the last 60 years men who commenced with nothing have started organizations that now own two-thirds of the Nation and dictate to the whole. They dictate to administrations and to both Houses of Congress and to our departments. They dictate to our press and to our schools. Directly or indirectly we are a price-fixing Nation as to everything but the product of the farm, and the most guilty ones of the price-fixing activity look the agriculturalist in the eye coldly, and without twitching a muscle, indict him as one who is trying to price fix.

No part of this Nation can thrive without navigation. If any section is without navigation, the rest of the country that has will get reduced rates because of their navigation, and the recoupment of losses will be placed on the shoulders of those without. The agriculturalists of the great valley, by act of Government in the deflation of currency and credits, were caused to lose more of their wealth than the entire war cost. There was the great commencement of their undoing. It was an act of the Democratic administration then in power. However, this is not an indictment of the Democratic Party in any special sense, for it would have been just the same if the Republican administration had been in power. Think of the Government sending out orders to reduce loans and discounts 30 per cent in 30 days. Who would have believed such a thing possible? Yet it was done, and suicides by the hundreds followed. Men of wealth and standing by act of Government were ruined in a year by the hundreds of thousands—worse than that, millions.

That great western country has asked that its flood waters be saved to it, especially that great section east of the mountains. People all over this country are asking that the floods be controlled by the only system that can control floods, by reservoiring the different minor flood areas whose combined volume makes up the great floods of the lower Mississippi. But this House and the Senate have each passed a bill that is intended to perpetuate floods, that is intended to cause the expenditure of billions of dollars to perpetuate floods. And the only hope of flood control up to this moment is placed in the hands of the avowed enemies of the only method of controlling and doing away with floods that can be devised. This in the face of the well-founded belief of all friends of real flood control that true control may be had to the American people at an expense of $600,000,000, of which $400,000,000 will be reimbursive, leaving a net cost, and a threat of floods gone forever, of $20,000,000 net.

Over beyond wishing to see the West develop according to its best, what are some of the purely selfish interests of the East, in the development of the national food supply that comes from the Great Plains country? For lack of water that great territory is losing its fertility and is not raising the wheat per acre as formerly. All authorities so declare. The winter wheating process and summer fallowing is sapping the nitrogen from the soil. It needs the added water to restore the nitrogen. In about eight years as a permanent condition the consumption of wheat in this country passes its production. We are then on an importing basis. This year, because of lack of moisture, the great wheat fields of the West will probably not produce one-fourth of their normal supply. The people of the East are now paying about half a dollar a bushel more than three months ago for their wheat, and the price is still soaring. It will probably go to a half or double beyond where it is now. In total this will mean hundreds of millions of dollars, and perhaps enough to reservoir the entire system of flood areas and surely of that great wheat country east of the Rocky Moun-

tains. The Atlantic States call for 250,000,000 bushels more than they produce annually. It may well be profitable for the East to seriously inquire, Can it ignore its own food supply even if it does the suppliers?

That great northwestern country of which I have spoken has asked that its great river be improved for navigation whereby will be saved to billions of bushels of grain raised each year, from 5 to 6 cents a bushel. The railroads of the West have fought 25,000,000 of agricultural people—including those dependent upon them for their industrial life—and for 50 years that improvement has been denied those people except as to an occasional gesture. It is easier to get a hundred million dollars to ornament the city of Washington than it is to get $10,000,000 to improve that great river. This in spite of the fact that all engineers—of course, all laymen—agree that that great river is the most practical river of them all for navigation. And governmental authority has said that when improved, as the old Missouri River commission knew how to improve it, that it would have the carrying capacity of 600 single-track railroads.

If the statements I have made are conservative and true, who shall say that that great western section has not good cause to voice its complaint? But that is only a part. With eyes wide open on ample and full advice of the needs of that great section for a conservation of its water resources, this session, as far as it could as yet, has fixed also the drought situation upon it. Now, drought is a greater calamity to the national welfare than floods in the lower section. Times over the losses occasioned by floods, bad as they are, are the losses occasioned by drought. Yet the East and the South, have said by their combination, that the floods shall continue and the drought shall continue, and that this Nation shall not develop according to its best prospective. And this because of the grip that the combined power people of this Nation have upon legislative and executive functioning. The power people who reach out to cities, States, and the activities of a nation, being determined that reservoir control of the flood areas shall not be had, for the reason that some of the reservoirs for the storage of flood waters might develop power for the people. That is the reason that Muscle Shoals has not been put to work for the benefit of the southeastern section of our country. And the power there developed is sold by the Government at 2 mills per kilowatt-hour to the power companies, and they in turn charging the people of that section 10 cents per kilowatt-hour.

There has never been known in the history of the world such good buyers and spenders when they were in a normal financial situation as the people of the Northwest. Yet the people of the East, in thinking only of their own interests, have denied to the West the ability to buy. How can the East prosper unless the West is prosperous?

Having laid down something of a foundation, let us get back to the McNary-Haugen bill. Why should a poor crop bring to the agriculturalist more money than a good crop? Something is wrong if it does. And it does. The farmer is the only man engaged in business to-day that takes his product to market and asks how much he shall receive for it. He does, and he does. If we were to commence in the first instance to adopt the policy of price fixing, where would we commence? By unanimous vote we would commence with agriculture. Yet price fixing obtains as to every one else but the farmer. I am for the McNary-Haugen bill because I think it will in all fairness fix prices and stabilize prices. It will take an act of Government to so arrange that this wonderfully scattered activity may have its parts so correlated that there will be such fair stabilization. I have never said that I was sure that the McNary-Haugen bill would work satisfactorily to all concerned. I do not know. But I have thought if it failed it would show us what would work. First, I am for my own section. If any man's hand is raised against my part of the country, I am enlisted in the war against him that he has declared and brought about. This, of course, in a very good natured way and abiding by whatever conclusions are reached, but hoping that in the end the battle shall wage with at least some modicum of benefit to my own people.

Mr. FORT. Mr. Chairman, I yield 20 minutes to the gentleman from Massachusetts [Mr. LUCE].

The CHAIRMAN. The gentleman from Massachusetts is recognized for 20 minutes.

Mr. LUCE. Mr. Chairman, of course I address myself to this subject under the existing conditions only in the hope that the unanswerable arguments which will fall from my lips will be reflected in print and in due course add something to the enlightenment of public opinion, upon which all law is founded. [Applause.]

I have addressed myself on previous occasions to this subject. It has become a biennial theme, and should I stay in Congress many years longer, I presume that the material which I now will give you will be available again for my own use every two years. [Laughter.]

I have one piece of good fortune as compared with the friends of the bill. A clergyman may turn his barrel of sermons upside down and use the old sermons over again, for principles endure. Gentlemen who favor this proposal, however, are embarrassed by the fact that conditions change rapidly. Several of the speeches to which I have listened evidently were taken out of the closet where they have been for from one to four years and have not been newly adapted to the change in prices and the improved prosperity of the farmer. I am not bothered in that way, because it is the eternal truth that I am maintaining. [Applause.]

It is well, in the course of these repeated discussions, that occasionally a voice from outside the circles directly interested should be heard, even though at remote intervals, the voice of somebody who speaks for the consumer. Here also I have some advantage, because nearly all the speeches that have been delivered have been appeals to the self-interest of one portion of the people, while it is my fortune to speak not for the 30,000,000 people of a single class, but for the 120,000,000 people of the whole country. [Applause.]

When this discussion was young, so many years ago that I suppose most of you have forgotten it, but when the end in view was somewhat nearer achievement than it is to-day, the weekly letter of the American Farm Bureau Federation said that the McNary-Haugen bill would be worth a billion dollars to the farmers of this country—one thousand millions of dollars of benefits.

Mr. MAJOR of Illinois. Will the gentleman yield?

Mr. LUCE. With the greatest of pleasure, because I may thereby get something in my speech that I might have forgotten.

Mr. MAJOR of Illinois. I wonder whether the gentleman has any corn or wheat farmers in his district?

Mr. LUCE. I hope presently, in the due and orderly course of my remarks, to come to that particular point. Now, I want you to stop thinking in millions and figure out what this means in dollars. This is a proposal to give one-quarter of the people of this country one thousand million dollars. Of course, it is not going to be taken out of the pockets of foreigners; it is not going to be fished out of the sea or pulled off some bush. It is to come out of all of us. We alone can furnish this one thousand million dollars. We must count in the farmers themselves because they, too, are consumers and must pay their quarter. If you figure it out with this in mind you will find that here is a proposal to take, on the average, out of the pockets of every family in this country $40 a year; and you are going to put into the pocket of every farmer of this country $160 a year. He will pay $40 of that himself, so that his gain is $120 a year, while we consumers pay $40 a year for each family.

I much regret that I do not see a large and enthusiastic attendance of the gentlemen from New York City this evening, but I trust they will read my words and prepare themselves to go before their constituents this next fall and explain to the people of the East Side and the West Side why we are going to take $40 a year out of the pittance that the wage earners receive. I do not see here my friend from Rochester, who last year made a powerful speech which disclosed the iniquities of the McNary-Haugen bill, and then proceeded to vote for it. I wish he had been here that he might by these remarks be prompted to ask his clothing workers what they think of contributing $40 a year, say one week's wages, for the benefit of another class in the community. In case the bill becomes law, I would ask every man here who has voted for it and expects to face an audience this fall to be ready to explain why he would take out of the pockets of every head of a family not a farmer $40 of his income and turn it over to the farmers of the West and South.

Mr. RANKIN. Will the gentleman yield?

Mr. LUCE. I yield with the greatest pleasure to the gentleman from Mississippi.

Mr. RANKIN. The gentleman evidently missed the speech made by the gentleman from New York [Mr. GRIFFIN] in opposition to the bill.

Mr. LUCE. I am thankful that somebody else looks at it in the same way, as all wise men should. [Applause.]

Mr. PURNELL. Will the gentleman yield?

Mr. LUCE. I yield.

Mr. PURNELL. I do not claim to be half as wise as the gentleman from Massachusetts, but evidently he is not familiar with the hearings which have taken place in our committee for the last four years, otherwise he would know that every labor

organization in the United States and every body of workers within the United States that appeared before our committee upon numerous occasions advocated the passage of this bill, and I myself asked them this specific question at the conclusion of their statements: "Do you still favor this bill if you believe it will increase your cost of living?" And they said yes.

Mr. LUCE. That is all the more reason why my argument ought to appear in print and persuade the deluded. [Laughter.]

Mr. DOWELL. Will the gentleman yield for one question?

Mr. LUCE. Yes.

Mr. DOWELL. Then the gentleman admits in his argument that the farmer is going to be benefited by this legislation when it is enacted?

Mr. LUCE. I am taking the American Farm Bureau Federation at its word and proceeding on that assumption.

Mr. DOWELL. I am just suggesting to the gentleman that his argument is conclusive that this bill will do exactly what the purpose of it is, and that is to give the farmer a greater price for his products.

Mr. LUCE. If it does not do that, the bill is no good.

Mr. DOWELL. Certainly; and the gentleman admits it is good because he says it is going to give the farmer a greater price for his product.

Mr. LUCE. It is good for one-quarter of the people of this country at the expense of the other three-quarters.

Mr. DOWELL. But it is good for the farmer?

Mr. LUCE. It is fine for the Western and Southern farmer.

You think I do not represent any farmers because I am from the East. Gentlemen discussing this bill do not think there is any such thing as a farmer north of the Potomac River or east of Pittsburgh.

To refute that I must distress you with figures. I come from New England, a part of the country which, with the Middle Atlantic States, is commonly known as "the East." This region, in the latest year for which I find the figures, grew crops estimated in value at $829,700,000, and had dairy products estimated in value at $464,400,000, making a grand total of $1,294,100,000. That was the value of the crops and dairy products produced in this region by about 580,000 farmers. I have not a few farmers in my district and not one of them has asked me to vote for this bill, save, I think, a single man, who, out of that broad and generous charity which characterizes some New Englanders, was willing to put his hand in his pocket, take out of it $40 a year, and give it to the men from the West and South who appear before us in this impoverished condition. I strongly suspect that the rest of the farmers in my district are not so philanthropical as to ignore the fact that they will have to pay more for their stock and poultry feed, more for such of the meat they buy as has been fattened with corn, more for the flour that comes from the West, more for the package cereals, more for every cotton garment they wear.

Mr. SCHAFER. Will the gentleman yield?

Mr. LUCE. Yes.

Mr. SCHAFER. Have any of the farmers in your territory written you in opposition to the bill?

Mr. LUCE. Not to my knowledge. My district relies upon its Representative to present the arguments. [Laughter and applause.]

I would further emphasize the fact that I do not come from a region that has in this matter the most important interest, measured either in men or in dollars. Gentlemen find it very difficult to disabuse themselves of the idea that New England is still dominant in industry, and gentlemen think that in passing a bill of this sort the cost is to be borne by men from the seaboard States. Can you not understand that the scepter of industry has passed beyond the Alleghenies? Can you not understand that at this hour the total value of the industrial products of Ohio, Indiana, Illinois, Michigan, and Wisconsin is two and a half times as great as that of New England? The total number of wage earners employed in the industries is two and a half times as great. The total amount of wages is two and a half times as great, and the value of the product is three times as great. You are not punishing or penalizing New England nearly so much as you are punishing and penalizing the industrial center of the country—Ohio, Indiana, Illinois, Michigan, and Wisconsin.

You have long thought us the leaders in the textile industry of America. Did you know that of the cotton consumed in this country since the 1st of January, 74 per cent has been consumed in the South and 26 per cent in the North? The interest of Fall River, New Bedford, Lowell, and our other mill towns is, in dollars, only one-third of the interest of North Carolina, South Carolina, Georgia, and Alabama. If this bill grinds down the faces of the people working in the textile mills, it will be chiefly the people of the Southern States. I wonder how any man from North Carolina, South Carolina, Georgia, or Alabama is going to his constituents this fall and answer the questions that will be put to him if he has voted for such a proposal.

What do you think this is going to do to cotton? You are going to send cotton abroad and dump it on the markets of the world, selling it at any price necessary to dispose of it all. Furthermore, by putting into the bill the new requirement that imports also shall pay the equalization fee, thus providing what will accomplish the same purpose as a tariff duty, you virtually prevent cotton, as well as any other commodity concerned, from being shipped back to this country in case it has been sold abroad at a price so much below the artificially elevated price here as to tempt reshipment.

I will admit now that when in previous sessions I talked upon this subject I had to be very careful lest I get caught by some inquirer who, when I told him he was going to feed the workers of Europe at the expense of the workers of America, would retort that the wheat could be brought back immediately if sold abroad at too low a price, or that cotton would likewise come back. I am now saved any worriment on that score, because the committee itself has put another lock on the door. No longer do I have to dodge that particular question; but what the committee has done has made the menace still more serious.

Furthermore, by reason of one thing the committee has not done, the prospect is blacker yet. The equalization fee is to be collected on any agricultural commodity imported when that commodity has been designated as within the operation of the fee, but not on the article manufactured out of such a commodity. This means that though raw cotton would have to pay the equivalent of a duty under such circumstances, it would, to the extent of the value of the cotton, come in free if fabricated, thus giving the foreign manufacturer virtually a bonus for its manufacture.

All this betokens still further calamity for the cotton mills that give livelihood to so many thousands of our people in the States of the Atlantic seaboard from Maine to Georgia, still more distress among the wage earners, still more of loss to the communities that have grown up around the mills.

Do you not know the condition of our textile industries? Since last year the wage pay rolls of the cotton-goods industry in this country have dropped by 14.5 per cent, more than one-sixth, in a year. The wage pay rolls in woolen and worsted goods have dropped 10.6 per cent. Here in one year an industry already depressed has by that much gone down hill disastrously more. This is not alone true of New England; it is true also of the textile mills of the Middle States and of the South.

What do you offer us? You gentlemen who to-day have $2 wheat, $1 corn, and 60-cent oats—what are you asking of us? You are asking the passage of a law that in the first place will give our foreign competitors certain raw materials of industry at a lower price than must hereafter be paid by the manufacturers of the United States. Secondly, you are furnishing to the workers in all industries, to the employees in Birmingham and Manchester and Chemnitz, and all the other industrial centers of Europe food at a lower cost than must be met out of the wages of employees in the United States. Thus New England, the Middle States, the South are to give aid to our competitors coming and going. We are in effect to subsidize England and Germany so that they can undersell us in the markets of the world.

Mr. SCHAFER. Will the gentleman yield?

Mr. LUCE. Certainly.

Mr. SCHAFER. Even if we do furnish the workers of these foreign countries food products at lower cost, apparently under the debt settlements we have relieved the taxpayers of the foreign countries from the payment of many billions of dollars. They were represented then as being very poor, indeed, and perhaps this bill will square with the billions of dollars which we have already relieved them of in the payment of their tax bills.

Mr. LUCE. Possibly this may work out by enabling the foreign manufacturers to dump their goods on our shores and underbid our manufacturers in a way to make the payment of those debts easier, but I would not defend it on that score.

Let us now come down to the crux of this proposition, the fundamental idea that has always been its weakness, is its weakness in its present form, and always will be its weakness. You are tempting the farmer to jump out of the frying pan into the fire.

Mr. FULBRIGHT. Will the gentleman yield?

Mr. LUCE. Certainly.

Mr. FULBRIGHT. The gentleman mentioned the dumping of surplus products into foreign countries and feeding them with cheaper foodstuffs. Is it not the fact that the manufacturing

industries dump their surpluses into foreign countries and sell them at a lower price than they sell at home?

Mr. LUCE. The last tariff bill we passed recognized the iniquity of that thing, and just so far as the American people possibly could they put their stamp of disapproval on what they said was an unrighteous practice.

Mr. FULBRIGHT. That does not answer the question. Is it not the fact that the manufactured products of this country, especially farming implements, are sold at a lower price abroad than in our own markets?

Mr. LUCE. If that is done, I still say it is an iniquity, and all the other countries of the world are fighting against it and we are fighting against it to-day.

Mr. FULBRIGHT. Does not the gentleman know that is true?

Mr. LUCE. I have the impression it is not so prevalent as it was in previous days.

Mr. FULBRIGHT. That is not answering my question. Is it not the fact that products manufactured in this country are sold on the foreign market at a lower price than they are sold on our home markets to our own people?

Mr. LUCE. Some products undoubtedly are.

Mr. HAUGEN. Will the gentleman yield there?

Mr. LUCE. Certainly.

Mr. HAUGEN. The gentleman is certainly aware of the fact that wheat sells in Liverpool at from 15 cents to 30 cents a bushel less than it does in Chicago.

Mr. LUCE. The cost of transportation I recognize to exist.

Mr. HAUGEN. Is not that true all along the line, just as the gentleman has stated; and have not the industries dumped their products for the last 50 years, to our certain knowledge, on the markets abroad at a price lower than the price received here?

Mr. LUCE. If that be true, the purpose of the bill is to carry farther a practice that in the end is unwise.

Mr. HAUGEN. The farmers have been up against it for 50 years, and we propose to do the same thing for them. They think what is good for the goose is good for the gander.

Mr. FORT. Will the gentleman yield?

Mr. LUCE. I yield.

Mr. FORT. If the statement of the chairman of the committee is correct, that we sell for 35 cents a bushel less in Liverpool than in Chicago, that is clearly evidence of the fact that the farmer gets the whole benefit of the tariff.

Mr. LUCE. Certainly.

Now, in the very brief time remaining at my command I want to point out some of the effects of giving anybody in production, industry, or commerce——

Mr. PURNELL. Will the gentleman yield right there before he proceeds?

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. FORT. Mr. Chairman, how much time have I remaining?

The CHAIRMAN. Seventeen and a half minutes.

Mr. FORT. How much time does the gentleman from Massachusetts want?

Mr. LUCE. That will depend upon how curious my audience is.

Mr. FORT. I yield the gentleman five minutes more.

Mr. PURNELL. I do not care to make a statement, but this is in the nature of a question. Industry is able to organize and can absorb the loss which it suffered by reason of the reduced price at which it sells abroad. Some of us who are sponsoring the bill have the thought, by reason of the fact that there are in the neighborhood of 6,000,000 farmers unable to organize, unable to absorb that loss in the prices at home, that they ought to have a measure such as this to assist in that very business.

Mr. LUCE. I am afraid I can not follow the gentleman's logic. Even if it be valid, let me go on to state what I think is the most serious evil in the whole matter and beg of you to give it attention.

A bounty to cure overproduction is like quenching flame with oil.

I have 20 acres of grass land in Maine. It is not worth as much as a good-sized garden patch out in Iowa. As grass land it is useless. I can not sell the hay because the automobile has ruined the hay market. [Laughter.] I can plow it up. I have the implements and have the help. I tell you, if this bill becomes law I will within 30 days get the land plowed and I will plant it, because I shall have a sure thing in the disposal of my crop. That is what you are offering the farmers of the country. You are guaranteeing them against loss, you are holding out to them the bait of high prices, you are inviting them to increase the real cause of their troubles, for at the bottom of all this is overproduction, surplus.

Remember what happened in the war. In the decade from 1909 to 1919, by reason of rising prices and a market apparently certain, 40,000,000 acres of pasture land were plowed up and put into crops, 5,000,000 acres of forest were cleared—40,000,000 acres of pasture land and 5,000,000 acres of forests! With the sudden increase of the price of wheat in the war period, the acreage increased 67 per cent in two years. The big jump in the price of cotton increased the acreage 53 per cent in four years.

By the way, our experience then gives the answer to the argument that we need to insure a surplus by such legislation as this. We found that by the use of extra land, better seeds, and more fertilizer supply can be quickly increased to vast extent.

See what happened in the case of coal when we turned the process the other way around. In 1922 when coal was $3.64 a ton there were 9,299 mines in operation. It dropped to $2.06 a ton, and the number of mines dropped to 7,144.

I want to get into this story what California saw when some of its producers put into practice the principles of this bill. In 1913 raisin grapes were selling for 3.46 cents a pound. The crop was 70,000 tons. An association was formed, by 1920 the selling price had been jacked up to 12.695 cents a pound, and the crop was 173,000 tons.

In 1922 the result of that folly was to send the price back to 3.214 cents a pound and to increase the crop to 225,000 tons. That fall there were 360,000 tons on hand. In 1925 there were of raisin grapes left unpicked on the vines enough to fill 10,000 cars; in 1927 enough to fill 15,000 cars.

There will be no raisin grapes left on the vines if you guarantee that the crops will be dumped on a foreign market. There will be no idle land. Everybody engaged in agriculture will jump at the chance to produce a surplus to be sold abroad at any price it will bring, with the consumers of the United States to pay the loss.

The CHAIRMAN. The time of the gentleman has expired.

Mr. DOWELL. Mr. Chairman, will the gentleman yield?

Mr. LUCE. If the gentleman will get me some more time.

Mr. FORT. Could the gentleman use five minutes more?

Mr. LUCE. I should judge so, at the present rate of inquiry.

Mr. FORT. Mr. Chairman, I yield the gentleman five minutes additional.

Mr. DOWELL. Mr. Chairman, will the gentleman yield?

Mr. LUCE. With great pleasure.

Mr. DOWELL. The gentleman has argued that three-fourths of the country would have to pay the penalty for the passage of this bill by the rise in the price of agricultural products. He now says that they are going to buy them much more cheaply than if the bill were not in operation. How does the gentleman reconcile the first part of his argument with what he is saying now?

Mr. LUCE. The gentleman forgets that the California raisin growers did not have the help of the McNary-Haugen bill to enable them to dump. The fate that befell them will not befall the wheat or the corn growers. It will be the foreign consumer, not the domestic consumer, who will enjoy the low prices.

Mr. DOWELL. The gentleman means that they are still going to maintain a good price for their products?

Mr. LUCE. Yes; and I am going to help pay for it.

Mr. DOWELL. Under this bill?

Mr. LUCE. Yes; with three-quarters of the population of the country, I am going to help pay for it.

Mr. BURTNESS. Mr. Chairman, will the gentleman yield?

Mr. LUCE. Yes.

Mr. BURTNESS. Do I understand that the gentleman's solution of the agricultural problem is to keep the prices of agricultural products as low as possible in order to prevent the farmers from growing crops or raising farm products?

Mr. LUCE. Oh, no, Mr. Chairman.

Mr. BURTNESS. The gentleman objects to higher prices.

Mr. LUCE. Mr. Chairman, my solution of this agricultural problem is to refrain from interfering with the problem. The farm population of this country is lessening at a net rate of something like half a million a year. The rush from the farm to the cities has already nearly solved the farm problem. As I incidentally remarked, the price of farm products has so risen that the speeches delivered on this floor in this matter are mostly away out of date. The pendulum has swung the other way, and instead of misery and suffering being on the farm they are now in the city. But you do not find those of us representing the populous centers coming here and asking for special legislation. We ask you to let us alone and we will work

out our own problem, just as the laws of economics will help you to work out yours if you let them alone.

Mr. DOWELL. Will the gentleman apply that problem to industry and let it work out its own solution?

Mr. LUCE. Absolutely.

Mr. DOWELL. Would the gentleman take the tariff out of industry?

Mr. LUCE. The tariff is not and never was and never will be for the primary purpose of benefiting men engaged in industry. The tariff was put on to help the Nation. There is no defense for the tariff if it exists simply for the special purpose of helping a special class.

Mr. DOWELL. Of course, the gentleman means that by furnishing a home market for industry it means helping the entire Nation without assisting the gentlemen who put the products of industry on the market.

Mr. LUCE. Their advantage is no greater and no less than that of any other man who faces the laws of competition within the borders of the country. But I thank the gentleman for mentioning the tariff. I had almost forgotten it.

Mr. FULBRIGHT rose.

Mr. LUCE. I have not the time to yield now until I get through with this particular matter. The pending proposal is the tariff upside down. The gentleman from Texas [Mr. JONES] said of his debenture bill this afternoon, and the same thing is in essence true of the equalization fee, "It operates exactly like the tariff, but in the reverse manner." He was more nearly accurate than perhaps he intended to be. The tariff is to secure for our manufacturers the home market at reasonable cost. This bill is to secure for the farmers the foreign market at any cost. The tariff is to secure ultimately to the people of this country lower prices. This bill is to impose on them higher prices. The tariff is to make us self-sufficing. We are already self-sufficing in agricultural matters. The tariff is to diversify occupation. This bill is to discourage diversification. The tariff is to protect us against foreign competition. Agriculture is already protected, or if not it will be given the necessary protection. The tariff is to the good, primarily, of the whole country. This bill is to the good, primarily, of a single class. It is the tariff upside down, and not a single argument that justifies the tariff can be successfully perverted to its defense when it has been stood on its head.

The CHAIRMAN. The time of the gentleman from Massachusetts has again expired.

Mr. FORT. Mr. Chairman, I yield the remainder of my time to the gentleman from Iowa [Mr. HAUGEN] for such use as he desires.

Mr. ASWELL. Mr. Chairman, I have 22 minutes remaining. I yield 10 minutes to the gentleman from Missouri [Mr. COCHRAN] and the remainder of my time I yield back to the chairman of the committee [Mr. HAUGEN].

Mr. COCHRAN of Missouri. Mr. Chairman, ladies, and gentlemen of the House, it is hard to understand why the so-called friends of the farmer, if they are sincere in their desire to better his condition, continue to advocate a measure which has no chance to become a law. The President's veto of the last edition of the McNary-Haugen bill specifically pointed out his objections to the equalization fee, which we again find in the pending measure.

Probably I should not discuss a bill which I do not propose to support, but those of us who oppose this legislation have been criticized and told conditions in the cities can be attributed to the plight of the farmer. No doubt there is something the matter with the farmer, but in part he is responsible for his own condition, as I will point out later.

As the Representative of a city district I can tell you there is something radically wrong in the industrial field. There is a difference of opinion as to the number of million people out of employment at the present time, the Department of Labor figures being far below those advanced by certain Senators who have placed the number above 4,000,000. In St. Louis, part of which I have the honor to represent, you can find places for over 50,000 people and then have many additional thousands looking for positions. There is no movement in Congress to come to the relief of the unemployed, but at the same time you are asking for a law granting a subsidy to the farmer, at their expense.

Under the terms of this bill you propose to sell the surplus crop to people in foreign countries at a price far below that which you would charge my constituents. In plain words, you propose to reduce the cost of living abroad and raise the cost of living among the people of my community.

You propose to put the Government in business, where it does not belong. In June, 1924, at Cleveland, the Republican Party at its national convention adopted a platform and under the head of "Government control" said in part:

> The Republican Party stands now, as always, against all attempts to put the Government in business.

This was in 1924. Where are you standing in April, 1928? It can not be denied the passage of this bill would mean further entrance of the Government into business. In a few weeks you will be reiterating the doctrine as expressed in the 1924 platform. Why not follow that doctrine now?

The outstanding trouble is the surplus—overproduction, if you please. I propose to show where the farmer is in part responsible for this surplus, and a great many of his representatives in this House are likewise in part responsible. You who are advocating the enactment of this legislation took away from the farmer a market for hundreds of millions of bushels of grain annually when you supported prohibition legislation.

The farmer lost a market annually of over 40,000,000 bushels of corn. In 1927 less than 10,000,000 bushels of corn were used by distillers and brewers, while in 1917, the year previous to the enactment of prohibition, over 49,000,000 bushels were used.

Mr. SCHAFER. Mr. Chairman, will the gentleman yield there?

Mr. COCHRAN of Missouri. Not now. I have only 10 minutes.

At the same time you deprived him of a market of nearly 80,000,000 bushels of barley and caused him to ship over 100,000,000 pounds of rice to foreign countries, while prior to prohibition it was found necessary to import this commodity in order to meet the demand. Where is the market to-day for 40,000,000 pounds of hops used in the preprohibition times? The farmer let the Anti-Saloon League sell him prohibition, and in return, instead of benefiting thereby, he lost a market for his crops. He reduced his own earning power.

What followed? Why, it was not long before he could not meet the interest payments on outstanding notes, and as a result tens of thousands lost their farms. Can the merchant drive his customers away and then sell his goods? Why certainly not; it would mean bankruptcy.

Had it not been for the war, prohibition would not have survived as long as it has. The war opened a field for hundreds of thousands of employees previously engaged in the manufacture of distilled spirits, beer, and wine, and enabled these men and women to earn a living. They took the places made vacant by the 4,000,000 engaged in battle. Thus the war served as an asset for prohibition in that for a time it took care of the unemployed. Gradually, however, as the country returned to normal, unemployment increased, until to-day more men and women are out of employment than at any time since the panic of 1907.

We should have a nation-wide survey made immediately, secure the true facts in reference to unemployment, and if it is found millions of our citizens are unemployed, forget tax reduction, and appropriate whatever surplus that might exist at the end of the fiscal year to be applied to the prosecution of public work. The farmer would benefit by such action.

A reaction has undoubtedly set in. The farmer's mistake in following the Anti-Saloon League, and your mistake in voting for prohibition, which resulted in the loss of a market for the farmer's crops, has returned to burden him, and now the appeal to place him on a sound footing is before Congress in the form of the fourth edition of the McNary-Haugen bill. Political expediency prevents many a legislator from frankly explaining the mistake to the farmer and residents of the rural communities, but they are being slowly educated.

Only a few days ago Dr. James M. Doran, United States Prohibition Administrator, was quoted as telling a Washington audience it was his belief the United States Government would never be able to stop violation of the prohibition law. What more convincing evidence would you desire on the subject? If prohibition was a success from an economic or a moral standpoint there would be no complaint, but it has failed beyond question even to promote temperance. See the official records of the police department of the city of Washington, Capital of the Nation, for the year 1927 and you find nearly 14,000 men and women arrested within the year for either being intoxicated on the streets, drinking in public places, driving an automobile while intoxicated, or for violating the Volstead law.

The farmer not only deprived himself of a market when he advocated prohibition but he also increased his expenses. The United States Government alone lost nearly a billion dollars annually in taxes. The States and local communities likewise were deprived of hundreds of millions in revenue. This has not resulted in a saving for the people but, on the contrary, it is being used for the purchase of so-called whisky and finally lands in the pockets of the bootleggers, who pay no taxes. It was necessary to find other sources of revenue when national prohibition was enacted, so the farmer was required to pay his share in various ways.

I admit many changes have been made in the pending bill since it was vetoed by the President last year, but it is easily recognized by the so-called equalization fee.

Not satisfied with providing an increase in the price of grain, this year you propose to spread "Mary Haugen's" wings, for you include even fruits and vegetables, perishable products, which can not be carried from one season to another, and in most instances must be disposed of on arrival at the market. Statistics will show the production of fresh vegetables and fruits has doubled within the last 10 years, further evidence of overproduction. The Senate very properly amended this provision, and I hope the House takes the same action. You are going to make enough of your people suffer as it is.

You have the votes to pass a farm bill, but rather than bring in a measure that can become a law you insist upon this bill, which I predict will inflict further damage to the farmer rather than improve his condition.

Let us assume this bill does become a law. What is your main objective? No one can deny it is to provide an increase in the price of farm products. Is there a Member of the House who does not really know that it would be but natural for the farmer to increase his acreage when the price of his products are advanced? This means further overproduction. In the end the bottom will fall out of your plan and the farmer will experience still harder times by a decided decrease in prices. In the face of a presidential veto you propose to pass this bill, and I admit you have the votes, but I warn you some day your action will return to plague you.

You can not justify a law assisting one class of people at the expense of the masses, and even though it should by chance receive the approval of the President it will meet its death at the hands of the Supreme Court when its constitutionality is assailed, as it will be.

As it is impossible to have a sound prosperity with one or more classes of our citizens in distress, I propose to be so bold as to offer a suggestion to my dry friends.

In the interest of the farmer, in the interest of temperance, and in the interest of the unemployed may I not suggest that it would be well to bring in a bill which will provide for the use of the surplus farm products, grains as well as fruits, to be used in the manufacture of light wines and beer up to the point of intoxication? [Laughter.] This will not in any way be a violation of the eighteenth amendment. It will simply give you a market for the farmer's surplus, in making legal the manufacture and sale of beverages, nonintoxicating, and at the same time bring relief to the farmer, which you so earnestly seem to desire. Proper provisions can be made in a separate measure for a special tax on these beverages which will bring to the United States Treasurly nearly $1,000,000,000 annually and hundreds of millions to the various States and local communities. This will not be any additional burden upon the people because they are now handing this money over to the bootleggers. Further this would enable you to repeal objectionable paragraphs in the revenue act as well as materially reduce others.

Provide more liberally for cooperative marketing if you will, forget the equalization fee, add the amendment I suggest and you will have a bill that will not only pass the House by an almost unanimous vote, if the farmer's representatives will join those in favor of light wines and beer, but a safe majority over the necessary two-thirds in the event of a veto.

To carry out my proposal would mean, first, a general improvement in the health of the millions who are indulging in "made to-day and drink to-morrow moonshine" as they would be satisfied with light wines and beer; second, respect for the laws of the country, which means more to the Nation than prohibition; third, a reduction in the unfair tax burdens now shouldered by the people and business; and fourth, prosperity for the farmer and employment for the millions now out of work in the cities.

Regulate the sale in any manner you desire but no longer deprive the people of the country of beverages to which they are entitled under the Constitution, and which they lawfully can not secure by reason of congressional action, and you will provide the farmer a market for his present surplus, which the enactment of the Volstead law has taken from him, causing the financial distress which you picture here to-day. [Applause.]

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. HAUGEN. Mr. Chairman, I yield three minutes to the gentleman from Wisconsin [Mr. SCHAFER].

The CHAIRMAN. The gentleman from Wisconsin is recognized for three minutes.

Mr. SCHAFER. Mr. Chairman, I take the floor at this time to state that I shall vote for the Haugen bill, although my district is a city district. The industrial workers and the farmers of this country realize that their interests are mutual. The prosperity of the farmers is closely interwoven with the prosperity of industrial employees, business and professional men. When the farmers are prosperous they are able to purchase the output of the industrial workers and business institutions and pay the bills of the professional men.

This Congress has enacted legislation and appropriated millions of dollars for the benefit of certain other classes, and surely should assist the American farmer, who, we all admit, is in a most precarious financial condition at this time. Representatives of great farm organizations, as well as representatives of great labor organizations, with membership of millions, are advocating the enactment of this legislation. I sincerely hope that the pending bill will become a law at this session, so that the American farmers may have something more from the Seventieth Congress than general vague promises. [Applause.]

Mr. HAUGEN. Mr. Chairman, I yield to the gentleman from Illinois [Mr. HALL].

The CHAIRMAN. The gentleman from Illinois is recognized.

Mr. HALL of Illinois. Mr. Chairman, in his remarks in the Committee of the Whole House on the state of the Union, when the rule was adopted for the consideration of this bill, the gentleman from Illinois [Mr. WILLIAMS] stated the agricultural situation in such terse and concise terms as to leave no room for doubt as to the conditions that confront us. [Applause.]

I agree with the gentleman from Georgia [Mr. CRISP] that "the die is cast and I know that the House is going to pass the McNary-Haugen bill," and that "12 hours of debate is not going to change a single vote."

I am glad the gentleman from Georgia feels that way about it and I am also glad but not surprised that he accords to each Member here absolute sincerity of purpose in the consideration of this measure.

I can not agree with Members who declare that the passage of this bill is a vain and childish thing; that the Agricultural Committee was swayed in the slightest degree in reporting this bill favorably to the House by testimony of witnesses who matriculated in and graduated from an institution for the feeble-minded. To assume this would be to admit that a majority of the House Committee on Agriculture have not the mental acumen of such a witness and that a very large majority of the Senate of the United States has not reached the mental attainments of even a sophomore in such an institution. I do not admit either of these conclusions.

Congress has by a majority vote of both Houses agreed to the principles contained in the McNary-Haugen bill. The Senate has done so a second time and the House is ready to do so.

Mr. Chairman, I can not believe and I do not believe that such a majority in Congress is either misinformed, mislead, intimidated by a lobby, or is so ignorant that it does not know what it is all about.

Rather would I conclude that the Members have given this question their careful, intelligent, and patriotic consideration and that the consensus of opinion of a majority is more likely to be right than the opinion of a few, no matter how enthusiastic, no matter how tenacious that few may be in their refusal to yield to the opinion of the majority. This House did, in the Sixty-ninth Congress and in this one, give this bill careful study.

I would not presume, therefore, to discuss it in detail. It would be like a freshman trying to explain to the dean of a university the intricacies of integral calculus.

I do say this, however, the Republican convention four years ago, at Cleveland, promised to enact legislation that would place agriculture on an equal economic basis with other basic industries.

I do know that the Democratic National Convention at New York promised the same thing. This has not been done, and now is the time to do it.

Mr. Chairman, in regard to former efforts to grant farm relief by Congress, the farmer has been forced, by circumstances, to "grin and bear it," but I assure you that another disappointment and his present frame of mind may compel him to bear it, but he has certainly ceased to grin.

I have the greatest confidence in the ability of the economists and statesmen of the United States to solve the ills that our body politic is heir to.

Other nations have by legislation helped to solve their agrarian problems, and we can solve ours.

Rice is the lifeblood of the Japanese nation, just as corn, wheat, cotton, and other staple commodities are the lifeblood of America. Nothing brings death to Japanese business and commerce so quickly or so effectively as the spasmodic rise or fall of the price of rice.

When the price of this commodity swings violently up or down the Japanese have an adage that they "can not sleep on high pillows"—that is, peacefully.

The Japanese Government has been forced to take a hand in the rice industry for no other reason than to stabilize the prices and to smooth out the friction between the demand and the supply of this their greatest food staple.

In the years of bumper crops of rice, when the price breaks so sharply as to cause the farmers great financial loss, the Government steps in and buys sufficient quantities to stem the tide of a descending market.

In lean years or at a time of great distress, like a destructive earthquake, when the price of rice begins to soar beyond the reach of the common people, the Government opens the doors of its rice warehouses and sells enough rice to chill the ardor of the aggressive speculators who dream of cornering the rice market and pillaging the people.

Denmark and Holland have a similar plan to stabilize the price of their farm products. To the same end, although not in the identical manner, it is now proposed to aid not only the farmer but the consumer in America by means of the bill under consideration.

I am in favor of the McNary-Haugen bill. I believe that it will accomplish the desired results, and I believe that it is not only constitutional legally, and sound economically, but I am thoroughly convinced that it is the one measure proposed that most nearly will approach the beneficent results so much desired.

I have lived among farms, farming, and farmers all of my life. I have watched them in and participated in their daily toil. I know their desires, their ambitions, and their patriotic loyalty to anything that is American. I and they have for many decades supported and voted for those measures in national legislation that have built up the eastern seaboard and the great centers of population and that have made our country strong and great.

These stalwart sons and daughters of the soil still believe in protection to American industries but they find themselves in the slough of despond, due to quick deflation and conditions incident to the World War. Now they are asking their Government for that protection for them that they have for years helped to give to others.

Our farm population is restless. It is dissatisfied. Its capital is depleted. Its buying power is gone. Its members feel that a depression has come upon them through no fault of their own; that governmental aid has not been forthcoming, and they feel that they have been treated unjustly in this regard. This condition has existed now for years and has increased in intensity. Certainly there is sufficient ability in the two great political parties to solve this problem. The farmer wants it solved or he proposes to know the reason why.

This is the way farmers have been brought by adversity to feel, and I am convinced that if this Congress refuses to pass legislation that shall give them relief, all the stump speakers in the world can not convince them that they have been well treated.

I favor the McNary-Haugen bill because I want to continue to see a majority of our people favorable to a protective tariff, and I fear that they may not remain so unless some such measure as this shall become a law. This plan is the only one that a majority can agree on. It should become a law.

Agriculture is one of our basic industries. We all agree to that. A fair and just analysis of the situation now existing is in this connection of interest.

A reliable survey reveals that the earnings of the average farm family is now 70 per cent as compared with like earnings in the year 1920. While the earnings of the average nonagricultural employee are 101 per cent as compared with that year, the value of farm products compares with the value of other products in like manner as does the numeral 135 to 160.

This comparison is not the most alarming one. The decline in value of all agricultural investments from the year 1920 to date has been from $79,000,000,000 to $58,000,000,000, a loss to the farmer in capital investment of the enormous sum of $21,000,000,000. The taxes with which his business is burdened have been increasing in like proportion to his steady loss of assets. This increase in taxes is mostly local and not Federal, but the increase is there and must be paid.

I venture to say that if a corresponding decrease of capital assets and increase of tax burden were in so short a time to come into existence affecting the railroads, the manufacturing industries, or the banking business, every legislature in this land would be called in extraordinary session, as would the Congress of the United States if it were not in session, to avert a national catastrophe and to rectify a condition that means disaster, bankruptcy, and despair throughout our entire land.

And yet when agriculture that feeds and clothes our bodies and without which we would die appears in such a plight, the advocates of relief measures are met with cool and disinterested gestures by statesmen who, for the good of their own people as well as for the benefit of the country at large, ought to be eager to help upon its feet the very industry the prosperity of which is the foundation stone upon which rests the success of all the others.

Two recent reports on the agricultural problem, one by the land-grant college group and one by the Business Men's Commission on Agriculture appointed by the United States Chamber of Commerce and the National Industrial Conference Board, have centered attention on the farm problem and both state the fact to be that farmers are now bearing an unfair share of the tax burden.

Mr. Chairman, when I began to be interested in agriculture the taxes on farm lands was about 50 cents per acre, whereas it is now about $2 per acre. The gross returns per acre then and now are approximately the same in terms of dollars. It has been for years my custom to market my corn soon after it is husked and under cover, selecting a time when the roads are frozen so that I can get to the elevator. In the year 1927 I was kept from doing this because the roads were soft so that instead or selling for 56 cents, the price in January, I was forced to keep it until June, when I received 92 cents for it. In December of the same year it went back to 68 cents. In the meantime the price was $1.01 per bushel. This showed a fluctuation of nearly 100 per cent in a little over one crop season upon a staple commodity which ought to be worth about the same price in January, in June, and in December. The price of our basic agricultural products should be stabilized. It can be done.

Some of the opponents of this bill seem to think that the farmer wants something soft handed to him; that he wants some sort of governmental certificate of freedom from work. Such a position is so untenable that it falls of its own weight.

The farmer is a hard-working man. He works long hours under adverse weather conditions. He not only has to fight the weather but innumerable insect pests. He does not want anything soft. All he wants is a fair place in the sun of prosperity such as his city brother has. He does not want to be furnished a Rolls Royce, a Buick, or a Ford. All he wants is a crutch to help him on his way to win back some of that $21,000,000,000 that he has lost by the general deflation after the Great War and to start paying his mortgage debts. And he proposes to get that help if he has to fight for it.

He wants no subsidy nor charity. He wants his Government to help him by legislation and he will pay the bill. The McNary-Haugen bill will give him the relief he asks and is entitled to and every Member of this House who believes in protection ought to in fairness and good conscience vote for this bill. [Applause.]

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. KINCHELOE. Mr. Chairman, I yield 10 minutes to the gentleman from Oklahoma [Mr. HOWARD].

The CHAIRMAN. The gentleman from Oklahoma is recognized for 10 minutes.

Mr. HOWARD of Oklahoma. Mr. Chairman and gentlemen. I listened with great interest to the appeal made for the West, South, and Southwest by the gentleman from Massachusetts [Mr. LUCE]. As I did I wondered why he has not before this been urging reduction of freight rates, tariffs, and so forth, for these farmers. But, Mr. Chairman, I do not think the appeal he made was for the benefit of the farmers of the West, South, and Southwest, but was in the interest of those of his section of the country who have profited at the expense of these farmers and have protested every time that suggestion is made to help them. His solution is a unique one, as I gathered from his remarks that he favors letting enough of them starve and lose their home to reduce production and reduce surpluses.

If the flood control bill, which passed the House a few days ago with an overwhelming majority, and the McNary-Haugen agricultural relief bill which is now before us for consideration, are enacted into law this session of Congress will go down in history as one of the most important sessions that ever convened. It is conceded by all who have given any consideration to the subject that there is an agricultural problem and that a solution should be found. The most deplorable conditions in agriculture exist now and the depression has been greater during the past eight years than at any other time in the Nation's history. These conditions are familiar to every Member of Congress from an agricultural district and to all others who have paid any attention to the subject.

Agriculture is the leading industry in this country and the one upon which all other business depends. There is, and can be, no general prosperity in this country unless agriculture shares in such prosperity. The merchants in the towns and cities and other business men who consider the subject know that their financial success depends upon the success of our farmers. I am not so much interested that the fortunes of the rich continue to increase, as I am that a reasonable degree of prosperity should exist among all our citizens. For the past six years the farmers of the United States, through their representatives, have been asking and petitioning Congress to do something to save their business. So far, their appeals have not sounded a responsive chord from this administration now in power. The influential and powerful industries of New England always find a quick ear turned to their demands. The farmers continue to toil from daylight to dark, as do their wives and children, and are unable to pay their interest, taxes, and other expenses and do not enjoy in full even the necessaries of life.

I wish some one who opposes this bill for the benefit of our farmers would rise now and tell me why our farmers should not receive the same consideration from this administration that is given organized business. You never read a county-seat paper but what you see page after page of farms advertised for sale for delinquent taxes and mortgage foreclosures. Something should be done to put a stop to such a condition, and the bill that we now have before us, in my judgment, will do the work. For the past several years our farmers have been producing their crops at a loss and they can not continue in that way any longer. There is no other business in the land that can survive under such conditions.

The farmer can not control his surplus, as can organized manufacturers who are protected under the Fordney-McCumber tariff law—the highest protective law ever enacted by any Congress. This law enables the manufacturer to fix his price upon the products of his factory. He also fixes the price that he pays the farmer for the raw material and when the farmer purchases the manufactured article he is compelled to pay the price asked, however high and unreasonable it may be. The Republican Party, in your platforms of 1920 and 1924, promised the farmers of America that you would remedy the conditions that now exist among them; and that they had faith in your promises was evidenced by the fact that your President in the election of 1920 received the largest vote ever given a presidential candidate, and this majority was exceeded by your presidential candidate of 1924. The farmers and agricultural interests have waited patiently for the fulfillment of your platform pledges. You have had the President, the House and Senate, and full control of all branches of Government since the 4th day of March, 1921, and no farm-relief legislation has been enacted. In 1921 you passed the emergency tariff law and told the farmers that you were going to raise the price of their products by that measure. Nearly all articles provided for in that bill declined in price soon after its enactment. The farmers know that where a large percentage of their crop, such as wheat and cotton, is exported that no tariff law can afford them any protection.

Reports from the Department of Agriculture show that the average cost of producing cotton in 1926 was from 15 cents to 16 cents per pound, and these reports show that, when the various yields are considered, the price of production ranged from 9 cents to 47 cents per pound, and other reliable reports go much higher. These reports also show that the average farm price of corn in this country in 1926 was 64 cents per bushel and in 1927, 72 cents per bushel; that the average price of farm wheat was 19 cents per bushel in 1926 and $1.11 per bushel in 1927; that the average price of cotton was 11 cents per pound in 1926 and 19½ cents per pound in 1927. No one on this floor yet has given any reason why the cotton production of 1924, with 4,000,000 bales less than the production of 1926, should exceed in value the crop of 1926 by more than $500,000,000. Neither has any member given any reason why the wheat crop for 1924 was worth $120,000,000 more than the 1926 crop, when the production for these two years was about the same.

In order to have a world market for farm products it is necessary that we have trade established with these countries. According to the reports from the Department of Agriculture, we exported from the United States agricultural products in 1920 to the extent of more than $3,400,000,000. Since the Fordney-McCumber tariff law has been in effect these exportations have been reduced to $1,800,000,000 for the year 1927. In 1920, before this law was enacted, the total exports of the United States amounted to over $8,000,000,000, which was reduced under this tariff law to $4,800,000,000 in 1927. That is what this high-protective tariff has done for American agriculture in the markets of the world. When this law was considered in Congress in 1922, it contained a schedule providing for a 35-cent tariff duty per barrel on oil imported into the United States from foreign countries. At that time we were suffering from large importations from Mexico, which oil was under the control of the Standard Oil Co. Just before the vote was taken a letter was sent to the House from the President of the United States, and this was read from the Speaker's desk, asking that the provision for tariff on oil be stricken from the bill.

I am glad to say, however, that all the Democratic Members from Oklahoma in the House at that time voted against the elimination of this provision from the bill and tried to have it retained therein. The oil industry in Oklahoma, and especially the independent operators, were suffering greatly at that time from these importations. Proper protection, it seems, can be given the big fellows under this administration, but, with this administration, it is a different question when something is asked for the farmers and independent oil producers.

The depression in agriculture is reflected by the number of bank failures, as shown in the report on this bill by the chairman of the committee [Mr. HAUGEN]. This report shows that the number of bank failures in 1924 was 42 per cent larger than the number of failures in 1893, and that the number of failures for the period of 1920 to 1925 was greater than the number of bank failures for the 26 years preceding 1920. Most of these failures in recent years have been in agricultural centers, and that is why the bankers are joining with others for agricultural relief.

Mr. Chairman, I am glad to appear before the committee at this time in behalf of the agricultural bill that is before us for consideration. There are amendments that I would like to see added to the bill and, if I were writing the measure, it would not be in precisely its present form, but in a body of 435 members, as we have in the House, it is impossible to have any bill incorporate the exact ideas of each Member.

This bill creates a Federal farm board consisting of the Secretary of Agriculture and 12 members, one from each of the 12 Federal land bank districts. These members are appointed by the President, by and with the advice and consent of the Senate. The regular term of office for members of the board is six years and the salary $10,000 per year. The general ideas in this bill and the McNary-Haugen bill, which passed both branches of Congress in the last session and which the President vetoed, are the same. The board created in this bill is authorized and directed to create an advisory council for each agricultural commodity which requires stabilization.

Under the terms of the bill each advisory council shall consist of seven members fairly representative of the producers of such commodity, and the members shall be selected by the board from lists of names submitted by cooperative associations or other organizations representative of the producers of the commodity. This bill also applies to all agricultural commodities which the board thinks can be handled. This bill authorizes the board to make loans from the revolving fund to cooperative associations or corporations created and controlled by one or more cooperative associations for the purpose of assisting in controlling a crop surplus. The bill also provides that if the board finds that its advice as to planting programs has been substantially disregarded by the producers, or if the planting of any commodity is substantially greater than the normal increase for the preceding five-year average, the board may then refuse to make loans for the purchase of these commodities.

Under the provisions of this bill the board is authorized to lend assistance to cooperatives in the establishment of terminal market associations to be maintained in distribution centers. This will be of great assistance in bringing the producers and the consumers closer together. Some of those who are now objecting to the passage of this bill are favoring a bill that provides for loans to agricultural organizations for the purpose of stabilizing the market, and some of these same people object to this bill because it contains an equalization fee. Let me call your attention to this fact: That if the farmer situation can be remedied and the prices established by the loaning of money to these cooperatives and other farm organizations, the board must proceed in that manner under this bill and can not enter into marketing agreements provided in the bill for handling agricultural commodities, which are to be financed by an equalization fee. In other words, no equalization fee on any commodity can be levied by the board if the loan features of the bill prove to be effective. A board of honest, competent, men, experienced in the production and marketing of cotton, wheat, and other agricultural products, will make a success of this bill for the benefit of our farmers and all other business.

Cotton, as we all know, is easily stored and economically warehoused and, in my judgment, there will never be an occa-

sion to levy an equalization fee on cotton, for the reason that the board will more likely make a profit on cotton than a loss, and that if a profit is made there would be no reason for the collection of an equalization fee for the payment of loss or other charges. There is no reason why the same can not be true of wheat and other products. If an equalization fee is collected, it will be collected by the board at the most convenient and logical place, and is nothing more than a commission. If a farmer ships cattle or hogs to the stockyards for market, he ships them to a commission man, who charges a small commission for selling this stock for the farmer, and the same principle applies in the levying and collecting of the equalization fee.

This bill authorizes an appropriation for carrying the provisions of the measure into effect of $400,000,000. Under the terms of the bill, the board is also authorized to make insurance contracts for the insurance of cooperative associations against price decline. Such agreements insure such cooperatives against loss to such association or its members, due to decline in the average market price of the product during the time of sale by the association from the average market price during the time of delivery of the product to the association.

There is great need of organization among our farmers, and if they were organized like our great business enterprises they would have no trouble in receiving due consideration at the hands of this administration. This insurance provision will greatly stimulate cooperation among farmers and will bring them into organizations for their mutual welfare and for the benefit of all legitimate business. The bill also provides that if the board finds that such insurance contracts for any commodity will stabilize the price in the interest of the producers, whether they are members of any cooperative association or not, then the board is empowered to enter into nonpremium insurance agreements with cooperative associations dealing in such commodity. Nonpremium insurance agreements are paid for from the stabilization fund, if there is a loss.

This is the fourth time that the McNary-Haugen agricultural bill has been before Congress for its consideration. The Committee on Agriculture has given long and patient consideration to this bill and it comes to us now as reported by a majority of the members of the committee. I believe the enactment of this bill into law will greatly relieve the agricultural situation, and no business and no people are more entitled to helpful consideration and assistance at this time than the farmers who produce all of the real necessaries of life. Let us pass this bill as quickly as possible and submit the same to the President for his consideration. All but one of the objections in the bill, which was vetoed by the President in the last Congress, have been eliminated from this bill and that one is the equalization fee and, as I stated before, this fee is never levied and can not become operative under the terms of the bill if the loan features of the bill will do the work. The Secretary of Agriculture, the President, and the administration leaders in the last Congress said that a bill to loan funds to the farmers to stabilize their prices, which bill was almost identical with the loan features of this bill, would provide the necessary assistance for agriculture. Then, let me ask why the administration can not support this bill? I do not believe that the President will veto this bill, as has been stated upon this floor and without any authority for such statement from the President. To those who are opposed to this bill, let me ask you what you propose? What do you offer as a substitute that will be of any assistance to remedy the present conditions in agriculture?

I am supporting this bill because I want to see the farmers of the United States placed upon the same plane with other business and given fair and equal protection of all laws. All the great farm organizations, with one exception, have indorsed this McNary-Haugen bill. Hon. Edgar Wallace, now deceased, several times appeared before the Agriculture Committee and urged the passage of this bill in the interest of American agriculture. He said that it would help stop the drift of our rural population to the cities and industrial centers, and he said when the farmers were assisted all other working people would benefit. I wish to state here that when Mr. Wallace died the farmers and other working people in this country lost one of their most trusted and valued friends.

I ask that this bill be passed, and believe it will pass by a large majority of our membership; and I also trust that it will receive the approval of the President, become a law, and our farmers be given a square deal. [Applause.]

Mr. Chairman, I yield back the remainder of my time.

The CHAIRMAN. The gentleman from Oklahoma yields back four minutes.

Mr. KINCHELOE. Mr. Chairman, I yield 10 minutes to the gentleman from Washington [Mr. HILL].

The CHAIRMAN. The gentleman from Washington is recognized.

Mr. HILL of Washington. Mr. Chairman, it is claimed that the McNary-Haugen bill would put the Government in business. To this charge a demurrer might be entered which would raise the question "What of it?" The Government has been in business from the time it was organized, but not for the farmer. It is in business now for the manufacturer, the railroads, and the banker. When this Government came into being 98 per cent of the people of America were farmers. They constituted the soldiery that won the victory for independence. They furnished the man power and the provisions for the Army and the credit for the victory belonged to them, but no recognition of such credit has ever been accorded them. If it had not been for the farmer soldiery, there would not be a United States of America to-day. When they created conditions that brought the Government into being they had no thought that anyone would use the Government as an aid to private enterprise. But no sooner had the Government been instituted than so-called business men made politics a business, secured control of the Government and put it into business for their own advantage and profit. Politics is and has always been a business with those who would use the Government as an instrumentality for securing business advantages that do not arise naturally out of the business itself.

But when the farming industry seeks the aid of Government to place it in a similar place of advantage with that of other Government-aided industries and commercial enterprises the cry goes up that the Government must not be used to aid agriculture. How often have you heard the statement that the farmer should stay out of politics and devote his thoughts and energies to his farm? How often have you heard it said that you can not help agriculture by legislation? These statements were so often repeated that they were taken up parrotlike by the great masses of the people and believed to be truisms. Who is responsible for the propaganda that it would not be constitutional or sound to extend Government aid to the farming industry? It is the business interests that are already receiving and profitably enjoying governmental aid.

This Government is the common heritage of all the people, but if there is one class of our people that has a stronger claim to recognition under it than any or all other classes it is the farmers. They made it and they are relied upon to preserve it. Why is it the farmer has never secured the consideration he deserves and that the farming industry deserves under the economic policies of the Government? Let us look into this question to some extent.

It is admitted that farming is the vital and basic industry of the country. We can not survive as a nation without it. It would appear, then, to be the part of wisdom to properly protect this industry, upon which the life of the Nation rests and the security of the Government depends. But conclusions reached on the basis of cold reason do not take into consideration the human equation—ideals do not always square with practice. The line of human conduct diverges from the true pole of justice. We have not reached the plane of human development upon which every man recognizes a responsibility as his brother's keeper. Figuratively, if not literally, all nature is cannibalistic. It is a realm of tooth and claw. The progress of man up the ascent of time has been marked all the way by struggles against oppression and revolts against peonage. Governments have been established and overthrown. People revolt only under unjust oppression. To paraphrase a famous saying of Abraham Lincoln, you can not oppress all the people all the time, but you can oppress part of the people all of the time. There has never been a time in the history of man when government rested with like burden or like protection on all of the people. Government has always been used as an agency for pecuniary or economic advantage by those in control of it. Government has always been an instrumentality of privilege, but it has never been used to confer privilege on the farming class of people. Why have the farmers not been given governmental aid along with those engaged in other industries? The reason is the same as a wolf would advance against the protection of sheep in a fold. It does no good to curse the wolf, for he is merely responding to the instincts of his nature, but the sheep need protection.

The wolves of commerce want the farmer kept out in the open where he will be an easy prey. So far they have been able to keep him there. They are fighting desperately to keep him there now. Through long practice a belief has become fixed that the commercial dealer is entitled to the profits on agriculture. This is the belief of the dealer, and the farmer has acquiesced in it. A coyote would feel aggrieved if all of the chickens were shut up in a pen.

The industrial interests now enjoying governmental aid do not want the Government to extend a similar privilege to agriculture. They think it would minimize the benefits of their own special privilege. They do not hate the farmers, but they hate the prospect of having a dollar less in their own pockets. They hate the prospect of the farmer enjoying the prosperity which his production should bring. They love the farmer as a plodding, producing peasant. They say he should stay out of politics and not ask the Government to do anything to improve his business opportunities or to make more profitable to him his production. They want the farmer to sweat and toil and exhaust the fertility of his soil that they may reap the profits of his production.

This is the whole issue in this fight for farm relief legislation. It is not concern for the Government that prompts opposition to this bill. It is no new governmental principle that is sought to be established. The Government is already in business for certain interests and this bill seeks only to extend the principle to include agriculture. The opposition is prompted solely by private business interests and they are simulating concern for the Government only to divert attention from their real purpose.

The Constitution has never been an obstacle to powerful interests in securing such beneficial legislation as they desired. They can and have secured special advantage in an economic way under the Government without any concern as to constitutional authority.

It is only when legislation is sought in the interest of the great mass of the people that the special interests set up the cry that there is no power under the Constitution for such governmental aid.

The cry of unconstitutionality as to the McNary-Haugen bill is not a new cry. The voice uttering it is a familiar one. It is the same voice and the same cry that has been employed since the beginning of our Government to withhold from the masses the economic advantages that would lift them out of servitude to special privilege.

It is not necessary for me to discuss the provisions of this bill. The farmers are familiar with the principle which it embodies—they want it enacted. They want the principle adopted. If it should not work as successfully as the farmers hope it will it can be improved by amendment from time to time as its deficiencies may develop through operation.

Of course the commercial dealers in agricultural products are opposed to the bill because it would take the farmer out of their clutches. It would make him free. Likewise the money powers and the industrial powers are opposed to the bill because they do not want the great basic industry of agriculture to be on a basis of independence from their economic control. It would extend to 30,000,000 people a new freedom. For them it would be a new declaration of independence; not political independence, but economic independence.

The issue presents a cold business proposition. Shall the farmer have the profits of his industry or shall they continue to go to the commercial dealer and the market manipulator? A question of far deeper significance than that of mere dollars and cents is involved in the principle of this proposed legislation. It is a social question. Material prosperity is necessary to development and progress. Aspirations of mind and heart find no impetus in hopeless poverty. Respect for law and love of Government fail when the powers of Government are used for oppression and not for freedom.

The farms and rural communities of this country constitute the great reservoir from which flows the best citizenry of our Nation. Our ideals will perish and our grandeur fade when the soul of rural life is dead. Agriculture must be preserved for men and not for peasants. Thirty million farmers are determined to make the business of Government their business. They are in politics. Their interest compels it, their hearts are in it, and their courage rests in desperation. [Applause.]

Mr. KINCHELOE. Mr. Chairman, I yield to the gentleman from Georgia [Mr. TARVER].

The CHAIRMAN. The gentleman from Georgia is recognized.

Mr. TARVER. Mr. Chairman, I do not claim to be an agricultural economist, nor possessed of that wisdom necessary to the solution of our agricultural problem. In view of the recognized difficulty and intricacies of the question it presents, and the inability of many of the best intellects of the Nation to arrive at a conclusion on the subject satisfactory even to themselves, I have listened with great interest during the few months that I have been privileged to sit in this Hall with you to some of the solutions which have been offered from time to time; and have tried to find reasons for the assurance with which some of them have been urged. There are a number of Members of this body who have devised their own individual plans for farm relief, which have appealed to them with greater force than the plan which, after years of study, has received the approval of the Senate and, in major principle, of the House Committee on Agriculture. There are some of these who, having failed to secure sufficient support for their own plans, are now willing to yield to the judgment of the majority and support the principle of the McNary-Haugen bill, knowing that unless they do so they will have neglected their only chance at this session of the Congress to do anything for the American farmer; there are others who, wedded to their own ideas, are unable or unwilling to see any chance of benefit to agriculture through other channels, and will by their votes say that in preference to the legislation advocated by the majority they prefer no legislation at all.

The McNary-Haugen bill is not perfect; there are some provisions of it, and especially the House version of it, which impress me as unwise, but it compares favorably to my mind with the plans which have been offered as substitutes. I have studied some of those substitutes with all of the care of which I was capable, and have listened to the explanations of their authors with intense and sympathetic interest. These have been, in the main, to my mind explanations that did not explain; most of them appear to have been drawn with a view to carrying to the agricultural population some sort of donation from the Federal Treasury instead of a plan of business organization capable of operation in perpetuity and by which the farmer may protect himself against those who reap fortunes by speculating in his products and manipulating the markets where he must dispose of the fruit of his toil. They have proposed remedies temporary in character and palliative in effect. All of them proclaim their belief in the necessity for farm relief legislation, and at the same time there is evidence of a fear that if they support something carrying with it a plan by which the farmer may permanently organize his forces in a business way, so as to take care of himself like the independent citizen that he is, there may be some mistake in that plan, it may not operate as intended, and if it does not, it may cause the farmer to destroy politically its supporters. And so some may prefer to do nothing rather than to do something which might possibly not work out well in practice.

Mr. Sydney Anderson, president of the Millers' National Association, representing millers manufacturing 65 per cent of the total national production of flour, appeared before the committee in opposition to the McNary-Haugen bill; nevertheless, he made in the course of his testimony one statement which makes a deep impression on me. He said:

> Sound solution of commercial problems can only be developed as a matter of experience and through trial and error.

I agree with him; and so long as Congress timorously refuses to adopt any remedy for the unfortunate condition of agriculture in this country, for fear that it may adopt one which has defects, it is apparent that no experience testing the practicability of such remedies can be had, no trial of anything can be made, no progress can be effected. I have faith in the fairness of the people of my congressional district; in the campaign which resulted in my election to Congress, I laid my views on farm relief before them and advised with them upon that subject in which they were so vitally interested. I can not say that, with anything like unanimity, they would agree that the vote which I shall cast on this bill is a correct one, but I believe it will meet the views of the majority of them, which views it is my duty to express as nearly as I can. In voting for that bill I have faith that the people of my district will approve my having made a conscientious effort in the interests of justice toward our farming population by so doing. But if it should be otherwise, Mr. Chairman, permit me to say that the question of my political fortunes is of small concern beside the issue here involved; and if, by offering my political welfare as a sacrifice upon the altar of the farmer's need, I can contribute toward hastening the day when agriculture shall come into its own, and the farmer shall receive an adequate return for his toil and be enabled by his labor to support his family in comfort and to properly educate his children, I shall always be glad that I was privileged to make the sacrifice. I do not come from a State which, as a whole, is suffering from economic depression, or an applicant for national sympathy. Aside from her agricultural interests, the business skies were never brighter over Georgia than they are to-day, and she is striding gloriously forward to that era of wonderful development which is her just due, and will place her eventually in the forefront of the Nation. From 1912 to 1922, the increase in her per capita wealth was 63 per cent, as against a 50 per cent increase for the Nation as a whole, a 23 per cent increase for the State of Iowa from which one of the authors of this bill

[Mr. HAUGEN] comes, and a 48 per cent increase for the State of Oregon, home of Senator MCNARY. But, on the other hand, her agricultural depression since 1920 has far exceeded that of the Nation as a whole and of the States mentioned, as well as many others.

In the United States as a whole the value of farm lands in 1925 was 73 per cent of 1920 values; in Iowa, 66 per cent; and in Oregon, 87 per cent; whereas, in Georgia, it was only 50 per cent. The per capita valuation of such land during the same period decreased 33 per cent in the whole country, 35 per cent in Iowa, 21 per cent in Oregon, but 53 per cent in the State of Georgia. I insert as a part of my remarks certain statistics published by the Bureau of the Census which demonstrate the truth of these assertions; and in connection therewith certain statistics relating to my own congressional district in Georgia:

*Total wealth and per capita wealth farm values*

| | 1910 | | | 1920 | | | 1925 | | |
|---|---|---|---|---|---|---|---|---|---|
| | Total | Population | Per capita | Total | Population | Per capita | Total | Population | Per capita |
| United States | $40,991,449,690 | 91,972,266 | $446 | $77,924,100,338 | 105,710,620 | $737 | $57,017,740,040 | 115,378,094 | $494 |
| Iowa | 3,745,860,544 | 2,224,771 | 1,684 | 8,524,870,956 | 2,404,021 | 3,546 | 5,602,077,895 | 2,419,927 | 2,315 |
| Oregon | 528,243,782 | 672,765 | 785 | 818,559,751 | 783,389 | 1,045 | 714,410,119 | 863,064 | 828 |
| Georgia | 580,546,381 | 2,609,121 | 223 | 1,356,685,196 | 2,895,832 | 468 | 686,673,248 | 3,101,523 | 221 |
| Seventh congressional district | 47,448,798 | 223,453 | 212 | 110,961,050 | 236,027 | 470 | 63,054,055 | 244,205 | 258 |
| Bartow | 5,669,474 | 25,388 | 223 | 11,309,540 | 24,527 | 461 | 6,869,818 | 24,527 | 280 |
| Catoosa | 1,834,389 | 7,184 | 255 | 5,224,836 | 6,677 | 783 | 3,028,975 | 6,677 | 454 |
| Chattooga | 3,117,634 | 13,608 | 229 | 8,054,627 | 14,312 | 563 | 4,340,605 | 14,709 | 395 |
| Cobb | 6,400,440 | 28,397 | 225 | 17,684,704 | 30,437 | 581 | 8,179,299 | 31,593 | 259 |
| Dade | 828,593 | 4,139 | 200 | 1,875,187 | 3,918 | 479 | 1,119,687 | 3,918 | 286 |
| Floyd | 5,905,265 | 36,736 | 161 | 14,221,407 | 39,841 | 357 | 7,382,255 | 41,600 | 177 |
| Gordon | 4,326,161 | 15,861 | 273 | 10,466,796 | 17,736 | 590 | 4,677,402 | 18,799 | 249 |
| Haralson | 2,604,151 | 13,514 | 193 | 6,161,403 | 14,440 | 427 | 4,309,470 | 14,963 | 288 |
| Murray | 2,009,133 | 9,673 | 208 | 4,689,819 | 9,490 | 494 | 3,629,924 | 9,490 | 382 |
| Paulding | 3,198,663 | 14,124 | 226 | 6,977,434 | 14,025 | 497 | 2,962,048 | 14,025 | 211 |
| Polk | 3,653,041 | 20,203 | 181 | 7,275,668 | 20,357 | 357 | 4,847,220 | 20,443 | 237 |
| Walker | 5,089,374 | 18,692 | 272 | 10,532,338 | 23,370 | 451 | 7,688,695 | 26,019 | 296 |
| Whitfield | 2,812,480 | 15,934 | 177 | 6,487,291 | 16,897 | 384 | 4,018,657 | 17,442 | 230 |

*Per capita estimated value of all property*

| | 1912 | 1922 | Per cent increase |
|---|---|---|---|
| United States | 1,950 | 2,918 | 50 |
| Iowa | 3,465 | 4,274 | 23 |
| Oregon | 2,816 | 4,182 | 48 |
| Georgia | 802 | 1,302 | 63 |

If these figures are any criterion as to existing conditions, Members of Congress from Georgia should be far more concerned in correcting existing agricultural troubles than even the Representative from Iowa [Mr. HAUGEN] and the Senator from Oregon [Mr. MCNARY], who have led this fight. With the per capita value of farm lands in my State depreciating 53 per cent in five years, I have no excuses to offer for lending such support as I can to an effort to stop the demoralization of the agricultural industry by legislation which will give it a fair chance to reach a level with labor and capital otherwise invested, rather than standing idly by to trust the issue to the operation of those economic laws which it is said can not be influenced by statute law, but which have been so tremendously influenced by legislation in the interest of American manufactories, notably the tariffs acts. The South is becoming more and more a manufacturing section. It is interesting to note that in the last census report upon the cotton milling industry it is stated that of the total active spindle hours for March, 1928, 5,508,055,878 out of a total of 8,312,305,109 are credited to mills in the cotton-growing States. There is no reason that I can conceive why a southern Representative should be opposed to reasonable tariff provisions for the protection of American industries and American labor; but at the same time agriculture has furnished the basis for our civilization, provided a class of citizens who have staunchly upheld our moral and political ideals, furnished a large part of those who now operate our other industries and carry on our businesses; and no question can be of more vital importance to the people of the South than that of placing farming on a prosperous basis.

It is said that the McNary-Haugen bill will not accomplish this result; that may be true. But of those who have given study to the economic problems involved, whose sincerity can not be questioned, of the farmers themselves who have studied their own difficulties—and many of whom are better able to comprehend them than some of our statesmen—an overwhelming majority have approved the McNary-Haugen plan.

Personally, I have approached with some concern the consideration of the equalization-fee proposition, which is a part of the plan. I have not failed to realize the capital that can be made by adroit politicians against those who vote in favor of the equalization fee, denominated as a tax on the already overburdened farmer, and attacked as unconstitutional. But the only question in my mind aside from that of constitutionality is whether it will benefit in the long run the people whom I represent and is fair to the Nation as a whole. If I am satisfied about these features, then I am willing to subject myself to the criticism which I know voting for it will entail in some quarters.

If it is unconstitutional, of course, it will be neither a benefit nor a burden; its operation will be restrained by the courts long before it can be made use of. Yet, with able legal authorities supporting both sides of that question, and with at least considerable doubt with regard to it in the minds of most of us, there is no way to have that question determined except by enacting this law, in order that a test case may be made. If it were clearly unconstitutional, I would not vote for it; but with its constitutionality supported by the action of eminent lawyers in the Senate in giving it their vote and by the opinions of the two great Committees on Agriculture of the House and Senate, I feel constrained to so vote as to give an opportunity for it to be submitted to the courts for decision, when convinced that the effect of it, if it is constitutional, will be beneficial.

When we approach that phase of the matter, there is a disposition on the part of some of our southern representatives to insist that, whatever its effect upon other agricultural products, it can not be beneficial to cotton. I entertain the contrary opinion.

This bill, as passed by the Senate—and it is the Senate bill that I hope will be enacted into law—provides, first, for a revolving fund, the amount of which is fixed at $400,000,000, to be administered through a Federal farm board, composed of the Secretary of Agriculture and one man each from the 12 Federal land-bank districts, each of whom must be interested in agricultural productions. It is therefore to be a board friendly to agriculture. This board is authorized to make loans on agricultural products at the rate of 4 per cent, and to this extent the legislation meets the ideas of those who insist that this is as far as the Government should go. If the equalization fee is held unconstitutional, this part of the legislation will not be affected, and will accomplish a similar benefit to that proposed in other legislation before the Congress from which the equalization fee is eliminated.

If the equalization fee is enacted, its purpose, as we know, is to further provide stabilization funds for various agricultural products, which funds may be started by advances from the revolving fund, but must be maintained by profits arising from marketing agreements and from equalization fees. It is never to be used if the $400,000,000 loan fund provides a remedy. It is sought by this means to maintain a permanent organization by which orderly marketing of agricultural products may be brought about and the farmer relieved of the necessity of dumping his product on the market within a few weeks of the year at gathering time, by which procedure he lowers the price at the time he has to sell below the average for the year and sees others obtain profits which justly belong to him. The purchasing or otherwise withholding from the market under the direction of the farm board of seasonal or yearly crop surpluses, and the marketing of such surpluses in an orderly way at such times as will best maintain a stable market, is to be accomplished through the stabilization funds. In addition, the bill provides for a system of insurance by which associations with-

holding cotton from the market under the direction of the farm board may be guaranteed that the average price during what is denominated the delivery season will not be higher than the average price during the sale season for a small insurance fee estimated at $1 per bale and based upon statistics as to price fluctuations for the 20 preceding years or upon a nonpremium basis financed from the stabilization fund.

Under this system of insurance it will be possible for associations withholding cotton from the market to advance farmers depositing their cotton with them practically the existing market price at the time of delivery, with a chance—and a very good chance—to those farmers that their products will increase in value to their benefit, but without a risk that the market will decline—to their loss and damage. The insurance fund by which this is done under the nonpremium plan and the entire system of withholding cotton under marketing agreements is made possible through the equalization fee, by which every unit of a commodity contributes ratably to the expense. If it is a plan which works well in practice, why should any man object to contributing a reasonable part of the expense? If benefits are to be derived from withholding a crop surplus from the market by all producers of that commodity, and loans as authorized in the bill should prove insufficient to handle the situation, why should not all producers contribute to the necessary expense rather than that, under the present system, only a small percentage of the producers should attempt to do such withholding as is done, bearing all the expense, running all the risk, and being unable to perfect a sufficiently strong organization? I am informed by the president of the Georgia Cotton Growers' Cooperative Association that each member of that association had to pay last year, besides his dues, $5.70 for expense incurred in warehousing, insuring, and finally selling each bale of cotton. That was an "equalization fee" larger in amount than would ever be levied under this act and which produced infinitely less beneficial results than would probably follow the enactment of this law, which would effectually bring about the organized cooperation not of a few farmers but all of them.

Let those who fear the equalization fee remember that under the Senate bill it can not be levied unless loans from the revolving fund do not stabilize prices nor without the joint action both of the farm board and of an advisory council of seven representing the particular agricultural commodity upon which it is to be levied and named by the farmers themselves through their associations; and it is inconceivable that such a council would ever permit the levying of an equalization fee burdensome in proportion, or, if upon trial it did not prove satisfactory, would ever permit it to be relevied under any circumstances.

This law is to be administered by the friends of agriculture. It does not require the levying of an equalization fee, but leaves that in the joint discretion of the farm board and the advisory council. Is it revolutionary to be willing to try this plan, which carries with it such promise of benefit to the farmers of the country, when we know that if its success is not demonstrated, it will be abandoned, and can be even without a repeal of the law? In the name of common sense, are we not willing to trust the representatives of the farmers themselves to be honest and reasonable? Do we assume to be ourselves the only friends of agriculture and the only ones worthy of trust, unwilling to even invest discretion in others who will be equally conscientious? The man who is not willing to go to some extent into the field of experiment in trying to save the agricultural situation in this country is not willing to do anything; for their is no proven plan by which success is assured.

I am familiar with the arguments of those who claim that this is a price-fixing scheme, that the effect would be temporarily to raise prices, but that such increase in prices would be met with increase in production, again demoralizing the situation. There is no element of price fixing in this bill. The retirement of such a proportion of the cotton crop, for instance, from the market, as to bring about a temporary price out of proportion to the world's supply would be foolhardy and would not be attempted by men of the caliber of those who would be placed at the head of this organization. The law of supply and demand must function. Neither would it be possible to create a price for cotton in this country above the world price, since there is no tariff on cotton.

But to have a board provided with a sufficient organization and sufficient funds to counteract depressions of the market entirely unrelated to the law of supply and demand, by feeding the farmer's products to the market as they are needed by the consumers instead of as they are desired by the speculators, and to assure the farmer that he himself will receive what is paid by those who use his raw material and to protect him against violent fluctuations of prices brought about by "dumping" at market seasons and by speculation—that is not price fixing, but seems to me to be good business. It is not likely that any tremendous increase in the price average of cotton, for instance, will result from the passage of this law, but that an improvement of prices will result is fairly to be hoped. If such increase in production as might thereby be brought about should bring about an unwieldy surplus, the farm board is expressly directed by the proposed law to refrain from attempting to withhold the surplus from the market. It is presumed the board will have and will exercise good judgment, and it is not to be presumed that merely aiding the farmer to get a just price, based on supply and demand, instead of speculation, for his products will cause him to run wild on acreage and to overproduce.

I have discussed this bill at greater length than I had intended. It relates to a subject upon which I feel very deeply. In the northwest Georgia country, in which I live, hundreds and thousands of farm houses are vacant this year, and one of them is the house in which I spent the years of my childhood and which never before in over 40 years has been without a tenant. Desperate as the condition of many of our farmers is, there is no proposal here to make any donation from the Treasury; there is not anything in this bill that even squints at such a thing. The American farmer is not and never has been an applicant for charity; he has that independence of character native to the soil, but he has that sense of fairness which demands a square deal. I believe the Senate bill now before us will help to give it to him, and I am going to support it for that reason. (When we have practically donated billions of dollars to stabilize the industries and agriculture of Europe, it is hard to feel there are men unwilling to even loan the amount named in this bill to the American farmer to enable him to live, to educate his children, and to discharge well his duties as a citizen.)

The American people should not forget, however, that this bill does not outline the only legislative way by which Congress may be of benefit to the farmer. The effort to secure action in this House with regard to a Senate resolution demanding tariff revision, which the Democratic Members almost solidly supported, was a blow for farm relief. There are many tariff rates upon necessaries that the farmer uses, as well as upon goods necessary to the people as a whole, that are far in excess of what would be essential for the protection of American industry. This sort of relief—not for farmers alone, but for the people of the entire country—can only be looked for in the event of the election of a Democratic Congress.

Let not the farmer of the South forget that in the disposition of Muscle Shoals is bound up a vital question of relief for him. If it shall be determined that the manufacture of fertilizer there is practicable and will result in lowering the price to the southern farmer of this agricultural necessity, it will be of wonderful benefit to the farming industry in the South. Whether this problem, which has been before the Congress for nine years, will be disposed of during the present session is very doubtful; but the people will not forget that those who are in control of the calendar and are strangling all Muscle Shoals legislation are effectively denying another attempt at farm relief.

Nor is the matter of relief in the raising and sale of farm products the only sort of relief that the farming population of this country needs. They need schools in the rural districts capable of affording to their children educational opportunities equal to those given to the children of the cities. We are all one people, city and country alike, and to my mind every American child has a God-given right to an educational opportunity, without discriminating between those who live in thickly congested areas where great wealth abounds and those who live in the more sparsely settled sections where local taxation can not, without being extremely burdensome, sufficiently supplement State appropriations to afford proper schools.

The most practicable aid for rural sections in school matters lies in the adoption of measures like that of Senator GEORGE, already passed the Senate, to extend additional Federal aid to vocational agricultural education, and in school consolidation; but school consolidation can not be had until farmers have good roads; and the building of only great interstate thoroughfares and intercounty thoroughfares does not furnish a large percentage of our population with good roads. It is my earnest hope that the Committee on Roads will see fit to give approval to my bill which proposes to spend $25,000,000 annually on rural and star-route roads, not now included in Federal or State highway systems. To do that will help toward another kind of farm relief, but none the less beneficial for that reason; for, as you add to the farmer's convenience in the matter of roads, you likewise enable him to consolidate school districts and build and maintain better schools, make the country more

attractive for him and his family, and render it less probable that he will pull up stakes and go to the cities where he can properly educate his children.

There are many other ways in which aid could be afforded our farming population, and benefit thereby extended to our entire country, since we can not separate our country and its welfare from the welfare and prosperity of the farmer. A bill does not have to be labeled "farm relief" in order to be a measure tending to bring justice to agriculture; and I call upon all true friends of the farmer to support, not alone this measure, but all others which shall tend to fairly give the farmer a better opportunity to live and prosper.

It is a matter of vital interest to the southern farmer and laboring man as well, that a bar shall be fixed against the present tremendous influx of Mexican peons into this country, where they enter into competition with American labor, and, in addition, enable some sections of the West which were never able to produce cotton with American labor at a profit, to enter with the aid of cheap Mexican labor into competition with the cotton farmer of the South. Far too many propositions of this kind which directly affect the prosperity of our people are neglected, and Congress prevented, through the Republican organization in this House, from even having an opportunity to vote thereon.

I mention these matters which some may consider not material to this bill, for the purpose of calling attention to the fact that it need not be expected that Congress shall, at one fell stroke, bring about by legislative action agricultural prosperity in this country, but that the matter of remedying here and there various handicaps under which agriculture labors is one of many angles, requiring faithful and persistent effort along many lines by those who stand for justice to our farming population. [Applause.]

Mr. KINCHELOE. Mr. Chairman, I yield to the gentleman from Missouri [Mr. FULBRIGHT].

Mr. FULBRIGHT. Mr. Chairman, ladies and gentlemen of the committee, if there had been any doubt in my mind as to how I should vote on this bill, my good friend from Massachusetts has presented an argument that has satisfied me, and I am ready to vote for the bill. [Applause.] I have listened with a great deal of interest to the various arguments that have been presented, but none of them, so far as I have heard, has been more convincing, to my mind, of the real merits of this bill than the argument presented by the gentleman from Massachusetts. His argument against the bill has satisfied me that it will do for the farmer what the tariff has done for industry. When he said that it would bring better prices to the farmers of this country he was sincere, and that is what we want. [Applause.]

Mr. Chairman, for several months past the metropolitan press has told us of the marvelous prosperity that exists in this country and we have frequently heard it mentioned on the floor of the House. Even the President advises us that the country is very prosperous.

Agriculture is not only the basic but the greatest industry of the country. It is the foundation upon which permanent prosperity of all business, commercial, and industrial activities must rest. Therefore to determine the soundness of the claim that the country is experiencing a period of genuine prosperity an inquiry into the agricultural situation is very pertinent.

In November, 1927, the business men's commission on agriculture, created jointly by the Industrial Conference Board and the Chamber of Commerce of the United States, published its report, in which the extent and gravity of the agricultural problem is, in part, summarized as follows:

> Any serious and careful consideration of the situation and trend of American agriculture makes it clear that in relation to it the United States is confronted with a question of fundamental national concern and of permanent importance to the American people. The specific problems which face individual farmers, the different branches of the industry, and the several agricultural sections of the country are numerous, varied, and constantly shifting; but beneath all these there lies the fundamental question of the maintenance, improvement, and wise utilization of the irreplaceable land resources of the Nation, which must remain the basis of the prosperity and even of the very existence of our people.
>
> The evidence is clear that American agriculture has undergone a prolonged and trying readjustment to postwar conditions, in the course of which those engaged in it have suffered seriously in their relative economic prosperity in comparison with those engaged in other fields. On the human side it has been deprived of the energy, experience, and knowledge of many thousands of farmers who have lost their resources and have been persuaded or compelled to leave the farm for other occupations, while the land resources of the Nation have been impaired by neglect and by wasteful exploitation under the pressure to which those who have remained in the business have been subjected.

This commission was headed by Charles Nagel, from my own State, as chairman, a very able and prominent Republican.

During the past seven years more than 4,000,000 people left the farm. Approximately 650,000 farmers quit their calling in 1926.

In the past seven years approximately 4,000 bank failures occurred, over 90 per cent of which were in agricultural communities.

From 1920 to 1925 farm values decreased $30,000,000,000, while mortgage indebtedness of farmers increased from $7,860,000,000 to $8,500,000,000. The Secretary of Agriculture has estimated the farm-mortgage debt of the farmer for 1926 at $9,500,000,000. This does not include other indebtedness of the farmer.

In the year 1926 approximately 200,000 farms changed hands, many of them as a result of foreclosures, tax sales, and bankruptcy proceedings, and the net income from capital invested in agriculture decreased 21 per cent.

By reference to the Agricultural Yearbook published by Mr. Jardine, page 1204, we find the value of 22 leading farm crops dropped from $12,442,977,000 in 1919 to $7,036,786,000 in 1926, a shrinkage of $5,406,000,000 in seven years. The shrinkage in value of all crops for the same period was $6,340,000,000.

From page 1208 we find the average value of wheat per acre in the United States for the year 1925 was $17.65, while the cost of production, based on 1925 cost data, as shown on page 1209, was $22.41, a loss to the farmer of $4.76 per acre.

The value of corn per acre for the same year was $17.21, page 1208; against a cost of production of $24.97, page 1213; a loss to the farmer of $7.85 per acre.

Taking my own State and those immediately adjoining, the following estimate is found:

Average value of wheat per acre in the State of Missouri, $18.98; against a production cost of $19.36; loss to the farmer, 38 cents per acre.

Average value of corn per acre, $18.50; against a production cost of $20.40; loss to the farmer, $1.90 per acre.

Iowa: Average value of wheat per acre, $25.08; against a production cost of $22.55; gain to the farmer of $2.53 per acre.

Average value of corn per acre, $20.72; against a production cost of $26.14; loss to the farmer, $5.42 per acre.

Illinois: Average value of wheat per acre, $21.93, against a cost of production of $20.80; gain to the farmer, $1.13 per acre.

Average value of corn per acre, $19.04, against a production cost of $23.29; loss to the farmer, $4.25 per acre.

Arkansas: Average value of wheat per acre, $17.27, against a production cost of $18.37; loss to the farmer, $1.10 per acre.

Average value of corn per acre, $16.40, against a production cost of $20.89; loss to the farmer, $4.49 per acre.

Kansas: Average value of wheat per acre, $17.60, against a production cost of $15.37; gain to the farmer, $2.23 per acre.

Average value of corn per acre, $7.21, against a production cost of $13.68; loss to the farmer, $6.47 per acre.

The price level of cotton on the 15th day of December, 1926, was 19.4 per cent lower than the price level before the war.

On page 527, Commerce Year Book for 1926, we find No. 1 calfskin for the years 1912 to 1916 was 21.3 cents per pound; the price at the close of 1926 was 17 cents a pound, a drop of 4.3 cents per pound. On the other hand, men's shoes made from these hides, as will appear on page 538, advanced in price from $3.11 in 1913 to $6.40 in 1926. In other words, calfskin produced by the farmer in 1926 was selling approximately 20 per cent lower in 1926 than the same article was selling for in 1912 to 1916, while shoes made from those hides were selling 100 per cent higher in 1926 than in 1913.

The following comparison of the purchasing price of a bushel of wheat in 1913 and 1927 is very significant:

| | 1913 | 1927 |
|---|---|---|
| | *Bushels* | *Bushels* |
| Wagon | 70 | 130 |
| Double harness | 30 | 60 |
| Pair of shoes | 5 | 9 |

Wagons that sold for $60 in 1913 sold for $125 in 1927; self-binders that sold for $125 in 1913 sold for $235 and more in 1927; plows that sold for $14 in 1913, sold for $28 and up in 1927; shoes that sold for $4 in 1913, sold for $8 in 1927.

The farmer is compelled to sell the products of the farm at a price fixed by the middleman and buy his supplies at a price fixed by the manufacturer and distributor—he has no voice in either. He pays the freight both ways. The freight is added to the price of everything he buys and deducted from the price he receives for everything he sells. Freight rates to-day from outlying shipping points to primary markets are something near

45 per cent above pre-war rates and from primary markets to the seaboard about 73 per cent above pre-war rates, while in Canada freight rates are almost down to pre-war levels. To-day the Alberta, Canada, farmer can ship his wheat 1,243 miles for 26 cents per hundredweight, while the Denver-Galveston rate for 1,113 miles is 56½ cents. The rate from Chicago to Baltimore, 802 miles, is 21 cents; while the rate from Denver to Missouri River points, a distance of 538 miles, is 33 cents.

The Secretary of Agriculture, in speaking of freight rates as applied to wheat, says:

> These freight rates are large relatively as well as absolutely. They place the American wheat farmer at a disadvantage of from 4 to 10 cents per bushel in comparison with freight rates of his competitors in Canada and Argentina.

The farmer is unfairly discriminated against in the matter of taxation. Farm lands and urban real estate at the present time are taxed entirely out of proportion to other property and for benefits which are enjoyed by and should be paid by others.

The total value of tangible and intangible property for 1922 was $476,712,487,000; the value of real property and improvements, according to the Census Bureau, being $176,414,444,000. The total assessed value of all tangible and intangible property for that year was $124,616,675,000. The total assessed value of real property and improvements was $92,369,378,000. Deducting this amount from the assessed value of both tangible and intangible property we find the total assessed value of property other than real property and improvements to be only $32,247,297,000. From these figures we find that the farmer is paying on a valuation of approximately 55 per cent of his farm values while the owner of other property is paying only on a valuation of approximately 10 per cent of its value.

It has been estimated by the Secretary of Commerce, Mr. Hoover, that the wealth of the United States had increased about $85,000,000,000 since 1920. Yet, in spite of this fact, the farmers of the country have lost approximately $30,000,000,000. It is at once apparent that the farmer has not participated in the increased wealth of the country; on the other hand, the mortgaged indebtedness has increased to more than $12,000,000,000 with an average interest rate of approximately 7 per cent. In addition to the freight rates, interest, and tax burdens borne by the farmer, he is being plundered by the iniquitious schedules of the present tariff law.

I favor a fair and equitable tariff law, but it is estimated that the present tariff act costs the American people approximately $4,000,000,000 annually, about three and one-half billions of which goes into the pockets of the manufacturers and one-half billion into the Treasury. The per capita cost of the tariff is approximately $35 per year; to the farmer with a family of five, $175 per year.

An article in the American Farm Bureau Federation Weekly in its news letter of January 11, 1923, after an exhaustive discussion of the present tariff act in relation to the farmer, summarizes the situation as follows:

> Cost to the farmer of the tariff, $426,000,000; gain to farmers as producers, $125,000,000; net cost to agriculture of the tariff $301,000,000.

Paragraph 1504, schedule 15, under title 2 of the present tariff act, placing agricultural implements on the free list, was inserted to deceive the farmer. The paragraph closes with the very significant provision:

> *Provided*, That no article specified by name in title 1 shall be free of duty under this paragraph.

By reference to title 1 we find that everything of any particular value that is used in the manufacture of agricultural implements is subject to a high and excessive tariff, and it is estimated that it costs the farmer $75,000,000 annually on the purchase of agricultural implements alone.

Substantially everything that the farmer uses, eats, or wears bears the burden of a tariff; and if he is to get any substantial relief from Federal taxation, it must come from a revision of the tariff.

The farmers have long since learned that a tariff on farm products is of little or no benefit to him from the fact that he is compelled to sell his products upon an open world market. Regardless of politics they are to-day demanding a revision of the tariff act or such legislation as will make the tariff effective upon farm products. They want a tariff for all or a tariff for none.

The average annual price paid by the consumer for the products of the farm is in the neighborhood of $22,500,000,000; the amount received by the farmer approximately $7,000,000,000. In other words, out of every $3 paid for the products of the farmer by the consumer the farmer receives $1, while the middleman, the manufacturer, and the transportation companies get the other $2. The spread between the farmer and the consumer is unquestionably too great and absorbs the profits of the farm. Not only does the farmer suffer from high taxes, high interest rates, high freight rates, and the unwarranted spread between the farmer and the consumer, but he must contend with the elements and the forces of nature. He gambles with drought and with flood; with sunshine and with storm; with heat and with cold; and if he, perchance, is the winner, he faces an unequal battle with other groups to preserve the profit he makes.

In the development of the economic and legislative policies of this country we have entirely lost sight of the farmer. We need a positive, well-defined agricultural policy—we have none. Although agriculture is the basic industry of the Nation, and every other business depends upon it, the farmers, as a class, receive less benefit from legislation than any other group. We created the Interstate Commerce Commission, a Government agency that fixes the price of transportation, and enacted the Esch-Cummins law for the benefit of the railroad companies, thus enabling them to keep the rates high enough to give them a reasonable return. We created a Federal Reserve Board that fixes the price of credits, and the Federal reserve banks that protect the banking interests in times of distress. Labor has its immigration law that protects it from outside competition, and the Adamson Act that regulates its hours, while the great industries of the country have the Fordney-McCumber Tariff Act, which enables them to increase the price of their products above the world level.

For six years the farmer has appealed to the Government for economic justice, but his appeal has been in vain; he has petitioned, but his petitions have been ignored. In a country that boasts of its wealth and power, its liberality and progress, its philanthropy and love for humanity, the gross injustice to the American farmer during the past seven years is a national shame.

Diversification of crops has been suggested; this would not solve the problem. Cooperative marketing has been offered; this would not give the necessary relief. Eliminating the surplus has been advised; this would be dangerous. A shortage in manufactured products would be an inconvenience and actual shortage in food supplies would be a tragedy. A reasonable surplus in farm products is our insurance against hunger and famine.

Extension of credit has been proposed. Any measure proposing relief that provides for further involvement without a corresponding correction in the general price level equal to the cost of production is both economically unsound and morally wrong. The farmer wants credit to the extent that it may be necessary in the successful operation of his business; but what he needs most of all is a price for his product sufficient to give him a reasonable return on his labor and his investment, thereby enabling him to pay the debts he already owes.

There should be a redistribution of the tax burden that rests with undue severity upon the farmer; a readjustment of freight rates on farm products, lessening the cost of transportation; a sane revision of the tariff downward and the enactment of such legislation as will place the farmer on an equality with industry and labor.

The proponents of the so-called McNary-Haugen bill claim that it will have this effect. I think it is a step in the right direction; it is the only legislation that we will have an opportunity to vote upon that proposes to give relief to the farmer, and I believe that every Member who is interested in the welfare of the farmer should support it. We all know that we can not make matters any worse. I was born and reared on a farm; my heart beats in sympathy with the man who toils. There is no group of people more honorable, more patriotic, or more deserving than the American farmer, and he should no longer be ignored.

Objection has been made that this bill represents the work of farmers and farm organizations and not the intelligence of the committee that reported the bill.

For that very reason, if no other, we should support the legislation. Industry and big business had a voice in writing the tariff legislation; labor and labor organizations had a voice in writing legislation for their protection; banks and bankers had a voice in writing legislation for their protection; railroads and transportation companies had a voice in writing legislation for their protection. Why should not the farmers and farm organizations have a voice in writing legislation in the interest of agriculture?

If the farmer is given a voice in writing legislation in his behalf and it proves a failure, he will assume the responsibility and not hold it against us. We all recognize the fact that this piece of legislation is not perfect. The farmer understands that. We understand that it is an experiment in a great

measure. The farmer recognizes that fact. We all understand that any great piece of legislation is brought about more or less in a spirit of compromise. The farmer knows that.

If we pass this bill and it fails to function in the interest of the farmer, it can be and will be repealed. If it proves a success, the farmer will profit thereby.

The Republican Party in convention assembled at Cleveland, Ohio, declared:

> We recognize that agricultural activities are still struggling with adverse conditions that have brought deep distress. We pledge the party to take whatever steps are necessary to bring back the balanced conditions between agriculture, industry, and labor.

The Democratic Party in New York expressed itself in the following language:

> Stimulate by every proper Government activity the progress of the cooperative-marketing movement and to the establishment of an export marketing corporation or commission in order that the exportable surplus may not establish the price of the whole crop.

If we are to retain the confidence of the farmers in this country, such platform declarations must not be meaningless platitudes but should represent a sincere desire to relieve a great economic group that has long been neglected. As a result of agricultural depression small business concerns and small banks have failed by thousands. Unless relief to agriculture comes this condition will continue.

I want to see this bill passed because I am sincerely interested in relief for the farmer. I want to see it passed because the farmer is appealing for legislation that will place him upon an equality with other groups. I want to see it passed because the farmer is justly entitled to legislation that will enable him to rise above the position to which he has fallen as a result of economic injustice and discrimination. I want to see it passed because I believe it will rescue the farmer and help save the small business man and the small banker. This is the only farm-relief legislation that has a chance to pass at this session of Congress. Why not pass it and quit trifling with the farmer? If it does not work, repeal it and try something else.

If the President vetoes it, then his is the responsibility.

When Thomas Jefferson became President of the United States, formal receptions were abandoned and no distinction of persons was recognized at the White House. On certain days each week any one who wanted to see the President was admitted, whether clothed in buckskin breeches or as an aristocrat. Each received the same respectful hearing. This was distasteful to diplomats representing the royalties of Europe. Sir August Foster, secretary of the British legation at the time, sneeringly referred to Jefferson as being a tall man with a very red, freckled face and gray, neglected hair, and said that he "looked very much like a tall raw-boned farmer."

We need a Jefferson, a Lincoln, or a Jackson in the White House—a man that will hearken to the voice of the common people, a man interested in the West as well as the East, a man as respectful to the farmer as to the plutocrat—a red-headed freckled-faced Jeffersonian, "a tall raw-boned farmer"—that would be a mighty good description for a President to-day. That kind of a President would have saved the farmer from the tragedies of the past seven years.

The safety of American civilization—the future of this Government depends upon a happy, prosperous, contented, and virile farmer citizenship. The shadows of former nations and former civilizations cross the stage like the ghosts of Macbeth—Egypt, Assyria, India, Greece, Rome. Shall America and American civilization join the weird procession? God forbid. Corruption will be curbed, discrimination will cease, all wrongs will be righted, the American farmer will come into his own, and American civilization and American statesmanship will blaze out the path and make clear the way up which all the nations of the earth must come in God's appointed time. [Applause.]

Mr. KINCHELOE. Mr. Chairman, I yield 10 minutes to the gentleman from Illinois [Mr. MAJOR].

Mr. MAJOR of Illinois. Mr. Chairman, I ask unanimous consent to include in my remarks resolution passed by the Illinois Agricultural Association and a letter addressed to me from Mr. Earl Smith, president of the Illinois Agricultural Association, and to also include a short editorial from the Prairie Farmer.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent to extend his remarks in the RECORD in the manner indicated. Is there objection?

There was no objection.

Mr. MAJOR of Illinois. Mr. Chairman and Members of the House, no more pleasant task has been mine during this session of Congress than the opportunity to raise my voice and register my vote in favor of this proposed farm-relief legislation. For more than eight years this great basic industry of the Nation has been and yet is in a deplorable condition. It seems almost useless at this time to recount even briefly the history of this period. It is one of hardship and suffering, mortgage foreclosures, bankruptcies, and bank failures such as has never before been visited upon so large and important portion of our citizenship in the entire history of this country.

The saddest thing I know of is to see a man who has passed the meridian of life lose the earnings of a lifetime, without any fault of his own, and be forced to commence life's work over again to provide a home for his declining years. Yet that is just what has happened to a million farmers in America, and a million more farmers in America are holding their homes to-day through the leniency of their creditors, and unless some legislation is passed that will be beneficial to agriculture they, too, sooner or later must lose their homes.

Since the crisis came to agriculture in 1920 the farmers have suffered a loss of more than $30,000,000,000. Since 1920, 2,000,000 of our farm population have left the farms each year to mill around in the great cities looking for employment. Most of them have been forced to return to the farm, but the actual net loss in our farm population since 1920 is between three and a half and four million.

In 1910 we had a farm mortgage indebtedness in this country of three and a half billion. To-day the total mortgage indebtedness of the farmer is something like twelve and a quarter billion dollars.

Since the crisis came to agriculture in 1920 more than 3,000,000 acres of land that were once fertile have been abandoned because the farmers are unable to buy fertilizer to keep up the fertility of the soil.

The bank failures in this country during the past few years are a sure barometer of the agricultural situation. Since 1920 more banks have failed than in all the years from the Civil War down to that time. During the period of 11 years up to 1920 we had 642 bank failures. During the past seven years we have had 4,287 bank failures. The average number of such failures from 1909 to 1920 was 61 per year. In 1921 we had 396 bank failures, in 1922 we had 394 bank failures, in 1923 we had 314 bank failures, in 1924 there were 894 bank failures, in 1925, there were 550 bank failures, in 1926 there were 573 bank failures, and in 1927 we had 831 bank failures. The figures for the year 1927 do not include State bank failures from July 1 to December 31 of that year. Eighty-seven per cent of these bank failures have occurred in agricultural sections of the country and can be attributed almost entirely to the condition of agriculture.

Here is another evidence of the unbalanced condition so far as the wealth of America is concerned: The total deposits in all the banks of the United States on the 1st day of January, 1914, was $21,359,842,316. The total deposits in the banks of this country on the 1st day of January, 1928, had reached the enormous sum of $57,820,730,000, an increase in 14 years of $36,460,895,684. In other words, while the farmers of the United States have suffered a loss of more than $30,000,000,000, the industrial States of the Union have increased their wealth, as shown by the deposits in banks, more than one and one-half times in 13 short years. So it appears that the accumulations in banks as shown by their deposits have increased more in 13 years than in the whole preceding period from the time of the formation of this Government.

Mr. Chairman, the whole world has marveled at the rapid accumulation of wealth in this country during the last few years, yet no part of that great accumulation of wealth has come to the tillers of the soil. In 1914 the estimated wealth of the United States was $200,000,000,000. The estimated wealth to-day is three hundred and fifty-five and one-half billions of dollars. In other words, since 1914 there has been an increase in our national wealth of one hundred and fifty-five and one-half billions of dollars. We have accumulated more wealth since 1914 than England accumulated in all her 1,000 years of existence. The national wealth of England is rated at $120,000,000,000; France, seventy-five billion; Russia, seventy-three billion; Germany, seventy-five billion; Belgium, ten billion; Italy, twenty-six billion; and Canada, twenty-two billion. However, with all this great accumulation of wealth, so great as to stagger the imagination, farming conditions have gone from bad to worse.

As I said before, Mr. Chairman, it is futile to offer figures to prove the deplorable condition of agriculture. Any person who has given the slightest attention to the subject knows it is one of the most important and perhaps the most important problem of this generation.

### WHAT IS THE SOLUTION?

It is not an uncommon thing to hear some person say—in fact, I have heard it said in this very Chamber—if the farmer would go to work he could solve his own problems. This is an

unfair assertion. The American farmer has been at work. There is no class of people on earth whose industry compares with his. To-day, while we have only 7 per cent of the land of the world and 6 per cent of the population, we are producing 68 per cent of all the corn of the world, 65 per cent of all the cotton of the world, 46 per cent of all the tobacco of the world, 37 per cent of all the oats of the world, 24 per cent of all the wheat of the world, 18 per cent of all the flax of the world, 15 per cent of all the barley of the world, and 15 per cent of all the beans of the world. At the same time we are producing 76 per cent of all the apples that go into commercial use in the world, 37 per cent of all the oranges, and 36 per cent of all the lemons of the world. We have in this country 24 per cent of all the horses and mules of the world and 40 per cent of all the poultry of the world. We are producing between 33 and 35 per cent of the milk of the world, 30 per cent of the butter of the world, and from 12 to 15 per cent of the cheese of the world.

Another statement we often hear is that the farmers could take care of themselves if they would organize the same as other economic groups have done. That perhaps is true; but can they so organize? While they have made great strides along this line and can yet do much to improve their condition, the answer to this question must be "no." The diversified and conflicting interests of the dairy farmer of the East, the cotton farmer of the South, the stock farmer of the West and Southwest, and the grain farmer of the Central and Western sections are such that even the hope that they can ever be brought together in one great organization is a dream too good to come true. Notwithstanding the fact that the nature of their business is such as to prevent their organizing as other groups are organized, they must meet organized effort on every side.

Everything they buy comes from organized groups with the price fixed, everything they sell goes into the hands of organized groups with the price fixed not by the farmer but by the purchaser of his products. He is the one man who has nothing to say about the price he is to receive. He has to look at the morning paper to find out what the wheat exchange will give him for his wheat, what the packers will give him for his cattle and hogs, what the produce dealers will give him for his poultry and so on.

Another remedy often suggested is diversified farming. Good husbandry no doubt requires this practice and it has been practiced by successful farmers for years. In other words, farmers of my section, at any rate, have long ago learned it does not pay to put all their eggs in one basket. I doubt, however, if it can be successfully contended that any amount of diversity will solve the present problem. There are five major crops produced in this country—cotton, wheat, oats, hay, and corn—besides the many crops which may be designated as minor crops. Of the major crops it is estimated there are not less than 37,000,000 acres of land devoted to each or about 185,000,000 acres devoted to these five major crops. It is also estimated there are about 40,000,000 acres devoted to all minor crops. The same authority discloses the surplus acres in the major crops are about as follows: Cotton, 10,000,000 acres, wheat, 9,000,000 acres, hay, 8,000,000 acres, oats, 6,000,000 acres, and corn, 6,000,000 acres from which it is readily apparent that diversified farming or the substitution of minor crops for a portion of the acreage would not materially help the situation. A relatively small increase in the acreage of the minor crops would soon bring an overproduction in any one of them. With an overproduction to the extent of 39,000,000 acres in the five major crops, and with the total of 40,000,000 acres for the minor crops, it is quite apparent that diversified farming is not the remedy.

I have merely mentioned a few of the many suggested remedies, none of which seems practicable and none of which the farmers themselves approve.

THE PRESENT BILL

For more than four years the farm organizations of this country have been back of what is widely known as the McNary-Haugen bill. It passed both branches of the Sixty-ninth Congress but was vetoed by President Coolidge. The bill now before us has been substantially altered in many respects to meet the objections made by the President in his veto message of the former measure. The present bill in my opinion is a great improvement over former bills in that it is much more simple in its terms and mode of operation. Like its predecessors it is predicated on the almost universally admitted proposition that the great problem of Agriculture is that of surplus produced. Whenever there is a surplus, it is an economic adage that that surplus fixes the price for the whole commodity; and, inasmuch as it is necessary for the producers of the country to sell this surplus in foreign markets, it naturally follows that the price obtained by the American producer is the world price; and so long as we are working and living under a protective tariff, it is not fair to the farmers of the country to be compelled to sell their whole product on the foreign-price level, and buy that which they need and must have in a protected market. That is one of the cardinal principles and one of the foundation stones upon which this measure is built, as were all of its predecessors.

In this bill there are two separable remedies. The first adopts the remedy of loaning money to cooperative organizations for the purpose of promoting the orderly marketing of farm products, or to loan them money for the purpose of acquiring the surplus products and selling them or making such disposition of them as in their judgment seems best. Second, if the Federal farm board finds that the cooperative or designated agencies are unable or unwilling to take the surplus product of any commodity from the market, then it may under the method described in the bill, start an operating period on that particular commodity. An equalization fee will be collected from those who are to be the beneficiaries of this operation for the purpose of paying the cost of the same.

Mr. Chairman, in the few minutes at my disposal it is impossible to discuss what I understand to be the essential features of this bill. The declaration of policy as set forth in the bill states the general purpose in language more apt than I could use in describing it. I quote:

> In order to stabilize the current of interstate and foreign commerce in the marketing of agriculture commodities and prevent suppression of commerce with foreign nations in such commodities and unjust discrimination against such foreign commerce, it is hereby declared to be the policy of the Congress to promote the orderly marketing of agricultural commodities in interstate and foreign commerce, and to that end, through the execution of the provisions of this act, to provide for the control and disposition of surpluses of such commodities, to preserve advantageous domestic markets for such commodities, to prevent such surpluses from unduly depressing the prices obtained for such commodities and from causing undue and excessive fluctuations in the markets for such commodities, to minimize the speculation and waste in marketing such commodities, and to further the organization of producers of such commodities into cooperative associations.

Mr. Chairman, many arguments have been advanced against this proposed legislation, some with logic of course, but much without logic. No one, however, can deny or defend the present situation. It is a simple story, and it seems to me that anyone with an open mind who studies the legislation that has been passed in the last few years, and the increased cost of production, can understand why there is a farm problem. The farmer is not responsible for the farm problem. He is fighting for an opportunity to pass on some of his increased cost of production, and he will be able to do that if this bill shall become a law. It will give him at least a part of the protective tariff that was promised him when the Fordney-McCumber bill was passed, but which he can not get under the present conditions, when there is a surplus.

The trouble with many of our friends from New England, where their industries and products have been protected by the highest tariff ever enacted at the expense of all the people of this country, is that they think the United States of America is all located east of the Allegheny Mountains. They talk about class legislation in face of the fact that their section is the chief beneficiary of more class legislation than all the rest of the country combined.

It has also been argued that the farmers themselves are opposed to this bill. I can not speak, of course, for the farmers of America, not even for all of them in my congressional district, but without question the great majority of them are for the McNary-Haugen bill. I desire to read a portion of a letter addressed to myself from Earl C. Smith, president of the Illinois Agricultural Association, and also resolution passed by that organization at its last annual meeting, held in Rock Island, Ill., January 19 and 20 of this year:

JANUARY 27, 1928.

Hon. J. EARL MAJOR,
*House of Representatives, Washington, D. C.*

DEAR CONGRESSMAN MAJOR: We are at this time very much concerned over newspaper reports that there is some tendency on the part of some of the former supporters of the McNary-Haugen bill to weaken in their attitude toward some of its most essential features. Resolution 18 very carefully interprets the attitude of the farmers of Illinois on this question. Farmers of this State are in a worse financial condition than at any time since 1920, regardless of reports to the contrary emanating from supposedly authoritative sources. The facts are that the total value of agricultural production in Illinois is much less than in 1926. * * * We sincerely believe that any legislation yet suggested eliminating the equalization fee can not and will not operate effectively for the basic cash crops of Illinois.

We have put forth every possible effort to meet the President's criticisms as carried in his veto message of this legislation and believe careful study will reveal that of his 10 pointed criticisms 9 have been wholly met and the tenth, namely, the equalization fee, can not be further criticized on the same grounds as formerly. Senate bill 1176, carrying the equalization-fee principle, provides that it is only to be invoked if and when the administration falls down in properly controlling crop surpluses without costs and losses, which they have claimed they can do. Should there be costs and losses develop, and which we believe will be the case, then the equalization fee becomes imperative so as to spread the costs and losses in the operation of surplus control over all the producers of the commodity benefited.

We trust you will use your best effort in seeing that legislation embodying the principles as outlined in Resolution 18 is passed by the Seventieth Congress.

Sincerely,

ILLINOIS AGRICULTURAL ASSOCIATION,
EARL C. SMITH, *President*.

The resolution is as follows:

"This association has repeatedly gone on record as favoring a national agricultural policy by which farmers, at their own expense, may stabilize the prices for their farm crops by regulating their flow to market.

"To this end they have supported the various bills in Congress known as the McNary-Haugen bills.

"At the last session of Congress legislation of this character was passed by both Houses of Congress and vetoed by President Coolidge. The veto message enumerated many objections, all of which have been met in the McNary bill now before the Senate except the objection to the equalization fee, which is the heart of the bill and which must remain in any bill to accomplish the desired end, namely, an opportunity without Government subsidy for the American farmer to live according to American standards.

"The present Senate bill specifically affords an opportunity for those who contend that markets can be stabilized by loans to undertake to do so and invokes the equalization fee only when the cooperatives are unable to accomplish the desired result in this way.

"Congress and the President have repeatedly recognized cooperative marketing as the proper medium for handling surpluses and we call upon them to support this legislation, giving loans a chance, and invoking the equalization fee if and when loans fail.

"We assert that the equalization fee is essential and that to deny it to agriculture is equivalent to refusing agriculture a place in our complex protective system.

"We urge the enactment of legislation containing all the essential provisions of H. R. 7940 and S. 1176. We shall hold responsible, so far as it is within our power, any political party or any public official who contributes to the surrender of the principles of this legislation. We prefer no legislation at this time rather than to surrender these principles. We instruct our officers to make our position clear to Members of Congress and to the President."

FARMERS' LOBBY

Of all the absurd argument made against this bill, that which was designed to ridicule it because it was backed by a "farmers' lobby" is entitled to first prize. The gentleman from Louisiana [Mr. ASWELL] is one of those who seems to be greatly disturbed, and I really am surprised at his attack on this "monstrous lobby" which he claims has been operating here in Washington this winter in favor of the McNary-Haugen bill.

This "monster," of course, consists of nothing more than the legislative representatives of the farmers who are endeavoring to obtain for them economic justice. Surely this is neither a strange or novel procedure. What group is there in this country who does not have its representative here to look after its interest? It is a well-known fact when tariff bills and revenue measures are being considered the great financial and industrial interests of this country have their representatives swarming about the Capitol like buzzards around a dead carcass.

What do the railroads do when legislation is up in which they are interested? Anyone who was here will not forget the fight they made against the Howell-Barkley bill. At that time railroad lawyers and agents of various sorts were as thick about the Capitol as bees around the hive in harvest time.

Organized labor long ago learned what the farmers of this country have only recently realized—and that is in order to compete with other economic groups, and as a matter of self-preservation, they must be organized and must have their representatives on the job here. It may be a sad commentary on our system of Government and upon Congress, but it is a fact nevertheless, and everybody knows it, that to get action on a major proposition in Congress requires organized effort and without this character of effort no bill has any more chance of being enacted into law than a snowball has in Hades.

In my opinion the farmers of this country, with this "terrible monster," which is alleged to exist here, are to be complimented and congratulated, rather than condemned, on the fact that they have learned this great lesson. There is no more certain omen that I know of that the great agricultural industry of this industry is coming into its own and is prepared to wage a desperate fight to obtain its just share of that to which it is entitled. I hope the good work will go on and that this "farmers' lobby" will succeed in forcing upon this Congress and upon a reluctant administration, legislation which will materially improve the deplorable condition in which the farmers are now situated.

There is no publication more interested in the farmers of Illinois, none which circulates so widely, and none in which the farmers have more confidence than the Prairie Farmer; and I now desire to read an editorial which appeared in that publication in the issue of April 21:

THE M'NARY-HAUGEN BILL

The McNary surplus handling bill passed the Senate Thursday of last week by the substantial majority of 53 to 23. President Coolidge has indicated quite plainly that he will not sign the bill.

It is difficult to conceive of a President of the United States having an outlook so narrow and a vision of national welfare so shortsighted. During the administration of President Coolidge economic conditions—largely artificial conditions created by act of Government—have taken $20,000,000,000 away from the farmers of America and given it to the cities of the Nation. President Coolidge has not lifted a finger to stop this greatest economic crime of all history. He has shown more concern about the tariff on barium carbonate and pig iron than over the condition of agriculture.

Some time in the future, when the problem of the Nation's food supply will be so important that all other questions will be insignificant by comparison, people will read with astonishment the record of a generation that robbed its farmers and its soils with scant regard for the welfare of either. It will be amazed at the indifference of a Chief Executive who was so blind to a problem of such vital importance.

Farmers have worked out what they believe to be a helpful and practical remedy for the situation in which they find themselves, only to have it vetoed after being passed by Congress with a second veto in prospect.

Congress should temporize no longer, but arise in its might and pass the McNary-Haugen bill over the expected veto of the President.

Mr. Chairman, I hope the President will not veto this bill. I hope he will sign it and permit it to become a law. If it solves this mighty problem, it will be a boon to mankind; if it fails, we will at least have the satisfaction of knowing we tried. Professional people, business people, and laboring people can well join hands with the farmer in his struggle to be placed on a parity with other lines of human endeavor. Their welfare is so largely dependent upon his that to do otherwise would be folly.

A lot has been said concerning the political effects of this measure. It has even been said that certain candidates for the presidency are using it as a stepping stone for that great office. I don't know whether that is true or not. I hope it is not. I wish politics could be forgotten so far as farm relief is concerned. So far as I am concerned I am glad to follow the leadership of any man, whether he be a Democrat or Republican, who has a program designed to remove the shackles which bind our farmers to industrial slavery and thus permit the men and women who feed and clothe the people of the United States to walk out into the sunshine of blue heaven, as independent as our Government, as free as the air we breathe, as joyous as the springtime.

> Ill fares the land, to hastening ills a prey,
> Where wealth accumulates and men decay;
> Princes and lords may flourish, or may fade—
> A breath can make them, as a breath has made;
> But a bold peasantry, their country's pride,
> When once destroy'd, can never be supplied.

Mr. KINCHELOE. Mr. Chairman, I yield to the gentleman from Mississippi [Mr. LOWREY].

Mr. LOWREY. Mr. Chairman, the question has been raised as to whether or not the farmer really needs national legislation in his behalf. And it has been suggested that he has worked out his own salvation, or that conditions have become adjusted until the farmer is recovering from his former desperate condition without the aid of the Government.

It is true that the farmer is now farming more intelligently and more efficiently than ever before. The farmers in my part of the country are the kind of people who, through thrift and industry and intelligence, will get the most out of their opportunities that can be gotten. The fact that they have recovered somewhat from the staggering blows that have been dealt them,

or, indeed, that they have survived those blows at all, is due to their own ability to strive and in a measure succeed even against tremendous odds. The odds are still against them.

Farming still pays smaller profits on invested capital and offers less return for the effort expended than other lines of endeavor with which it deserves to be at least on an equal plane. The average annual income of the farm operator is $760, according to the report of the Department of Agriculture. And if we allow him 4½ per cent on his capital investment, this leaves him less than $520 for his year's work. Men employed in building trades, transportation service, manufacturing, and other lines of industry, performing less work, and work requiring no more knowledge and skill and experience in its performance than farming, are receiving average salaries of more than three times that amount. Yet with this the farmer's taxes have increased 150 per cent in 10 years, and by reason of high tariffs, high freight rates, high wages to labor in industry, and tremendous profits made in industry, the things which the farmer must buy have been kept at high price levels.

Is it any wonder that 750,000 families, or 3,000,000 people, have left the farms in one year's time to seek better opportunities in other lines of work in the towns and cities and to add to the numbers of unemployed in the thickly populated districts? Is it any wonder that values of farm lands have decreased steadily for 10 years and that no man with money cares to invest it in farm property? Abe Martin in a recent paper speaks of a young fellow whose father died and left him two farms, and who petitioned to have the will set aside, claiming that his father was evidently of unsound mind. This is a joke that is not all a joke. A young man who inherits a fertile farm may find that he has come into possession of a liability rather than an asset.

Thirty per cent of our people have been living on the farms. They have contributed far more than their pro rata of commodities for both interstate and foreign commerce, for local consumption, and for raw materials in manufacture and construction. They have contributed vastly more than their pro rata of brain and brawn, of good citizenship and constructive leadership. Yet this important 30 per cent of our population have been getting 10 per cent of our Nation's income, while 70 per cent of population engaged in other pursuits, productive and nonproductive, have been getting 90 per cent of the Nation's total income. This is not only unreasonable and unjust; it is bound to prove serious to our country, socially, economically, and politically. It is glaringly obvious that something is dangerously wrong and out of balance. The fact that our farmers are struggling along under this handicap, and even managing by painfully strict economy and hard work and good management to improve their situation a little is no excuse for permitting the discrimination against them to continue.

All other classes of our citizenship are enjoying the protection and benefits of national legislation. The National Government has supplied the manufacturer with the protection of the tariff wall; has put laws into effect to protect and promote the welfare of the laborer and industrial worker; has cared generously for banking and financial interests of the country with laws and governmental machinery for their benefit; has, besides providing loans and financial aid for the railroads, protected them with rates and a virtual guaranty of 6 per cent earning on their investments. And this protection has been given to other people and interests with a reckless disregard for the rights and the welfare of the farmer. The tariff wall takes $10 out of his pocket where it gives him one; the railroads derive their income more largely from him than from any other class; the protection given to labor in the trades and industries has actually cost the farmer money.

It is the duty of the Congress to pass legislation to aid the farmer; to reconstruct, revise, and in some cases repeal legislation that injures him, and, in a word, provide that he shall have the same opportunity as others to get a fair reward for his toil. The gentleman from New York [Mr. SOMERS] has suggested that the pending bill is class legislation, benefiting one group at the expense of others. But, as before said, the Congress has from time to time provided helpful legislation for the special benefit of almost every other group in business or industry. It is time for fair play with the farmer. Let us get back to the fundamental principle of equal rights to all and special privileges to none. Perhaps giving the farmer his rights is going to take away the special privileges of some one else. But justice demands it, and the safeguarding of our health and wealth and strength and security as a Nation demands it. This House during this session is passing legislation to expend more than $700,000,000 on the direct military activities of the Army and Navy. I make no argument against proper preparedness, yet while we are spending money for public defense why should we shrink from an appropriation to save to our country that sturdy rural population which is our very greatest defense and which means more to the safety of our country than any amount of military preparedness could mean? The decline of agriculture has spelled the decline of nations throughout the pages of history. The demand for national legislation in the interests of agriculture and on behalf of the agricultural people of this country is a demand that can not and must not be sidetracked or ignored or treated indifferently.

I am for the bill which is before us. I do not believe that it is a magic potion to cure all the ills of the farmer at once. Its authors and proponents claim nothing of the kind for it. It simply proposes to aid in the orderly marketing of the surplus of agricultural commodities, to prevent such surpluses from unduly depressing the market and to minimize speculation and waste in marketing, to provide that the farmer shall get a larger share than a mere $9,000,000,000 of the $29,000,000,000 which the consumer pays for his products.

I am in favor of other legislation in addition to this for the farmer. I have worked during this session especially hard for the passage of three other more or less important bills, the Morin bill for Muscle Shoals, the Reed bill for vocational agriculture, the Buchanan bill to aid in the eradication of the pink bollworm. And as I have said, I am in favor of the repeal or revision of some laws that hurt the farmer. The tariff and railroad-rate matters particularly need attention.

But the passage of the Haugen bill will not only put into operation a plan of real benefit to the farmer, but will declare to the Nation that we recognize the injustice of things as they are, and propose to correct them. Let us pass this bill, and let us who place the interests of the farmer above other considerations search every measure that is proposed to us with the question in mind, How will this affect agriculture? It is only by strict adherence to this kind of program, of guarding the farmer's interests in the same careful manner that other interests are guarded, every day and every hour, that the welfare of the rural population, on which depends the welfare of the Nation, can be properly cared for. [Applause.]

Mr. HAUGEN. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and Mr. TILSON having taken the chair as Speaker pro tempore, Mr. MAPES, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee, having had under consideration the bill (S. 3558) to establish a Federal farm board to aid in the orderly marketing and in the control and disposition of the surplus of agricultural commodities in interstate and foreign commerce, had come to no resolution thereon.

Mr. KINCHELOE. Mr. Speaker——

The SPEAKER pro tempore. For what purpose does the gentleman rise?

Mr. KINCHELOE. I would like to propound a question for information. Is it the intention of the majority leader to dispense with the business of Calendar Wednesday to-morrow?

The SPEAKER pro tempore. It is the intention of the majority leader to make such request as the gentleman from Iowa and others specially interested in the conduct of this bill may wish.

Mr. KINCHELOE. I would like, then, to ask if it is the intention of the chairman of the Agricultural Committee to ask for it?

Mr. HAUGEN. I can not inform the gentleman now. We will decide that on Wednesday morning.

Mr. KINCHELOE. Very well.

### ADJOURNMENT

Mr. HAUGEN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 10 o'clock and 47 minutes p. m.) the House adjourned until to-morrow, Tuesday, May 1, 1928, at 12 o'clock noon.

## COMMITTEE HEARINGS

Mr. TILSON submitted the following tentative list of committee hearings scheduled for Tuesday, May 1, 1928, as reported to the floor leader by clerks of the several committees:

### COMMITTEE ON THE JUDICIARY

(10 a. m.)

To provide an additional justice of the Supreme Court of the District of Columbia (H. R. 13116).

### COMMITTEE ON THE PUBLIC LANDS

(10.30 a. m.)

To promote the better protection and highest public use of the lands of the United States and adjacent lands and waters in northern Minnesota for the production of forest products, the

development and extension of recreational uses, the preservation of wild life, and other purposes not inconsistent therewith; and to protect more effectively the streams and lakes dedicated to public use under the terms and spirit of clause 2 of the Webster-Ashburton treaty of 1842 between Great Britain and the United States; and recreational and economic assets (H. R. 12780).

COMMITTEE ON BANKING AND CURRENCY

(10.30 a. m.)

To amend the act approved December 23, 1913, known as the Federal reserve act; to define certain policies toward which the powers of the Federal reserve system shall be directed; to further promote the maintenance of a stable gold standard; to promote the stability of commerce, industry, agriculture, and employment; to assist in realizing a more stable purchasing power of the dollar (H. R. 11806).

## EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

470. A letter from the Comptroller General of the United States, transmitting report in the matter of the claim of Pvt. Ralph Rhees, United States Army, pursuant to the provisions of the act of April 10, 1928 (Public, No. 247); to the Committee on Claims.

471. A letter from the Commission for the Enlarging of the Capitol Grounds, transmitting plans for the enlargement of the Capitol Grounds and recommending legislation which will authorize the Architect of the Capitol to proceed with said plans (H. Doc. No. 252); to the Committee on Public Buildings and Grounds and ordered to be printed.

472. A letter from the Acting Secretary of War, transmitting report from the Chief of Engineers, United States Army, on preliminary examination and survey of the Great Lakes, their connecting waters, principal harbors, and river channels, authorized by the rivers and harbors act approved January 21, 1927 (H. Doc. No. 253); to the Committee on Rivers and Harbors and ordered to be printed, with illustrations.

473. A communication from the President of the United States, transmitting supplemental estimate of appropriation for the Civil Service Commission for the fiscal year ending June 30, 1929, amounting to $31,600 (H. Doc. No. 254); to the Committee on Appropriations and ordered to be printed.

474. A communication from the President of the United States, transmitting paragraph of proposed legislation, the object of which is to authorize the payment from existing appropriations of two claims for damages to privately owned property, which have been considered and adjusted, in the sum of $51 (H. Doc. No. 255); to the Committee on Claims and ordered to be printed.

## REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. CARTWRIGHT: Committee on Indian Affairs. H. R. 12574. A bill to extend certain existing leases upon the coal and asphalt deposits in the Choctaw and Chickasaw Nations to September 25, 1932, and permit extension of time to complete payments on coal purchases; with amendment (Rept. No. 1421). Referred to the House Calendar.

Mr. UNDERHILL: Committee on the District of Columbia. S. 3565. An act to provide compensation for disability or death resulting from injury to employees in certain employments in the District of Columbia, and for other purposes; without amendment (Rept. No. 1422). Referred to the Committee of the Whole House on the state of the Union.

By Mr. DOYLE: A bill (H. R. 13429) granting an increase of pension to Max Drozdowitz; to the Committee on Pensions.

By Mr. DYER: A bill (H. R. 13430) for the relief of Arthur E. Rump; to the Committee on Claims.

By Mr. GREEN: A bill (H. R. 13431) granting an increase of pension to William A. Paulsen; to the Committee on Pensions.

By Mr. HOFFMAN: A bill (H. R. 13432) to compensate the Automatic Safety Davit Co., of Highlands, N. J., for the loss of a boat, *Modesty;* to the Committee on Claims.

By Mr. HOGG: A bill (H. R. 13433) granting an increase of pension to Clara A. Estry; to the Committee on Invalid Pensions.

By Mr. HUDDLESTON: A bill (H. R. 13434) granting a pension to George J. Lacey; to the Committee on Pensions.

By Mr. McKEOWN: A bill (H. R. 13435) for the relief of Carrie M. Haney; to the Committee on Claims.

By Mr. MEAD: A bill (H. R. 13436) granting an increase of pension to Mary J. Parker; to the Committee on Invalid Pensions.

By Mr. MERRITT: A bill (H. R. 13437) granting an increase of pension to Caroline R. Raynor; to the Committee on Invalid Pensions.

By Mr. NELSON of Missouri: A bill (H. R. 13438) granting a pension to Catherine Jones; to the Committee on Invalid Pensions.

By Mr. PRALL: A bill (H. R. 13439) for the relief of Morris Binswanger; to the Committee on Naval Affairs.

By Mr. SCHAFER: A bill (H. R. 13440) for the relief of H. P. Milligan; to the Committee on Military Affairs.

By Mr. SHREVE: A bill (H. R. 13441) granting an increase of pension to Elmer Harry Martin; to the Committee on Pensions.

By Mr. SPEAKS: A bill (H. R. 13442) granting a pension to Isabelle Eccles; to the Committee on Invalid Pensions.

By Mr. WARE: A bill (H. R. 13443) granting a pension to Joseph Rombach; to the Committee on Pensions.

By Mr. WHITE of Maine: A bill (H. R. 13444) granting an increase of pension to Arria S. Sargent; to the Committee on Pensions.

By Mr. WYANT: A bill (H. R. 13445) granting a pension to Alice Cribbs Kemp; to the Committee on Invalid Pensions.

## PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

7314. Petition of the Senior Christian Endeavor Society of the First Presbyterian Church of Export, Pa., urging the passage of the Sproul bill (H. R. 11410) to amend the national prohibition act; to the Committee on the Judiciary.

7315. By Mr. COCHRAN of Pennsylvania: Petition of George W. Elliott and numerous residents of Franklin, Pa., urging the passage of the Sproul bill (H. R. 11410) to amend the national prohibition act; to the Committee on the Judiciary.

7316. By Mr. COOPER of Ohio: Petition of citizens of Youngstown, Ohio, requesting increases in pension for veterans of the Civil War and their dependents; to the Committee on Invalid Pensions.

7317. By Mr. DENISON: Petition of various citizens of De Soto, Ill., urging that immediate steps be taken to bring to a vote a Civil War pension bill carrying the rates proposed by the National Tribune; to the Committee on Invalid Pensions.

7318. By Mr. EATON: Petition of L. C. Reading, of Somerville, N. J., and 17 other residents of Somerset County, N. J., urging immediate consideration of national flood control and adoption of such laws as will insure the impounding of unrestricted waters; to the Committee on Flood Control.

7319. By Mr. ENGLEBRIGHT: Petition of board of directors, Sacramento Chamber of Commerce, pertaining to Bureau of Internal Revenue studying depreciation and maintenance in mining industry; to the Committee on Ways and Means.

7320. Also, petition of board of directors, Sacramento Chamber of Commerce, pertaining to House bill 9282, being opposed thereto; to the Committee on Mines and Mining.

7321. By Mr. ROY G. FITZGERALD: Petition of 71 ex-service men of the wars of the United States in the Railway Mail Service, asking favorable consideration of House bill 10922, to allow credit in the Postal Service, day for day, for the time necessarily absent while in the military service of the United States; to the Committee on the Post Office and Post Roads.

7322. By Mr. GARBER: Petition of P. Harned, Jet, Okla., in support of Tyson-Fitzgerald bill for retirement of disabled emergency Army officers; to the Committee on Military Affairs.

7323. Also, petition of P. W. Henry, secretary of American Institute of Consulting Engineers (Inc.), of New York, in opposition to House bill 107; to the Committee on Interstate and Foreign Commerce.

7324. Also, petition of J. C. Reichert, secretary of the Maritime Association of the Port of New York, in support of House bill 11886 and Senate bill 3721, to establish the office of captain of the port of New York and to define his duties; to the Committee on Interstate and Foreign Commerce.

7325. By Mr. HOPE: Petition signed by the residents of Ford County, Kans., requesting more adequate legislation on the behalf of Civil War veterans and their dependents; to the Committee on Invalid Pensions.

7326. By Mr. HOWARD of Nebraska: Petition signed by Miss Cathern Lowe, of Neligh, Nebr., and nine other citizens of that city of Neligh, Nebr., praying for the passage of legislation granting more adequate pensions to Civil War veterans and the widows of Civil War veterans during the present session of the Congress; to the Committee on Invalid Pensions.

7327. By Mr. KNUTSON: Petition signed by E. P. Baron, of Pillager, Minn., and others, requesting higher rates for Civil War survivors and Civil War widows; to the Committee on Invalid Pensions.

7328. By Mr. LETTS: Petition of Mary A. Smyth and other citizens of Clinton, Iowa, urging the passage of the Civil War pension bill; to the Committee on Invalid Pensions.

7329. By Mr. MEAD: Petition of Henry Bischoff, of Buffalo, N. Y., favoring the passage of House Joint Resolution 273; to the Committee on Military Affairs.

7330. By Mr. O'CONNELL: Petition of the Merit Hosiery Co. (Inc.), Ozone Park, Long Island, N. Y., favoring a just adequate flood-control legislation; to the Committee on Flood Control.

7331. By Mr. PRATT: Petition of residents of Woodstock, Ulster County, N. Y., urging enactment of legislation to provide increased pensions for Civil War veterans and widows of veterans; to the Committee on Invalid Pensions.

7332. By Mr. ROBINSON of Iowa: Petition signed by Rev. Ralph Hall Collis, pastor of the Methodist Episcopal Church of Hampton, Iowa, and about 100 citizens of Hampton, Iowa, urging the passage of the Sproul bill (H. R. 11410); to the Committee on the Judiciary.

7333. By Mr. SHREVE: Resolution adopted by the American Legion, Department of Pennsylvania, indorsing the Tyson-Fitzgerald disabled emergency bills; to the Committee on World War Veterans' Legislation.

7334. By Mr. SINCLAIR: Letter from W. T. Wakefield, vice president Farmers' State Bank, Bentley, N. Dak., protesting against the Oddie bill; to the Committee on the Post Office and Post Roads.

7335. By Mr. SPEAKS: Petition signed by Alice E. Murphy and some 45 residents of Franklin County, Ohio, urging enactment of legislation for the relief of Civil War veterans and their dependents; to the Committee on Invalid Pensions.

7336. By Mr. THURSTON: Petition of 10 citizens of Shenandoah, Iowa, petitioning the Congress to pass pending legislation increasing the pensions to veterans of the Civil War and their dependents; to the Committee on Invalid Pensions.

7337. By Mr. WHITE of Kansas: Petition of L. Johnson and others, of Ellis, Kans., for the relief of Civil War veterans and widows of veterans; to the Committee on Invalid Pensions.

7338. By Mr. WYANT: Petition of Department of Pennsylvania, the American Legion, favoring passage of legislation for retirement of emergency Army officers permanently disabled; to the Committee on Military Affairs.

7339. Also, petition of members of First Presbyterian Church of Export, Westmoreland County, Pa., favoring passage of Sproul bill (H. R. 11410); to the Committee on the Judiciary.

7340. By Mr. ZIHLMAN: Petition of residents of Montgomery County, Md., urging immediate action on the Civil War pension bill in order that relief may be accorded needy and suffering veterans and widows; to the Committee on Invalid Pensions.

# SENATE

## TUESDAY, *May 1, 1928*

The Chaplain, Rev. ZeBarney T. Phillips, D. D., offered the following prayer:

O God, true source of light that never fades, of life that never dies, Thou hast set us in the bonds of time, this narrow space so crowded for life's purpose that day has worn to noon ere we have planned our work. Forgive the waste of precious moments by loitering feet and faltering wills. Teach us to lengthen our brief life by intensity of living, to fill swift hours with glowing deeds, and to speak kind words with breathless haste, for we pass this way but once. Grant this for the sake of Him whose footfalls on the shores of time made life's dim meaning clear, Jesus Christ our Lord. Amen.

The Chief Clerk proceeded to read the Journal of yesterday's proceedings, when, on request of Mr. CURTIS and by unanimous consent, the further reading was dispensed with, and the Journal was approved.

### INVESTIGATION OF CAMPAIGN EXPENDITURES

The VICE PRESIDENT. In accordance with Senate Resolution 214, agreed to yesterday, providing that a special committee of five be appointed to investigate campaign expenditures, the Chair appoints the junior Senator from Oregon, Mr. STEIWER; the junior Senator from Vermont, Mr. DALE; the junior Senator from South Dakota, Mr. MCMASTER; the senior Senator from New Mexico, Mr. BRATTON; and the junior Senator from Kentucky, Mr. BARKLEY.

### PETITIONS AND MEMORIALS

Mr. WARREN presented a resolution adopted by the Lions Club, of Lyman, Wyo., favoring the passage of legislation providing for aided and directed settlement on Federal reclamation projects, which was referred to the Committee on Irrigation and Reclamation.

Mr. BLAINE presented a petition of sundry physicians of Beloit, Wis., praying for the adoption of the so-called Robinson amendment to House bill 1, the tax reduction bill, authorizing the deduction in the computation of Federal income taxes of expenses incurred by physicians in attendance upon professional meetings, which was referred to the Committee on Finance.

Mr. STEPHENS presented a petition of sundry citizens of Aberdeen, in the State of Mississippi, praying for the adoption of the so-called Gillett resolution, being Senate Resolution 139, suggesting a further exchange of views relative to the World Court, which was referred to the Committee on Foreign Relations.

Mr. COPELAND presented a resolution adopted by the board of directors of the Buffalo (N. Y.) Chamber of Commerce, protesting against the passage of legislation "in normal peace times appropriating Government funds for the use of cooperative or other associations, groups, or corporations for the purpose of maintaining price levels and to control and handle surplus products," etc., which was referred to the Committee on Agriculture and Forestry.

He also presented a petition of sundry citizens of the State of California, praying for the passage of legislation requiring finger and foot prints of mother and child to be taken at birth on joined cards; the identification of persons injured, lost, or otherwise unmarked, and requiring that every alien and traveler carry an identification card with his own proper finger prints thereon, etc., which was referred to the Committee on Education and Labor.

REPORTS OF COMMITTEES

Mr. SHEPPARD, from the Committee on Military Affairs, to which was referred the bill (S. 3569) to equalize the pay of certain classes of officers of the Regular Army, reported it without amendment and submitted a report (No. 962) thereon.

He also, from the same committee, to which was referred the bill (S. 2990) to provide for the paving of the Government road extending from Lee & Gordon's mill to La Fayette, Ga., known as the La Fayette extension and constituting an approach road to Chattanooga and Chickamauga National Military Park, reported it with amendments and submitted a report (No. 963) thereon.

Mr. BROOKHART, from the Committee on Civil Service, to which was referred the bill (S. 2440) to provide that four hours shall constitute a day's work on Saturdays throughout the year for all employees in the Government Printing Office, reported it without amendment.

He also, from the Committee on Military Affairs, to which was referred the bill (S. 3459) to amend an act of Congress approved March 4, 1927 (Public, No. 795, 69th Cong.), to provide for appointment as warrant officers of the Regular Army of such persons as would have been eligible therefor but for the interruption of their status, caused by military service rendered by them as commissioned officers during the World War, reported it with an amendment and submitted a report (No. 964) thereon.

He also, from the same committee, to which was referred the bill (S. 652) for the relief of Edgar Travis, sr., reported it with amendments and submitted a report (No. 965) thereon.

He also (for Mr. ROBINSON of Indiana), from the same committee, to which was referred the bill (S. 1690) for the relief of Lewis W. Crain, reported adversely thereon.

He also (for Mr. ROBINSON of Indiana), from the same committee, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

A bill (H. R. 3241) for the relief of Seymour Buckley (Rept. No. 967); and

A bill (H. R. 8988) for the relief of Milton Longsdorf (Rept. No. 966).

Mr. HALE, from the Committee on Naval Affairs, to which was referred the bill (H. R. 9148) for the relief of Ensign Jacob E. DeGarmo, United States Navy, reported it without amendment and submitted a report (No. 968) thereon.

He also, from the same committee, to which were referred the following bills, reported them each with an amendment and submitted reports thereon:

A bill (H. R. 1951) granting six months' pay to Frank A. Grab (Rept. No. 969); and

A bill (H. R. 11978) granting six months' pay to Alexander Gingras, father of Louis W. Gingras, deceased, private, United States Marine Corps, in active service (Rept. No. 970).

Mr. BROUSSARD, from the Committee on Naval Affairs, to which was referred the bill (H. R. 10536) granting six months' pay to Anita W. Dyer, reported it without amendment and submitted a report (No. 971) thereon.

Mr. COPELAND, from the Committee on the District of Columbia, to which was referred the bill (S. 4063) to amend certain sections of the teachers' salary act, approved June 4, 1924, and for other purposes, reported it without amendment and submitted a report (No. 972) thereon.

Mr. HARRIS, from the Committee on Territories and Insular Possessions, to which was referred the bill (H. R. 9363) to provide for the completion and repair of customs buildings in Porto Rico, reported it without amendment and submitted a report (No. 973) thereon.

Mr. WAGNER, from the Committee on Military Affairs, to which was referred the bill (H. R. 971) for the relief of James K. P. Welch, reported it with an amendment and submitted a report (No. 974) thereon.

Mr. STEIWER, from the Committee on Claims, to which was referred the bill (S. 2304) for the relief of M. Seller & Co., reported it without amendment and submitted a report (No. 975) thereon.

He also, from the same committee, to which was referred the bill (S. 444) for the relief of H. C. Magoon, reported it with an amendment and submitted a report (No. 976) thereon.

TAX REDUCTION

Mr. SMOOT. Mr. President, from the Committee on Finance I report back favorably, with amendments, the bill (H. R. 1) to reduce and equalize taxation, provide revenue, and for other purposes, and I submit a report (No. 960) thereon.

I wish to say to Senators that I have had placed upon the desk of each Senator a copy of the bill, together with a copy of the report. I discovered this morning that there are one or two errors in the report as it came from the Printing Office, but they are not material ones. For instance, a table has been printed on page 5 instead of page 4. We will correct the report in those minor respects, but there is no material error in the report which has been placed upon the desks of Senators.

I wish also to give notice that the Finance Committee, at a meeting held on Saturday last, decided that, if agreeable to the Senate, we would call up the bill for consideration on Thursday next, at which time I hope to be prepared to speak upon the bill and explain each of the amendments to existing law as provided therein.

Mr. FLETCHER. Does the Senator mean Thursday at the close of morning business or at 2 o'clock?

Mr. SMOOT. At the close of the routine morning business, I hope.

The VICE PRESIDENT. The bill will be placed on the calendar.

AMENDMENT OF FEDERAL RESERVE ACT

Mr. GLASS. Mr. President, at the request of the Senator from New Jersey [Mr. EDGE] I present, from the Committee on Banking and Currency, a unanimous report on the bill H. R. 10151, and ask for its immediate consideration. I also submit a written report (No. 961).

The VICE PRESIDENT. Is there objection to the request of the Senator from Virginia?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 10151) to amend section 9 of the Federal reserve act, and it was read, as follows:

*Be it enacted, etc.*, That section 9 of the Federal reserve act be amended by adding thereto a new paragraph as follows:

"All banks or trust companies incorporated by special law or organized under the general laws of any State, which are members of the Federal reserve system, when designated for that purpose by the Secretary of the Treasury, shall be depositaries of public money, under such regulations as may be prescribed by the Secretary; and they may also be employed as financial agents of the Government; and they shall perform all such reasonable duties, as depositaries of public money and financial agents of the Government, as may be required of them. The Secretary of the Treasury shall require of the banks and trust companies thus designated satisfactory security, by the deposit of United States bonds or otherwise, for the safe-keeping and prompt payment of the public money deposited with them and for the faithful performance of their duties as financial agents of the Government."

Mr. CURTIS. Mr. President, I should like to know the changes the bill makes.

Mr. GLASS. I can explain it in a word. It grants to member State banks of the Federal reserve system the privilege of being designated as Government depositaries along with national banks.

Mr. CURTIS. That is the only change made?

Mr. GLASS. That is the only change.

Mr. CURTIS. I have no objection to the passage of the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. HALE:

A bill (S. 4287) for the relief of William C. Whitehead; to the Committee on Naval Affairs.

By Mr. SACKETT:

A bill (S. 4288) authorizing the State Highway Commission, Commonwealth of Kentucky, to construct, maintain, and operate a bridge across the South Fork of the Cumberland River at Burnside, Pulaski County, Ky.;

A bill (S. 4289) authorizing the State Highway Commission, Commonwealth of Kentucky, to construct, maintain, and operate a bridge across the Cumberland River at or near Neelys Ferry in Cumberland County, Ky.;

A bill (S. 4290) authorizing the State Highway Commission, Commonwealth of Kentucky, to construct, maintain, and operate a bridge across the Cumberland River at or near Burkesville, Cumberland County, Ky.;

A bill (S. 4291) authorizing the State Highway Commission, Commonwealth of Kentucky, to construct, maintain, and operate a bridge across the Cumberland River at or near Arat, Cumberland County, Ky.;

A bill (S. 4292) authorizing the State Highway Commission, Commonwealth of Kentucky, to construct, maintain, and operate a bridge across the Cumberland River at Blacks Ferry, near Center Point, in Monroe County, Ky.;

A bill (S. 4293) authorizing the State Highway Commission, Commonwealth of Kentucky, to construct, maintain, and operate a bridge across the Cumberland River at or near Creelsboro, in Russell County, Ky.;

A bill (S. 4294) authorizing the State Highway Commission, Commonwealth of Kentucky, to construct, maintain, and operate a bridge across the North Fork of the Cumberland River at Burnside, Pulaski County, Ky.; and

A bill (S. 4295) authorizing the State Highway Commission, Commonwealth of Kentucky, to construct, maintain, and operate a bridge across the Cumberland River at or near the mouth of Indian Creek, in Russell County, Ky.; to the Committee on Commerce.

By Mr. ROBINSON of Arkansas:

A bill (S. 4296) for the relief of the First National Bank of El Dorado, Ark.; to the Committee on Claims.

By Mr. SHORTRIDGE:

A bill (S. 4297) granting a pension to John H. Franey; to the Committee on Pensions.

By Mr. McNARY:

A bill (S. 4298) granting an increase of pension to Sarah E. Morse; to the Committee on Pensions.

By Mr. CURTIS:

A bill (S. 4299) granting an increase of pension to Honora Dorsey (with accompanying papers); to the Committee on Pensions.

By Mr. HARRIS:

A bill (S. 4300) for the relief of the State of Georgia; to the Committee on Appropriations.

By Mr. REED of Pennsylvania:

A bill (S. 4301) for the relief of Theodore H. Bryant; to the Committee on Military Affairs.

By Mr. SIMMONS:

A bill (S. 4302) to authorize the Secretary of Commerce to convey the Federal Point Lighthouse Reservation, N. C., to the city of Wilmington, N. C., as a memorial to commemorate the Battle of Fort Fisher (with accompanying papers); to the Committee on Commerce.

By Mr. COPELAND:

A bill (S. 4303) for the relief of Morris Binswanger; to the Committee on Naval Affairs.

By Mr. KENDRICK:

A bill (S. 4304) to provide for the storage for diversion of the waters of the North Platte River and construction of the Casper-Alcova reclamation project; and

A bill (S. 4305) to provide for the storage for diversion of the waters of the North Platte River and construction of the Saratoga reclamation project; to the Committee on Irrigation and Reclamation.

By Mr. FESS (for Mr. WATSON):

A bill (S. 4306) granting a pension to Minerva Alice Hutton; to the Committee on Pensions.

By Mr. WAGNER:

A bill (S. 4307) to provide for the emergency construction of certain public works for the relief of unemployment during the periods of business depression; to the Committee on Education and Labor.

CHANGES OF REFERENCE

On motion of Mr. ODDIE, the Committee on Naval Affairs was discharged from the further consideration of the bill (S. 1689) for the relief of the Sachs Mercantile Co. (Inc.), and it was referred to the Committee on Claims.

On motion of Mr. KEYES, the Committee on Public Buildings and Grounds was discharged from the further consideration of the joint resolution (S. J. Res. 132) to create a commission to secure plans and designs for and to erect a memorial building for the National Memorial Association (Inc.), in the city of Washington, as a tribute to the negro's contribution to the achievements of America, and it was referred to the Committee on the Library.

AMENDMENT TO SECOND DEFICIENCY APPROPRIATION BILL

Mr. FESS submitted an amendment intended to be proposed by him to the second deficiency appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed, as follows:

At the proper place in the bill, insert:

"For services performed during the summer of 1927 in the removal and cleaning of books and documents incident to the renovation of the Senate library and document room, as follows: To James Payne, $300; to Richard Blount, $200; in all, fiscal year 1928, $500."

THE FUNDAMENTALS OF DEMOCRACY, BY LOUIS LUDLOW

Mr. ROBINSON of Arkansas. Mr. President, I ask leave to have inserted in the RECORD an address by Mr. Louis Ludlow on the subject of the Fundamentals of Democracy. Mr. Ludlow has been for many years a member of the Senate press gallery, is an experienced newspaper correspondent, and a brilliant student of public questions. He has discussed this important subject in a very interesting way. I ask, therefore, that it be printed in the RECORD.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. Ludlow's address is as follows:

Mark, the incomparable historian, says of Jesus of Nazareth that the common people heard Him gladly. So will they always hear, gladly and thankfully, the doctrines of Thomas Jefferson; for it is no profanation of the God-given mission of our Saviour to say that the aims and philosophy of our great Democratic patron saint were in striking and complete harmony with the philosophy and works of the Nazarene. Both strove to exalt the dignity and worth of the individual man. In a world where wealth and social caste and privilege wield such tremendous influence, both saw with perfect vision that greater than all these, greater than principalities and powers, is the human being who, though born naked into the world, nevertheless possesses a kingly dignity and certain inalienable rights, including the right to life, liberty, and the pursuit of happiness, which are coexistent with his birth and coextensive with his being.

Just as the Nazarene by his whole life and example, and especially by his inspired utterances on the Mount, pointed out that the strong and the rich and powerful have no corner on heaven, so Jefferson demonstrated that the prime aim and purpose of temporal government should be to accomplish the greatest good for the greatest number.

Democracy, as we understand it, whose prophet was Jefferson and whose militant defenders were Jackson, Cleveland, and Wilson, is not a new thing either in idea or in enjoyment. It is as old as time. It is an outburst against the unspeakable forces of tyranny that would put fetters on the human spirit. In ages agone it was the flaming sword of the martyrs who died that their fellow men might be free. To-day in our own country it is the voice of indignation protesting against the economic enslavement of millions of Americans through perverted governmental practices made possible under privileged statutes. It is the outcry of local self-government against the centralization of all power at Washington. Democracy is everywhere and all of the time, decade after decade and century after century, the best friend of the common people, the same sort of people that heard Jesus gladly.

Throughout the receding centuries democracy's aim has been to help the common man, first to strike off his shackles, then by ever-widening influence of education and its handmaiden, the ballot, to lead him to that high estate of usefulnesss and honor where he becomes a free agent, an ornament to society, and a credit to the God who made him. The long and toilsome upward march has been one of blood and pain. The pages of history teem with epics of the grueling advance, of harrowing conflicts between the embattled hosts of repression and the heroes who sacrificed their all that the human spirit might be free. No longer than the century before the birth of Jefferson the theory that a few men were endowed with the divine right to exploit all other men still had firm lodgment in the world, and about 5 per cent of the earth's population made serfs of all the rest.

Then came the American Revolution, and out of its travail was born democracy's great opportunity. "We declare it to be self-evident that all men are created equal," wrote Jefferson in the opening sentence of the Declaration of Independence—equal not in pedigrees and

coats of arms, but equal in the sense of being entitled, as God's creatures, to enjoy equal rights and opportunities under the law. Never was a sublimer principle struck from the brain and heart of man. It was an audacious challenge to the old order—the order whose eternal answer to aspiring manhood was "Death to liberty!"

Upon this declaration was waged a war that rocked two continents. The doctrine of the divine right of kings was shot to death on a hundred battle fields, and while the cataclysm raged the moving hand of God wrote the end of despotism in the Western Hemisphere and brought forth the greatest charter of liberty the world has ever known—the Constitution of the United States.

But while this was an epochal victory for democracy it was not conclusive. Kingly oppression was no more, but the oligarchy of caste was left to exert its baneful influence in the new Republic. The divine right of kings was dead and buried, but in its place sprang up the doctrine of a ruling class that boldly asserted its title to the usufruct of office, a class whose sway was to be perpetuated through privileged statutes and a strongly centralized government, compact and wieldy in the hands of those who arrogated to themselves the ruling power. Jefferson defied this challenge to the new freedom, and his dynamic rejoinder, "Equal rights to all, special privileges to none," became the shibboleth of the undefiled democracy.

For more than a century the conflict has waged between the ideas of Jefferson, emphasized and epitomized in his immortal utterance that "all men are created equal," and the ideas of those who think some men are born to be governed and browbeaten and exploited by others. As the antidemocratic forces gained ascendancy we have seen Jefferson's cherished motto, "the least governed, the best governed," challenged by the newer version of the plunderbund, "the most governed, the best governed." We have seen local self-government all but effaced by the strong arm of Federal interference. We have seen 51,482 laws written upon the Federal statutes books, mostly designed to regulate the citizen in respect to things wherein he should be his own judge, and he finds himself hedged about with a bewildering maze of "Thou shalts" and "Thou shalt nots." We have seen bureaucracy wax rampant and the country overrun by Government agents, inspectors, and spies, comprising at this very hour an inquisitorial army of more than 30,000, who pry into the business of the citizens and make themselves generally obnoxious. We have seen the taxing power grievously perverted to build up colossal fortunes from the toil of the masses. To-day in one of our large cities we see the holders of some of these legislative-made fortunes lolling in luxury beyond the richest dreams of avarice, while all around the city's environs the children of coal miners, distressingly poor, on the verge of starving and freezing, are crying for food and clothing. I can not but think when I view the situation at Pittsburgh how shamefaced these holders of fortunes of special privilege would feel if Jesus of Nazareth should walk among those children to-day, put his loving arms around them, and say:

"Suffer little children to come unto Me, for of such is the kingdom of heaven."

We have seen the beneficiaries of improper and excessive use of the taxing power salve their consciences and make a great show of benevolence by establishing "foundations" and "endowments" and giving away chains of libraries, using for this largess money that should never have been taken from the pockets of the people in the first instance.

As a natural consequence of the special privilege which Jefferson abhorred, we have seen stark and hideous scandal creep into the public service. We have seen seats in the highest forum of legislation—the Senate of the United States—bought and sold like cattle in the market places. Where the prizes of privileged legislation are great, where the pawns of office allure, there will always be men who will be tempted and men who will fall. Through the revelations brought about by a great Democratic statesman, Senator THOMAS J. WALSH, of Montana, we have seen the little black satchel and the king's ransom which it contained—a faithless public servant's reward for betraying a sacred trust. Here in Indiana the grabbing for special favors in this, that, and the other form has brought about a condition where the whole State stands appalled by the looseness of morals of our public officials and by the unconscionable trafficking that has been going on.

The State of Indiana has produced many great Democrats who are worthy to walk down the corridors of history by the side of Thomas Jefferson, men who though dead still live—such men as Thomas A. Hendricks, Daniel W. Voorhees, Claude Matthews, Isaac P. Gray, Joseph E. McDonald, David Turpie, Thomas R. Marshall, John W. Kern, Benjamin F. Shively, Samuel M. Ralston. When we grow sick of special privilege, sick of seeing some men live off of the life energies of others, sick of a world where justice at times seems not only blind but paralytic, let us go into our cloistered places and commune with these great spirits, to the end that we may do our part in our own day to usher in a world that will be motivated by love, based upon equal rights—a world in which the human spirit will at last be free.

## PRESIDENTIAL APPROVALS

A message from the President of the United States, by Mr. Latta, one of his secretaries, announced that the President approved and signed the following acts:

On April 28, 1928:

S. 1428. An act for the relief of R. Bluestein;

S. 2126. An act to provide for compensation for Ona Harrington for injuries received in an airplane accident;

S. 2926. An act for the relief of the Old Dominion Land Co.;

S. 3366. An act to authorize a per capita payment to the Shoshone and Arapahoe Indians of Wyoming from funds held in trust for them by the United States;

S. 3506. An act for the relief of the owners of the British steamship *Larchgrove;* and

S. 3507. An act for the relief of the Eagle Transport Co. (Ltd.) and the West of England Steamship Owners' Protection & Indemnity Association (Ltd.).

On April 30, 1928:

S. 1181. An act authorizing an appropriation to be expended under the provisions of section 7 of the act of March 1, 1911, entitled "An act to enable any State to cooperate with any other State or States, or with the United States, for the protection of the watersheds of navigable streams, and to appoint a commission for the acquisition of lands for the purpose of conserving the navigability of navigable rivers," as amended.

## RIKER MISSISSIPPI SPILLWAY PLAN FOR FLOOD CONTROL

Mr. FRAZIER. Mr. President, a few days ago I introduced a resolution calling for a report from the Chief of Army Engineers on the Riker Mississippi spillway plan for flood control. On April 28, as found in the RECORD of the proceedings of that day, at page 7367, Major General Jadwin, Chief of Engineers, submitted a reply, from which I quote as follows:

> Referring to the resolution passed by the Senate April 25, 1928, requesting the Chief of Engineers to report to the Senate upon the merits of the Riker Mississippi spillway plan for flood control, I attended the hearing of the Committee on Commerce on February 11, 1928, and heard Mr. Riker describe to the committee his Mississippi spillway plan for flood control. My comments thereon are printed on pages 652 and 653 of the hearings before the Committee on Commerce, United States Senate, Seventieth Congress, first session, part 3.

The Chief Engineer made a very short statement at that time in the hearings, and among other things he said, speaking of the spillway plan:

> It is very alluring in many ways, but we could not bring ourselves to recommend it, largely on quantitative grounds, and on the ground that the way that we believe the river wants to work it does not incline to work very much in straight lines.

In other words, he gave the impression that the spillway is a sort of a river. Of course, the spillway is not a river. It is merely a spillway to take care of surplus flood waters. Waters coming down the spillway would go straight if there was no obstruction, just as the water coming down a river would go straight if there was no obstruction. He makes one or two other comments, but nothing very particular. In his letter he says further:

> On April 16 I examined the model of the Riker spillway plan on exhibition in the basement of the Senate Office Building.
>
> Flood ways for the relief of the main river below the mouth of the Arkansas are essential for flood control of the Mississippi if the maximum possible flood is to be protected against. But flood ways in the St. Francis or Yazoo Valleys are not an essential part of the plan and would result in claims for damages as lands have not been subject to overflow frequently in recent years.

Mr. President, I understand the Yazoo and St. Francis Valleys were flooded a year ago this spring and that in order to take care of the flood situation there must be something done to control the excess flood waters. General Jadwin says that claims for damages to lands would result. I do not know what the Chief of Engineers means by that, because if the proposed spillway plan is adopted, the lands would be bought that would be occupied by the flood way, and if it controlled the flood there could be no possible further damages to lands.

Further in his letter he said:

> The levees proposed along the Riker flood ways are, in my opinion, too high for safety, and the estimated cost for the whole project—$785,000,000—is too low.

The levees proposed on the Riker spillway are entirely different from the levees on the Mississippi River, inasmuch as they are proposed to be 50 feet high, 300 feet wide at the base, and about 130 feet wide at the top, which is altogether a different proposition from building levees along the river banks. The higher the levee the more weight there is to hold the levee compact and not allow seepage through the levee.

He states that the cost would be too much. Of course, that is his opinion as against that of other engineers. He said:

The low unit cost for earthwork is out of line with the experience of contractors and of the Government on work of a similar nature. The dredge proposed by him for use in building these levees is of a design that has not been proved.

In other words, the Chief of Army Engineers does not approve of the plan of putting up the levees proposed by Mr. Riker, because he said the dredge has not been proved. When the Wright brothers came to the Patent Office to ask for a patent on their flying machine, the Commissioner of Patents said, in substance: "Your scheme is unproved and we can not give you a patent," but when the Wright brothers went back and demonstrated their machine by actually flying, then the patent was granted. It seems to me that this objection is a mighty poor excuse for opposition to a measure of this kind.

General Jadwin then goes on to state:

The proposed dams would be expensive and uncertain in their operation.

There are some 12 or 15 dams proposed along the spillway. Of course, that is also a matter of opinion and the cost is figured in very carefully in connection with the total estimated cost of the project. He states further:

There are other matters of hydraulics and engineering, such as capacity and velocity of flow in the spillway and erosion of the bed and banks of the spillway, that are open to objection, as, for example, the natural slope of the ground from Red River to the Gulf of Mexico is very small, and a cleared flood way 3 miles wide with such a small slope will have insufficient capacity to carry the water brought to it from above, and therefore more water would be thrown down the main Mississippi River and pass New Orleans than can be carried in its channel between existing levees.

Mr. President, that seems to me a mighty strange statement for an Army engineer to make, to say nothing about his being Chief of the Army Engineers of the United States. The Chief of Engineers complains because the fall or slope of the land from the mouth of the Red River to the Gulf of Mexico is so slight that there would not be velocity enough down the spillway. The facts are that the distance from the mouth of the Red River to the Gulf of Mexico is 90 miles approximately. That would be the length of the spillway. The Mississippi River, as it now flows from the mouth of the Red River around to the Gulf of Mexico, is approximately 300 miles. It has the same fall in going 300 miles that the proposed spillway would have in going 90 miles. But the Chief of Army Engineers states that there would not be fall enough, and that a spillway 3 miles wide could not take care of water which the river, approximately 1 mile wide, now takes care of all but extreme cases.

In the recent resolution to which I have referred we asked for the opinion of Major General Jadwin on the merits of the proposed flood-way plan. General Jadwin in his response said nothing about the merits of the plan, but talked about the demerits of the plan. His suggested demerits in my estimation are the flimsiest arguments that anyone, especially an engineer, could possibly put up. I believe they can be refuted by engineers by the score who have no interest in the spillway proposition.

It will be recalled that a day or two ago I had inserted in the RECORD a resolution by the American Society of Engineers, of which General Jadwin is a member, I understand, adopted by them unanimously, asking that a commission of nine disinterested engineers be appointed to study the Mississippi River flood-control proposition. Therefore, Mr. President, I ask for the adoption of my resolution, calling upon Major General Jadwin to give us something of the merits of the proposed spillway as well as the demerits. I ask for the immediate consideration of the resolution.

Mr. CURTIS. Mr. President, let the resolution be read.

The Chief Clerk read the resolution (S. Res. 217), as follows:

*Resolved*, That Maj. Gen. Edgar Jadwin, Chief of Engineers, United States Army, having replied to a recent request of the Senate for "an immediate report upon the merits of the Riker Mississippi spillway plan for flood control" by a statement solely presenting his opinions upon its demerits without one word respecting its merits, be hereby again requested to report more specifically upon the merits of the proposed plan for flood control.

Mr. JONES. Mr. President, I doubt the wisdom of the Senate passing such a resolution as the one just read. General Jadwin has responded to the resolution which the Senate has heretofore passed, and, of course, if his response does not meet with our approval I do not see how we can do anything else except take it for what it is worth. At any rate, I ask that the resolution may go over.

The VICE PRESIDENT. The resolution will go over on the request of the Senator from Washington.

ANNUAL REPORT OF FEDERAL FARM LOAN BUREAU

The VICE PRESIDENT. The Chair lays before the Senate a resolution coming over from the preceding day, which will be read.

The resolution (S. Res. 215) submitted yesterday by Mr. BLEASE was read, as follows:

Whereas by act of Congress, July, 1916, known as the farm loan act, it becomes the duty of the Secretary of the Treasury to annually transmit to the Congress the annual report of the Federal Farm Loan Bureau of said department for the purpose of advising the Congress and the public of the true financial condition of the 12 district farmer-owned Federal land banks and of the privately capitalized joint-stock land banks chartered under said act; and

Whereas said report has not to this late date been filed with Congress, whereas prior to 1927 said report was always available for the deliberation of Members early in January, that necessary remedies might be adopted to safeguard and strengthen a system intended for the financial support of American agriculture; and

Whereas we have reason to believe that the said Secretary of the Treasury now has available said annual report for the last fiscal year, and is again withholding same from the public until after the adjournment of this session of Congress, as he did in 1927, which is contrary to the intent of demanding an annual report, and which deprives thousands of farmer owners of the 12 district land banks of knowledge of the real condition of their banks; and

Whereas a national scandal is now impending with respect to the financial condition of 6 of the 12 district Federal land banks, due to the failure of the political appointees who have been named to act for the Farm Loan Bureau in the operation of these banks, which the farmer stockholders now fully own; and

Whereas so grave has become the condition in one of these banks that the Committee on Banking and Currency is now considering a resolution which calls for a full investigation of the entire system as a result of startling revelations recently come to light; and

Whereas the financial welfare of thousands of farmer owners of these district Federal land banks, whose banks are now manipulated by political appointees, is at stake, and their property may be so depressed that it become beyond repair unless Congress is immediately advised of the condition, permitting of necessary remedies; and

Whereas political appointees of the Farm Loan Bureau and the Treasury Department have assured Members of Congress, and are now carrying on a propaganda program among farm-paper and newspaper editors, in order to suppress the real truth being printed, or necessary legislative action taken by this session of Congress; said annual report being the only basis upon which intelligent conclusions may be reached: Therefore be it

*Resolved*, That the Secretary of the Treasury be, and he is hereby, directed to immediately transmit to the Senate the annual report of the Farm Loan Bureau for the past fiscal year which he is now withholding from release unnecessarily.

The VICE PRESIDENT. The question is on agreeing to the resolution.

Mr. CURTIS. It is agreed that the preamble shall be stricken out, and I move the following amendment to the resolution proper:

On page 3, line 2, strike out the word "immediately"; in line 3, before the word "the," insert the words "as soon as possible"; and in lines 4 and 5, strike out the words "which he is now withholding from release unnecessarily," so as to make the resolution read:

That the Secretary of the Treasury be, and is hereby, directed to transmit to the Senate as soon as possible the annual report of the Farm Loan Bureau for the past fiscal year.

The amendments were agreed to.

The resolution as amended was agreed to.

The VICE PRESIDENT. Without objection, the preamble will be stricken out.

MESSAGE FROM THE HOUSE—ENROLLED BILLS AND JOINT RESOLUTIONS SIGNED

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the Speaker had affixed his signature to the following enrolled bills and joint resolutions, and they were signed by the Vice President:

S. 4046. An act authorizing the Henderson-Ohio River Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Henderson, Ky.;

S. 4180. An act authorizing the attendance of the Marine Band at the Confederate Veterans' Reunion at Little Rock, Ark.;

H. R. 8132. An act authorizing the appropriation of $2,500 for for the erection of a tablet or marker at Medicine Lodge, Kans., to commemorate the holding of the Indian peace council, at which treaties were made with the Plains Indians in October, 1867;

H. R. 13331. An act to authorize the President to present the distinguished-flying cross to Col. Francesco de Pinedo, Dieudonne Costes, Joseph Le Brix, Ehrenfried Gunther von Huenefeld, James C. FitzMaurice, and Hermann Koehl;

H. J. Res. 192. Joint resolution to provide for the coinage of a medal in commemoration of the achievements of Col. Charles A. Lindbergh; and

H. J. Res. 239. Joint resolution authorizing the erection in the District of Columbia of a monument in memory of Peter Muhlenberg.

The VICE PRESIDENT. The morning business is closed.

RETIREMENT OF CIVIL-SERVICE EMPLOYEES

Mr. DALE. Mr. President——

The VICE PRESIDENT. The Senator from Vermont.

Mr. DALE. The Senator from Massachusetts [Mr. GILLETT] has asked me to yield to him. I assume that in yielding to him I will not lose the floor.

Mr. CURTIS. I suggest that the measure in which the Senator from Vermont is interested be brought before the Senate, so that the Senator from Massachusetts may talk while that measure is pending.

Mr. DALE. I ask unanimous consent that the Senate proceed to the consideration of Senate bill 1727, Order of Business 684, to amend the act entitled "An act for the retirement of employees in the classified civil service," etc.

The VICE PRESIDENT. Is there objection?

Mr. BLEASE. I object.

Mr. DALE. Then, Mr. President, I move that the Senate proceed to the consideration of that bill.

The VICE PRESIDENT. The question is on the motion of the Senator from Vermont.

The motion was agreed to; and the Senate, as in Committee of the Whole, proceeded to consider the bill (S. 1727) to amend the act entitled "An act for the retirement of employees in the classified civil service, and for other purposes," approved May 22, 1920, and acts in amendment thereof, approved July 3, 1926, which had been reported from the Committee on Civil Service with amendments.

Mr. GILLETT. Mr. President——

The VICE PRESIDENT. The Senator from Massachusetts.

Mr. DALE. Mr. President, I understand that I do not lose the floor by yielding to the Senator from Massachusetts.

Mr. REED of Pennsylvania. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator from Pennsylvania will state it.

Mr. REED of Pennsylvania. Does not a Senator lose the floor when he presents a motion which is put to a vote? Is it not then a question whom the Chair will recognize?

The VICE PRESIDENT. The Senator is correct. The Senator from Vermont will have to take his chances on recognition by the Chair.

Mr. DALE. Mr. President, I ask for recognition now.

The VICE PRESIDENT. The Chair will have to abide by the rule, which is that he shall recognize the Senator who first rises and addresses the Chair.

Mr. DALE. Does the Chair rule that if I yield to the Senator from Massachusetts I lose the floor?

The VICE PRESIDENT. The Chair so rules.

Mr. REED of Pennsylvania. I make the point of order that the Senator has nothing to yield.

Mr. GILLETT. Mr. President——

Mr. DALE. I addressed the Chair and was recognized after I made the motion.

Mr. GILLETT. I addressed the Chair first.

Mr. DALE. Under the circumstances, Mr. President, I yield the floor to the Senator from Massachusetts.

THE WORLD COURT

Mr. GILLETT. Mr. President, I have been confined to the house for some time by a very persistent and disabling cough; and it happened that on the very first day of my absence the Senator from Pennsylvania made some remarks criticizing a resolution which I had introduced.

Mr. REED of Pennsylvania. Mr. President, the Senator does not mean that I did it because he happened to be absent?

Mr. GILLETT. Of course I do not, although I will confess that I think it would have been courteous if the Senator had waited until I was here or had notified me that he was going to make his statement; but of course I do not charge in the slightest that that was the reason why he spoke at that time. I have no doubt he would have preferred that I be here.

The subject which the Senator discussed was a resolution which I introduced early in the session requesting that the President undertake to continue negotiations relative to our entrance into the World Court.

The main irritation of the Senator from Pennsylvania seemed to be that he was receiving a great many letters from his constituents which, he said, showed that they did not understand the nature of the question. Of course, that is a matter between the Senator and his constituents. I do not wish to defend the constituents of the Senator; but I confess his letters must have differed very much from a great many letters which I have received from my constituents on the same subject, because what impressed me in those was that the writers did seem to know exactly what the subject under consideration was, and they came exactly to the point, and they aimed exactly at what my resolution aimed at, namely, that the deadlock which has occurred in the consideration between us and these other countries about the World Court should be ended.

Of course, I do not suppose that the superior information shown by my letters in comparison with those of the Senator from Pennsylvania was due to the difference of latitude between Massachusetts and Pennsylvania; but I was much impressed not only by the fact that they appreciated the point but by the intelligence and the standing of the writers of those letters. It struck me, as a rule, that they were unusually intelligent, and aimed exactly at the point; and I could but wonder, considering the remarks of the Senator, if the trouble was not so much with some of his letters as with the spectacles with which the Senator read them.

The Senator criticized and inserted in the RECORD a letter which was written by Miss Esther Everett Lape, which he surmised was the principal source of the propaganda of which he complained. I have carefully read that letter, and although he says that that letter did not state the facts, it seems to me that letter very frankly, perspicuously, and unobjectionably stated exactly the point which was aimed at my resolution and could not mislead anybody. There was no misrepresentation or repression, and I confess I think if the politics of Pennsylvania are never going to be subjected to any propaganda more sordid or objectionable than this, the reputation of Pennsylvania for both intelligence and virtue will be enhanced rather than injured.

But, Mr. President, just what is the question which is raised by my friend? He states that the resolution which I submitted is a mere, empty, futile gesture and can accomplish nothing. There, I think, he is absolutely mistaken. Let us just see—and I shall be very brief, because I really think my own voice as well as the time of the Senate compels it—let us consider very briefly just what the condition is of the World Court treaty.

As we all know, when the question came up we adopted five reservations. The Secretary of State, as directed by us, submitted those reservations to the other powers, and the other powers called a conference in September, 1926; and at that conference a large proportion of the powers were represented. For some time they discussed very intelligently, in a very friendly spirit, our reservations. The result of that conference was, to be brief, that they practically agreed to the first four of our reservations. The only difference between us, then, was on the fifth reservation.

You all remember the fifth reservation. It provided that the court shall not render any advisory opinion except publicly, after due notice to all States adhering to the court and to all interested States, and after public hearing or opportunity for hearing given to any State concerned.

As to this first half of the reservation they suggest, which is true, that the rules of the court have been adopted which provide substantially what we ask there, and suggest that that should be satisfactory. I confess that I think it is better that our reservation should be agreed to by them, because, by saying that the court has adopted substantially that reservation, they admit that they accede to it; and it is better that it should be acceded to by agreement than that it should be continued by a rule of the court, which rule, of course, can at any time be changed by the court. Therefore there is, I think, no difference between us on that point, and I think they would undoubtedly agree to that reservation.

The second half of the reservation says:

> Nor shall it [the court], without the consent of the United States, entertain any request for an advisory opinion touching any dispute or question in which the United States has or claims an interest.

There is the nub of all the difference there is between us and the other signatory powers. There was drawn up, at this meeting of the other powers, a statement which was submitted by them to us; and as to the last half of the fifth reservation they say:

As regards disputes to which the United States is not a party but in which it claims an interest, and as regards questions, other than disputes, in which the United States claims an interest, the conference understands the object of the United States to be to assure to itself a position of equality with states represented either on the council or in the assembly of the League of Nations. This principle should be agreed to.

In other words, they assent to the principle that the United States should have exactly the same rights as the other nations. It would seem that that would settle the question; and the question is asked, "Why, then, do they not agree to our reservation?"

But they proceed:

But the fifth reservation appears to rest upon the presumption that the adoption of a request for an advisory opinion by the council or assembly requires a unanimous vote. No such presumption, however, has so far been established.

Mr. President, I think the Members of the Senate did believe, when they adopted the fifth reservation, that it required a unanimous vote. I can not say that all the Senate held that opinion, but I think the majority opinion in the Senate undoubtedly was that for the League of Nations to request an advisory opinion of the court required a unanimous vote either of the council or of the assembly. There certainly was good reason, it seems to me, for us to believe that.

I will ask the clerk to read—it will give me a minute's respite—the provision of the covenant of the League of Nations which states where there shall be a unanimous vote and where there may be a majority vote.

The PRESIDENT pro tempore. Without objection, the Secretary will read, as requested.

The legislative clerk read as follows:

ARTICLE 5

Except where otherwise expressly provided in this covenant or by the terms of the present treaty, decisions at any meeting of the assembly or of the council shall require the agreement of all the members of the league represented at the meeting.

All matters of procedure at meetings of the assembly or of the council, including the appointment of committees to investigate particular matters, shall be regulated by the assembly or by the council, and may be decided by a majority of the members of the league represented at the meeting.

Mr. GILLETT. Thus, Mr. President, you see that when it is a mere matter of procedure a majority vote is sufficient; but any matter of substance requires a unanimous vote. The question to any lawyer would be, "Is it a mere matter of procedure to ask the court for an opinion upon some question between nations, or is that a matter of substance?"

I confess that to me it seemed clear that it was a matter of substance, and that it was not a mere matter of procedure, like the illustration used in the article which has just been read; and I think, from the comments that were made on the floor of the Senate during the debate, that was the general opinion of the Senate—that it did require a unanimous vote, and that it was not a matter of procedure.

Of course, I appreciate that it may be presuming for me to express an opinion upon the meaning of part of the text of the covenant of the League of Nations. Of course, that is for them to decide for themselves. I appreciate that fully, and I appreciate that they can decide as they please, and, no matter what my opinion or the opinion of other lawyers may be, they have the full right of ultimate decision. At the same time, I think it will appear to most lawyers that that is a matter of substance, and it would require a unanimous decision.

Moreover, one is fortified in that position by the fact that in the past six years every one of the advisory opinions that have been asked—14 of them—has been asked by unanimous vote. Of course, that does not prove that a majority vote would not have been sufficient; but the issue never has been raised, and always a continuous series of decisions tends to create a precedent; and I think that would in anyone's mind confirm the opinion which the first reading of the language gave, that it would require a unanimous opinion. At the same time, this conference suggested—and, of course, they had the right to suggest it, and they have the final decision—that it is not settled that it required a unanimous decision.

Mr. President, if they would simply vote that it did require a unanimous decision, if they would decide that either the council or the assembly can ask an advisory opinion only by a unanimous vote, then substantially every difference between us and the signatory powers would be wiped away.

Mr. BORAH. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Massachusetts yield to the Senator from Idaho?

Mr. GILLETT. I do.

Mr. BORAH. Suppose they did so declare. Next year they could declare the very opposite.

Mr. GILLETT. They could; but I think we hardly need to consider that proposition, because I do not believe any powers that invited us to enter the court on the theory that an advisory opinion can be given only by a unanimous vote, and therefore that we are on an equality with them, after we were there would then change and leave us on an inequality, particularly after they have themselves suggested in this very statement that what they desire is to give us the same rights that they have.

Mr. BRUCE. Mr. President, may I interrupt the Senator for a moment?

The PRESIDENT pro tempore. Does the Senator from Massachusetts yield to the Senator from Maryland?

Mr. GILLETT. Certainly.

Mr. BRUCE. Why could we not ratify subject to the understanding that an advisory opinion could not be called for except by unanimous vote?

Mr. GILLETT. If the Senator will allow me to conclude, I think I will state my views on that point. I am just making that statement to show what an insignificant difference there is between us at present—that if they should decide that, there would be no difference between us, and we would have the same rights there that they would. Of course, as some one—I think it was the Senator from Virginia—pointed out, we would not have exactly the same rights, because any member of the council can object without giving any reason for his objection, without claiming an interest, whereas we have got to claim an interest; but that, I think, is too trivial to affect a matter of this kind, because we should never want to object to anything in which we have not an interest.

After saying that it is not certain that there is a unanimous consent required, then they continue and suggest that they allow us to have the same rights they have; that if it is finally decided that there shall be a unanimous consent, then we have the same rights they do. If it is afterwards concluded that it requires only a majority to request an advisory opinion, then they will give us the same right they have, and the court should count us as having a vote.

I do not think that would be satisfactory. While I believe that when we adopted that fifth reservation we did think that we were putting ourselves on the same footing on which they were, giving ourselves the same right that every other member of the council had, yet, despite that, I do not believe that if it should be decided the other way we would be satisfied to have a vote. I think whichever way they may decide, the Senate would insist that this reservation should practically stand as it is, because if they are willing to put us on a position of equality, and if they really intend that a unanimous consent should really be requisite for an advisory opinion, then there is really no reason why they should not accept our fifth reservation. That is the point that I hope we shall come to, that they will accept our fifth reservation.

Mr. REED of Pennsylvania. Mr. President, will the Senator permit a question?

Mr. GILLETT. Of course.

Mr. REED of Pennsylvania. The Senator does not think it likely that the Senate will recede from the fifth reservation as it stands?

Mr. GILLETT. I do not.

Mr. REED of Pennsylvania. What, then, can the President do more than he has already done?

Mr. GILLETT. If the Senator will have patience for a moment, I am coming to just what the purpose of this resolution is.

The Senator from Pennsylvania said this resolution was just an empty and futile gesture. I think those were his words. The Senator can not know whether it is an empty or futile gesture.

Mr. REED of Pennsylvania. If the Senator will pardon me, I said the adoption of the resolution would be an empty and futile gesture. I did not ascribe that to anything the Senator had offered.

Mr. GILLETT. I, perhaps, misinterpreted the Senator's remarks; but if the adoption would be an empty and futile gesture, I think the introduction of it would be equally a futile gesture. I hardly see the distinction.

Of course, Mr. President, it may be that the adoption of this resolution would be empty and futile, I recognize the possibility of that; but the Senator from Pennsylvania does not know that any more than I know that it will be an effective and useful gesture. It depends upon what happens. The purpose I had in view was this: The Senate adopted the five reservations. They were sent to the other powers, and they sent back this response, accepting four of them and suggesting modification of the fifth. We have made no answer, and there the matter has remained ever since.

There could not be an answer. What could the Secretary of State do? He did not frame these reservations; the Senate adopted them, and the Senate was the only body that could negotiate about them, the only body that knew exactly what they meant.

The signatory powers made certain suggestions as to what the United States intended by the reservations, and as to what the United States might be willing to accept. The Secretary of State, who, of course, is our organ in communicating with other nations, could not decide what the Senate intended; he could not decide how the Senate would look upon the substitute which was presented to us by the signatory powers. Therefore, not knowing what he could safely say, he very prudently, as it seems to me, said nothing.

There the matter has rested for a year and a half. The powers have sent back a courteous, friendly response to the reservations, suggesting changes which they think should be made in them, suggesting what they thought we intended, and that they were willing to give us exactly what they thought we intended, and they made these suggestions. There it has dropped.

Mr. BORAH. Mr. President, may I ask the Senator a question?

Mr. GILLETT. Certainly.

Mr. BORAH. I have not read the resolution this morning, but my recollection is that this resolution does not indicate to the Secretary of State anything about the present view of the Senate.

Mr. GILLETT. Exactly; I am coming to that.

Mr. BORAH. If the Secretary of State should take up the correspondence as a result of the passing of this resolution, he would have no more enlightenment than he had before it was passed.

Mr. GILLETT. That is where I differ from the Senator, as I will state in a moment; and my very purpose in introducing the resolution was, as I have said, to break that deadlock. We have this letter from the other powers, a communication unanswered, and necessarily it will remain unanswered, and of course until there is some answer the other powers will not take any further steps.

My purpose in introducing this resolution was, and my belief still is, that in the debate on this resolution it will clearly appear that the Senate is not willing to vary from the fifth reservation, that the Senate believes that that is essential for the protection of the rights of the United States, and the difference having been shown by the communications sent us by these signatory powers to be so slight, my hope is that they would be willing to accede to our positive debate on the resolution. Perhaps the Senate might amend the resolution. I would be glad to have it amended. We might even amend it to suggest what the Secretary of State should say. But without that the Secretary of State could see, by what is said by the friends of our entrance to the World Court, what the attitude of that portion of the Senate is, and could frame an answer accordingly. Of course, with all respect, the attitude of the Senator from Idaho, who is absolutely opposed to our entering at any rate, would not enter into the question; I appreciate that there is a group of Senators who do not wish to have the United States enter at all, and therefore the Senator from Idaho would be glad to say to the other nations, "Let it rest as it is. Take our reservations or leave them."

Mr. BORAH. Mr. President, is the Senator from Massachusetts in favor of modifying the fifth reservation in any respect?

Mr. GILLETT. I am not.

Mr. BORAH. Then the Senator from Massachusetts and the Senator from Idaho are perfectly agreed.

Mr. GILLETT. We are on that; yes.

Mr. BORAH. That part of the fight is over. I was opposed to adhering to the court, but the Senate adopted the protocol with reservation 5. I must accept that. I am not in favor of amending it in any way. The Senator from Massachusetts accepts it, and he is not in favor of amending it in any way. So, so far as our positions are concerned, they would be identical in passing on this resolution.

Mr. GILLETT. I am not so sure about that. I can not believe that our positions would be identical in passing on this resolution, because the object of this resolution is to resume communications with the other powers, and I suspect the Senator from Idaho, not wishing that anything further be done, would be glad to have the deadlock remain, would not be in favor of any further negotiations. Is not that correct?

Mr. BORAH. No, Mr. President. I do not favor a deadlock. I would be perfectly willing to have the Secretary of State take up this correspondence again if he desires to, with the understanding that the Senate has no additional suggestions to make with reference to article 5. If the Senate is standing upon article 5, the only thing the Secretary of State can do is to communicate to the powers that fact, which is, in effect, what he has already done.

Mr. GILLETT. Mr. President, he can; but it makes a great difference how he communicates.

Mr. BORAH. I have no doubt the Secretary of State would communicate it in diplomatic language.

Mr. GILLETT. I think he would; but the very purpose of this resolution is to have him do that. Unless we do take some step in the Senate, there will be no diplomatic letter passing from the Secretary of State on this subject.

Mr. NORRIS. Mr. President, will the Senator yield?

Mr. GILLETT. I yield; but I am sorry to impose so much on the time of the Senator from Vermont.

Mr. NORRIS. I would like to ask the Senator a question to ascertain whether I understand his position. If I understand it, the object the Senator has in view is to take some action so that the communication, which has so far remained unanswered may be answered, even by a statement that we can not recede from the action we have taken, with the hope that when that communication is sent they may recede from their position.

Mr. GILLETT. Exactly; and that is just what I was coming to.

Mr. BORAH. What is the necessity of a resolution in order to accomplish that object? The Secretary of State has communicated the views of the Senate to these governments, they have them, and they have answered them. The Secretary of State can only again communicate the views of the Senate, unless we are going to modify our position. Let me read the Senator's resolution.

Mr. GILLETT. Will the Senator allow me to sit down?

Mr. BORAH. I will not interrupt the Senator.

Mr. GILLETT. I am glad to be interrupted.

Mr. BORAH. I will ask the Senator to pardon me; I had forgotten his ill health.

Mr. GILLETT. It would give me a respite. I will be glad if the Senator will proceed, if I do not lose the floor.

Mr. BORAH. The resolution reads:

*Resolved*, That the Senate of the United States respectfully suggests to the President the advisability of a further exchange of views with the signatory States in order to establish whether the differences between the United States and the signatory States can be satisfactorily adjusted.

The Secretary of State has no views to suggest. He can only communicate what the Senate has done, the views which the Senate has expressed; and unless the Senate is going to modify its views upon article 5, the Secretary of State can do precisely again what he did in the first instance—communicate to the foreign powers that here is our adherence to the World Court upon these terms and conditions. Unless the Senator is willing to modify the resolution and say that the views should be so-and-so, that we interpret article 5 so-and-so, I do not see what the Secretary of State can do; and from what I know of the matter, I do not think the Secretary of State would know what to do otherwise.

Mr. REED of Pennsylvania. Mr. President, without attempting to take the floor from the Senator from Massachusetts, I wanted to ask the Senator from Idaho if it does not come down to this, that with the Senate determined to stand by reservation No. 5 as it is——

Mr. BRUCE. Mr. President——

The PRESIDENT pro tempore. The Senator from Massachusetts still has the floor.

Mr. BRUCE. I desire to make a statement.

The PRESIDENT pro tempore. The Senator has yielded to the Senator from Pennsylvania for the time being.

Mr. BRUCE. The Senator from Massachusetts has the floor?

The PRESIDENT pro tempore. The Senator from Massachusetts has the floor.

Mr. BRUCE. I have never seen any standing posture of that sort before.

Mr. GILLETT rose.

The PRESIDENT pro tempore. The Senator from Massachusetts.

Mr. GILLETT. I asked the indulgence of the Senate, because of my illness, from which I am just recovering.

Mr. BRUCE. Nobody would be more willing than I to accord the privilege to the distinguished Senator.

Mr. REED of Pennsylvania. Mr. President, if I may state my question again, the resolution of the Senator from Massachusetts suggests a resumption of negotiations, with a view to an adjustment of the impasse. Clearly that implies a possibility of mutual concessions. Would not the passage of such a resolution imply that the Senate was ready to recede, at least in part, from reservation No. 5, and do we most of us, at least, recognize the complete impossibility of any recession by the Senate on reservation No. 5?

Mr. WALSH of Montana and Mr. BORAH addressed the Chair.

Mr. REED of Pennsylvania. It seems to me, just to finish, that the adoption of the resolution in those circumstances would invite the Secretary of State to give a false impression to our friendly fellow nations of a fact which could not come to pass, in that the Senate in all likelihood would not recede.

Mr. WALSH of Montana. With the indulgence of the Senator from Massachusetts, I would like to say that I do not take the view expressed by the Senator from Pennsylvania at all.

Mr. BRUCE. Mr. President, I would like to know on what principle of parliamentary procedure the Senator from Montana is allowed to interrupt the Senator from Pennsylvania when that privilege was withheld from me.

The PRESIDENT pro tempore. The Senator from Montana said "with the indulgence of the Senator from Massachusetts," which was given.

Mr. GILLETT. It was.

Mr. BRUCE. I did not understand it was given. If I may take issue with regard to a matter of fact with the Presiding Officer, I did not hear it given.

Mr. GILLETT. Mr. President, I dislike to be irregular in this way, but I am sure the Senate will appreciate that this is the first time I have been out since my illness, and my strength is not great, and when the Senator from Montana asked if he could speak with my indulgence, I nodded to him. I did not speak. I was in a way saving my voice.

The PRESIDENT pro tempore. The Chair discerned that gesture.

Mr. GILLETT. Mr. President, to resume, there is, it seems to me, a distinction between leaving a matter in a deadlock, as this is to-day, where it will remain forever just because of what the other nations probably would say was a discourteous refusal to answer, or trying to remove that deadlock. In communications between nations, method is often just as important as it is between individuals. It depends a good deal on how we are approached as to what answer we make.

I remember a story of General Jackson when he was President. It was said that he received a communication from the French Government, and when the secretary who translated it to him came to the verb "demander" instead of translating it, as it should have been, as "request" or "ask," he translated it "demand," that "we demand this." The determined President at once said, "If they demand it, by the Eternal, they shall not have it." It required some explanation to persuade him that they did not demand it, but that they only requested it. So, between nations, good feeling and courteous treatment often are quite as important as agreement in opinion. That is the point I am trying to reach in this case. We are in the doldrums here. No action will be taken. The Secretary of State does not know what to say, and the other nations will take no action unless he says something. What I think is that the attitude of the friends of the World Court in the Senate, expressed, as I believe it would be, in a debate on this resolution so clearly and yet so friendly that there would be no offense given, and yet insisting that it is necessary—and I can not take the time to say why I believe that is so—that is necessary after all that we should be protected as we are by the fifth provision, I have hoped that the difference between us and the signatory powers having come down to this very insignificant point of a majority or unanimous vote that the other signatory powers, if they really, as I believe they do, wish to have the United States represented in supporting this World Court, I have hoped that they would then, by a renewal of communications, accede to our fifth reservation, and in that way the matter would be settled. Personally, I should be very willing to see some modification of our fifth amendment, but I do not believe any change could be carried in the Senate, and therefore I think it would be wasted effort to attempt it. But I hope that when the other powers are informed that we can not accept the substitute that they will agree to our reservation.

Mr. President, some time in February I made some remarks on this subject over the radio, in a talk of 10 or 15 minutes, a very condensed statement, which I am sure expresses my views better than what I have said in this rambling way this morning. I ask unanimous consent that I may print that as a part of my remarks.

The PRESIDENT pro tempore. Is there objection?

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

I will confine myself to presenting to you as fully as I can in the limited time that one of the reservations or conditions to the World Court treaty which the Senate adopted which is now the only substantial point of difference between us and the other nations, and which alone is preventing our membership in the court. You must bear in mind that this whole World Court treaty is a very restricted one, and that under it we only bind ourselves to submit to the decision of the court such disputes as we may agree with the other nation in each particular case we wish to have the court pass upon. The court can give judgment against us in no case which we do not voluntarily submit to it.

But, besides its trial jurisdiction, there is a provision which allows the League of Nations to ask the court for advisory opinions upon any question or dispute it chooses. Some of our States give their legislatures a similar privilege to ask advice from their supreme court on questions of law. But the United States is not a member of the League of Nations, and so could have no voice in deciding whether an advisory opinion should be requested. And, inasmuch as the court has no jurisdiction over any dispute of ours which we do not voluntarily refer to it, it is natural that we should not wish it to take such jurisdiction through the medium of an advisory opinion, and, therefore, the Senate provided in the fifth reservation—

"The court shall not, without the consent of the United States, entertain any request for an advisory opinion touching any dispute or question in which the United States has or claims an interest."

It is that reservation to which the other nations have failed to agree, and which is the stumblingblock to our membership in the court. Representatives of all the other nations held a conference in September, 1926, for the purpose of considering our reservations, and after agreeing substantially to the others they sent us their views on this reservation, saying that they presumed we intended simply to put ourselves on an equality with the members of the League of Nations, that we doubtless thought that when a question of asking for an advisory opinion came up before the league it would require a unanimous vote to pass it, so that any one nation could prevent its passage by objecting, and that we wanted the same right. But, they continue, it has not yet been determined whether the vote of the league on that question must be unanimous or whether a majority is sufficient, and so they suggest that we be granted the same rights that the members of the league have, and if it is finally decided by the league that the vote must be unanimous and a single vote can defeat it we shall have the same right, but if it shall be determined that a majority vote of the league can request an advisory opinion then we shall still have the same rights as the members of the league, and our vote would be counted, although we are not a member of the league.

I do not believe that would be satisfactory. I think most of the Senate did assume that it required a unanimous vote of the league to request an opinion from the court, inasmuch as so far all such votes have been unanimous, and that we were only asking the same right which others had. But whether or not the league should finally decide that the vote must be unanimous and so every nation, like ourselves, should have the power of preventing an advisory opinion, I think the Senate would insist upon that power for us. It would be easy for the league to put us all on an equality by deciding that the vote must be unanimous, but if, for any reason, they did not choose to do that, still I think we would want that right. We are not members of the league, we did not, like the other nations, appoint the council our agent to ask advisory opinions, we could not participate in any discussion of the necessity for an advisory opinion, and we do not feel that our interests are subjects for their deliberation or for the court to advise the league upon.

We are not at all within their jurisdiction and we feel that if at any time, by accident or design, they should request an opinion of the court affecting our interests we ought to have the right of deciding whether to allow it or prevent it. We have that right in any judicial decision of the court. It can not take jurisdiction of any case concerning us or render any judgment affecting us without our consent. Why, then, should they have any more jurisdiction over us indirectly through an advisory opinion? Of course, I have no authority to speak for the Senate, but I am expressing the views which, from my knowledge of it, I think it probably holds. For an advisory opinion, although not binding on anyone, will have eventually much the same weight as a judgment of the court. Neither of them have any force behind it. The judgment of this court, unlike those with which we are familiar, has back of it no sheriffs or marshals to enforce it. It depends for its authority and execution upon the public opinion and conscience of the nations. Therefore an advisory opinion, though technically not binding, makes the same appeal to public opinion as a judgment, and no nation would like to ignore it.

The conference of the nations upon our reservations, to which I have referred, was finished in September, 1926, and they sent us the result of it with courteous expressions of hope that the differences between us could be accommodated and that there might be such further exchanges of views as the Government of the United States might think useful. There negotiations ended and the subject has slept for a year with no attempt toward further adjustment. It seems to me the next move is up to us. Unless we make some response the question will lie dormant indefinitely. I presume the Secretary of State, who received the communications from the other nations, felt that as he did not originate the reservations but as they were framed by the Senate, he could not presume to interpret them or to answer the messages from the other nations by telling them whether their interpretations of the reservations were correct or their suggestions of changes acceptable. And so, not knowing what answer would correctly represent the views of the Senate, he prudently answered nothing.

And there the matter has rested. Thinking that so momentous a matter should not be allowed to die from inaction so long as there was a chance of agreement, particularly when I believed that both parties sincerely desired some agreement, I introduced in the Senate last month the following resolution:

"*Be it resolved,* That the Senate of the United States respectfully suggests to the President the advisability of a further exchange of views with the signatory States in order to establish whether the differences between the United States and the signatory states can be satisfactorily adjusted."

My hope is that the debate on that resolution will disclose clearly the attitude of the Senate toward the suggestions of the other nations, or possibly the resolution might be so amended as to indicate exactly the position of the Senate, and that then the President will respond to the long unanswered letters referring perhaps to the proceedings of the Senate, and with this new light as to the meaning of the reservations and the probable attitude of the Senate, the other powers will again consider whether a satisfactory agreement can not be reached. It certainly would be disheartening if the United States, which has always been the leader in the movement for submitting disputes to arbitration, should not become a member of the court, and I hope the other nations really want us enough to accede to the conditions which we think necessary to protect us. Very likely if we did not have the power to object which we are claiming, the League of Nations would never ask for an advisory opinion that would affect our interests. Very likely if we were granted the veto power we would never have occasion to exercise it. But I think at the inception of this new tribunal the Senate will move very cautiously and will be unwilling to take any chances at first, trusting to time and experience to determine how far it is wise to submit more freely to the jurisdiction of the court.

This court as at present constituted is, of course, but a feeble beginning toward that universal reign of law which we hope will some time supplant force. It falls short of everyone's ideal. It was necessarily a compromise, as any institution in whose framing so many nations join is bound to be. Probably there is no one who could not offer a criticism of some feature. Probably there is no one who could not construct in his own mind a court which would seem to him better. But if we wait for what each person or each nation thinks is a perfect constitution for a court we shall never have any.

This is the only World Court this generation is likely to see. It is an existing, functioning tribunal comprised of great jurists with international reputations, has already rendered eminent and most helpful service to many nations, and I think we ought to study how it can be maintained and strengthened rather than dwell upon its defects and weaknesses. While the present jurisdiction of the court is very limited, its constitution provides that any nation may sign a stipulation giving to the court full jurisdiction over all disputes between it and any other nation. Thus far the only nations to sign that clause are small nations who have nothing to lose because their armies are so weak that they know they would be beaten if they resorted to the test of war, and so they are willing to risk a court. But I hope the day is not very far distant when the World Court will have so won universal respect and confidence, will have proved itself such a fair and satisfactory arbiter of international quarrels that the strong powers as well as the weak, and first among them the United States whose whole history and tradition pledge her to the judicial settlement of disputes, will be willing to risk something for world peace, to show that she would rather lose a case before a court than win it by brute force, and that she is ready, like the weakest nation, to submit all her quarrels, whether against a feeble or against a mighty antagonist, to the decision of a court of justice. And I hope that this court despite its present restrictions and weaknesses may be the germ from which will gradually develop the peace on earth for which everyone is striving.

Mr. BRUCE. Mr. President, I did not know this matter was coming up this morning——

Mr. DALE. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Maryland yield to the Senator from Vermont?

Mr. BRUCE. Certainly.

Mr. DALE. I just want to make this statement: I do not think the Senator from Maryland did realize that this was coming up to-day, and I did not either. But the situation now is that we have just one hour to consider the bill I have in charge, and if we go on discussing these extraneous matters, of course, the effect will be to bring us to 2 o'clock, when we can not consider the bill.

Mr. BRUCE. I really think that this resolution is even more important than the bill in which the Senator and I are so deeply interested, important as that is; but I promise the Senator to say only a few words with respect to the resolution. Indeed, my purpose is to say nothing more for all practical purposes than that I am heartily in accord with it or with any similar resolution looking to the same object. I am bound to say that I think the distinguished Senator from Pennsylvania was just a little premature when he assumed that all the Members of the Senate are determined to adhere in any event to the language of the fifth reservation.

Mr. BORAH. Do I understand that the Senator is in favor of modifying article 5?

Mr. BRUCE. I think that it can be modified in such a way as not to surrender our just rights.

Mr. BORAH. How would the Senator modify the reservation?

Mr. BRUCE. The present construction is that no advisory opinion is binding without unanimity on the part of the proper agency of the league, and it seems to me that instead of that fifth reservation we might simply ratify subject to the understanding that we place that construction of unanimity on our act of ratification, and that it was to be obligatory upon us no longer than that construction was conceded.

Mr. BORAH. The proposition of unanimity is one of the very incidental propositions of the discussion. The objection upon the part of foreign powers is with reference to that portion of the reservation which provides that no opinion shall be rendered in any matter without our consent, in which the United States claims an interest.

Mr. BRUCE. I know. The Senator is opposed to our entry into the World Court in toto. We understand that.

Mr. BORAH. What I would like to know is whether the Senator from Maryland is in favor of eliminating that last clause?

Mr. BRUCE. I have answered that question.

Mr. BORAH. No; I do not think so.

Mr. BRUCE. I may not be in favor of eliminating the last clause, and yet at the same time be in favor of substituting for it something which, so far as our purposes are concerned, would be equally as effective and at the same time satisfactory to the signatory powers. As I said, I do not hope to convert the Senator. He has been for some years, though not always, against the World Court. As I read the record of his relations to it, he really favored the World Court until he found that some 46 or 50 of the most highly civilized powers of the world agreed with him, and then he went off on his present tangent.

Mr. BORAH. I have never been in favor of this so-called World Court, but I am now defending what the Senator from Maryland advocated upon this floor, and that is reservation 5.

Mr. BRUCE. Of course.

Mr. BORAH. I understand the Senator from Maryland has changed his position and wants to eliminate reservation 5.

Mr. BRUCE. Until we find that we have come to an impasse we are not likely to abandon any proposition to which we have given our assent. But now that we have reached such an impasse in the matter of the World Court it seems to me that like a group of practical, sensible men bent upon carrying out the general object that they had in view, we should be disposed to have the Secretary of State open up a correspondence with the signatory powers for the purpose of ascertaining whether some basis of compromise or adjustment may not yet be found.

I think that we Democrats deserve some credit for the way in which we came to the aid of the administration when it brought forward the World Court proposition. That proposition did not emanate from us except originally, of course, in another form during the Wilson administration. It emanated from the President and his Secretary of State, and in perfect good faith and with marked enthusiasm we voted to bring about the entry of the United States into the World Court. We were actuated, I think I can say, by the most patriotic and disinterested motives in taking the stand that we did at that time; and I for one expressed then the sense of gratification that it gave me individually to find myself in accord, as respects the World Court, with the President of our country, though he happened for the time being to be a Republican President.

The door to negotiation is still open. Why should we not make an effort to reenter it and arrive at an understanding

with the signatory powers in relation to the conditions on which we might enter into the World Court? Let the Secretary of State go ahead. Let him ask the signatory powers whether they can not suggest some basis of adjustment or the initial understanding that would bring their minds and the minds of the President of the United States and of the United States Senate into accord. Their general attitude toward us is conciliatory. Their ear would be attentive to any and every appeal that we might make to them. Any suggestion or recommendation that might come from us would, I am sure, be received by them with the fullest measure of consideration and respect. All that the resolution proposes to do is to make possible a renewal of the negotiations by which our Secretary of State might again bring himself and our country into touch with those signatory powers for the purpose of seeing whether we and they could not do something toward the establishment of universal peace and the prevention of the most hideous of all calamities that befall human beings in the course of their checkered existence—that is to say, the calamities of a state of war.

I know that some Republican Members of the Senate feel about this matter exactly as I do, and as many of my associates on this side of the Chamber do; but I am certain that some Republican Members of the Senate did not give their assent to the reservations of the Senate in good faith. They did not expect all those reservations to be accepted. They did not wish all of them to be accepted. It is my honest belief that the course of a large part of the Republican Party with respect to the establishment of closer international relations between us and the other great civilized powers of the world has been marked in the highest degree by a hopelessly tortuous policy.

I had almost borrowed one of the vigorous phrases from the Scriptures and was ready to say that the course of the Republican Party as a whole, in relation to the League of Nations and the World Court, has been as crooked as the path of a serpent across a rock. Unwilling to make any real contribution toward the peace of the world, at session after session they have come here and, to use the expression of the Senator from Pennsylvania [Mr. REED], have made one idle, empty gesture of peace after another. Now it is this and now it is that, and at the present time it happens to be a lot of paper pronouncements in favor of peace, which nobody except a few enthusiasts expects ever to result in anything genuine or effective so far as the promotion of lasting good will, concord, and amity between the nations of the earth are concerned.

I care very little about the World Court except as an antechamber to the League of Nations. There has never been a time in the past, and there will never be a time in the future, when we could not resort to arbitration independently of The Hague court, independently of the World Court, and independently of any existing organization. Whether we enter the World Court or not, arbitration will always be open to us; and when, in the ordinary course of arbitration, we select arbitrators, we are free to select our arbitrator from any country we choose—not from some country that has not the same degree of prestige in the family of nations that other countries have but from some country which enjoys the very highest degree of prestige and standing in the great family of nations.

Mr. REED of Pennsylvania. Mr. President, will the Senator permit a question?

Mr. BRUCE. Certainly.

Mr. REED of Pennsylvania. Are Great Britain and Egypt members of the League of Nations?

Mr. BRUCE. Great Britain is a member of the League of Nations, of course.

Mr. REED of Pennsylvania. Is Egypt a member of the League of Nations?

Mr. BRUCE. I really do not recall. I think that is not a matter of very great importance.

Mr. REED of Pennsylvania. I can tell the Senator that it is a member, and it is a matter of great importance, and yet British warships are steaming toward Egypt at this moment and the League of Nations is sitting passive.

Mr. BRUCE. But perhaps if the United States of America, with its enormous wealth and power and its unfailing sympathy with the higher humanitarian impulses of the world, would enter the League of Nations, the League of Nations would not sit passive when there was occasion for it to be active.

Mr. REED of Pennsylvania. Would the Senator send the American Navy to the Mediterranean to stop the British fleet?

Mr. BRUCE. Indeed, if our naval and military force were a quota contributed by us pursuant to the provisions of the covenant of the League of Nations toward the police force of the league, I would.

Mr. GLASS. Mr. President, may I interrupt the Senator from Maryland at that point?

Mr. BRUCE. Certainly.

Mr. GLASS. I remind the Senator from Maryland that under the terms of the League of Nations it would not be necessary, it certainly would not have been imperative, that we should send our naval force there.

Mr. BRUCE. No. In my judgment, economic pressure would usually be sufficient to preserve world peace.

Mr. REED of Pennsylvania. If we were members of the league, the British warships would not be stopped any more than they are now being stopped to-day.

Mr. GLASS. But that is not the question.

Mr. REED of Pennsylvania. But the Senator said our membership in the league would bring about peace.

Mr. BRUCE. I think it would.

Mr. GLASS. There is such a thing as moral force in the world.

Mr. BRUCE. Precisely. When we allied ourselves to the English-speaking peoples of the world, not to speak of any of the other great civilized peoples of the world, and became a member of the League of Nations, I think that the league would have the full endowment of moral prestige and authority and of physical power to preserve the peace of the world. But if the peace of the world could not be preserved by any other means, do not make the mistake of thinking that I should not be even in favor of securing peace through the armed force of the league, and I would be willing that to that armed force the United States of America should make its proper proportionate contribution.

I have no faith in this vain cry of "Peace, peace, peace," not backed by some real, essential, military agency adequate to the task of preserving international peace. Nor do I believe in those paper trumpets which are forever blowing strains of peace, such as the paper trumpet which the Senator from Idaho [Mr. BORAH], with great respect, has recently sounded, or the paper trumpet which the Senator from Kansas [Mr. CAPPER], with great respect, has recently sounded. Peace never will be secured by any mere fanfare of paper trumpets. It will never be assured by anything except the one single central agency on which the peace of the world should be concentrated, and that is the League of Nations with its World Court.

Mr. COPELAND. Mr. President, will the Senator yield?

The PRESIDENT pro tempore. Does the Senator from Maryland yield to the Senator from New York?

Mr. BRUCE. I yield.

Mr. COPELAND. I am sure the Senator from Maryland will take what I have to say in good part. A lot of us are tremendously interested in the retirement bill which is before the Senate, and we are anxious to have a vote if we can get it.

Mr. BRUCE. I am very sorry. The Senator can not be more interested in the retirement bill than I am in the universal pacification of the world and the prevention of the return of war with all its unspeakable horrors.

Mr. DALE. Mr. President, I would like to suggest that we can pass the bill before 2 o'clock, but we can not have universal pacification of the world, even if we talk until 2 o'clock, in any way that I know of.

Mr. BRUCE. I will be through before 2 o'clock, if that is the object of the Senator.

The Republican Members of the Senate, to say nothing of some of the Democratic Members of the Senate, now have an opportunity to show how far they are actuated by good faith in putting out propositions looking to our entry into the World Court; and I trust that every Member of the Senate, whether he is a Democrat or a Republican, will vote in favor of the resolution.

There is much more that I would like to say on the subject, but it has been brought up to me entirely unexpectedly. If there is no disposition on the part of any other Member of the Senate to prolong the debate, but a disposition merely to make way for the bill in which the Senator from Vermont is so much interested, I will take my seat; otherwise I shall not.

Mr. GLASS. Mr. President, will the Senator from Maryland yield to me for a few words of explanation?

Mr. BRUCE. I will yield if it does not operate to cause me to lose the floor.

The PRESIDENT pro tempore. Does the Senator from Maryland yield to the Senator from Virginia?

Mr. BRUCE. I am willing to yield provided it does not cause me to lose the floor.

The PRESIDENT pro tempore. The Senator from Maryland yields to the Senator from Virginia.

Mr. GLASS. Mr. President, as supremely pertinent to the discussion and as so clearly representing my views on the question better than I might write them myself, I want to violate my conception of usage and to send to the clerk's desk an editorial from the Philadelphia Record to be read on this

subject. I do not think, since I have been a Member of the Senate, that I have ever asked unanimous consent or otherwise have ever endeavored to insert a newspaper editorial in the CONGRESSIONAL RECORD.

I want to say with respect to the resolution of the distinguished Senator from Massachusetts [Mr. GILLETT] that it is my purpose to vote for the resolution, but with no confident belief that it will amount to anything more than an idle gesture. I think if the Senate wants to do something substantive with respect to the World Court, it might suggest to the President that he have the Secretary of State return the correspondence to the Senate, and the Senate in turn modify the reservations which it has adopted. I might answer more directly the inquiry of the Senator from Idaho [Mr. BORAH], propounded to the Senator from Maryland, by saying that I do favor the abrogation of the fifth reservation.

I ask to have read at the desk this leading editorial from the Philadelphia Record, with the permission of the Senator from Maryland.

Mr. BORAH. Before that is read permit me to say that I join with the Senator from Virginia. I am perfectly willing to bring the World Court protocol back to the Senate for reconsideration of the reservations. I have no objection to such a course.

Mr. GLASS. That is what I would advocate.

Mr. BRUCE. Then there is no quarrel between any of us.

Mr. BORAH. Yes; there is a quarrel between any of us. What I am opposed to is passing a resolution which does not suggest and can not suggest, without action upon the part of the Senate modifying reservation 5, any different course for the Secretary of State to take than that he is now taking. I am perfectly willing to have the entire question resubmitted to the Senate and ascertain whether the Senate wants to modify reservation 5.

Mr. BRUCE. I am reminded of Cardinal Newman's hymn, One Step Enough for Me. The proposition before us is the proposition of the Senator from Massachusetts [Mr. GILLETT], but I am bound to say I am more in accord with the proposition of the Senator from Idaho and the Senator from Virginia than I am with the former. If the Senator from Idaho will only offer some such proposition, I will be very glad to vote for it.

Mr. BORAH. I am not offering the proposition, but I am perfectly willing to support the proposition.

Mr. GLASS. I may offer it as an amendment to the resolution proposed by the Senator from Massachusetts.

Mr. BRUCE. The Senator from Idaho, then, was just drawing a red herring across the trail, and really did not have in his mind——

Mr. BORAH. No; not at all. The Senator from Maryland can draw a resolution just as readily and more perfectly than the Senator from Idaho. The Senator from Maryland is in favor of the World Court. I am perfectly willing to support a program to bring the reservations back here for consideration. If the Senator is in favor of it, instead of finding fault with another Senator about his failure to do so, the Senator can offer his resolution.

Mr. BRUCE. I am going to leave that to the skillful hand of the Senator from Virginia. If he will promise me to bring in such a resolution, I will gladly waive any claim that the Senator from Idaho should bring it in.

Mr. GLASS. I shall propose such an amendment, I think, to the resolution submitted by the Senator from Massachusetts, and in case of the failure of adoption of such amendment I shall vote for the resolution of the Senator from Massachusetts which, I think, however, will accomplish nothing.

Will the Senator from Maryland permit the reading of the editorial at this time?

The PRESIDING OFFICER (Mr. ASHURST in the chair). Does the Senator from Maryland yield to the Senator from Virginia for that purpose?

Mr. BRUCE. I am glad to do so.

The PRESIDING OFFICER. The clerk will read the editorial, as requested.

The legislative clerk read the editorial, as follows:

FEEBLE SUBSTITUTE FOR THE LEAGUE OF NATIONS

There is a going concern, a world-wide organization of 56 nations, which was created at the close of the World War in response to universal demand, the principal object of which is to promote international understanding and avert the settlement of differences of opinion by wholesale murder. The United States was largely instrumental in the creation of this organization. Having conceived and brought it forth, this country repudiated the League of Nations and would have none of it. If the league has failed in any respect to make reasonable progress in the achievement of the stupendous tasks involved in the substitution of reason for force as a solvent of international disagreements, that failure is almost wholly due to the refusal of the United States officially to cooperate in its undertakings.

It would be futile now to dig into the motives which impelled the United States to turn its back on the League of Nations, along with Turkey and Soviet Russia—the only other States in the world which remain outside. It may be profitable to point out, however, that for practically 10 years our statesmen have been seeking other means to accomplish what would have been accomplished by our thoroughgoing adherence to the league. There is in this a confession on their part of consciousness of a moral urge; an admission of the desirability of the objects of the league; and a defiant claim that our way, or any one of our several ways, of promoting international peace is superior to the way devised by the combined wisdom of 56 other sovereign states.

Our latest effort to attain by a side path the objective to which the broad and smooth highway of the League of Nations already leads is an outgrowth of Secretary Kellogg's recent attempts to negotiate a permanent peace treaty with France. He has broadened proposals originally directed to one power so as to include four other great powers. He has submitted to Great Britain, Germany, Italy, and Japan, as well as to France, the tentative draft of a proposed treaty to outlaw war among its signatories and has invited them to submit their views thereon. The gist of this instrument lies in a formal condemnation and renunciation of recourse to war and a pledge that "the settlement or solution of all disputes or conflicts of whatever nature or of whatever origin they may be * * * shall never be sought except by pacific means."

Since any step looking to the avoidance of war is to be welcomed and earnestly championed in the interest of an enlightened civilization, it would be invidious to compare this document's provisions with the similar provisions of the covenant of the League of Nations. It pledges its signatories to a pacific course without signifying what the processes of that pacific course shall be. It has no teeth. It has exactly the same binding force as the instrument by which Germany was pledged in 1914 not to violate the neutrality of Belgium. That instrument, we seem to remember, was subsequently described as a "scrap of paper."

It would not be quite reasonable to inquire into the shortcomings of the Kellogg proposal until the other nations concerned shall have expressed their views upon it. If it has weaknesses they will discover them. It is only a framework upon which diplomacy may attempt to build. And the more and better it shall build, the closer must the finished product come in resemblance to the detailed and comprehensive scheme of the League of Nations covenant for the achievement of the same purposes.

What a pity it is that partisanship has impelled us to seek devious byways, backdoor conferences, and knot-hole views in order to avoid an admission of our original egregious mistake!

Mr. BRUCE. Mr. President, if the Senator from Vermont will now obtain the recognition of the Chair, I am prepared to sink back gracefully into my seat; otherwise I will continue the discussion of this subject.

Mr. DALE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Maryland yield to the Senator from Vermont?

Mr. BRUCE. I do.

The PRESIDING OFFICER. The Senator from Vermont is recognized.

RETIREMENT OF CIVIL SERVICE EMPLOYEES

The Senate, as in Committee of the Whole, proceeded to consider the bill (S. 1727) to amend the act entitled "An act for the retirement of employees in the classified civil service, and for other purposes," approved May 22, 1920, and acts in amendment thereof, approved July 3, 1926, which had been reported from the Committee on Civil Service with amendments.

Mr. DALE. Mr. President, I realize perfectly well that the purpose has already been accomplished, and that the plan is to talk this bill to death before 2 o'clock, so it does not make any difference whether I talk 5 minutes or whether I talk 35 minutes. It is just a question of who talks. I realize that. There is not any misunderstanding on my part with respect to it.

Mr. BRUCE. Mr. President——

Mr. DALE. I do not yield, Mr. President.

Mr. BRUCE. No; the Senator dare not yield.

Mr. DALE. Mr. President, some seven or eight years ago a retirement bill was passed. It was discussed for a good many years, and no doubt every Senator on the floor understands the conditions under which that bill was passed. I am not going to take the time to review those conditions. It gave to the employees an average of about $500 on retirement and it fixed their ages at 70, 65, and 62. That is, there were several groups. They were grouped according to the peril and the exposure, and so forth, of their work. A year or two years ago that act was amended, and the purpose of the amendment of that act was to bring the annuity up to a little over $700 on the average and the maximum to $1,000.

The men themselves paid all that increase. The Government was not called on for a cent there, because their contribution, which was formerly 2½ per cent, was raised to 3½ per cent to cover that increase, so that the Government gave nothing more in the bill that has been passed since the original retirement bill. They contributed nothing more out of the Treasury than they did respecting the original bill.

The so-called deferred liability is frequently confused with the expense to the Government. The statement is made repeatedly, "Why, it will cost the Government so many billions of dollars to do this and do that." The great expense to the Government is in the deferred liability; that is, men going out of the service who do not pay in this contribution of 3½ per cent perhaps at all, some of them, or only a year or two, or five or six years. Therefore, the Government has to meet the cost of these men who have gone out. That cost, of course, is quite large; but the Government has to meet it now. It has already assumed that liability, and that is an expense that the Government has to meet anyway. That liability will be liquidated completely in about 28 years.

The purpose of the bill under consideration is to increase the average annuity to about $800 and the maximum annuity to $1,200. Twelve hundred dollars is the very largest annuity that anyone in the classified service can get under this bill, and the average is about $800.

That is the purpose of the bill, and that is all the purpose in that element of it. It is a very simple, plain purpose. According to the reports of the actuaries—and the committee had to take their reports—toward the normal cost, after we get by the deferred liability, the Government at the present time pays in round numbers $3,852,000 a year. This bill will increase that amount about $5,535,000. At the present time the men pay 3½ per cent and the Government pays less than one-half of 1 per cent. That is the proportion. Under this bill the Government will have to raise its contribution to a little over 1 per cent. That the Government will have to pay, and the men will have to pay 3½ per cent.

Your committee felt that $800 retirement was a small enough amount on the average for any man to receive after he had given 30 full years of service. Under this bill, if he has given 30 full years of service he is given two years' reduction in the age at which he may voluntarily retire. That is, if he has served the Government 30 years, he may retire at 68 in one class. If he has served 30 years, he may retire at 63 in another class. If he has served 30 years, he may retire at 60 in another class. That is, having served 30 years, he may retire two years earlier than those who serve 15 but less than 30 years.

That is all there is to the bill. It simply gives the employees two years' option after 30 years' service; it gives an average retirement of $800 a year; and it costs the Government 1 per cent—less than one-third of what it costs the men.

Mr. COPELAND. Mr. President, I ask unanimous consent to have included in the RECORD a short item regarding the retirement bill which has just been passed in the State of New York.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The matter referred to is as follows:

[From the Chief for Saturday, April 7, 1928]

SMITH SIGNS PENSION BILLS—FOUR FORUM BILLS AMENDING PENSION SYSTEM NOW LAWS—55-YEAR BILL, PRIOR SERVICE, 20-YEAR RETIREMENT MEASURE, AND 10 PER CENT PENALTY REPEAL APPROVED BY THE GOVERNOR

Governor Smith again proved himself to be a friend of civil-service employees when on Thursday he signed the four bills prepared by the Civil Service Forum amending the New York City employees' retirement act.

The provisions of the four new laws follow:

1. The 55-year bill, introduced by Senator Burchill and Assemblyman Grenthal permits city employees in the New York City employees' retirement system to obtain a pension at 55 years of age at their own request. This is known as chapter 788.

2. The bill introduced by Senator Burchill and Assemblyman Tonry reopens the New York City employees' retirement system to any employee who has not as yet joined the system and gives him credit for any service prior to October 1, 1920, at the cost of the city, and since October 1, 1920, at half the cost to the city and half to the employee. This is now chapter 786.

3. The bill introduced by Senator Burchill and Assemblyman Grenthal repeals the disability clause in the present law which deprives an employee who has been retired for disability of his full pension and which provides that a 10 per cent penalty be deducted before his pension is paid. This is chapter 790.

4. The bill introduced by Senator Burchill and Assemblyman Grenthal provides that an employee who has served the city for 20 years, and who is being involuntarily separated from the service through no fault or delinquency on his part, shall be entitled to a prorata pension based on his years of service. This is now chapter 789.

The governor also signed the Schackno bill, introductory No. 1281, amending section 1703 of the charter, relative to allowance for prior service to certain members of the pension system, and the Kinsley bill, introductory No. 1311, amending section 1709 of the charter, relative to withdrawals from the pension system.

Mr. BLEASE. Mr. President, on yesterday at the hour of 2 o'clock, when the unfinished business was laid before the Senate, I was reading a letter which appears on page 7436 of yesterday's RECORD. I desire now to finish reading the letter from the Standard Mailing Machines Co., of Everett, Mass., which is signed by F. M. Holmes, president. This is addressed to some one whose name is blotted out:

As a user of our Standard postal permit machine, you will undoubtedly be interested in the action our company is taking in behalf of its users to effect a change in the postal laws and regulations for the betterment of the nonmetered permit system of mailing.

The present postal regulations require 300 or more pieces to a mailing of nonmetered matter and only 100 pieces or more to a mailing of metered permit matter.

Until recently your local postmaster was given considerable latitude in the enforcement of this postal regulation, and he was permitted to, and did, accept smaller quantities so as to encourage earlier mailings, thus relieving peak-load conditions at the post office.

The department has recently issued instructions to postmasters requiring the rigid enforcement of the minimum quantity requirements, with definite instructions that only once a week may the postmaster accept mailings of less than 300 pieces. Our mailers inform us that this rigid and arbitrary ruling inflicts a hardship upon them and compels them to use adhesive postage stamps on many of their mailings. This is particularly inconvenient for those who wish to present portions of their daily mailings earlier in the day.

We believe that the minimum quantity regulation is discriminatory and most unfair to the general mailing public, who are entitled to satisfactory and impartial postal service regardless of the device used for imprinting the indicia. Whether the mailer uses a metering machine for which he must pay to the manufacturer, in addition to the purchase price, rental charges of from $10 to $25 per month, or whether he uses a nonmetering machine free from all rental charges, the same postal service should be rendered as long as the postage required by law is paid on each piece of mail matter.

As a result of the many complaints received from our users, this company has issued a formal complaint to the Post Office Department, presenting reasons and facts why more reasonable and uniform minimum quantity regulations should be established regardless of the device used for imprinting the indicia.

I call especial attention to the next paragraph:

Our case is being handled by Mr. Frank W. Mondell and Mr. C. Bascom Slemp, as competent counsel as can be obtained in Washington. Mr. Mondell was formerly Congressman from Wyoming, with over 20 years' experience as a Member of Congress, and for several years leader of the House of Representatives. Mr. Slemp was formerly Congressman from Virginia, and secretary to both President Harding and President Coolidge.

I call the attention of the Senator from Arkansas [Mr. CARAWAY] to the fact that that might be of some use to him in connection with his resolution investigating lobbyists.

Another section:

Our case is also being supported by the Hon. CHARLES L. UNDERHILL, Congressman for several consecutive terms from our Massachusetts congressional district. He has the high honor of being chairman of the Committee on Claims, one of the most important committees in Congress. He is respected by his constituents and associates in Congress for his high principles and sound judgment.

Another case that the junior Senator from Arkansas might possibly look into when he comes to the question of lobbying.

These unbiased, competent men, after giving careful consideration to the facts of the case, have decided that our position is sound and that there is no justification for the existing discrimination, as expressed in the Postal Regulations. They contend that the Postmaster General has exceeded the authority conferred upon him by Congress in establishing unreasonable and discriminatory minimum quantity requirements.

I call attention to that, Mr. President, to show that this very able and distinguished ex-Congressman, this ex-secretary to the President, and the present Congressman, who has served his district so well, do not agree with the Post Office Committee and the Postmaster General in putting upon these people such unreasonable and discriminatory requirements. It is a rather strange thing, too, that at this time in a presidential campaign these very distinguished Republicans—I presume that Mr. UNDERHILL is one, coming from the State that he does—are so much at cross-

purposes with the Postmaster General of the United States. I am not surprised that the Postmaster General should act in this way, because some three months ago he appointed a man from the State of Georgia, born in Georgia, reared in Georgia, and who lived in Georgia—it is much to his credit, I think, that he should have been born and reared and lived in such a great State, being what he is now, an impostor—they took him out of Georgia and carried him to the State of South Carolina, and, in violation of every civil-service rule known on the books, appointed him acting postmaster in that city.

Then, when the Civil Service Commission had an examination and certified that this man was not a citizen of South Carolina, that he was a qualified registered voter, sworn as such in April, 1927, of the State of Georgia, the Postmaster General still keeps him in office in the State of South Carolina; and yet Senators expect me to stand on this floor and advocate civil-service matters!

Never in God's world! There is no such thing as civil service. They are cold-bloodedly and deliberately selling post offices in South Carolina. I have the proof and have offered it to Attorney General Sargent; I have offered it to Postmaster General New; and I am ready to offer it to any Senate committee you appoint.

Men go around deliberately and ask, "How much is such and such a post office worth to you?" Or they will go to the man who is selling the post office, and they will say, "What conditions do I have to meet to be appointed postmaster at Spartanburg, or Greenville, or Gaffney, or Columbia, or any other point?" If the man who is an applicant for the job will meet the requirements, his name is put on the eligible list whether he is eligible or not, sent up by the Civil Service Commission to the Post Office Department, and the Post Office Department names that party postmaster whether he is entitled to it under the civil service law or not.

I charge that, as a Senator from the State of South Carolina, with the proof in my office. Yet they expect me to sit here as a Senator from a sovereign State and support bills of this character and bills of the character of the bill before the Senate yesterday and hypocritically play the part of helping to pass a so-called civil service law that is nothing in the world but a barter and a trade and a sale.

Mr. DALE. Mr. President——

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from Vermont?

Mr. BLEASE. I yield.

Mr. DALE. I know it does not matter how much time I use up, so I would like to ask the Senator a question, if he will yield to me.

Mr. BLEASE. I yield.

Mr. DALE. How does the Senator connect this civil service retirement bill with the civil service law in any way?

Mr. BLEASE. If the Senator will just wait until I get to it, I am surely going to connect them.

I have not yet seen any bill here to pension farmers, who work from their babyhood all through life feeding this country. I have not seen any bill here to pension lawyers; or doctors, who ride all night in the rain and cold to administer to mankind. I have not seen any bill to pension office clerks, or merchants, or bank clerks, or newspaper reporters, or even Congressmen or Senators. If these people work for the United States Government, why do they not do as other people do? Why do they not save money out of their salaries? If the salaries are not enough for them to live on and save something, then why do they not resign and go to work at something where they can save something? Why should the taxpayers of this country pay pensions to people who have already lived on the Government for years and for years, educated their children, fed their families, and then insist, at the age of retirement, because they simply have worked for the Government, that they shall be picked up and pensioned, when all other classes of people on earth have to take their own chances? Why not go to work and pass a retirement bill for mothers, providing that after they have had so many children we are going to take them and the children and provide for them by pensions?

Mr. DALE. Mr. President, will the Senator yield?

Mr. BLEASE. I yield.

Mr. DALE. The Senator just made the remark that we do not hear of any retirement bill to pension Congressmen. Does not the Senator know that Al Smith has signed a retirement bill to pension the Congressmen of New York?

Mr. BLEASE. Mr. President, I am not responsible for anything Al Smith does, and I am not surprised at anything he would do.

Mr. DALE. Did the Senator know that he had done that?

Mr. BLEASE. No; I did not know that, but I know I am against him for President, so that would not change my mind at all.

Mr. COPELAND. I am for him.

Mr. BLEASE. I will be for him, too, if he is nominated properly.

I continue reading from this letter:

They contend, also, that the choice of permit printing machines should lie wholly with the mailer; that even though one type of machine may save the department more than another, the department is not justified in giving better postal service in one case than in another. They contend that the Post Office Department, being a public service organized not for profit but to do the greatest good for the greatest number, is acting selfishly and is not considering the best interests of the mailer when it refuses to give him the same efficient postal service because he uses a machine of the nonmetering type, through which he may save thousands of dollars in meter rental charges.

Those are the charges these ex-Congressmen and Congressmen are alleged to be making against this Postmaster General.

As a matter of fact, the Post Office Department, by restricting the nonmetering system, is limiting postal revenues. The questionnaire recently sent to all Standard users reveals the interesting information that each Standard permit machine in use saves the post office on an average of $48.90 per year on the manufacturing cost of postage stamps alone. This means an average saving for the department of approximately $490 on each machine over a period of 10 years, which is a conservative estimate of the life of the Standard machine.

Through the elimination of meter rentals, totaling from $120 to $300 a year, the Standard machine effects even greater savings for the mailer. Each Standard user saves from $1,200 to $3,000 in the cost of meter rentals alone over a period of 10 years. Furthermore, in the case of many mailers the machine pays for itself in a short period, often in a year or less.

Thus the combined saving to the Post Office Department and the mailing public is greater with the Standard machine than with the meter rental type of machine. A machine or system which is capable of effecting such substantial savings should naturally be encouraged, as was the expressed intention of Congress in adopting the permit system. At least its use should certainly not be restricted by unreasonable and discriminatory postal regulations.

As this matter is of great importance to you and thousands of other mailers, will you kindly join us and help us to solve this problem by writing to Mr. Frank W. Mondell? We do not seek to encroach upon your valuable time by asking you to go into detail on the subject, but simply ask you to express your opinion of our proposal and the extent to which you may now be inconvenienced by the present arbitrary minimum-quantity requirements.

By request, your communication will be considered as strictly confidential, and for your convenience we inclose a stamped envelope addressed to Mr. Mondell, Investment Building, Washington, D. C.

Very truly yours, STANDARD MAILING MACHINES CO.,
F. M. HOLMES, *President*.

Mr. President, they sent along with that the following:

Reply to points raised in circular letter, March 23, of the Standard Mailing Machines Co. soliciting letters to Mr. Frank Mondell in favor of Senate 3890.

Before I read that I think I had better read the bill. It is as follows:

[S. 3890, Seventieth Congress, first session]

IN THE SENATE OF THE UNITED STATES,
*April 4, 1928.*

Mr. GILLETT introduced the following bill; which was read twice and referred to the Committee on Post Offices and Post Roads:

A bill to amend section 5 of the act entitled "An act making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1921, and for other purposes"

*Be it enacted, etc.*, That section 5 of the act entitled "An act making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1921, and for other purposes," approved April 24, 1920 (41 Stat. L. 583), is hereby amended to read as follows:

"SEC. 5. The Postmaster General, under such regulations as he may prescribe for the collection of such postage, is hereby authorized to accept for delivery and to deliver, without postage stamps affixed thereto, not less than 100 pieces at a mailing, mail matter of the first class on which the postage has been fully prepaid at the rate provided by law."

Mr. President, just by way of answering my friend the Senator from Vermont [Mr. DALE] a little further, I will say that I introduced a bill a few days ago that would go a long way toward doing away with the unemployment we have in this country. It would go a long way toward solving the very

things this bill here is attempting to solve. That bill provides:

That from and after the 1st day of July, 1928, no person or persons shall be employed in any department of the United States Government when or where there is another member of the same family working in that or any other department: *Provided,* That the salaries of the family shall exceed $5,000.

It then goes on and provides for the punishment of any person who violates that provision, whether he is an officer of the Government or not.

I have made just a little bit of inquiry in the last couple of months along this line, and I think that what is needed in this country is the right kind of home, and that is needed very badly; the good old home we used to have in the days gone by, when they would have family prayer in the morning, and when at night the children were taught to go into their bed rooms, and either with their mothers with them, or by themselves, were taught to kneel down at the bedside and thank the great giver of all gifts for the blessings to their family, and for the blessings to them individually.

I think we need that kind of homes in this country. I think we need the kind of homes where the father and the mother have time to sit down and eat their meals with the children, and to teach them the proper manners at the table, and time enough to stop and talk with the children, and explain to them something of what will be required of them in the after life.

Mothers and fathers may send their children to school, Mr. President, they may send their children to Sunday school, or Sabbath school, if you please, and they may feel that they are doing their full duty by those children, but they can not shift the responsibility of the rearing of their children either to the day-school teacher or to the Sabbath-school teacher. God Almighty has given them those children, and regardless of what the mother and father say, God is going to hold them responsible for the rearing and training of those children, and, to a large extent, for the future of the children.

The real old American home is fading out very rapidly, with that home touch, that family tie, that have made this country what it is, upon which the foundation of this country is laid, and a belief in the divinity of Jesus Christ, because if you deny and take out of the Bible the divinity of Jesus Christ you destroy the Christian religion.

What have we here in Washington? We find mothers and fathers working in these departments who hire servants to rear their children. The father and the mother get up in the morning and do not have time to thank God, unless they thank Him while they are dressing. They go rushing to the departments, greedy for money, greedy to cheat some woman, some poor widow, perchance, who could do that work, a woman with little children to support; but they combine the jobs in the family, leaving the children at home to some incompetent servant, possibly, whom they can hire cheap, who comes in about the time the father and mother leave, and is supposed to take the place of the father and mother.

Mr. MAYFIELD. They even take the babies down town and check them, do they not, turn them over at the playhouse, and take a check for them, as they would check a grip?

Mr. BLEASE. I think they do that; and I noticed not long ago that some woman went to a hospital and forgot to check the baby, and they are having a lawsuit to determine whether she got her's or the other woman's. They had better have the babies at home, as they used to, when they brought forth good, strong, sturdy children, where they did not have them in hospitals, as they do now, and where they have to shift them around.

If this bill I have introduced should pass, it would mean no hardships to these women whose husbands are drawing five or six or seven thousand dollars from the Government, adequate compensation to pay for the upkeep of their families in this city, where we have free schools, where they are certain of the education of their children. I am told they have fine schools in this city.

Mr. MAYFIELD. And a free university.

Mr. BLEASE. And a free university, as my friend the Senator from Texas suggests. I say it is not right for the father and the mother and two or three of the older children to work their way through the departments through the influence possibly the father gains with the head of the department in which he works, cutting out, as I said a moment ago, women who are entitled to those positions and who can fill them just as well as the ones who have them. Then these women could go home and take care of their children. There would not be so many out at night dancing, drinking liquor, and smoking cigarettes, and raising the devil in general, a telephone message coming along during the night saying, "Send some money down here. Your boy is in the lockup."

Now, at times the husband is given a job at about five or six thousand dollars; then a swap is made. Some fellow says, "I will get your wife a job over here under my boss, and you get my wife a job under your boss." They are afraid to put both in the same department, afraid somebody will raise the devil with the head of the department. But they will switch. One fellow will put another man's wife in, and the other fellow will put his wife in. Then the child gets in, and they actually have whole families working in these departments. Yet Senators come here on this floor and complain about unemployment.

If this bill of mine shall be passed and a thorough examination into the matter is made, we will not only relieve a good deal of the unemployment by giving people who have no work employment but we will put these mothers back home; and they will begin to rear better citizenship than is being reared to-day.

Why should a few people gobble up all the jobs? Why should a few people, because they have a little political pull, live in luxury, working in the departments, and when they are not at work riding around in big, fine automobiles, wearing the finest kind of clothes, and wearing costly jewelry?

I like to see people in automobiles; I like to see them dressed well; I like to see them with pretty jewelry on and wearing pretty dresses; but I do not like to see them doing it at the expense of somebody else with four or five members of their family drawing big salaries from the Government, and the very man living next door or the very woman living next door possibly at night feeding their children a little dish of some kind of food that does not amount to much, and putting them to bed, and sometimes the little things crying for something to eat, while right next door lives a man whom the Government is paying a salary and paying his wife a salary and possibly one of his children. I say, let the civil service begin to remedy that, and take out of South Carolina these imposters who are coming and holding our post offices, and I might say that I would vote for some civil service bill. But I want to be distinctly understood as being opposed to all civil service. If I were President of the United States I would not appoint any man to any office who had not voted for me for President, I do not care who he was.

Mr. COPELAND. Mr. President——

The PRESIDING OFFICER (Mr. KING in the chair). Does the Senator from South Carolina yield to the Senator from New York?

Mr. BLEASE. I yield.

Mr. COPELAND. Surely the Senator could find a way to formulate a bill to take away the evils which are associated with the matters concerning which he is speaking, but he would not interfere, I am sure, with giving decent retirement pay to people who are of a different type entirely, who give their lives to the Government, who are slaving along here at very low salaries, and who are entitled to every consideration.

The PRESIDING OFFICER. The hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business, which is Senate bill 728.

Mr. COPELAND. Mr. President, surely the Senator from South Carolina realizes that there are many people who have given a lifetime of devoted service to the Government and who are not at all of the type of which he has spoken. These public servants, I take it, the Senator believes should be rewarded in an ample way.

Mr. BLEASE. I think we are rewarding them every day when we are paying them handsome salaries. When the Congress will pension the farmers of South Carolina, whom I have known for 55 years, who have been working, shoveling, toiling every day to feed the world, when the Congress will pension the men and the women in the mills of South Carolina, and the railroad employees in my State, all of whom have to lay by something to take care of themselves in their old age, then, and not until then, will I vote for a proposition such as the pending measure.

### ENROLLED BILLS PRESENTED

Mr. GREENE, from the Committee on Enrolled Bills, reported that this day that committee presented to the President of the United States the following enrolled bills:

S. 4046. An act authorizing the Henderson-Ohio River Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Henderson, Ky.; and

S. 4180. An act authorizing the attendance of the Marine Band at the Confederate Veterans' Reunion at Little Rock, Ark.

### MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the House had disagreed to the amendments of the Senate to the bill (H. R. 12875) making

appropriations for the legislative branch of the Government for the fiscal year ending June 30, 1929, and for other purposes; requested a conference with the Senate on the disagreeing votes of the two Houses thereon, and that Mr. MURPHY, Mr. WELSH of Pennsylvania, Mr. HOLADAY, Mr. SANDLIN, and Mr. TAYLOR of Colorado were appointed managers on the part of the House at the conference.

BOULDER DAM

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 728) to provide for the construction of works, for the protection and development of the lower Colorado River Basin, for the approval of the Colorado River compact, and for other purposes.

Mr. SMOOT resumed and concluded the speech begun by him yesterday. The entire speech follows:

*Monday, April 30, 1928*

Mr. SMOOT. Mr. President, the most remarkable fact concerning this proposal is that it should have reached the floor of the Senate—it is so thoroughly unsound in every aspect that it is a real tribute to its sponsors that they have even after six years of effort been able to get it before the Senate for serious consideration.

I am sure that there is little appreciation of the magnitude or of the revolutionary character of this proposal. No doubt most of the Senate are under the impression that this is simply another of the many internal-improvement projects. I know that many believe that the primary purpose of the bill is to provide flood control for the Imperial Valley in California.

In fact, flood control is only a minor purpose of the project. There is said to be $100,000,000 of property values to protect from flood. Flood protection, and the only complete flood protection, through levees and channel dredging, can be provided for not more than $7,000,000 and if so provided would be available within two years at the most. Flood control and river regulation for irrigation through the construction of a great dam on the river 120 miles closer to the property to be protected can, according to the available evidence, be provided for $15,000,000. Here we are asked to spend $125,000,000 on a great experimental power project where the flood-control dam is 300 miles above the land to be protected and the time required for securing the flood protection will be at least 10 years if the bill should become a law at once.

I propose to disclose some facts concerning this bill—facts which I will demonstrate from the indisputable evidence in the record, and which to my mind absolutely and beyond question preclude the possibility of authorization of this project without further investigation.

Do Senators know that we are here being asked to authorize and by our vote to approve the greatest engineering risk in history?

Do Senators know that the plan which you are asked to approve and therefore accept responsibility for is a plan that is the subject of bitter disagreement among the engineers of the Government service?

Do Senators know that you are being asked to substitute for a comparatively insignificant flood menace a menace to lives of thousands of people which might result in the greatest man-made disaster in history?

Do Senators know that if we pass this bill the responsibility for this engineering experiment is squarely and wholly upon us, because the responsibility has been passed to us by the Secretary of the Interior?

Do Senators know that in order to provide flood control and irrigation relief, the only subjects in which we have any possible interest as Federal officials, it is wholly unnecessary not only to expend more than a fraction of the money here involved but to take any of these risks?

We are told of a flood danger in Imperial Valley, and this is used as an argument for Boulder Dam. Yet on examination of this project, as compared with any of the alternative proposals for affording flood relief, we find that it is by far the most costly, will delay relief for years longer than any other method proposed, and that flood control is in all respects subordinated to the major purpose of this project, which is power development. Then we find that instead of solving the flood menace it is proposed under this project to substitute for the existing menace an enormous experiment concrete dam, the like of which was never before tried in the world, under conditions which introduce grave elements of risk in its construction, and finally that when, if ever, it is constructed it will stand in an earthquake area and on a spot where earthquakes have occurred within recent years. It will be found that the only relation between Boulder Dam and flood control is that "flood control" is a good selling argument for this project. Boulder Dam is not to provide flood control, but flood-control talk, it is hoped, will provide Boulder Dam.

There prevails in the mind of the Congress and in the public mind an entirely false impression which has been carefully cultivated by the promoters of this legislation. That impression is that the only issue concerning this legislation is whether the advertised benefits of it should be provided by Congress. It is the general impression that there is only one plan for developing the Colorado River, and that is by the construction of Boulder Dam. Nothing could be farther from the truth. There is no issue over the question of developing the Colorado River. The issue is as to whether this particular plan for its development through the construction of this huge experimental dam is the sound and proper way to begin its development. One bureau of the Government says that Boulder Dam is the way. Two other bureaus say that Boulder Dam is decidedly not the way to do it; and they present another engineering plan, involving less initial expenditure, less risk, less delay, less litigation, and all the benefits except the questionable benefit of an indigestible supply of electric power developed in one huge block. Many people can be quoted in support of Colorado River development. Very few people can be quoted as supporting the Weymouth plan for Boulder Dam. The argument here is not about flood control, about irrigation development, or any of the things that are involved in Colorado River development. The argument is as to the manner in which these things should be done and whether the States whose territory lie within the basin shall be protected in that development. This is not a humanitarian question. It is a question of engineering, economics, and State rights.

I urgently request that you keep in mind at all times during my remarks that this entire project rests upon one engineering investigation and report, that that report is not only the final authority, it is the sole authority upon which this project rests. There are many subsidiary questions—questions of States' rights, of financial plans, of adopting a revolutionary policy for Federal action, but the fundamental question is whether this one report submitted to Congress in March, 1924, unreviewed, unchecked since that time, is sound. We are the judges; the decision is up to us; the other questions are all secondary. The Congress of the United States is now sitting as a board of directors with the responsibility of accepting or rejecting this engineering report.

The primary issue before us is not whether there is necessity for flood control on the Colorado River, not whether flood control should be provided at Federal expense and by the Federal authorities, not whether the Colorado River should be developed, not whether the States or the Federal Government should control the waters of the Colorado River, not whether the Federal Government should undertake the biggest power enterprise in history, not whether we should adopt a revolutionary policy for handling Government undertaking—all these issues are involved, but, important as they are, they are secondary to the main issue. The question before us is whether we shall approve, adopt, and authorize the Secretary of the Interior to proceed with the Weymouth plan for building Boulder Dam. The case for this proposal stands or falls with that report. I, therefore, propose to first consider, and to consider in some detail, the Weymouth report.

I make no apology for the length of the discussion which I find it necessary to make nor for the difficulty of the subject. The subject is not of my choosing. Congress is here confronted with the necessity of acting as an engineer and with passing upon a detailed intricate engineering plan, in order that we may advise the Secretary of the Interior whether he shall proceed with it. I can only remind you that the points which I shall discuss are, each and every one, points that you must make a decision upon if you are going to vote intelligently on this measure.

I first proceed to a consideration of the history of the Weymouth report. Despite the fact that this plan was submitted to Congress four years ago, and was then the subject of acute disagreement among Government engineers, and the question of deciding the issue between these engineers was submitted to Congress by the Secretary of the Interior, there has not since that time been any independent check of the basic engineering plans or of the cost estimates of the Weymouth report. Not a single independent engineer unconnected with the Reclamation Service has given Congress any additional information as to this plan in those four years. Indeed, engineers who are reported to have approved the basic features, have cast doubt on its safety, and have proposed methods of construction as substitutes.

For the story of the Weymouth report I turn first to the testimony of Mr. F. E. Weymouth himself, given before the House Committee on Irrigation and Reclamation, March 20, 1924 (pp. 710–711, hearings, H. R. 2903, 68th Cong., 1st sess.):

In 1920, under the Kinkaid Act, the Secretary of the Interior was instructed to investigate the irrigation possibilities in the Imperial Valley and further development in that valley, including storage on the

Colorado River. * * * Pursuant to this authorization, funds were provided in the sundry civil appropriation act for the fiscal year 1921 (41 Stat. 915) for the Government's share of this investigation. Subsequent appropriation acts for the fiscal years 1923 and 1924 have extended the scope of the studies. * * *

The results of these investigations thus provided for to the end of the calendar year 1921 were submitted to Congress in a report by the Secretary of the Interior, dated February 28, 1922, and published under the title, "Problems of Imperial Valley and Vicinity." (S. Doc. No. 142, 67th Cong., 2d sess.)

This first report is the one known as the Fall-Davis report. Mr. Weymouth further says (pp. 710–711):

We have gone into great detail in our investigations during the past two years and have gathered a great deal of engineering data that we did not have at the time of the so-called Fall-Davis report. We have written up our findings in eight volumes, and in the first part of each of the volumes, which the committee has, we have summarized the findings on the subject in that particular volume. In volume 1 I have attempted to summarize everything we have worked on; I have written a synopsis of about 15 or 20 pages for volume 1 which gives the essential points in our particular studies, and it would save time, perhaps, for all if I would read that 15 or 20 pages into the record.

Mr. Weymouth then read from his summary of his report, and I quote some paragraphs which he read (pp. 715 and 718):

A consideration of water supply and irrigation demand on the Colorado River demonstrates conclusively that at the Boulder Canyon reservoir site in connection with a reservoir providing flood and irrigation control of the entire flow of the river there is opportunity for the development of 667,000 horsepower of electrical energy at 100 per cent load factor, justifying the construction of a power plant with an installed capacity of 1,200,000 horsepower operated at 55 per cent load factor, which is the condition under which comparable plants in this region are found to operate.

* * * * * * *

It has been shown that river regulation, flood control, and storage for irrigation can be best and most economically obtained at Boulder Canyon with a dam at Black Canyon. * * *

22. The Geological Survey in 1923 discovered what appears to be a favorable dam site in Bridge Canyon at an elevation of about 1,210. Should the physical conditions at this site, upon test and investigation, prove suitable for a dam, the interests of Colorado River development may possibly be best served by reducing the height of the proposed dam in Black Canyon from 605 feet to 550 feet.

I direct your attention at this point to the fact that the dam which is now proposed and which we are asked to authorize by this bill is this 550-foot dam mentioned in the last quoted paragraph. The dam covered, and for which designs and cost estimates are made, in the eight-volume Weymouth report is a different dam—a 605-foot dam, estimated to cost $49,500,000. The only cost estimate for the 550-foot dam that is officially before us is contained in a sentence from Mr. Weymouth's oral testimony on page 718, as follows:

The cost of the dam would be reduced from $49,500,000 to about $41,500,000.

This casual figure given on March 20, 1924, by Mr. Weymouth is apparently the source of the estimate given in a letter written by Secretary Work almost two years later—January 18, 1926—to the chairmen of both the House and Senate committees, in which he recommends the construction of the 550-foot dam. Senators may not realize that an enormous amount of engineering computation and of new drafting of designs is involved in subtracting 55 feet from the height of a dam. The changing of every dimension from the bottom of the foundation of the dam to its crest, the stresses at every point in the concrete must be figured anew in order to insure the safety of the changed structure. If such computation and designing has been done for this 550-foot dam the results have not been transmitted to Congress.

I now challenge your attention to this fact and I hope no Senator will miss this point, because it is fundamental in much of the discussion which follows: The fact is that this Weymouth report submitted to Congress in March, 1924, is the "last word" in Government reports on this proposed development; in other words, there has been no investigation or report on the basic plans, on the cost estimates, on any of the basic factors which we are asked to pass upon except that which is contained in this Weymouth report. All the compilations and any report made since 1924 are simply compiled from this report and are the result of superficial examination of this report.

I quote from the testimony of Mr. George W. Malone appearing at page 234 of hearings before Senate Committee on Irrigation and Reclamation on the bills S. 728 and S. 1274, given under date of January 20, 1928:

This Weymouth report compiled all of the data up to date and in addition secured an enormous amount of detailed data and made estimates at an approximate cost to the Government of $400,000, and is the last word in Government reports.

Mr. Malone is State engineer of Nevada and secretary of the Colorado River Commission of that State, and is an advocate of this bill. He filed a report with the Senate committee which appears on pages 495–513 of the volume of hearings last referred to, and I quote the following from page 496 of that report:

Any reports made subsequent to 1924 are simply compiled from this work, since any superficial examination will not reveal further information.

Having in mind that this Weymouth report made in 1924 is the one and only report of record which supports this project, and that there has been no subsequent investigation, I turn again to the story of its consideration by Congress. Under date of March 25, 1924, I find in the hearings before the House committee on H. R. 2903, at page 817, the following statement made by the chairman:

A few days ago I received from the Secretary of the Interior a letter dated March 17, 1924, commenting upon the proposed improvement of the Colorado River Basin, and transmitting to the committee reports, in eight volumes, in manuscript form with a great many maps and photographs, one of which is the report of the Reclamation Bureau.

This is the first appearance of the Weymouth report before Congress. The letter from Secretary Work to which Chairman Smith refers appears at pages 818–821 of the same hearings, and I quote pertinent parts of that letter:

The Fall-Davis report of two years ago has been before Congress since then and no doubt has been analyzed by it. Its recommendations stress the Boulder Canyon Dam which is the paramount feature of it.

The proposed Boulder Canyon Dam treated in these studies will raise the water surface 605 feet, a height greater than that of the Washington monument and more than two and one-fourth times as much as the Don Pedro Dam in California, which has the highest lift of any in this country and probably of any in the world.

The dam would contain over three and three-fourths million cubic yards of concrete, which is more than three times as much as the Assuan Dam in Egypt, containing the greatest amount of masonry of any dam heretofore built.

The cost of the Boulder Canyon Dam will be about $50,000,000, two and two-thirds times as much as that of the Assuan Dam.

The reservoir formed by the dam will be 120 miles long and will have an area of 157,000 acres, which is one and one-half times as much as that of Gatun Lake on the Panama Canal. The proposed reservoir will have a capacity of 34,000,000 acre-feet, eight times as great as that of Gatun Lake and nearly thirteen times as great as that of the Elephant Butte Reservoir in New Mexico, the largest in this country.

The total cost of the enterprise, including the building of the dam, power plant, and transmission lines, will be about $130,000,000 (estimated), which is about one-third of the cost of the Panama Canal. The cost given does not, however, include that of the all-American canal, which would add $31,000,000.

The total cost of the three features, the dam, transmission lines, and the all-American canal, should be estimated at $200,000,000.

The Boulder Canyon Dam recommended in the Fall-Davis report is described as beginning 150 feet below the bed of the river; to be 605 feet high, 1,350 feet long, and 650 feet thick at its base; estimated to cost $50,000,000. It must be built in a normal current 20 to 30 feet deep ordinarily, with a flood crest in the canyon of 30 feet, having a velocity of 15 feet per second of time, all of which indicate engineering difficulties attractive to ambitious engineers, if not to Government or private capital.

An opinion is no better than the reasons for it. Whether or not it is practical at any cost to divert, through tunnels in the canyon walls, such a body of water from the river long enough to build this substructure; whether a mass of masonry unapproached in size in the history of engineering is practicable; or whether it is possible to give more than an intelligent guess of its cost are problems not to be passed upon by one man alone, but should challenge the judgment of the country's ablest engineers, and be subject to deliberate review by the Congress. Congress should itself appraise the necessity of an outlay of such magnitude, and justify the financial obligation to be assumed by the Government before beginning this project.

* * * * * * *

It has been demonstrated that estimated construction costs in Government reclamation have been below final expenditure on engineers' estimates. To protect the Government, a margin of safety should be added to the estimated costs herewith submitted.

We find, therefore, that the Secretary of the Interior in submitting the Weymouth report to Congress in substance said: Here is a report upon a plan for a dam on the Colorado River which involves many engineering experiments. It is not known whether it is practicable. The question of its practicability and feasibility should not be passed on by one man alone, but should challenge the judgment of the country's ablest engineers, and then be subject to the deliberate review of Congress. Some of the questions are: (1) Whether it is practical to divert such a body of water from the river long enough to build the enormous substructure; (2) whether a mass of masonry unapproached in size in the history of engineering is practical; (3) whether it is possible to give more than an intelligent guess of its cost. In any event, Congress should appraise the financial plan and add a margin of safety to these estimated costs of the Reclamation Service, because the estimates of those engineers have been proven by experience to be below final costs. This means, of course, that the Secretary passed the responsibility of determining all of the fundamental engineering facts to the Congress. No further advice since that time has been received either from the Government engineers or from any other engineers, to say nothing of the "judgment of the country's ablest engineers," which Secretary Work suggests. But here we are trying to pass upon it, nevertheless, in the light of the same conditions and same information as to the basic facts that we had four years ago.

I have said that even at the time the report was submitted to Congress there was a bitter dispute amongst the Government engineers upon it. Before Secretary Work submitted it to Congress he learned of this disagreement and made an unsuccessful endeavor to get some unity of opinion among these engineers. Under date of January 19, 1924, Secretary Work stated in a letter to the Chairman of the House Committee on Irrigation and Reclamation:

In view of the magnitude of the subject, the voluminous amount of data gathered, and pronounced difference of opinion as to the best location for a dam, I have appointed a committee of engineers who have worked over the field to review and collate the data gathered and to furnish me, in abstract, data which I should review. (See p. 4, hearings on H. R. 2903, 68th Cong., 1st sess., February 9, 1924.)

In February, 1924, Secretary Hoover was before the House committee, and was asked the following question by Congressman (now Senator) HAYDEN:

Mr. HAYDEN. This thought has been in my mind: If we are not going to accomplish anything in a practical way until the question of the Colorado River compact and an understanding between the States is determined, could the interim be profitably employed by a study of the facts by an engineering commission in which the Congress and the country had confidence?

Secretary Hoover replied:

You are correct. There is an engineering controversy on here that reaches the same degree of heat that the legal controversies have reached. There are various other controversies about this river. I have never heard of a river in history that developed as much heat as this river is developing. The Secretary of the Interior has, I think, appointed a committee of engineers from three or four branches of the Government to consider these various questions to try to secure some unity of view as to the proper program for the development of the river. The conclusion of this commission should be valuable. (See p. 63, hearings H. R. 2903, 68th Cong., 1st sess.)

Now this engineering commission to which Secretaries Hoover and Work refer could not reach an agreement. They submitted a divided report, and the joint report which all signed failed to recommend this project and tended to recommend another dam site some distance farther down the river, where the primary purpose of flood control could be much better served. (See this joint report of engineers, pp. 821–822, hearings H. R. 2903.)

I now quote from a letter written under date of February 11, 1928, by one of the members of this engineering committee appointed at that time by the Secretary, this member being Col. William Kelly, who was at the time of his service on the committee chief engineer of the Federal Power Commission. This letter is quoted by Congressman DOUGLAS in his minority report on this bill, pages 23–24:

BUFFALO, N. Y., *January 11, 1928.*

Hon. L. W. DOUGLAS,
*Member of Congress, Washington, D. C.*

DEAR MR. DOUGLAS: In reply to your request, I have to inform you that the engineering board appointed by Secretary Work to review the Weymouth report was appointed for the purpose of advising the Secretary as to what reply he should make to a request from Congress for the views of his department on the Swing-Johnson bill.

The board, as first appointed, had four members: Mr. Weymouth, of the Reclamation Service; Colonel Cosby, of the Corps of Engineers; Mr. Stabler, of the United States Geological Survey; and myself. Two or three days after the board had been appointed its membership was increased by Messrs. Debler and Young, of the Reclamation Service, who were at the time working with Mr. Weymouth on the Boulder Canyon report.

Mr. Weymouth's report had not been completed at the time Secretary Work appointed the board, and the three reclamation members were spending all their time completing that report. The board was, therefore, delayed in rendering its report, and Mr. Work, a few days after the board had been appointed, called the board into his office and informed them that he had decided to make his report to Congress without waiting for the report of the board. He thereupon read to the board a draft of his report which, with certain minor modifications, was sent to Congress a day or two later. In view of this situation the purpose for which the board was appointed no longer existed, but Mr. Work stated that, notwithstanding that fact, he would like to have the board go ahead and make a report.

When the engineering board met, after the Weymouth report was finished, it became apparent that the three reclamation members would stand solidly behind the Weymouth report, whereas Mr. Stabler and myself were unwilling to accept it. Colonel Cosby at that time was not familiar with the project and had not had time to form an opinion. There was a lack of purpose for the boards' report, and the board had no authority to make the field investigations necessary to obtain an agreement upon facts, an essential preliminary to any agreement upon conclusions; consequently, the board drafted a report which expressed, in general terms, the views of its various members but settled none of the controversial points.

In regard to the Weymouth estimate, I am certain that it is much too low. The cost of the dam is certainly too low. Provisions for handling the water during construction are not adequate and the unit costs of doing work in such an inaccessible location are too low. The dam can be built for twice the estimated cost only in case the breaks of fortune are all in its favor. The estimate for the all-American canal is very much too low. I am satisfied that such a canal can not be constructed and operated satisfactorily unless it be concrete lined and covered throughout the section that passes through the sand dunes. In my judgment, at present prices, the works covered by the Swing-Johnson bill will cost more than $200,000,000.

Very truly yours, W. KELLY.

A similar letter which substantiates Colonel Kelly's account of the unwillingness of the committee to indorse Mr. Weymouth's report and which sets forth another view which was transmitted by him to the Secretary of the Interior is found in the letter of Mr. Herman Stabler, of the Geological Survey, printed on pages 369–370, hearings on this bill before the House Committee on Irrigation and Reclamation, January 13, 1928. You will find by an examination of Mr. Stabler's report to the Secretary of the Interior made in March, 1924, that he pointed out that not more than from 4,000,000 to 10,000,000 acre-feet of storage was required for flood control and irrigation usage, and recommended that the Mohave Canyon site be utilized for the first dam, leaving the further development of the river to follow another general plan which he outlined, but which does not include this dam at Boulder Canyon.

You will further find reports of Colonel Kelly and Stabler recommending and outlining entirely different plans of Colorado River development than those proposed in the Weymouth report, given at pages 821–845 of hearings on H. R. 2903.

I call your particular attention to paragraph 5 in a letter written by Mr. Stabler to the Secretary of the Interior in 1924, which letter he confirms by his letter to Congressman DOUGLAS appearing on page 369 of the hearings on H. R. 5773 before the House Committee on Irrigation and Reclamation, January 13, 1928:

From present information the most favorable site for a dam to create a reservoir to accomplish adequate flood control and supplementary storage for irrigation with least interference with power development in the canyon section of the river is at Mohave Canyon, below Topock, Ariz. This site is adapted to the generation of power only to a very minor degree, and the cost of its development would necessarily have to be borne by public funds or by assessment on the lands benefited (p. 370).

Another engineer of the Geological Survey, in addition to Mr. Stabler, has played a prominent part in the engineering dispute which has been raging about Boulder Dam during the last four or five years. This engineer is Mr. E. C. La Rue, the engineer of all engineers in either Government service or private service who has made the most exhaustive studies of the Colorado River and the problem of its development in the lower basin and who has particularly devoted years of study to the location of dam sites and the character of structures

which would most adequately and fully serve the development of the river. Mr. La Rue has indeed spent most of his adult life on the Colorado River in making these various studies, over a period of 15 years. The most recent analysis of the problems involved in the location of a dam on the Colorado River is a paper of the Geological Survey, of which Mr. La Rue was the principal author. It was published in 1925, or the next year after the Weymouth report was issued. It is the only complete report thus far published by the Government on the problem of development of the lower Colorado River and represents the culmination of more than 10 years continuous effort by the staff of the Geological Survey. I shall have something more to say about that water-supply paper at another point, because it is of great importance. Suffice it to say at this time that the report disapproves of Boulder Dam and recommends an entirely different plan of river development. I refer to it here because I want to quote from the introduction to that volume written by Mr. Nathan C. Grover, chief hydraulic engineer of the Geological Survey, what is said about Mr. E. C. La Rue, the man who is the chief engineering opponent of Boulder Dam. Mr. Grover says of Mr. La Rue on page 7 of Water Supply Paper 556:

Mr. La Rue, the author of this report, has previously prepared the first comprehensive report on the utilization of Colorado River, published in 1916 by the Geological Survey as Water Supply Paper 395. Prior to the writing of that report he had investigated and prepared unpublished reports on many power and irrigation projects in the basin and had seen most of the accessible regions within its borders. Since that report was written he has worked almost continuously on projects within the basin.

Mr. Grover then details some 2,000 miles of boat trips made by Mr. La Rue from 1914 to 1924 in the Colorado and its tributaries. He further says:

When making these boat trips in company with the party of topographic engineers Mr. La Rue has been charged with the responsibility of selecting the dam sites and supervising the survey of such sites. He has therefore first-hand knowledge of the problems of the basin, which has been supplemented by careful study, continued over many years, of the data relating to the control and utilization of the river. He has taken more than 1,000 photographs to show the many interesting features of the canyons and the river and canyon walls near them. A few of these photographs have been used to illustrate this report; others are on file in the Washington office, where they may be studied by those who are interested.

As compared to this record of intimate study devoted to the Colorado River over a long period of years, it is well to recall that Mr. Weymouth and other engineers of the Reclamation Service who disagree with Mr. La Rue have had and claim to have had no such experience.

Now it is this Mr. La Rue, this leading authority on the Colorado River, who disagrees so completely with the Weymouth plan for building a dam at Boulder Canyon. I quote from the hearings on Senate Resolution 720, in which Mr. La Rue testified on December 9, 1925, first at page 590:

Senator ODDIE. When did this opposition to the Boulder or Black Canyon Dam start?

Mr. LA RUE. So far as I am concerned, it started at Riverside, Calif., in 1920. I was informed at that time that I would be fired out of the service if I did not keep still or if I opened my mouth.

Senator JOHNSON. But you are still there?

Mr. LA RUE. I am still in the service, yes.

Senator JOHNSON. And as long as you oppose it, you will probably be there, won't you?

Mr. LA RUE. Well, let me explain that I objected that time, not that that was not the right spot on the river, but I knew that they had not investigated sufficiently. All I asked was for them to hold off until we could get the facts. You can get my lectures that are typewritten, and you will find that they have recommended a comprehensive plan of development for five years, and I said, then, to build a dam to fit in with the plan.

At this point it is of interest that Mr. La Rue did leave the Government service last year, 1927, and at the time of his resignation he announced that he had been forced out of the service because of his being "muzzled" in criticisms of Boulder Dam. Apparently, then, it was not an idle threat to which he referred in his testimony of 1925.

I quote from Mr. La Rue's testimony further at page 534 of the Senate hearings on Senate Resolution 720:

The Swing-Johnson bill calls for the construction of a high dam at or near Boulder Canyon. If a dam were constructed and operated as planned it would cause an unnecessary waste of water, a loss of 400,000 horsepower, and cause 100,000 acres of irrigable lands to remain in its desert state forever. If such a dam were built and 600,000 horsepower developed, the low water flow of the river would be increased far beyond the present needs for irrigation in the basin in the United States. This water could be quickly put to beneficial use in Mexico and before many years pass about 1,000,000 acres of land would be under irrigation in that country, which would mean that 1,000,000 acres of irrigable land in the Colorado River Basin in the United States must remain a desert. A high dam at or near Boulder Canyon can not be made to form a unit of a comprehensive plan of development that will provide for a maximum use of the waters of the Colorado River.

* * * * * * *

If life and property on lower Colorado River are to be protected from the ravages of the floods a dam must be built to control the flood flow of the river. A dam for flood control only should be located at Glen Canyon or Mohave Canyon. In six years a dam could be built at Glen Canyon which would remove the flood menace. Such a dam would cost about $30,000,000. A dam for flood control only may be built at Mohave Canyon for about $15,000,000. This dam may be built in about three years. A dam at Mohave Canyon to provide 22,000,000 acre-feet of storage capacity for irrigation and flood-control purposes would cost about $20,000,000.

Mr. La Rue then offers six recommendations for an investigation which he thinks would disclose the facts and result in a proper development of the river. I shall refer to this later.

We now find that among the Government engineers, opposition to this Boulder Dam plan is expressed by the Geological Survey and the Federal Power Commission engineers. In other words, the engineers of two Government bureaus—namely, the Geological Survey and Federal Power Commission—are opposed, and the engineers of the Reclamation Service are for it.

What about the engineers of the War Department? You will note from the testimony already quoted that the engineer from the War Department, Mr. Cosby, who was on the committee of six engineers with Mr. Stabler and Colonel Kelly, had so little chance to inform himself as to the Weymouth plan that he as well as Kelly and Stabler refused his indorsement. I find, however, that since that time care has been taken to prevent the engineers of the War Department from making an investigation on the Colorado. I read you the text of a law which was passed in 1925 which prohibits the War Department engineers from considering the problems of the Colorado River. Section 3 of the rivers and harbors act of 1925 reads as follows:

SEC. 3. The Secretary of War, through the Corps of Engineers of the United States Army, and the Federal Power Commission are jointly hereby authorized and directed to prepare and submit to Congress an estimate of the cost of making such examinations, surveys, or other investigations as, in their opinion, may be required of those navigable streams of the United States, and their tributaries, whereon power development appears feasible and practicable, with a view to the formulation of general plans for the most effective improvement of such streams for the purpose of navigation and the prosecution of such improvement in combination with the most efficient development of the potential water power, the control of floods, and the needs of irrigation: *Provided*, That no consideration of the Colorado River and its problems shall be included in the consideration of estimate provided herein.

I do not know who is responsible for this prohibition on the War Department, but it is at least suggested that some one did not care to have this Boulder Dam plan examined by War Department engineers.

Before proceeding to discuss in detail the Weymouth plan for developing a great section of the Colorado River by the construction of this great engineering experiment called Boulder Dam, I wish to read from the Government report which was completed and issued more than a year after the Weymouth plan was submitted to Congress. I refer to Water Supply Paper 556 of the United States Geological Survey, issued in 1925. It is this report which disagrees with the Weymouth plan, and in general it is the plan of development of the lower Colorado which has the support of the Government engineers other than those in the Reclamation Service, who have been permitted to study the problem. With the request that you bear in mind that this report was issued after the Weymouth plan, I read from pages 68–73 of Water Supply Paper 556:

OUTLINE OF PLAN

There is general agreement to the effect that construction work should start at an early date for the purpose of providing flood-control works and water-power development on Colorado River. It seems probable that the first dam to be built on the river will be in the interest of flood control, with provision made for a small amount of storage to take care of present irrigation needs during occasional periods of low water. It is also probable that a dam for developing power will be built at an early date. These dams may be located below the west boundary of the Grand Canyon National Park.

In the building of the cities of Washington, D. C., and Salt Lake City, Utah, a definite plan was followed. The soundness of this policy can not be successfully refuted. These cities, however, are exceptional. In other cities, planning commissions are recommending that buildings be torn down or moved back so that streets may be widened, that new streets be opened, that parks be provided, and that business, industry, apartments, and residences be restricted to definite districts. To modernize in part the plan of these cities will cost millions of dollars. To make most of our larger cities really modern in plan would be infeasible on account of the cost.

In developing the water resources of our country the same haphazard policy has been followed. With respect to the development of our important rivers the writer does not know of an instance in which a comprehensive plan of development was prepared in advance of construction. Engineers have been sent into the field to locate the sites where water might be stored or power developed at a minimum cost. Almost without exception the projects for immediate development have been selected with little regard for future developments or the full utilization of the water resources of the region. Railroads have been built through valuable dam sites and dams have been built that will forever prevent full utilization of the water resources except at prohibitive cost. Such mistakes should not be made on Colorado River.

Twenty-three dam sites on Colorado River between the west boundary of the Grand Canyon National Park and Parker, listed in the following table, have been surveyed, and at four of the sites the character of the foundation has been determined by diamond-drill borings:

(Table omitted.)

The rapid increase in population and the drought in 1924 have caused the people of southern California to realize that before many years pass they must procure an additional domestic water supply from Colorado River. The use of water for domestic purposes is rated as a higher use than irrigation or the development of power. Therefore in preparing a plan for the development of lower Colorado River consideration should be given the fact that at some future time 1,000 to 2,000 second-feet of water may be diverted from the river to augment the domestic water supply of southern California.

Irrigation is rated as a higher use than the development of power, and the problem is further complicated by the fact that there are valuable properties on the lower river that are menaced by the summer floods. The floods should be prevented and the use of water for domestic purposes, irrigation, and the development of power should be harmonized so far as practicable. It has been shown that with ultimate development in the upper basin the available water supply is not sufficient to furnish a domestic water supply to the cities of southern California and serve all the lands adjacent to the river in the United States that are classed as irrigable. Therefore the plan of development that will provide the greatest benefit to the community is that which will best conserve the water supply, adequately control floods, provide a domestic water supply, and permit maximum irrigation and power development.

In the 368-mile section of Colorado River between the west boundary of the Grand Canyon National Park and Parker, Ariz., the fall is 1,425 feet. Some of the 23 dam sites surveyed on this section of the river, as is shown below, are relatively poor and should be abandoned. Obviously the better dam sites should be utilized if their position on the river will permit a maximum utilization of the water resources.

All the plans heretofore suggested for the development of this section of the river have been based on incomplete data as to dam sites. In September and October, 1924, the writer directed the survey of six dam sites below Diamond Creek that had not previously been considered. At least two of these sites are admirably adapted to form units of a comprehensive plan of development.

The numerous plans that have been suggested for the development of lower Colorado River may be divided into two classes. One class embraces those plans which are based on the theory that the best solution of the problems involved may be obtained by building a high dam at or near Boulder Canyon to serve four purposes—flood control, storage for irrigation, storage for silt, and the development of power—a scheme of development which has never been tried. The other class embraces the plans which are based on the theory that major regulation of flow by storage can be developed by dams at or above Lees Ferry and that one dam should be built in Mohave Canyon to furnish preliminary and eventually supplemental storage for flood control and irrigation, the canyon section of the river being left free for power development, with the power dams incidentally providing for the storage of silt. One plan of the latter class is suggested by the writer. (See Pl. L.) Though a high dam is included in this plan for the purpose of showing the power value of the stretch of river between the Bridge Canyon site and the boundary of the Grand Canyon National Park, in the opinion of the writer dams of great height should not be built unless alternative plans for development of this stretch of river by lower dams are found infeasible or unless one such dam is decided upon as a point of diversion for a gravity water supply for irrigation in Arizona or for domestic use in the cities of southern California.

For the remaining stretch of the river here considered, between Bridge Canyon and Parker, all plans of the first class include a storage dam of unprecedented height, whereas the plans of the second class (see Pl. L) include only dams of moderate height, well within the limits set by modern engineering practice.

The plan suggested by the writer is based on the theory that a more efficient use of the available water supply may be had by separating the problem of flood control and storage for irrigation from the power problem. In his plan 10,200,000 acre-feet of storage capacity for flood control and irrigation is to be provided at Mohave Canyon. A diversion dam at Parker is recommended so that the waters of the Colorado River may be used for the irrigation of lands situated in the United States. For the stretch above the Mohave Canyon reservoir the plan calls for the construction of dams that may be operated to obtain a maximum development of power. These dams step up the river to the west boundary of the Grand Canyon National Park, so as to permit full use of the fall in the river for power. Four power dams are suggested—at lower Black Canyon, Hualpai Rapids, Devils Slide, and Bridge Canyon. (See Pl. L.) * * *

(Table omitted.)

With the water supply now available and with development accomplished, as suggested by the writer, the loss of water due to evaporation would be reduced to a minimum and a maximum amount of power could be developed. If the plan of development that calls for a high dam at or near Boulder Canyon were followed the additional loss of water due to evaporation from the water surface of the reservoirs would be about 800 second-feet, and the consequent loss of power would exceed 230,000 horsepower.

The loss of water at present is not a serious matter, for a great surplus passes into the Gulf of California each year. Before many years pass, however, the demand for water will be greater than the available supply. It would therefore be unwise to carry out a construction plan that would forever prevent the full use of the water resources of the river. The real test of the soundness of the several plans suggested lies in a comparison on the basis of ultimate development of the water resources of the region. A thorough analysis of the plans that call for a high dam at or near Boulder Canyon shows that with complete development in the upper basin and with the lower river developed as suggested by the writer, 103,000 acres more land could be irrigated and an additional 251,000 horsepower could be developed.

The Mohave Canyon storage reservoir, operated solely in the interest of flood control and irrigation, would provide the most satisfactory solution of this phase of the problem, as it would be 120 miles nearer the lands that would be benefited by such storage than the Boulder Canyon site.

It would be possible to provide 2,000,000 acre-feet of available storage capacity at the Parker Dam site, but such a plan would seriously interfere with the full use of water for irrigation. Under such a plan it would be necessary to pump the water an additional 33 feet to reclaim by irrigation some 700,000 acres of land below Parker. With the Mohave Canyon Reservoir in operation, it would not be necessary to provide available storage capacity at the Parker Dam site.

The writer suggests that his plan should be given serious consideration for the following reasons:

1. It provides the most effective means of flood control and storage for irrigation.
2. It solves the problem of silt storage for several generations.
3. It provides a maximum use of water for both irrigation and power development.
4. It calls for a minimum departure from present engineering practice in the construction of dams.

We are now confronted with the fact that the Secretary of the Interior warned Congress when he submitted this plan that we should have the judgment of the country's ablest engineers; with the fact that the Secretary failed in his endeavor to get an agreement upon this or any other plan from a committee of Government engineers; and with the fact that three, if not four, of the ablest engineers in the Government service not only refused to approve it but suggested substitute plans. I now propose to examine in some detail this Weymouth plan in order that you may understand the most prominent features of it which raise the serious and vital questions of its soundness and safety.

I venture to say that if you will follow carefully the exposition of these high points of the Weymouth plan that you will agree that what we have before us is not a matured and thoroughly considered engineering plan based upon tried and proven engineering practice and methods, but

A SERIES OF DANGEROUS EXPERIMENTS

I wish first of all to try to picture for you the location where this dam is to be built. In Water Supply Paper 556, issued in 1925, the Geological Survey tells us that 23 dam sites on the Colorado River between the west boundary of the Grand Canyon National Park and Parker, Ariz., a distance of about 465 miles, have been surveyed, but only four of these have been drilled to test the foundation conditions.

Now the one dam site out of these 23 known locations which was chosen by the Reclamation Service for this first dam on

the Colorado is 170 miles above the lowest dam site; that is, 170 miles farther away from the lands for which flood protection is sought. It is properly known as the Black Canyon Dam site and is 18 miles below the Boulder Canyon Dam site, but because the name Boulder Canyon is better known, this dam site is commonly referred to as in Boulder Canyon. There are three dam sites below the Black Canyon site, and at least at one of these there is an opportunity to create at a fraction of the expense here involved a storage capacity more than adequate for all the purposes for which storage is desired, including flood control, the provision of irrigation and domestic water, and silt storage.

The Reclamation Service was, however, searching for a site where a huge power dam could be located. They consequently chose the site where it was necessary to build a very high dam before adequate storage could be secured, for the reason that if you are to have any such power potentiality as is here afforded you must have a high dam and hence a very large head or fall for the water.

The selection of this site achieved this power object of the Reclamation Service, because, once built, the height of the dam together with its large storage gives enormous power potentiality. But in reaching out for a great power project the planners were compelled to choose a site that offers the almost unbelievable difficulties of construction which I shall endeavor to partially describe.

These difficulties of construction are hinged upon one basic fact created by the physical location of the dam site, and it is this basic fact which I want to emphasize. This fact is that an amount of work must be done and an amount of material removed and construction done in the river in the nine-month period between the regular and inevitable annual floods of the Colorado which to every informed person except the Reclamation Service and their advisers appears all but impossible—certainly impossible under the existing plans on which this bill is based.

This dam site is in what is known as a box canyon. At the river level this canyon is 250 feet wide, and the river normally covers this entire width of 250 feet, reaching from wall to wall. The great canyon walls rise so precipitously from the water level that 450 feet above that point they are still only 700 feet apart. Through this immense vaultlike, narrow gorge, confined as it is between these huge cliffs, the Colorado must pour in time of flood from 100,000 to 225,000 cubic feet of water per second. The river at this point has a normal depth of 20 to 30 feet, while in flood the depth rises to 60 feet or more, and the current travels at a velocity of 15 feet per second or 900 feet per minute. (See letter of Secretary Work, p. 819, hearings, H. R. 2903, and Water-Supply Paper 556, p. 15.)

Now, the plan under which this dam is to be built calls for the diversion of the water from the river bed during the normal flow of river, through three tunnels each approximately 1 mile in length, which tunnels will be bored through the canyon wall on one side of the river. No attempt is to be made to divert the flood flow of the river, because that is an undertaking which even those ambitious engineers do not care to ask Congress to finance.

It is this fact that the river can not be diverted from its bed in time of flood, coupled with the fact that the flood comes as surely as death once each year and lasts for a period of three months, that is responsible for the most fantastic part of this most interesting plan of the Reclamation Service. I shall deal with the situation in detail, but at this point I want to summarize for you the things which must be done in the nine-month period which the Colorado, if it is kind to these engineers, may allow:

First. Quarry and drop into the river 620,000 cubic yards of rock and 128,000 cubic yards of earth mattress, or a total of 808,000 cubic yards of material for the upper temporary cofferdam. Time limit for this work is 69 days. (Weymouth report, vol. 5, p. 442.)

Second. Quarry and drop into the river 137,000 cubic yards of rock and 36,000 cubic yards of earth mattress for the lower temporary cofferdam; time limit mid September. (Ibid., p. 442.)

Third. Excavate and remove from the river bed 212,000 cubic yards of silt, sand, bowlders, etc., for the foundation of the upper permanent cofferdam; time limit December 1. (Ibid., p. 443.)

Fourth. Excavate and remove from the river bed 369,000 cubic yards of sand, silt, gravel, and bowlders for the lower permanent cofferdam. (Ibid., p. 443.)

Fifth. Build permanent cofferdam to water level. Time limit, May 15.

If this program fails at any point, the permanent cofferdam will not be ready by the time the flood starts, and that means that the river in flood will destroy all the work which has been done and another try must be made.

Let us examine in more detail these major tasks which must be performed in the nine-month period between floods.

I quote from the Weymouth report (p. 139, vol. 1):

> The diversion tunnels would be built before starting the work on the cofferdams. It is proposed to build the rock-fill cofferdams by dropping rock into the river from cableways capable of handling rock up to 10 or 15 tons in weight. Construction of such a cofferdam would start soon after the spring flood had begun to recede, giving a longer working season than could be secured with any other type of cofferdam studied. Between flood seasons it is proposed to build the rock-fill cofferdam, excavate the river-bed material, and build portions of the dam near the up and down stream faces to the elevation necessary to force the oncoming flood through the tunnel. The portions built would, in effect, be cofferdams behind which the main portion of the dam would be built. It would be essential that the permanent cofferdam be finished to at least river level between floods.

Again from pages 91 and 92, volume 5, Weymouth reports:

> It is proposed to start dumping large rock obtained from the canyon walls at the cofferdam sites, from cableways spanning the site as soon as the flood begins to recede in July, the diversion tunnels having been completed before the spring floods. * * * The first rocks dropped would be as large as it is practicable to handle. Some of these rocks would be carried downstream beyond the limits of the cofferdam section, but at some stage a part of them would begin to "hang" within the section. At this point smaller rocks would be dropped simultaneously, which would be caught by the larger rocks and held in the interstices. As the flood receded more rocks would stay in place. The estimates assume that 25 per cent of the rock dropped will be carried away.

The height of the upper temporary cofferdam that must be constructed in this river bed under these conditions and by this method is 106 feet. The material required to build such a dam, including the estimated 25 per cent of rock lost, is estimated at 620,000 cubic yards of loose rock and to this is to be added on the upstream face 128,000 cubic yards of earth mattress to make it water-tight. The time estimated for quarrying the necessary rock, transporting it on the cableways, and placing it in the stream to complete this temporary cofferdam is 69 days. Upon this point the Weymouth report says (pp. 109–110, vol. 5):

> The material will be handled in 8 by 8 by 2½ feet steel skips, the loaded skips weighing from 8 to 8½ tons. The skips would be filled by electric shovels, with some handwork, and taken to the cableways on flat cars. The skips would be dumped automatically without lowering down into the canyon, permitting high speed and large output.

This operation then is started while the river is still in flood, though it is hoped that it will be receding. We are told that the river has a flood crest of 30 feet and a normal depth at this point of 20 to 30 feet and moves at a velocity of 15 feet per second. Since the rocks are not to be lowered into the canyon and at this point the canyon walls rise some 1,200 feet above the water level, Mr. Weymouth plans to drop the rock from the cableways about 700 feet. Imagine an 8-ton rock dropped from such a height into this 30 or 50 feet of water moving at a velocity of 15 feet per second and speculate, if you will, as to what kind of accuracy you will obtain in controlling their final destination. What will happen to the rocks in place, if any stay in place, after the dam rises above the stream level, if it does so rise, when a rock moving at the attained velocity hits those which have preceded it?

No one can tell us, because it is another untried experiment. Yet this Weymouth plan for Boulder Dam is absolutely dependent upon this experiment working out just in the way in which Mr. Weymouth hopes it will work. You must understand, however, that a slip in this single plan, as well as a slip in any one of a dozen other of the experiments on which this dam is based, will so disarrange the entire program that this project can not be carried through except at a greatly increased expenditure of time and money—if it can be done at all.

Now, a recent happening gives us some light on what might be expected to happen to this rock dropped into the Colorado River. At the failure of the St. Francis Dam several large pieces of concrete, one of them weighing 10,000 tons (see Western Construction News, April 10, 1928, p. 2327), washed down the stream, around bends, and came to rest some half mile below the dam. The average water velocity was estimated at 22 feet per second. (See Engineering News Record, March 22, 1928, p. 470.) No doubt the maximum velocity considerably exceeded this 22 feet per second, but suppose that while this 10,000-ton chunk of concrete was being rolled along the water velocity over the whole half-mile path was double the average, or 44 feet per second. This would be only three times the 15

feet per second that Secretary Work gives as the velocity at Boulder. Yet the rock that washed down a half mile when the St. Francis Dam failed was one thousand times as large as Mr. Weymouth's 10-ton pieces, and probably ten thousand times as large as the average pieces in his 8-ton skip loads.

Now, some other engineer might guess that all of the rock so dropped would wash downstream beyond the limit of the proposed cofferdam. Mr. Weymouth guesses that only 25 per cent of the rock will wash down in this manner. Only the outcome of the experiment will demonstrate which is right. This question can not be settled by argument on the floor of the Senate, and yet it is one of the questions that we must decide, because the whole plan fails if Mr. Weymouth has guessed wrong.

Now, suppose that most of this rock comes to a resting place in the area where it is proposed to excavate for the foundations of the main dam, which is only a few hundred feet down the stream. If so, then this added rock must be excavated, but the time allowed for the main excavation is just barely sufficient, in the judgment of Mr. Weymouth, for the excavation of the material already in the river. If there is any slip up on this part of the project a year's time will be lost and the forces disorganized. We take that chance.

Then it is proposed, quite contrary to the usual custom on such work, to apply a large part of the earth blanket to the face of a pile of loose rock, not merely under water, but with the river roaring through this rock pile. Will the earth stay on the face? If there is any trouble about it there will be no chance to correct the trouble, for the work is to be done on a scheduled program if the job is to succeed. We guess again.

The Weymouth report proceeds:

> The quarry equipment to maintain the pace set by the cableways would have to be sufficient.

Now, that statement is correct as far as it goes. The only difficulty with it is that it does not tell us how very efficient this quarry must be. In order to find out how efficient it will have to be let us compare this quarrying operation with the world's greatest quarrying operation—that of the Utah Copper Co. This company quarries a little less than 30,000 cubic yards of rock per day in its surface-mining operations. To reach this capacity the Utah Copper Co. has established, after 15 years of development, 20 "benches," each bench equipped with railroad tracks, steam shovels, locomotives, and cars. These benches occupy a vertical space of 1,100 feet, more than is available at Boulder Canyon. These benches occupy a ground area of 240 acres. No such ground area is available at the Boulder location. To convey the ore from these benches to the point of use the copper company has a most intricate, elaborate, and costly system of tracks, yards, switches, and terminal equipment. To quarry the rock for the Boulder cofferdams operations will have to proceed at about one-third the rate of the Utah Copper Co. To open seven benches, equip them with machinery, arrange the tracks, handling, and terminal facilities would require not weeks but months and perhaps years.

Again, if there is any slip or delay either in the speed of quarrying, the speed at the rock terminal, or the speed of loading, placing, and emptying the skips the whole operation, which is working against time to do this part of the job in the three months possibly available, falls down and must await another season after the next flood, when another trial may be made.

> If there is any inaccuracy in the regular placing of rock under muddy water where it can not be seen, so that the level of the crest is not evenly maintained at all times during construction, the water will concentrate at the lowest point, wash out that section of the partially completed dam, and again we must stop and wait for the next season.

Continuing, the report says:

> Work would be carried on three shifts per day without interruption, at least until the river had been turned. The crest of the fill would be kept level in order to avoid a concentrated flow at any one point. Allowing 30 seconds for "hooking" each successive skip, each cableway should average 30 trips per hour. * * * Three cableways would place about 9,000 yards per day and it would require 69 days to complete the cofferdam, or, conservatively, three months. By the middle of October, therefore, the rock fill should be completed.

At this point I direct attention to the fact that this highly efficient quarrying, loading of skips each 30 seconds, dumping of rock, etc.—all operations done at a speed which exceeds any efficiency ever before attained in such operations—must be carried on during the months of July, August, and September in one of the hottest places in the United States, where the temperature ranges from 110° to 115° in the shade—and no shade! We find from the testimony of another engineer, who had planned the construction of a dam on the Colorado in a more favorable location, that under his plans work was to be suspended during this period because the temperature is too high for men to work in. (See testimony of J. P. Hogan, pp. 363–364, hearings on H. R. 5773, January 13, 1928.) But the Reclamation Service plans call not only for the men to work during these months, but to work at unusually high speed and in the most efficient manner!

Now these plans must be carried out on schedule, and any interference with them, anything which delays the operation beyond the appointed time, means the loss of at least one year's time and millions of dollars. Why? Because the floods on the Colorado River come regularly each year from the melting snow on the Rocky Mountains, and they can not be postponed. When the flood starts in May of the year following the beginning of operations, the dam builders must be prepared to handle it, to divert it through the canyon walls and to have their structure in such condition that it can stand the overflow of that portion of the flood which can not be diverted. I quote again from page 96, volume 5, of the Weymouth report:

> The critical time in the construction period is that during which the permanent cofferdams are being built. It will, in an ordinary season, be necessary, in about eight or nine months' time, to build the rock-filled cofferdams, excavate the river channel filling and rock under the portion of the dam to be built, and place the concrete to at least low-water surface. Otherwise the rock-filled cofferdams will have to be reconstructed.

Again, from page 113, volume 5:

> Any diversion scheme which does not contemplate building the permanent cofferdam in one low-water period will be a very expensive one, since it will involve the partial or total loss of both temporary cofferdams, and the necessary replacement, and the excavation of the river bed material at the dam site for the second time—at least down to the uncompleted structure. While the monetary loss would not be especially serious, the loss of time, necessary shutdown, and demoralization of the organization would have a serious effect upon the work.

Again I quote from page 84, volume 5:

> The impending danger of losing cofferdams will be due to the flash floods, which are apt to occur at any time during the working season.

So it appears that a flash flood, which may occur at any time, might upset the entire program for starting this dam and cause the loss of a year's time, millions of dollars, and the shutdown and demoralization of the organization. These flash floods are, as indicated, not at all unusual. A flash flood occurred in 1923 and again in 1927, in the month of September, a flood which would have done this very thing—interrupted the work, caused a year's loss of time, and so forth.

Although it is not emphasized, I find there is a recognition of the possibility of this loss in the time estimates. I quote from page 141, volume 1, of the Weymouth report:

> It is estimated that the construction of the dam proposed, from the time the diversion tunnels are started until the parapets on the dam are finished, will require from six to eight years, depending upon the success attained in diverting the river upon first trial.

Why only two years' loss of time are recognized as a possibility I do not know. It would seem that recognition should be given to the possibility of 5 or 10 years' loss from this one cause.

But there is another risk which involves more than the loss of time and money on this experiment. Let us suppose that the temporary cofferdam of loose rock has finally been successfully completed but, as seems inevitable, away behind schedule. Then an attempt is made to excavate and to build the sides of the permanent dam, but the time is too short, and this can not be finished before the flood comes upon the workmen in June. As the flood rises, the water will be backed up and stored behind the temporary cofferdam.

Mr. Weymouth plans to build this cofferdam to a height of 79 feet above the low-water level. The water stored by a dam of this height at the time the crest of the flood pours over the cofferdam in such volume as to destroy it will amount to about 250,000 acre-feet. Water-Supply Paper 556, United States Geological Survey, Plate X, shows that a dam 50 feet high at this point will store 88,000 acre-feet and a dam of 100 feet will store 362,000 acre-feet. When the dam suddenly fails there will be added to the crest of the rising flood a volume of water seven times as large as swept through the Santa Clara Valley when the St. Francis Dam gave way. What would happen to Needles, Blythe, Yuma, and the Imperial Valley? Once more we can only guess. We can not know unless and until it is tried and the event occurs, if Congress passes this bill and authorizes the Weymouth experiment. Personally I should prefer not to take this particular chance, at least.

There is still another chance of this last character which we must take. This rock-fill temporary cofferdam is not to rest

on a rock foundation. We have to take the chance that it will hold—that it will not fail as did the defective foundation of the St. Francis Dam and suddenly turn this river into the hole in its bed, some 100 feet or more deep, where scores of workmen are to be toiling night and day in an endeavor to excavate the great cavity for the permanent foundation. If we lose in this chance, many times the six lives lost in the Imperial Valley flood of 1905–1907 will be wiped out and charged to this experiment. I, for one, prefer to adopt Secretary Work's recommendation that we secure the judgment of the country's ablest engineers before authorizing this experiment, and I shall not vote for this measure until we have such a review.

Now it must be remembered that this greatest engineering job since the building of the pyramids in Egypt is to be performed in a rather inaccessible spot in the desert and that to reach it at all a 35 to 45 mile railroad must be built for either the Santa Fe or Union Pacific lines. By reason of its isolation and the unpleasant character of the weather during the summer months a huge labor turnover must be expected, with its consequent interference with time schedules.

I quote again some paragraphs from the Weymouth report which give a further idea of the problems of preliminary work and of the quantity of materials involved. In volume 5, at page 107, I find the following:

Construction of a dam of the size proposed on the Colorado River is an undertaking involving some difficult problems as well as the handling of enormous quantities of construction materials. The dam proposed, for example, is two and fourteen one-hundredths times as high as the Arrowrock Dam, the highest dam now built; contains three and thirteen one-hundredths times the amount of material in its building as is contained in the great Assuan Dam in Egypt; and is estimated to cost over two and one-half times as much as the Assuan Dam, the most expensive to date. Twenty thousand ordinary freight cars would be required to haul the cement required alone—a train about 165 miles in length.

So for the cement alone we would have a train 165 miles in length. Now, add to these 20,000 carloads of cement the other thousands of carloads of materials and supplies which must be hauled to the dam site and we begin to get some small idea of the quantities which are involved. This material, these thousands upon thousands of carloads, must, of course, be hauled over the railroad, and the first task will be to build the railroad from the nearest or most accessible point out to this point in the desert. I find that Black Canyon may be reached by constructing a railroad some 40 miles in length from Las Vegas, Nev., or a railroad 48 miles in length from Searchlight, Nev. These railroads, or whichever of these railroad lines are built, will serve no other purpose than the hauling of supplies and workmen to this dam site. There is no other territory in this mountainous and desert country through which the road would pass that would assist in bearing the expenditure. (See vol. 5, p. 102, of Weymouth report.)

The Weymouth report also says:

There is only one feasible route to the dam site for a railroad through the rough hills adjacent to the river, so, no matter whether the railroad is built from Las Vegas or Searchlight, the last 3½ or 4 miles will be over the same route. (Vol. 5, p. 102, Weymouth report.)

The building of this railroad is the first step toward building the dam, and the estimated cost of the railroad is only a paltry $1,675,000. This, of course, does not include the equipment for the railroad, which would include five locomotives and some hundreds of gravel cars and the like.

I find from page 116 of the Weymouth report (vol. 5):

The cement, sand, gravel, and cobbles would be brought in on the railroad built over the material bins and dumped directly into the bins. For each yard of concrete 1.44 cubic yards of material exclusive of cement are required, or for the construction of the dam 5,130,000 cubic yards. If 30-yard dump cars are used, it will require 171,000 carloads of material from the gravel pit, 3½ miles away. Trains will be operated three shifts per day, so that when runs of 7,000 yards per day are being made at the dam 336 carloads of material will be required at the rate of 14 cars per hour continuously. In operation a seven-car train would probably be brought to the mixing plant every half hour.

Now that we have reviewed some of the engineering assumptions and possibilities of mistaken estimates, let us summarize them:

First. That the 35 to 40 miles of railroad track, the construction camps, the electric plants, etc., and the 3 miles of 35-foot diversion tunnels are completed within the first year. That being done they are then ready to begin the real task.

Second. That an organization for quarrying and transporting rock can be developed to a 100 per cent higher efficiency than any hitherto developed after years of experience by the largest surface-mining companies.

Third. That highly efficient workmen can be found who can and will work in this isolated spot in 8-hour shifts at top speed in a temperature of 110° to 115° (in the shade and no shade).

Fourth. That not more than 25 per cent of the rock dropped into a river 30 to 60 feet in depth and flowing at 15 feet per second will be carried away.

Fifth. That the most efficient quarrying operation in the world can be developed and carried on under these conditions.

Sixth. That no flash flood will occur before or after the temporary cofferdam is completed.

Seventh. That the water between the cofferdams can be pumped out; the sand and silt excavated; the larger bowlders blasted and excavated; a hard rock foundation uncovered, blasted out, and excavated; the permanent cofferdams, each an enormous dam in itself, built to a height of a maximum of about 140 feet to the water level—all of this work to be done within the five to six months remaining out of a total of eight or nine months, three of which are allowed for the temporary cofferdams.

Eighth. That all of this work can be done in a box canyon where there is no room for either men, materials, or equipment, and if the thing is not finished within the schedule the optimistic engineers must be reduced to hoping for better luck the next year, their camps being in the meantime shut down and their organization demoralized.

Ninth. That a cofferdam does not fail with resultant great loss of life.

One does not need to be an engineer to realize at once that this program is preposterously impossible; that the best that can be hoped for is that after only one season of failure, other and more effective means, perhaps ten times more expensive than those now proposed, may be adopted if they can be devised. A more probable outcome is that the original plan will be adhered to through two or three seasons of failure before the engineer in charge takes the bull by the horns, abandons this fantastic program, and casts about to see whether there are not other means, however costly, through which success in the building of these foundations may be achieved.

We must remember also that there is the basic assumption involved that the foundations when exposed will not prove to contain deep faults, necessitating far more excavation than is indicated by the somewhat meager amount of drilling so far performed. If such difficulties develop then we must speculate on whether the engineers, already at the bottom of the formidable hole that they thought would be deep enough, with the top of the river, perhaps 250 feet over their heads, and rising rapidly, will abandon their plans for that season and hope for better luck next season, or whether they will take a chance, hastily throw some concrete into the bottom, and try to complete the dam with a skimpy foundation, thus setting the stage for a great future disaster. That such things are sometimes done, even by engineers of the highest reputation, was disclosed by the disaster to the St. Francis Dam built by the city of Los Angeles.

Now at this point I ask your special attention to an important fact which must be understood if confusion is to be avoided. This fact is that all of these constructional difficulties, all of these hazardous experiments, all of these unsound assumptions which I have detailed apply equally to the construction of any dam which has been proposed for Boulder or Black Canyons, whether the dam be this particular 550-foot dam, a so-called "low flood-control dam with a base sufficient for a dam of 550 feet," or the dams of other heights suggested for this location. This is true in the first place, because all of these impossibilities which I have detailed are in connection with building the foundation. You therefore obviously avoid no difficulties by simply failing to add 150 or 200 feet to the height of your dam. In the second place, there is no such thing as a "low dam" in Boulder or Black Canyons. As I have already pointed out, it is necessary to build a "highest dam in the world" at these sites before you can get the storage which is estimated as being required for flood control only. A dam at Black Canyon to create a storage capacity of 8,000,000 acre-feet, the amount which advocates of this measure say is needed for flood control, would have to be 350 feet high above the water line, or about 500 feet high in all—still nearly the height of the Washington Monument, and still incomparably the greatest dam in the world. At another point I direct your attention to the fact that a dam at another site will store from ten to twelve times the amount of water that these "less high" dams at Boulder Canyon will store.

I wish also to take note at this point of the argument that this dam which we are now considering is not the dam covered by former bills; that the plans for the dam have been changed and the provisions of the bill. I hope no one will be misled by that argument. The fact is that there is only one plan for

a dam before us. It is a plan for a 550-foot dam at Black Canyon. There is not a single basic objection to the 605-foot dam which was originally proposed, and is the only one for which designs or drawings have been made that will not apply equally to the dam before us. Furthermore, since the entire engineering and economic plan of this bill is based upon the Weymouth plan for Boulder Dam it makes no difference how many changes are made in other details of the bill; the heart of it is the same—the impossible plan for construction of this 550-foot dam in Black Canyon.

Assuming, however, that after some years of preliminary failure, the final adoption of new methods, and a total expenditure for river diversion and the construction of foundations approximating perhaps the sum now estimated for the completed job, that the foundations have finally been established, what then? The remaining big task will largely be confined to the pouring of concrete. This presents no engineering difficulties of an unprecedented character. Given time and money enough, a block of concrete as large as the city of Washington and as high as the Washington Monument could be put together. But what of the time required and what of the cost involved in placing a mass of concrete not, indeed, as large as the city of Washington but taller than the Washington Monument by the height of the Senate Office Building?

However, when we consider the time estimates which are made for the pouring of this concrete we find another of the glaring discrepancies between the Weymouth plan and the factual probabilities. I quote from volume 5, page 115, Weymouth report:

The maximum rate at which concrete would be placed is estimated to be 3,500 cubic yards per shift of eight hours, which amounts to 438 yards per hour, and considering loads of 5 yards, the requirements of cableway service are 87½ trips per hour. The cableways proposed are capable of making 13 trips per hour each, carrying concrete the average distance and lowering to the average depth of the lower two-thirds of the concrete in the dam. Thus it will require seven cableways to do the work. However, nine cableways are proposed, partly on account of advantageous spacing of cableways over the work and partly on account of the fact that some of these cableways will be used for handling forms and miscellaneous material.

If the average rate of progress could be maintained the dam would be completed about seven years from the time work is started on the construction railroad.

With reference to these estimates, Mr. John P. Hogan, consulting engineer of New York, who is familiar with the construction problems on the Colorado by reason of the fact that for three years he was one of the consulting engineers for the proposed Diamond Creek development on the Colorado, testified, as appears at page 364, hearings on H. R. 5773, January 13, 1928:

This dam proposes to be 550 feet high above the surface of the stream or about 680 to 700 feet from the bottom point, and contain three and a quarter million yards of masonry. That would require a working season of about four and a half years to put in the concrete alone, even if it were put in at twice the rate which material has ever been put into a structure of that kind at present. In other words, the maximum record we have of material going into a structure is 86,000 yards in one month at Kensico Dam, which also happens to be a million-yard dam. There we had a very favorable terrain. * * * We had a very favorable terrain there and flat ground. The dam was long and low rather than high. We had a great deal of space in which to work, and, as I say, the maximum record that was made there was 86,000 yards in one month. The average record was about half that.

So that in Boulder Canyon, even to put the masonry in in about four and one-half years would require a maximum day's progress of about 150,000 yards in a very difficult situation.

At Conowingo at present, which is one of the largest dams being built, they have two plants, one on each side, and the maximum they have ever put in there on this side is 43,000 yards; on the other side, 54,000 yards in one month. * * *

When we made up the estimates for the Diamond Creek project we were informed, believed, and counted in our estimates that it would be impossible to work in the bottom of the canyon in the months of May, June, and July, because the temperature was from 110 to 115 in the shade.

It would appear, therefore, that even if the builders of this dam are able to maintain the average rate of the most efficient work ever done in pouring concrete under much more favorable conditions than exist at this dam site, it would take nine years, at least, to pour the concrete alone. Adding to this 9 years the highly favorable estimate of 3 years for the preliminary construction work, we find that it would take 12 years to complete this dam without allowing for the loss of any time in preparing the foundation and this also without allowing for the increased quantity of concrete required to bring the stresses in the structure down to the usual maximum of 30 tons per square foot rather than the somewhat hazardous 40 tons per square foot used in this estimate, and so used, apparently, to secure economy at the expense of safety.

A 12-year construction period is, therefore, apparently not only probable but unless some revolutionary method of pouring concrete is discovered and developed prior to the starting of this construction it is inevitable.

Let us remember in this connection that the contracts for the sale of the electricity with which this project is to be financed must, under the terms of the bill, be made before any construction work starts. I am wondering if it will make any difference to a possible purchaser of power when he finds that he is taking a chance on his delivery of power being delayed several years. In making its contracts, it seems to me that the Government must either guarantee its time of delivery or otherwise protect the purchaser. In estimating the probable time within which power can be sold after it is ready it is always assumed that the purchaser will rely wholly upon this source of power for his new business and growth of load after it is available. Suppose he makes a contract in 1928 for delivery in 1936 and then litigation delays the starting of construction some three or four years, and construction difficulties delay the completion of construction another five years. Is the purchaser going to sign a contract under which he will take this risk? I hardly think so. Again, the Government must take the risk.

God knows there is danger enough without trimming it down; for I say now that if that dam is built, with all the water back of it, and an earthquake comes, and it goes out, it will be the greatest disaster that has ever happened in all the world; and the poor people in Imperial Valley will be the very first ones that will be murdered.

CONGRESS MUST TAKE THE RISK OF THIS DAM'S SAFETY

On page 210 of the hearings on H. R. 11449, February 21, 1923, Committee on Irrigation of Arid Lands, House of Representatives, I find that the committee of the House was warned by Mr. W. G. Clark, consulting engineer of New York City, that this dam was to be built in an earthquake area and that a masonry dam such as proposed would therefore be inadvisable and subject to the danger of destruction by earthquake. Mr. Clark testified that the development of the Colorado had been a matter of engineering interest to him for more than 22 years, and that he had spent much time in and around the canyon of the lower Colorado River; that in particular he had been on the ground for the location of this dam many times and studied the canyon and the conditions very carefully.

This is what Mr. Clark said:

The dam proposed by the Reclamation Service would give an average head of 500 feet and would generate between 600,000 and 700,000 horsepower. It is possible at this location to construct a dam of unprecedented height—a dam with a crest 1,064 feet above the present water surface and 1,200 feet above bedrock.

The dam which I am proposing is a rock-fill dam, constructed with a steel diaphragm. This dam has been designed after many years of study. I was in Boulder Canyon when an earthquake occurred. At that time there was a decided movement of the north wall of the canyon, but there was no movement of the south wall. Thousands of tons of rock fell along the north wall of the canyon, but there was no fall along the south wall. I was camped on the south side of the canyon; and if it were not for the fact that I could see and hear the rock falling on the other side of the canyon, I would not have known that an earthquake was in progress.

Mr. RAKER. The north wall is on the right-hand side going downstream?

Mr. CLARK. Yes, sir. Some years later, in 1913, I believe, an earthquake occurred which affected the Imperial Valley. I was in southern California at the time, so went immediately to Boulder Canyon. The same condition had been repeated. I found that thousands of tons of rock had been shaken from the north wall of the canyon, but the south wall remained undisturbed.

The river apparently runs through a fault fissure, for in both instances, the disturbance was confined to the north side of the canyon at Boulder wash.

I at that time abandoned the idea of constructing a stone or masonry dam, for, in the event of an earthquake, the bond between the side walls of the canyon and the concrete structure might be broken, allowing the impounded waters to escape.

Not only is this whole thing experimental from the physical standpoint, it is an experiment which, if unsuccessful, is likely to lead to the most tremendous man-made catastrophe in the history of the human race. Many dams have failed in history; no dam that has ever failed—indeed, no dam in the world, and no collection of the greatest dams in the world—even approximate the magnitude of this single one. This dam is to store

26,000,000 acre-feet of water. Some of the other great dams created storages as follows:

| | |
|---|---|
| Gatun Dam | 4,410,000 |
| Assouan Dam | 1,865,000 |
| Elephant Butte Dam | 2,368,000 |
| Almanor Dam | 1,318,000 |

All of these great reservoirs together contain a capacity of about 7,961,000 acre-feet, or a smaller total capacity of 18,000,000 acre-feet than the reservoir here proposed.

The reservoir created by the St. Francis Dam of the ctiy of Los Angeles, whose failure is fresh in the minds of all of us, was only 38,000 acre-feet when full and contained only 36,000 acre-feet at the time the catastrophe occurred.

The Boulder reservoir then will contain seven hundred and twenty-two times as much water as destroyed the lives of between 400 and 500 people when the St. Francis Dam of Los Angeles failed. We can not visualize the catastrophe that would follow the breaking of the dam here proposed. Of course, the engineers who designed this dam feel that it can never fail, but what are the facts? No engineer ever designed a dam which he thought would fail. Of all the engineers who testified before the committees that favorably reported this bill, the most prominent and widely known is Mr. William Mulholland. Indeed, he seems to have been the only engineer of prominence, outside the Reclamation Department itself, who has ever attempted to guarantee the stability and the cost estimates of Boulder Dam. I read a portion of Mr. Mulholland's testimony from page 121 of the hearings on H. R. 2903, Sixty-eighth Congress, first session, held in 1924, four years ago:

Mr. RAKER. Have you gone into this project and the report of the engineers of the Reclamation Service so as to be able to determine whether or not this Boulder Dam project is feasible?

Mr. MULHOLLAND. Minutely. I have taken the greatest interest in it ever since its inception. I have gone on the ground and looked at it.

Mr. RAKER. I am asking you as an engineer, then, whether in your judgment it is feasible?

Mr. MULHOLLAND. I have given it the most scrutinizing inquiry as an engineer, and it is not only feasible, but it is easily feasible.

Mr. RAKER. And practicable?

Mr. MULHOLLAND. And practicable.

You will see that Mr. Mulholland is then quite positive in his indorsement. Yet he is the man who selected the site of the St. Francis Dam and passed its foundation as being safe and adequate.

Now, I do not refer to Mr. Mulholland for the purpose of condemning him; far from it. I feel the greatest sympathy for him in this disaster, the responsibility for which he feels most keenly and which has come near the close of his long and useful career. Doubtless he was and is a great engineer. Furthermore, as he told the House committee considering this bill, he is an amateur geologist. (See p. 101 of hearings on H. R. 2903, 68th Cong., 1st sess.) And what does this prove? It proves that a dam built by a great engineer, that foundations selected by a man experienced in geology, can fail.

The St. Francis Dam was a dam of moderate dimensions. It was built according to conventional designs which have been tried and proved by experience. In fact, the maximum pressure between the bottom of the dam and its foundation was reported to have been only 12 tons per square foot, which is regarded as eminently conservative. In this Boulder Dam it is proposed not only to try the experiment of by far the largest mass of concrete ever attempted in the history, with internal stresses that in the opinion of General Goethals are indeterminable, but it is likewise proposed, in order to reduce the cost, to try the experiment of the extraordinarily high pressure of 40 tons per square foot and the foundations upon which it rests. I refer you to page 23 of the minority report of Senator ASHURST, where you will find quoted the testimony of Col. William Kelly upon the point, as follows:

Colonel KELLY. As you go up in height the mere weight of the dam itself puts a pressure on the foundations that runs into very large figures. On the Washington Monument that pressure was great enough to cause the stones to sprawl at the edges around the bottom of the Monument. * * * In addition to the weight of the structure itself you have the pressure of the water behind it which greatly increases the stresses, especially on the downstream part of the foundation. In order to keep these stresses within reasonable limits the dam has got to be widened out and made very wide at the base.

* * * * * * *

Up until a few years ago the usual practice on gravity dams was to keep the maximum stress below 20 tons per square foot. The Reclamation Service in designing some of their higher dams, like Arrow Rock, found that in order to comply with that requirement they had to expand the dam at the base to such an extent that the cost became very great. They consequently made use of the arch principle in combination with the gravity section or weight of the dam and allowed a maximum stress of 30 tons per square foot. * * *

In the design of this Boulder Canyon high dam they again found that going up to 600 feet, 30 tons per square foot required a dam of abnormal dimensions and their design proposes to have an allowable maximum stress of 40 tons per square foot on that 600-foot dam.

In this bill Congress is asked to become the engineer of this adventure. The bill fixes the site of the construction within very close limits. If we pass this bill, Congress will have ordered, as a result of congressional engineering ability, that this dam be built at this particular spot, a spot which has been condemned by many competent engineers, who question whether the foundations of a dam can be established there, except at a prohibitive cost. Congress, as an engineer, will have dictated the size of the dam to be built in this difficult and perhaps impossible place, and the size of the structure is seriously questioned. Congress will also, by this measure, have fixed the general plan of development of the Colorado River for all time—fixed it according to a plan which is condemned by many competent engineers, and particularly by the engineer of the Geological Survey who has studied the river for a greater length of time and more minutely than any other man—Mr. E. C. La Rue. (See Water-Supply Paper 556, Geological Survey, 1925.)

All engineers who have examined this project agree that the crux of the whole enterprise, the point concerning which there is the greatest doubt and greatest risk, is the matter of foundations for the dam. The depth to bedrock is at its deepest point said to be 127 feet—127 feet below the surface of the river. If this foundation is not secure, if the dam is not firmly anchored in bedrock at every point, the greatest dam disaster in history is invited. What of the foundations thought to be adequate in the case of the St. Francis dam? I quote from the report of the committee on engineers appointed by the Governor of California to ascertain and report upon the cause of the St. Francis Dam failure:

(1) The failure of the St. Francis Dam was due to defective foundations.

The committee reported that the foundations primarily of red conglomerate and mica schist formations, specimens of which—

go to pieces when immersed in water for a few hours, and samples taken over a considerable area have gone to pieces almost immediately upon immersion.

With such a formation the ultimate failure of this dam was inevitable unless water could have been kept from reaching the foundation.

I pause to inquire whether the Members of the Senate feel themselves sufficiently well informed about the foundations for this Boulder Canyon Dam that they are willing to authorize and direct the Secretary of the Interior to proceed with it. Let us remember that under the terms of this bill, and under the advice given us by the Secretary of the Interior, if we pass this bill the responsibility is ours. Let us also remember that it is wholly unnecessary to take this risk; that there are alternate plans of development of the river which will provide the flood protection and all other benefits at much less expense and in much less time through the construction of dams which, as is said in Water-Supply Paper 556 (p. 73), call for a minimum departure from present engineering practice in the construction of dams.

Does not prudence and common sense suggest that we at least require a report from the ablest engineers in the country before we approve this experiment?

WHAT HAVE GOVERNMENT OFFICIALS SAID?

I have no doubt that much of what I have said is new and perhaps rather startling to many of my colleagues. If this project is so fraught with engineering risks and is a subject of such a pronounced difference of opinion as I have pointed out, the obvious query is as to why it should have been submitted to us in this unsettled state. I have already read to you from the letter of Secretary Work of March 17, 1924, with which he submitted this Boulder Dam plan to the Congress that portion wherein he stated that "Congress should itself appraise the necessity of an outlay of such magnitude and justify the financial obligation to be assumed by the Government before beginning this project." At that time it is perfectly apparent that Secretary Work himself questioned the wisdom of entering upon this huge undertaking. Again, in his testimony before the House Committee on Irrigation and Reclamation on March 29, 1924, Secretary Work testified as follows (p. 1029, Hearings on H. R. 2903, 68th Cong., 1st sess.):

Some engineers urge that a dam as high as 605 feet would serve all purposes now, but I do not know what available market we have for

power. We ought to know how much power could be sold and the probable income from it before we could appraise the situation.

A dam 605 feet, I am told, would be twice as high as any dam in existence. Whether a dam of that height—and its base as broad as its height—is a practical engineering possibility I do not know. Some engineers say it is. They all agree that it has never been tried.

But in this Boulder Canyon project, before the dam is begun, engineers advise me that they would have to spend some $17,000,000 to get ready, to put in a cofferdam to divert the stream at low water, and to tunnel the mountains on each side to take care of the river, and after that is done they would only control the flood at low water; it will not control a flood.

Those are all engineering problems of such magnitude that I can have no opinion on them.

This testimony of Secretary Work, it must be remembered, was given after he had received and submitted the engineering report and study for this dam to the Congress, and after he had passed to the Congress the responsibility for determining whether this dam was feasible or practical. No further engineering facts relating to the fundamental problems of great magnitude to which the Secretary refers have been made available to the Secretary since that time.

In this same testimony, on page 1030, Secretary Work also said that "estimates are only intelligent guesses."

I now desire to direct your particular and very special attention to a letter written under date of March 24, 1924, by the three Cabinet officers who at that time constituted the Federal Power Commission—Secretary Weeks, Secretary Work, and Secretary Wallace. This letter is of the utmost importance because it was written at a time when the details of the Weymouth plan for the construction of this project was fresh in the minds of these Cabinet officers. It was written just a little more than a month after the Weymouth report was completed and just one week after Secretary Work had submitted the plan to Congress with his letter of March 17, 1924. That this letter represented the considered judgment of these Cabinet officers is apparent not only from the details dealt with in the letter but from the clarity of their expression and, further, from the fact that each one of them was called before the House Committee on Irrigation and Reclamation and there testified in verification of their letter. This letter raises the fundamental questions as to the soundness of this venture and as to the policy to which the Government is committed by undertaking it. On every main point which has since been raised against this proposal these gentlemen expressed themselves clearly and definitely and just as definitely condemned the proposal. They condemned it on the ground that it was a power project which committed the Government to a policy and to an activity which if logically pursued has possibilities of demands upon the Federal Treasury in amounts far beyond those now involved in reclamation and highway construction combined. They condemned it on the ground that it was unnecessary to construct a reservoir of any such capacity in order to meet the problems with which the Federal Government should be concerned. They condemned it on the ground that it was inadvisable to proceed with any such project until the Colorado River compact was ratified. They further condemned it on the ground that the regulation of the Colorado River to the extent proposed would produce surplus waters for use in Mexico and that such a condition should not be created in advance of an agreement with Mexico upon this subject.

I read you the following from that letter (pp. 1000–1003, hearings on H. R. 2903):

> Flood control and irrigation storage are presumed to be the primary purposes for which it is proposed to construct the dam at Boulder Canyon. While there are differences of opinion with respect to the amount of storage actually required for these purposes, it is agreed that 8,000,000 acre-feet is the maximum required, and it is probable that 4,000,000 feet would be reasonably adequate. The nearer the reservoir is installed to the lands to be protected or irrigated, the more satisfactorily will it serve the purposes of flood control and irrigation. Information recently made available indicates that a reservoir of sufficient capacity to serve all the needs of flood control and irrigation could be located on the river some 100 miles nearer the lands to be served and at a cost of not more than one-half that of the proposed high dam at Boulder Canyon. If this is correct, the location of the dam at Boulder Canyon and its construction to the height proposed must be justified, if at all, wholly from the standpoint of the development of electric power.
>
> * * * * * * *
>
> In so far, at least, as the project proposed exceeds the requirements of flood control and irrigation the bill proposes that the United States undertake a new national activity, namely, the business of constructing facilities for production of electric power for general disposition, an activity which if logically pursued has possibilities of demands upon the Federal Treasury in amounts far beyond those now involved in reclamation and highway construction combined. While the United States has heretofore constructed power developments in connection with irrigation projects, these developments have been merely incidental to the projects, have been of a few thousand horsepower only, and have been primarily for use on the projects themselves. The construction of a reservoir having a capacity of from four to eight times the needs of irrigation and flood control and of a power development twenty times in excess of the probable power needs of the irrigated lands and adjacent communities is a complete departure from former policies. The only undertaking by the United States at all comparable in magnitude with the proposals at Boulder Canyon is at Muscle Shoals and this project was undertaken to furnish munitions in time of war. In so far as it was to serve the needs of peace it was to furnish an essential commodity for all sections of the United States and was not for the special benefit of a limited area.

I will not at this time read the entire letter, but I hope that you will give it your serious consideration. It will be found at pages 1000–1003 on the hearings of H. R. 2903 before the House Committee on Irrigation and Reclamation, Sixty-first Congress, first session.

Now, it may be said by the proponents of this bill that this project which was condemned in 1924 in this letter is not the present project. I challenge this statement and ask the proponents to point out a single objection in that letter which does not apply equally to the present bill. Aside from the fact that the height of dam proposed has been lowered from 605 to 555 feet, there has been no essential change in the plans for the project.

I anticipate also that it will be said that there has been a great deal of further investigation made since that time and that the objections then raised have been removed by this subsequent investigation. I also challenge this statement, because I am unable to find where a single new fact has been developed that was not known to these gentlemen at that time. Certainly it can not be claimed that any new engineering facts except adverse ones have been revealed since that time. It may also be said that Secretary Work has changed his opinion since that time and that the other two secretaries are dead. That is true, but so far as Secretary Work is concerned, he has given us no new facts which in any way nullify the very sound conclusions and criticisms which were stated in that letter. The fact that the other two secretaries are no longer with us is certainly poor proof that they were wrong at that time or that they would have changed their minds had they lived.

Now the only further investigation of this project since 1924 of which I am aware is the investigation that is reported to us at this session and was carried on by the five advisers appointed by the Secretary in the spring of last year. These advisers were Prof. W. F. Durand, of Stanford University; Hon. James C. Scrugham, former Governor of Nevada; Hon. Frank C. Emerson, Governor of Wyoming; and our colleague, Senator CHARLES WATERMAN, of Colorado. All of these advisers except Senator WATERMAN have submitted their written reports. With reference to the investigation made by these gentlemen, I wish to call your attention in the first place to the fact that their report can hardly have been the reason for the change in attitude of Secretary Work toward this project for this reason. The change of attitude by Secretary Work was made as early as January 18, 1926, because on that date he wrote a letter to the chairman of both the House and Senate committees considering this bill in which he recommended its favorable consideration and set forth his reasons therefor in detail. The most recent letter from Secretary Work is included in the most recent majority report, and is dated January 21, 1928. It does not add anything to the information contained in his letter of January 18, 1926, except that he now specifies the necessity for an immensely greater amount of storage for silt purposes than had previously been considered necessary either by Mr. Weymouth or any of the other engineers. I therefore do not think that it can be maintained that Secretary Work was influenced or gained any new knowledge from the report of the advisers which he appointed during the last year.

With reference to these advisers, it is also necessary to call your attention to the fact that at least two of them were not disinterested. Professor Durand and ex-Governor Scrugham are, as has been pointed out by Congressman LEATHERWOOD in his minority report on this bill, "old-time champions of this project." Professor Durand has been before the committees of both the House and the Senate during the past six years at various times, and has given testimony in favor of the project. For more than 18 years he has been retained by the Los Angeles Bureau of Power and Light, which is one of the principal promoters of the project. Ex-Governor

Scrugham has likewise strongly supported the project for years, and as Governor of the State of Nevada is naturally favorably predisposed toward a project which means the expenditure of from $100,000,000 to $300,000,000 in his State. If was hardly to be expected that these advisers at least would do more than to reiterate their opinions, which were well known, and I do not believe that Secretary Work could reasonably have expected anything but a strong indorsement of the project by them.

Governor Emerson had likewise previously expressed himself as favorable to the project and would naturally be inclined to arrive at conclusions which substantiated opinions previously expressed.

Mr. James R. Garfield, ex-Secretary of the Interior, was asked to report particularly upon the power of the Federal Government to undertake this project without the consent of the States and, as stated by Congressman LEATHERWOOD, his "championing of the right of the Federal Government to extend and retain a close control over the natural resources within the States, is well known." I do not question or in any manner impugn the honesty of these gentlemen. I distinctly do not wish to be understood as doing so. I only insist that if an impartial report from engineers who approached the subject with an open mind was desired much better appointments could have been made. If a report which indorsed the already known views of the Interior Department was expected and desired, their choice was well made. I also am impelled to point out that none of these gentlemen qualify as hydraulic engineers or as expert dam builders but that their engineering experience runs along other lines.

Senator WATERMAN has not submitted his report to the Secretary and, I understand, expects to make it on the floor of the Senate, and I shall indeed be interested in hearing from him. I have no doubt that Senator WATERMAN can confirm my statement that no independent engineering investigation was made by any of the five advisors but that every one of them of necessity proceeded on the assumption that the basic plans and estimates of the Reclamation Service were correct. It is certain from their reports that they have not considered the details of the engineering difficulties which are presented by this project and which I have only to a degree outlined. Their report would certainly have been of much greater value to us if they had answered the questions as to the proposed methods of construction and attempted to explain to us how the obvious and inescapable risks involved in the numerous engineering experiments contained in this project are to be solved. Their general indorsement of the proposal to build a high dam at Boulder Canyon, is, after all, of little value. As to two of them this indorsement had already been given. It would have been of great value if they had undertaken to tell us precisely why and how this unique plan for building a dam can be worked out without enormous risks.

Again, in connection with the indorsement of this project, I am sure that many of you have in mind that Secretary Hoover has approved it. We all know that Secretary Hoover is a great engineer and most of us, I am sure, have great confidence in his judgment and ability. Many Senators feel that if this engineering plan and these cost estimates have been examined and approved by Secretary Hoover that his judgment is good enough for them. I am frank to say that if this were true his judgment would go a long way toward reassuring me. The unfortunate part about this, however, is that it is not true. It is not true for the simple reason that Secretary Hoover has never examined the details of the Weymouth plan from an engineering standpoint or from any other, and that he has never attempted to approve these engineering plans or the cost estimates for this project. Like practically all others, his indorsement has been confined to the idea of building a great dam which would serve the primary purposes involved, assuming that subsequent investigation confirmed the basic facts.

In his first appearance before the committee considering this bill, in February, 1924 (p. 67, hearings on H. R. 2903, 68th Cong. 1st sess.), he testified:

> I do not think the engineers have sufficiently determined yet as to where the best foundation lies in Boulder Canyon or Black Canyon. They are not far apart and must yet be determined.

Secretary Hoover here, no doubt, had in mind the fact that only four locations for dam sites have been drilled in the hundreds of miles of canyon where there are at least 23 dam sites, and that, therefore, there had been no final determination of the best location. There has been no further investigation along this line since the Secretary testified—indeed, no further engineering facts regarding the fundamental questions have been investigated except by the Geological Survey which condemns this Boulder Dam plan.

Again, Secretary Hoover's chief interest and chief work in connection with the Colorado has been the negotiation of the Colorado River compact, the division of water between the States of the upper and lower basin States. While this compact was intended to clear the way for some development of the river, the compact had nothing to do with any single engineering plan. In his examination before the House committee (pp. 67–68, hearings on H. R. 2903), we find that Congressman SWING endeavored to have the Secretary say that the compact was framed on the theory that a big dam would be built along the lines of the one here proposed, and Secretary Hoover replied (p. 68):

> No; there is not a word in the compact relating to the character of engineering development. The compact did not pretend to enter into that field at all. Any statement as to Boulder Canyon, of course, was merely the expression of my personal ideas and some of the members of the commission.

Not only has Secretary Hoover not approved the engineering plans; he has also failed to approve and has suggested an amendment concerning the power features of the bill. In his last appearance before the House committee on March 3, 1926, in testifying on this bill, Secretary Hoover said:

> On that proposition I would like to make this suggestion for the consideration of the committee: That it is desirable to provide that the Federal Power Commission should make the division of power entirely under the water power act, including the whole of the act. The licenses should, of course, be issued subject to the approval of the Secretary of the Interior in order to secure the financial arrangements which would bring to him the necessary revenue to carry the amortization and interest on bond issues. (Hearings on H. R. 6251 and 9826, 69th Cong., 1st sess., p. 50.)

This amendment to place the handling of the power under this development under the Federal water power act, as recommended by Secretary Hoover, has never been adopted.

I have yet to find any statement wherein Secretary Hoover has expressed his approval of this bill, of the provisions thereof, or of the engineering plans.

ADVICE OF PRIVATE ENGINEERS

In order that you may have the complete story of the engineering advice it is necessary to call your attention to what other engineers than the Government engineers have said and done in connection with this Weymouth plan.

The Bureau of Reclamation, according to Mr. Weymouth's testimony, had two consulting engineers—Mr. A. J. Wiley and Mr. Louis Hill—who constituted the advisory board on the plan in general. Their opinions have not been made available to us except by Mr. Weymouth's reference to them which is quoted on page 28 of the majority report to the Senate on this bill. We do not know whether these two advisers approved all the plans, and each detail, or only certain special problems, or only the general plan. From the context of the testimony of Mr. Weymouth (pp. 741–743, hearings on H. R. 2903) in this connection it would appear that they were consulted only on each step of the general plan.

I have already called your attention to the report of the three engineering advisers who were appointed by the Secretary of the Interior last year. Their report, as I have said, falls into the class of those who have made a compilation from the facts and assumptions of Mr. Weymouth but who have not checked the basic figures. Now, aside from these engineers and the engineer of the Los Angeles Bureau of Power and Light, Mr. William Mulholland, the engineer of the St. Francis Dam, whose testimony I have also quoted, I can find no evidence from a private, disinterested engineer, except that of Mr. John P. Hogan, of New York.

Mr. Hogan was called before the House committee at the hearings this year by Mr. DOUGLAS of Arizona, and his testimony appears at pages 360–374, hearings on H. R. 5773, January 13, 1928. It appears that Mr. Hogan is an engineer of 25 years' experience, 15 years of which has been in water-supply work. He testified that he had dealt with projects in the Columbia Basin, Colorado Basin, St. Lawrence, Hudson River, and a number of projects on the larger eastern rivers. He was in charge of construction of the reservoir and conduit division of the Catskill Aqueduct and was afterwards chief engineer of the Catskill Aqueduct. Of most importance is the fact that for three years he was one of the consulting engineers for the proposed Diamond Creek development on the Colorado River, a site about 130 miles above Boulder Canyon.

Mr. Hogan testified that the cost of this Boulder project, if it could be carried through, would be between $180,000,000, and $210,000,000. I quote from his testimony on page 363 of the House hearings on H. R. 5773:

> We made a careful estimate at the time of the application for license on Diamond Creek, and as a result of that estimate we presented an

estimate of cost to the Federal Power Commission. That was the result of about three years of study on this project. Now, considering the cost and applying those costs which we assumed to build Diamond Creek to the work at Boulder Canyon and assessing the additional difficulties which existed at Boulder Canyon, due to the greater depth of the foundations, I arrived at—first, assuming the same basis of cost as used for Diamond Creek, I arrived at a figure of $62,000,000 for the dam alone. On assessing the three things—there were three things in the plan announced for the construction of this dam that were not adequately taken into account. One was the great depth of the foundation, 127 feet to bedrock, and cut-off 20 to 30 feet, depending on the rock conditions below that. In view of that, the stream control is in no way adequate, and I did not consider that the plan to uncover that bottom and throw an arch dam 215 feet high in there in a single working season was in any way practical. Therefore, it would be necessary to provide complete stream control to take care of a flow of somewhere between 70,000 and 100,000 second-feet, preferably the latter, in view of the investment in the amount of work to be done on the bottom which the flood might partially ruin, and I thought that the proper protection would be against a flood of 100,000 second-feet.

Then you would take the risk during the year or two that you were at the bottom of having one of the 200,000 second-feet floods come along, which undoubtedly would do great damage, but it is almost impossible to attempt to divert the entire flood—a possible flood of 200,000 second-feet.

Mr. Hogan further testified that the time estimate on the one job of pouring the concrete was four and a half years too low, but I deal with that in another place.

I further quote the following from Mr. Hogan's examination (p. 364):

Mr. DOUGLAS of Arizona. If you were employed by private enterprise, Mr. Hogan, to investigate and examine into the Boulder Canyon project, would you recommend it?

Mr. HOGAN. I would not. It would be impossible to finance a project with the risk connected with it which the Boulder Canyon project has by private capital.

Another engineer who appeared before the Senate committee on November 2, 1925, was Prof. G. E. P. Smith, professor of irrigation engineering, University of Arizona, and at that time president of the Arizona section of the American Society of Civil Engineers. Although Professor Smith is a resident of Arizona, and may therefore have some bias against this project, it is at least worth while quoting the following from his testimony, which appears at page 397, Senate hearings on S. Res. 320:

There are also several engineering objections to the Boulder project, as follows: It begins development at the foot of the long canyon region instead of at the head; it places the main storage at the foot, though it should be at the head, and a smaller storage reservoir for reregulation of the flow should be at the foot; the site is not easily accessible; the foundations will be difficult, if not impossible, of construction with no river control upstream; its magnitude is such that the period of construction will be 8 to 10 years, and the Imperial Valley should not be compelled to wait so long. Also, being primarily a power project, it is not a defensible enterprise for the Federal Government.

If the Federal Government decides to adopt a flood-protection project, then provision should be made for a reservoir of not to exceed 10,000,000 acre-feet capacity. A much smaller capacity will be adequate for irrigation development for many years. To provide a reservoir of 30,000,000 acre-feet capacity is a plunge into the power business.

The Boulder Reservoir would equate the flow of the river completely to about 21,000 second-feet. For the next 15 or 20 years not over one-third of that flow could be utilized in the United States, and during that period of time from half a million to a million acres of land in Mexico would be brought under irrigation. After the water has been applied to Mexican lands, and canals and villages and railroads have been built there, it will be impracticable to take the water away for use in the United States. The plan of building a great storage reservoir in this country to equate the flow was originated by the owners of the Mexican lands.

The other engineers not in the Government service who should be mentioned because of their testimony before the committee considering this legislation are Gen. George W. Goethals and Mr. W. G. Clark.

General Goethals was apparently associated with Mr. W. G. Clark as a consultant with reference to a dam which Mr. Clark advocates building in Boulder Canyon—a rock-filled dam. Mr. Goethals advocated a rock-filled dam because he said he had more faith in that character of a dam at this location, and particularly because of the height to which the dam was to be built. The dam which we have under consideration is the concrete dam recommended in the Weymouth report. As to that General Goethals testified (p. 752, Hearings on H. R. 2903, March 20, 1924):

With the concrete dam you have got internal stresses developing in concrete that nobody knows anything about; and the ultimate strength of that dam is rather a difficult thing to determine. In the other case you have got merely weight and pressure, both of the water and of the silt that may be deposited against it. In the concrete dam, you have got internal stresses that are developing.

Mr. HAYDEN. Is there any doubt about the stability of concrete structures?

General GOETHALS. Yes; when you get up to certain masses, you do not know what you are running into, on account of these internal stresses.

Again, at page 755, he says:

When you get to concrete, and get putting in concrete in big masses, you are not always sure of your mix; you are not always sure of your foremen laying the concrete at the proper time; you are running into uncertainties, that with the internal stresses of the dam make me prefer a rock-filled dam, under conditions such as exist at Boulder Canyon, rather than a concrete dam. Now, that is the situation.

Mr. Goethals was then recommending a different type of dam than the one we are considering, and doing this because he had doubt as to the factor of safety in a concrete dam of this size.

With reference to the plans of the Reclamation Service for this dam, he said that he had not seen them; that he was talking about the dam that he was consulted about, which was the rock-fill dam. At page 759 he says:

Now, if he had asked me about the 600-foot dam of the Reclamation Service, I would have asked him to let me see the plans. I have never seen the plans.

I take it, therefore, that there is no further argument needed that General Goethals is not one of those who can be quoted as giving any indorsement to this dam, or any assistance in the question of the adequacy of the engineering which has been done upon it.

Now, as to Mr. W. G. Clark, the other engineer associated with General Goethals. What I have said concerning Mr. Goethals largely applies to him. He has not advocated or attempted to recommend this dam of the Reclamation Service. At another point I have quoted what Mr. Clark says as to the danger in building this kind of a dam at Boulder Canyon because of the possibility of earthquake shocks at that point.

Finally, we have the report of the committee of the American Engineering Council which has just been made under date of April 19, 1928, and which has already been called to your attention. I am sure that no one is going to seriously question the ability, integrity, or qualifying experience of Francis Lee Stuart, Allen Hazen, Clemens Herschel, J. Waldo Smith, and Lewis B. Stillwell. I especially desire, however, to direct your attention to the full and careful analysis and study of the problem of Colorado River development made by the chairman of that committee, Mr. Francis Lee Stuart. If any further assurance was needed as to the advantages of the plan of the Geological Survey for Colorado River development as compared with the plan of the Bureau of Reclamation, we have such assurance in the report of Mr. Stuart.

I pause again to inquire: In the face of the facts now before us, who is there who will affirm that this Boulder Dam plan has the support of the weight of engineering authority? Whether measured by numbers, by reputation in their profession, or by logic of their reasoning, I can not but conclude that the weight of authority in both governmental and private engineering circles is against rather than for the Weymouth plan for Boulder Dam.

FLOOD CONTROL BY LEVEE CONSTRUCTION

I quote from volume 1, page 7, of the Weymouth report:

Two principal methods of flood control may be considered for the lower basin, viz, levees and reservoirs. Levees at present protect the Yuma project lands and the lands of the Imperial Valley. They are a source of continued, and, as the delta rises, of constantly increasing expense. No construction short of a complete line of levees adequately maintained on both sides of the river from Laguna Dam to the Gulf of California can be considered as a complete solution of the problem and such construction would impose an insupportable burden of expense.

It appears, therefore, that there are two methods of providing flood protection and that both should be given consideration. Mr. Weymouth dismisses the idea of providing flood protection through the construction of levees on the ground that it would be an insupportable burden of expense. In this connection, however, it must be remembered that there is an extensive system of levees on the lower delta of the Colorado to-day and that this must be maintained even after a flood control dam is constructed, for the reason that it is impossible to regulate the flow to such a small quantity that the river will not cut the banks and menace the Imperial Valley unless dykes are maintained. The necessity of continuing to maintain the levees even after a storage dam is constructed is

admitted by all engineers. The only argument on this point is as to the cost of maintaining them.

It appears from the indisputable evidence in the record that the cost of building a system of levees and of dredging the channel should not exceed some $3,000,000 in the judgment of competent engineers. Indeed the Southern Pacific Co. offered to solve the flood problem on the Colorado in this manner for the sum of $1,500,000 (plus the payment of the bill owing to them for the 1907 flood work), or to make no charge if their system was unsuccessful. This offer was made in a formal proposal from the president of the Southern Pacific to the President of the United States in 1911.

I quote from the letter written by the president of the Southern Pacific, Mr. Lovett, to President Taft, December 13, 1911, which letter will be found in House Document 504, Sixty-second Congress, second session, at page 175:

Upon the appropriation by Congress and the payment to the Southern Pacific Co. of $1,083,673.97, being the amount given by Mr. G. E. Grunsky, consulting engineer, in his statement to the Committee on Claims of the House of Representatives when acting in an advisory capacity to said committee, as reimbursing the said company for work costing $1,600,000, done in the year 1907 at the request of President Roosevelt, and upon the further appropriation by Congress of $1,500,000, to be placed at the disposal of the President of the United States and to be used by him in restoring the flow of the Colorado River to its former channel, the Southern Pacific Co. will agree to raise and reenforce the so-called California Development Co. levees a distance of 10.45 miles, to build a new levee and dam across the Abejas, or Bee River, a distance of 7.1 miles, and to raise and reenforce the so-called Ockerson Levees a distance of 17.40 miles, in accordance with the report and plan of Mr. Epes Randolph, dated November 1, 1911, a copy of which is submitted herewith.

The Southern Pacific Co. will further guarantee that this system of levees, 34⅞ miles in total length, will turn the Colorado River into its old channel, and it will agree to maintain this levee system for a period of one year after the completion of the work.

For this work the Southern Pacific Co. is to be paid by the President of the United States, out of said appropriation of $1,500,000, the actual cost of such work and the cost of its maintenance for one year, the total, however, not to exceed said appropriation. If the cost to the Southern Pacific Co. shall exceed the appropriation, then the Southern Pacific Co. will itself bear such excess. In estimating the cost of the work to the Southern Pacific Co. the charge for transportation shall be in accordance with the arrangement now in effect between the Government and said company in reference to the work done by the Government on the Colorado River during the past year.

In case the Southern Pacific Co. should fail to cause the Colorado River to return to its former channel and to maintain the levees for one year thereafter, then in that event the Southern Pacific Co. is to receive no compensation or reimbursement for the work which it may do under this offer.

I have been informed that this plan of the Southern Pacific is still thought to be feasible and that the engineers for the Mexican Government have adopted it as the best plan for flood protection. It is my understanding that the figures which they have arrived at indicate that the plan could be made effective for a total of $7,000,000, allowing $5,000,000 for the completed work and $2,000,000 additional for maintenance over the first few years. My information on this subject is not exact, but at least this is another question which should be investigated, because, as I understand it, this solution of the flood problem would be permanent and complete and would protect against the floods from the Gila River as well as the Colorado. Under the present plan of flood protection through a storage dam no protection is afforded against the heavy floods from the Gila, and this river, according to Arthur P. Davis, former chief of the Reclamation Service and originator of the Boulder Dam plan, "furnishes flood waves at times which are as great as the maximum flow of the Colorado River itself above the mouth of the Gila." (See p. 24, hearings on H. R. 11449, 67th Cong., 2d sess., June 15, 1922.)

I find a reference to this solution of the flood problem in the minority report of Congressman LEATHERWOOD, at pages 21 to 22, where he quotes the figure of $7,000,000 as a probable cost of this plan of flood protection.

Another great advantage of this plan for flood control is that it would solve the problem within a year's time from the start of the work.

IS A 26,000,000-ACRE-FOOT RESERVOIR REQUIRED FOR SILT STORAGE?

I have already pointed out that this enormous storage capacity is not required for flood control, irrigation, or domestic water purposes—that at the maximum a storage of 8,000,000 acre-feet, which is almost four times the storage ever before provided for these purposes, is ample. This fact leads inevitably to the conclusion that the sole purpose of adding 225 per cent more storage to this reservoir is for power purposes. During the past few months the proponents of the bill have recognized the force of this argument, and have apparently been casting about for an argument which would refute the charge that this is primarily a power dam. That is, they have been under the necessity of maintaining their thesis that the United States Government is not to build a power project but is to produce power merely as a by-product of flood control and irrigation storage. In the arguments made by proponents of late, therefore, there has been increasing emphasis laid upon the necessity of providing silt storage; hence you will find this necessity emphasized in the reports of the advisers to the Secretary of the Interior which were made during the past year. And the amount of silt storage which advocates tell us is necessary is from 100 to 200 years. For this reason it becomes necessary to examine this silt argument.

The Colorado does carry huge quantities of silt. This silt gets into the irrigating ditches and is deposited upon the irrigated areas and causes a great amount of trouble. The Imperial Valley irrigation district is put to a constant expense in removing this silt from its main canal. Furthermore, the silt must be removed from the water before it can be used for domestic purposes. There is no dispute, then, upon the point that if the silt can be removed from this water by this dam or any other dam it would be of considerable assistance.

A recent report made by two Department of Agriculture investigators, which is, no doubt, part of the efforts made to bolster up the case for Boulder Dam, emphasizes the great assistance to agriculture on these irrigation projects which would result from the removal of silt. In so far as the report is confined to that point there is no question as to its accuracy, but the conclusion which is drawn that Boulder Dam will accomplish this purpose is not only doubtful—it is incorrect.

As Congressman DOUGLAS has pointed out in his minority report to the House of Representatives on this bill (page 9) even the two advisers of the Secretary who emphasized the silt story admitted that Boulder Dam would not do this job for an indefinite period, which period they do not attempt to definitely state, except that Mr. Scrugham uses the expression "several years." I think if he had said "many decades" instead of several years, he would have more accurately conveyed the fact.

I quote at this point from the statement of Professor Durand, one of the advisers of the Secretary, which statement appears at page 385, Senate hearings on S. 728 and S. 1274, during this session of Congress, before the Committee on Irrigation and Reclamation:

Upon the completion of such a dam and reservoir there would remain in the bed of the river below the dam site large quantities of silt to be picked up and carried along by the previously desilted water discharged from the reservoir. The river and its bed would thus have to develop and reach a new condition of equilibrium as regards silt bed and flow, and for some years there would be a silt burden carried into the lower reaches of the river, gradually decreasing in amount until some approximate condition of equilibrium is reached between the regulated flow of the river and its silt bed.

At another point in his report Professor Durand again says:

It should be noted, however, that the building of a large reservoir at any point on the river suited to entrap and hold the silt entering the river above the Grand Canyon section will not in itself furnish a complete and immediate solution of the silt problem.

Please note that the professor is, like his coadviser, very indefinite as to when this solution of the silt problem is going to be provided. His term "some years" may be interpreted as only 15 or it may reach to 300.

The reason, I believe, that Professor Durand and Mr. Scrugham are so indefinite about this solution of the silt problem is that they recognize, as does everyone who has studied the matter, that it is impossible to estimate how much silt is stored in the river bed in that 300-mile stretch below Boulder Dam site, and how long it will take to move this silt down stream and thus clear the river bed so that the clear water which emerges from the dam will no longer resilt itself in its 300 miles of travel down the stream bed. We may get some small idea of how much silt there is available to this river after Boulder Dam by taking just one area—that in Mohave Valley, about 100 miles below Boulder Canyon. On this point I quote from Water Supply Paper 556 of the United States Geological Survey, page 30:

The Mohave Valley is a large basin extending from Bulls Head southward to The Needles. The center of the basin is occupied by a broad flood plain, which has an area of nearly 50,000 acres. Here the Colorado becomes a meandering stream, following a circuitous course 50 miles long in passing through the 35-mile stretch of Mohave Valley.

Owing to its unstable banks and flat gradient, the course of the river is ever changing.

Upon this point also I quote from the testimony of Mr. La Rue which appears at page 583 of the hearings on Senate Resolution 320, Sixty-eighth Congress, second session. In response to the question as to what would be the effect of Boulder Dam upon the silt contents down the river, Mr. La Rue said:

If we could tell you absolutely what would happen it would be a pretty interesting story, because that clear water is coming over that dam, and it will be clear maybe for a few hundred feet, and then it reloads itself with silt. It will be practically as muddy down at Needles and Parker as it was before the dam was built, and it will continue to carry silt until all this silt in the channel below Boulder Canyon has been sluiced out. My estimate of the time it would take for that clear water to sluice that mud out of that channel would be from 100 to 150 years. I can not imagine that that stored water passing from the Mohave Valley, which is 6 and 7 miles wide and made up of silt, and when it is wet it is mud, even with the river under control, meandering from one side of the valley to the other, cutting it down, that it will take other than years and years for that silt to be carried on down into the Gulf. If it will be carried down in four and a half years, as one person has testified before you, the amount of silt deposit down below Yuma would be so enormous that I do not believe there would be anything left of the canal and irrigation system.

Is it more reasonable to suppose that the water issuing from this dam will stay clear after 300 miles of travel through this river bed than it is to suppose that Mr. La Rue's prediction as to what will happen will prove to be true? Again I say that I do not believe that 18,000,000 acre-feet of storage capacity is being provided for silt purposes.

It is interesting also to note that Mr. Weymouth himself states (p. 483, Senate committee hearings on S. 720, November 2, 1925) that in designing the dam—

we allowed about 8,000,000 acre-feet for flood control and 5,000,000 or 6,000,000 acre-feet for silt, and the remainder of the water would be available for irrigation and still have this high head of 430 feet for power.

I interpret this statement as an admission by the designer of the dam that he did not allow 18,000,000 acre-feet for silt storage, but was primarily interested in power.

Will this desilted river cut into its banks after it leaves the dam? The Boulder Dam plan contemplates that 40,000 second-feet will be discharged from the dam during the time that the floods are rising and falling; that during the rest of the time the discharge from Boulder Dam will be that required to operate the proposed power plant. The quantity of water required for power will vary according to the head of water behind the dam, from a minimum of around 12,000 second-feet to a maximum of around 18,000 second-feet. (See p. 274, hearings on H. R. 5773.)

We have, then, an irregular discharge fluctuating between a daily average of 12,000 and 40,000 second-feet. This may seem like a small stream, but let me point out that 12,000 second-feet is about equivalent to the average flow of the Potomac River; 40,000 second-feet is about equivalent to the flow of the Potomac in a small flood. Either figure means a big river. (Water-flow Records in Geological Survey.)

I now turn to the testimony of another expert, who tells us how a river having a flow of between ten and thirty thousand second-feet acts with respect to bank cutting; that is, with respect to gathering a load of silt from its banks and bed. I quote from the testimony of Col. William Kelly, former chief engineer of the Federal Power Commission, and a recognized authority on questions of this kind.

With reference to the power of the river to meander, Colonel Kelly testified (p. 1239, House Committee on Irrigation and Reclamation hearings on H. R. 2903) as follows:

Colonel KELLY. The river has the power to meander and cut its banks whenever the flow is above 10,000 second-feet. When the flow gets to 20,000 second-feet the velocity in the river—the velocity of flow of the water—reaches its maximum; after that, increased flow does not materially change the velocity.

That indicates that when that flow is present in the river the river has reached a point where it overcomes the resistance to erosion—where it breaks down the resistance to erosion in the material in which its bed is made, to such an extent that the enlargement of channel takes place rapidly enough to prevent increased velocity. After 25,000 second-feet is reached the river has its full power to meander and cut its banks.

Now, if the flow at the present time were averaged throughout the year it would be somewhere around 24,000 second-feet. Consequently, it is impossible, by storage or any other means, except to take the water out of the river somewhere, to reduce the flow to a point where bank cutting will cease.

In other words, bank-protection work must go on regardless of whether storage is provided for flood protection or not.

Mr. RAKER. Just what do you mean by that, Colonel? Your statement was quite plain, perhaps, but I did not quite get it.

Colonel KELLY. If you will look at the river, from Laguna Dam to Yuma, the river flows through a fairly wide valley. That valley has been formed—the present ground in that valley is formed—of a deposit from the river.

Now, the river winds through that valley. As the flow changes it deposits material at one place and cuts it out at another. Consequently, it does what we call meandering through the valley. This year it may be in the position shown on the map, next year the first bend, instead of starting to the east, may start to the west, and the river will take an entirely different shape in its valley.

It has the power to do that at any stage above 10,000 second-feet—to cut its banks and make a new channel.

Now, it is well known that when you desilt a stream its velocity increases. It is also well known that as the velocity of a stream increases not only does its power to transport silt increase but its tendency to meander is very greatly increased, while its power to roll silt, sand, and pebbles along its bottom increases with the sixth power of the velocity; that is to say, if you double the velocity of a stream it has thirty-two times as much power to roll material along its bottom as it had at its former velocity. Colonel Kelly's figures as to meandering power refers to the silt-saturated stream only. It appears, therefore, that the stream of water issuing from Boulder Dam will have even greater tendency to meander than at present and will have considerably greater capacity to move silt than it has now.

It is sometimes argued that there will be a uniform flow of this river after this dam is in operation, and that with this uniform flow the river will more quickly reach the state of equilibrium of which Professor Durand speaks. Now, it is probably true that if there were in fact to be a uniform flow that it would shorten this period of the river's search for its new state of equilibrium. The difficulty with the argument is that there will be no uniform flow established by this dam, but, on the contrary, the flow of the river below the dam will be very much more unequal—that is, jerky and fluctuating—than before the dam was built. And this is because of the operation of the power plant. The power plant is to be of 1,000,000 horsepower installed capacity, and we are told it is to operate on a 55 per cent load factor. This means that at a certain time of the day—perhaps between 10 o'clock in the morning and noon—the plant will be delivering its full million horsepower, or nearly that. At 3 o'clock in the morning the plant will probably not be called upon to deliver more than 10 per cent of its full load, or, say, 100,000 horsepower. The average throughout the day, however, is 55 per cent of full load. That is what is meant by a 55 per cent load factor for the day of 24 hours.

Now, if the average flow for 24 hours is 12,000 second-feet when the dam is full, or 18,000 second-feet when the water level in the dam is drawn down, the maximum flow for each day will be in the neighborhood of 22,000 second-feet when the dam is full, and near 33,000 second-feet when the reservoir level is at the lowest estimated point. We shall have, then, a daily fluctuation of flow on the order of from, say, 2,500 second-feet to 22,000 second-feet, or from, say, 3,500 second-feet to 33,000 second-feet, depending on the stage of the reservoir. These figures are not exact but they illustrate the fact that fluctuations in the flow of the stream after the power plant is running will be daily fluctuations while now the fluctuations come once a year, increasing and decreasing more or less gradually over a period of weeks. Now, these sudden fluctuations in quantity of water poured into the stream bed at the power plant is the very thing which increases the meandering, bank cutting, and consequent silting of the river. Anyone who has ever watched the action of a garden hose on a pile of loose dirt will appreciate the fact that a fluctuating flow of water on the dirt cuts away much faster than the steady flow of the stream in one spot, and the river is subject to precisely the same law.

Again recalling that the Boulder Dam is to be 300 miles above the Imperial Valley diversion and 200 miles above the Los Angeles water diversion, that throughout most of this course it is to flow through sections which, while not as large as the Mohave Valley in silt content, nevertheless contain huge silt deposits which have accumulated through past ages, when do you think the water will arrive at the points of diversion sufficiently free from silt to remove this problem? Assuming, as the advocates have pointed out, that it will take 300 years to fill Boulder Dam with silt, we may reasonably expect that at the time Boulder Dam is full of silt the river may have so scoured its bed that it will be reasonably free from silt at the points of diversion. I wonder if the present inhabitants of

Imperial Valley who are complaining of the silt problem would be greatly interested if they knew that this great structure which they are asking Congress to build for them will have solved this problem in 300 years.

If silt storage is really the object of providing this enormous additional capacity at Boulder Dam, and if the silt problem can be in a measure remedied by dam construction, may we not reasonably inquire why these seekers of silt storage do not move their dam site 120 miles downstream and build their 24,000,000 acre-foot reservoir at Mohave Canyon? It seems to me that those who tell us that Boulder Dam is not primarily a power dam but that power is a by-product of silt storage capacity will again be compelled to shift their position and find still another explanation for their 26,000,000 acre-feet of storage.

(At this point Mr. SMOOT yielded the floor for the day.)

*Tuesday, May 1, 1928*

THE NEW GOVERNMENTAL POLICY

Mr. SMOOT. Mr. President, we are in this bill asked to adopt a new economic policy for governmental undertakings—a policy which immeasurably extends the basic powers of the Federal Government beyond any power heretofore recognized. This power, briefly stated, is that where the Government wishes to enter upon an undertaking involving large expenditure, we should endeavor to extend the undertaking to include some commercial or business activity through which the expenditure for the entire undertaking may be recaptured and returned. Here the proposal is that the Government should enter the power business in order to attempt to make this flood-control, irrigation, and so-called navigation project self-supporting. The purpose is expressed in the bill as follows:

* * * for the purpose of * * * the generation of electrical energy as a means of making the project herein authorized a self-supporting and financially solvent undertaking.

Turning to page 8 of the majority report on this bill to the Senate, I find that the project is represented as having four main purposes, and these are described as:

1. Flood control for Imperial Valley and one or two other much smaller areas.
2. Water storage for an all-American canal, which is the irrigation feature of the project.
3. A domestic water supply for southern California cities.
4. The development of desirable hydroelectric power to make the project financially feasible.

Now, the Boulder Dam site is slightly more than 300 miles above the danger point for Imperial Valley, and approximately 200 miles above the point at which water is proposed to be diverted from the river for Los Angeles.

We further find from the Government reports (vol. 9 of Weymouth report, and others) that the storage required for all irrigation projects, which includes the all-American canal, is 1,000,000 acre-feet. The amount of storage required for flood control is variously estimated from a minimum of 4,000,000 to a maximum of 8,000,000 acre-feet, and this storage for flood control takes care of the 1,000,000 acre-feet for irrigation. It will also amply serve the needs for storage for domestic water.

We have heard so much about a storage of 26,000,000 acre-feet that we are apt to overlook the fact that storage of one twenty-sixth of this amount, or 1,000,000 acre-feet, is, as compared with existing reservoirs, an enormous storage. Eight million acre-feet of storage is indeed practically four times the storage capacity of the largest reservoir now serving these purposes. The largest reservoir for irrigation and flood control now in existence is the Elephant Butte Reservoir, which stores only 2,368,000 acre-feet. The Assuan Dam in Egypt stores only 1,865,000 acre-feet, or less than one-fourth of the amount provided by an 8,000,000 acre-foot reservoir. Indeed, the largest artificially created basin of water in the world, which is on the Panama Canal, and hence has no connection with irrigation or flood control, is only 4,410,000 acre-feet, or slightly in excess of half of the capacity of this 8,000,000 acre-feet of storage we are here considering. I desire to emphasize this point because there has been so much talk about the necessity for a great dam and a great reservoir on the Colorado that the impression has been given that only the Boulder Canyon Dam and Reservoir meet this description. In fact, any storage reservoir proposed on the Colorado would be not only great; it would be enormous. Do not, therefore, be misled by the talk about substituting for this great dam a small dam and reservoir. There has been no such suggestion. The suggestions of alternate dam sites which have been made are of dam sites for dams and reservoirs which are still great and are overwhelmingly great as compared with any except the proposed Boulder Dam and Reservoir. The St. Francis Dam, which recently failed, and which was considered a large dam, stored behind it only one seven-hundredth of the amount that would be stored in the Boulder Dam Reservoir.

To return, then, to the amount of storage required here, we find that 8,000,000 acre-feet is the maximum amount of storage required for all of the purposes for which this dam is represented as serving, except the single purpose of power development. Silt storage I deal with separately, and at this point simply dismiss the bogus claim that Boulder Dam is required for silt storage with the statement that so far as silt storage is involved it will be much better served by the other dams.

Again turning to the Government's reports, we find that there are two other dam sites which are available for great but much less costly dams, and which are respectively 120 and 175 miles below the Boulder Dam site, and hence that much nearer to the lands to be protected and that much more desirable for these primary purposes of flood control, irrigation, and domestic water. There is another feature in which they excel, if silt storage is to be emphasized, namely, that they would remove the silt much more effectively than the Boulder Dam, which is so located that the river will resilt itself before it reaches the point where the desilted water is desired.

A dam site which offers capacities ranging up to 22,000,000 acre-feet or more if desired is at Mohave Canyon, or the so-called Topock site, which is 120 miles farther down the river than Boulder, and, according to the Geological Survey engineer who made the most complete study of this site, a 10,000,000 acre-foot dam can be built there for $15,000,000. It was this site to which the three Cabinet officers directed the attention of the Committee on Irrigation and Reclamation in their letter of March 24, 1924, condemning this proposed power dam at Boulder Canyon, and in which they said:

If this is correct the location of the dam at Boulder Canyon and its construction to the height proposed must be justified, if at all, wholly from the standpoint of electric power. * * * The construction of a reservoir having a capacity of from four to eight times the needs of irrigation and flood control and of a power development twenty times in excess of the probable power needs of the irrigated lands and adjacent communities is a complete departure from former policies. (See letter of Secretaries Weeks, Work, and Wallace, pp. 1000–1003, hearings on H. R. 2903, 68th Cong., 1st sess.)

The point which I wish to make, therefore, in view of the facts, is the point so well expressed by these three Cabinet officers:

"The location of the dam at Boulder Canyon and its construction to the height proposed must be justified, if at all, wholly from the standpoint of electric power."

The justification, and the sole justification, of this Boulder Canyon Dam is the production of electric power. And, as I have said, the majority report states, and the bill states, that the purpose of including the electric-power feature is to make the project "financially feasible"—that is, "self-supporting and financially solvent."

Of course, it does neither of these things. It only makes the project more insolvent and more financially unfeasible, but I am here discussing this policy.

The policy, then, which we are here asked to adopt is this: While it is true that we can build a dam at Mohave which will adequately serve these purposes for a cost of $15,000,000, that dam will not produce electric power in such huge quantities. Now, if the Government is going to enter upon this undertaking, it should not stop with the expenditure of $15,000,000, but should add thereto an investment of from $40,000,000 to $100,000,000, depending upon the accuracy of the estimates, and risk this sum, greater by at least 500 per cent than the amount necessarily risked in the endeavor to return the $15,000,000, as well as the amount expended in the business investment.

Perhaps the biggest question before the Congress in this bill, therefore, is simply this: Shall we adopt a policy of going into business wherever the opportunity is offered in connection with a Government undertaking, and attempt to relieve the Treasury of outright expenditure by risking large additional funds which we will take from the Treasury in the hope that governmental operation of business will be so much more successful in the future than it has been in the past that instead of losing the entire sum we may save the Government its expenditure in its legitimate activity?

I have been so interested in this new theory that I have considered its wider application—not an extension of the principle, but its logical application to other Government activities. The largest single undertakings which the Government carries on from year to year are the maintenance and operation of the Army and Navy. Now, applying this precise principle to these

undertakings and in the hope of making them self-supporting and financially solvent, I have cast about for a business enterprise which offers an opportunity for apparently large profits. The happy thought of the automobile business has presented itself. I suggest therefore that if we are to adopt this new principle of government, a commission shall be appointed of, say, seven leading citizens, chosen by the President, "by and with the advice and consent of the Senate," of course. This commission shall be authorized and empowered to devise ways and means for the Government to enter the automobile business. The precedent set in the instant legislation must, of course, be followed. Congress must act as the board of directors and pass upon the plans and cost estimates. Perhaps a new congressional committee, to be called the "committee on automotive transportation," should be created. The commission will report and Congress will pass upon the plans and the Treasury will loan—just lend, you understand, for this project is not to cost the Government one cent—$2,000,000,000 as a starter for the manufacture and sale of automobiles.

This proposed project of mine has its appealing aspects which seem to me to far overshadow those of the instant proposal. My friends who are advocating this proposal for the Government's entry into business tell us that it has possibilities of great benefit to every man, woman, and child in the United States, because it will mean cheaper electricity for the home. I find that the average consumption of electricity is only 34 kilowatt-hours per month in the average American home and that my friends predict that the Government can reduce the wholesale cost of electricity in southern California by as much as 2 mills per kilowatt-hour, or save for the average family of five the enormous sum of about 1.3 cents per person per month. There are few families, however, in the United States in such indigent circumstances that they can not to-day purchase electric service which costs them from $1.50 to $3 per month. But there are many families in the United States who can not afford even a cheap automobile. Now, certainly one goal at which we must aim in these Government business enterprises is to furnish the Government product to the mass of voters as cheaply as possible—otherwise the voters will change the board of directors. The automobile business is to-day apparently one of the most profitable in America, and, if the representations of our public-ownership enthusiasts are true, with the elimination of these profits and with the great efficiency of Government enterprise we should be able to provide automobiles for almost every family in the country—without costing the Government one cent, you understand—and while we are conferring this great boon on the American people, we will be running the Army and Navy without one cent of cost to the taxpayer.

There are, of course, other governmental activities which we can handle on the same principle and just as rapidly as our time will permit. The Department of Agriculture can defray its expenses from farming enterprises; the Interior Department will run the public parks on a paying basis; the Commerce Department will engage in interstate and foreign commerce, and take over the railroads and telephone companies. Why, the principle has limitless possibilities, and all Congress will have to do will be to act as the board of directors—of course, at greatly increased salaries.

This is the proposal we are considering; this is the logical application of the principle we are adopting. I dare to suggest that we have some further expression of opinion on its advantages and, possibly, on its disadvantages.

WHY NOT BUILD A STEAM PLANT?

In this bill this purpose and this policy is expressed—

for the purpose of * * * the generation of electrical energy as a means of making the project herein authorized a self-supporting and financially solvent undertaking.

The purpose, then, of adopting this power project and of building this power dam and of expending some fifty to one hundred million dollars more for the dam than is required to be spent if the other available sites which will supply all needs other than power are chosen, is to endeavor to make this project "self-supporting and financially solvent."

Now, accepting this policy for the sake of argument and ignoring for the time being the question of its soundness or desirability, it becomes pertinent to inquire whether this particular power project is the best available investment for the Government to make in the power business. Remember that what we are seeking, according to the terms of the bill, is to make the project "self-supporting and financially solvent," and that the Government is asked to do this by generating and selling electricity.

We have then to determine the answer to the separate question: Does this particular power project, which includes this particular dam at this particular site and the $35,000,000 power plant to be constructed in connection therewith, offer the best and cheapest means through which the Government might sell electricity in the market which is represented to us as waiting eagerly for an enormous new supply of electric power? The briefest of examinations will convince us that this is not the case; that the Government can engage in the electric-power business for southern California, with a more secure promise of much greater profit, if indeed there be any profit for the Government in this business, through the erection of modern steam plants located in the very market that is to be supplied.

The Boulder project involves 1,000,000 horsepower at the dam, all be brought into the market at one and the same time, although it is conceded that from 8 to 12 years will be required before the market is ready to absorb the full power capacity. A steam plant to render equivalent service in southern California would, owing to the necessary transmission losses on Boulder power, have a capacity of at least 12 per cent less, or 880,000 horsepower. This enormous steam plant would not be built all at one time, with the fixed charges on the investment piling up during the period while we are waiting for the load to grow. The steam plant would be built one unit at a time, and the latest units now being installed in southern California are of 125,000 horsepower each. The Government steam plant, therefore, need not involve any capital that would be idle for from 8 to 12 years.

The Federal Power Commission has reported (see p. 34, minority report of Mr. DOUGLAS of Arizona on H. R. 5773) that the cost of Boulder power delivered in southern California, and assuming that the Reclamation Bureau's estimates are correct, is 4.77 mills per kilowatt-hour. The same authority has reported that the cost of steam power in southern California, as of the most modern plant of 1928, is 3.86 mills per kilowatt-hour. Assuming that steam equipment for the next few years in the future will proceed in the way of efficiency and reduced cost only to a very slight extent, the figures indicate that at the time when the full 880,000 horsepower has been installed by the Government and has been sold in this eager and waiting market, the difference between the cost of the steam power and the cost that would have been incurred for Boulder power, had that alternative been chosen, will amount to a difference in favor of the steam project of more than $4,000,000 annually—enough, in short, so that if the Reclamation Bureau's estimates be correct, the whole of Boulder Dam might then be built out of excess steam-plant profits, if the Government of that day should be so foolish as to wish to take the engineering risks involved in this mammoth undertaking.

The flaw in the preceding argument, and it is a serious flaw, is in the assumption of an eager and waiting market for electricity in southern California, in which the Government might sell such an enormous block of power. Such an assumption is the very heart of the Boulder proposal. If such an assumption is justifiable then the steam plant that I have suggested furnishes the obvious solution if the Government intends to engage in the electric-power business in that locality.

THE ECONOMIC ASPECT OF THE PROPOSAL

One other phase of this project demands the most careful scrutiny. This is the economic or financial aspect of the proposal. The irrigation committee has presented us in connection with this bill some vague generalities respecting the probable economic performance of the tremendous business project upon which they suggest that the United States should embark. Indeed, there is nothing in the committee hearings on this bill upon which any investment banking house considering the furnishing of capital to a corporation contemplating a similar proposal would for a moment consider risking its funds.

The United States Government is being asked to underwrite a business project. It may be said that it is not usual to require the application of strict business principles to Government undertakings. That is true—unfortunately true. In this case which we are now considering, however, so far as this power development is concerned, it is a business project and not a governmental undertaking. We are assured in the first place that this will not cost the Government one cent and that the power development must be included for that reason. It is admitted that all other benefits to be expected except power development can be secured at much less expense by building a storage dam at other available locations. But we are told that here is an opportunity for a commercial enterprise out of which the Government may make money, and that we must, therefore, build this dam at this site in order to make that money. The sole excuse, I say, for including power is in order to make this a financially solvent and self-supporting undertaking. The bill says so in the first paragraph. The promoters say so. There is no escape from the proposition that we must examine it ac-

cording to business principles; we must see if it meets the test, not of the usual governmental undertaking, but of the usual business undertaking. Hence, if the proposal does not meet business tests it should be dropped. Proponents are here in the position of promoters, and their proposal is presented to the Government for underwriting, with the Government in this instance occupying the position which in the case of private enterprise would be occupied by an investment banking house, which the promoters of a private business enterprise would approach in order to secure an underwriting of their project. A business firm asked by promoters to underwrite a project would examine the question of the security of their funds. The physical construction proposed and the business prospect reasonably to be expected would, of course, be required to pass an acid test. Then, and even more important, the question of security would enter. If the proposed product were to be sold on long-time contracts, any reasonably capable business man would demand definite security for the faithful performance of each contract.

The Government dollar is no less sacred than is the private dollar. The Government secures no dollar that is not taken from the taxpayers, who in the last analysis are private citizens. If the Government underwrites an enterprise that results in loss, that loss is a loss of funds to every inhabitant of the United States. It is a loss of funds which, had they not been taken from our citizens, would have been available for the stimulation of the thousands of separate endeavors in which those citizens in the ordinary course of their business and social affairs spend their own money. The Government can not fairly take tax money from a citizen and employ that money to less advantage in a business enterprise than those funds would have been employed had the Government not seized them.

Let us, for the present, disregard the primary question as to the policy of the Government and let us consider the question as if presented by promoters to a business firm that specializes in underwritings. Will the money be secure? Is there even a possibility of loss? Is there perhaps a probability of loss? Let us see if the approach of the committee that has given us a favorable report on this bill resembles in any manner the approach of a business firm. Let us see whether there is a single thing in the committee report, or in the matter presented here, that makes it possible for a dispassionate banker to conclude that the funds proposed to be invested would in fact be safe. We shall find that there is no item of specific information and no provision for the security of funds, that would lead to the conclusion that the proposed investment is safe. On the other hand, there is every reason, from the testimony before the Irrigation Committee and before similar committees that have in the past considered a like proposal, to draw the conclusion that the enterprise is unsafe. So far as we can judge from the meager analysis that has been made by the committee, there is every probability that the investment would be lost. The probabilities are, as I shall show you, that we would have not merely an outright expenditure of $125,000,000, that would never be retired; the probabilities are, that before the enterprise was finished something like twice that amount would have been expended, and the further probabilities are that the Government's net investment in the project would afterwards increase year by year indefinitely; that the enterprise would never be sufficiently successful to pay operating and maintenance expenses, a reasonable depreciation on the property, and interest at 4 per cent on the actual cost. The matter of amortization of the principal may, I think, be forgotten. There seems to be no prospect of any amortization whatever.

The first thing to be considered, the physical construction proposed, I have already discussed. It appears that the physical construction, if it be possible at all, will be possible only after an indefinitely long time, and at a cost greatly exceeding the estimate; that the physical hazards are very great; that the ostensible objects of the project could be secured at a fraction of the cost, in a fraction of the time, and without the hazards of this project. Any business man or any business firm would drop the matter upon ascertaining these facts. Such a project could never be underwritten. I quote from the testimony of Mr. Hogan, hearings on H. R. 5773, page 364:

Mr. DOUGLAS of Arizona. If you were employed by private enterprise, Mr. Hogan, to investigate and examine into the Boulder Canyon project as a power project, would you recommend it?

Mr. HOGAN. I would not. It would be impossible to finance a project with the risk connected with it, which the Boulder Canyon project has, by private capital.

But, for the sake of the argument, let us suppose that the physical constructional features had passed the acid test. The next thing is to examine the business prospects of the enterprise, and this I propose to do at this point.

An investigation of business prospects does not consist merely in listening to the claims of promoters. Similar projects, if any, that have previously been presented by a similar group of promoters would be scrutinized as to their outcome; the probable market for the product that it is proposed to manufacture would receive the most careful investigation, not merely as to the present extent of that market, but more particularly as to the probable future market over all of the time during which it is promised that the investment will be returned. The present supply of the commodity proposed to be sold, and its present price would be examined with care. The price at which it seems probable that the new product can be manufactured and offered for sale in that market must be compared with the present cost of producing the same product through other means. This, however, is the mere beginning of a business investigation. If at this point, it appeared that the product proposed to be manufactured is now being produced in the market where it is to be sold at a less cost than it can probably be delivered in that market by the new enterprise, no careful business man would pursue his investigations any further. As I shall show you later, this is the situation that confronts us in the present proposal. Let us, however, assume that the proposed enterprise could in fact lay down electric power in the market in question at a less cost than that at which electric power is now produced in that market. The next thing to be investigated is the probable cost in that market of producing electric power throughout all of the 50 future years during which this proposed enterprise is to repay its cost. Then it will be necessary to examine into the extent of the present market, into its ability to absorb new power in the quantity proposed to be injected into that market, and to form an opinion as to the probabilities for a successful outcome in this respect.

At this point we necessarily enter into the speculative field. A prediction of cost of production and of market over a 50-year period is vague at the best. The proposal becomes even more vague when we remember that this 50-year period does not begin to-day, but begins, at the earliest, 10 years hence, and is more likely to begin 15 or 20 or perhaps even 25 years from to-day. A business firm faced with this uncertainty would demand security, and it is security that the Government must demand in this instance. I shall later show you that the present proposal offers no security whatever, but I shall suggest to you certain amendments which, if accepted, would give real security to a very considerable degree.

Before presenting the facts regarding the business aspects of this proposal, it will be of some advantage to discuss the evidence, if it can be called evidence, which the promoters of this enterprise present to us in the claims that they make regarding the business features of their proposal.

First, we have the Weymouth report made four years ago. In Mr. Weymouth's summary, pages 11 and 12, Volume I, he says:

In southern California, however, the growth of the power load is rapidly exhausting the available hydroelectric resources of the State, and competent authorities have stated that by 1935 California must look outside the State for its supply of power to keep pace with the existing demand.

If it be true that California must by 1935 go outside the State for a supply of power to keep pace with the existing demand, this fact would have an important bearing on the question of the California market for Boulder power during the period 1938 to 1988 within which we must estimate the business prospects of this proposal. What, however, is the fact? I quote the following from an article appearing in the San Francisco Bulletin of February 8, 1927, headed, "Generation by steam coming power influence."

Long Beach steam plant No. 1 of the Southern California Edison Co. was built in 1912–13 and 1914 with a rated capacity of 61,000 horsepower, capable of producing an average of 240 kilowatt-hours for each barrel of oil consumed. Due to the much higher efficiency of the later installation this plant is now held merely as a stand-by.

Long Beach steam plant No. 2, with 200,000-horsepower capacity, came into operation in the year 1926–27. This plant, which is in constant operation, is producing 435 kilowatt-hours per barrel of oil burned.

Construction of Long Beach steam plant No. 3 has just begun, and the first unit of 125,000 horsepower will be in operation early in 1928. It is planned to install eight turbine units in this plant from time to time as the territory grows, with an ultimate capacity in excess of 1,000,000 horsepower at a cost, including transmission to load centers, of $100,000,000.

The new plant has been designed with further increases in efficiency. Much larger generating units are the basis for the engineers' predictions that the efficiency of the first unit in this plant will be approxi-

mately twice the efficiency of the first Long Beach plant installed only a few years ago.

It is further expected that these efficiencies will be still higher as subsequent units are installed, due to constant advances in the art of generating electricity by steam power, which is the major study to-day in the laboratories and test rooms of electrical turbine and steam boiler manufacturers.

This new mammoth plant is designed to burn as fuel either oil, natural gas, or coal.

I shall refer later to the Federal Power Commission's figures respecting the cost of electricity from this No. 3 plant, which, they say, will be less than the cost of delivering Boulder power in that market. I refer to the matter here merely to show you that the first prediction regarding California's need to go outside the State for electric power, the prediction of Mr. Weymouth, has turned out to be the opposite of the fact.

The next prediction regarding market for Boulder power came in October, 1925, and is contained in a report of L. S. Ready and H. D. Butler. I shall give to this report somewhat more analysis than its importance deserves, since this report is a typical example of the misleading propaganda, masquerading as engineering, with which the Congress has been deluged.

On pages 12 and 13 of this Ready-Butler report are charts which purport to show the growth of electric load in southern California for a few years prior to October, 1925, when the report was compiled, together with the predicted growth of load up to 1940. When this report was made the electric load for the year 1924 was definitely known, while enough of 1925 had elapsed to make final figures for 1925 quite accurately predictable. Ready and Butler did not use either 1924 or 1925 figures on their charts. Now it appears that the year 1923 was the boom year of all time in southern California. Business, population, and electrical demands made growth records in 1923. The historical figures on the Ready and Butler chart stop at 1923, although their report was made in October, 1925. These engineers omitted to put on their charts the historical load for the year 1924 or to put on the load for the year 1925 up to October, or to use the then closely determinable figures for the full year 1925. Instead of historical figures for these years they used inflated estimates. The Ready-Butler charts start with 1921 as a low point; the line of growth of electric load runs sharply up to the 1923 peak, and then continues, and even increases, the steep slope so obtained up to the period when, as shown on their charts, Boulder Dam power was expected to be installed. The slope of the Ready-Butler line-of-growth-of-load had become so steep at this period as to indicate graphically the full use of 1,000,000 horsepower at Boulder, without shutting down steam plants, in some five and one-half years.

If there was any reason for drawing the line of growth through the peak of the boom year, 1923, and for neglecting the historical figures they then had for the subsequent years 1924 and 1925, other than the desire to make a place for Boulder Dam power in the picture, I do not know what that reason was.

Now, I do not know whether you consider this to be honest statistical research or not. I do not so consider it, and I wish to point out one other pertinent fact. We now have the record complete for 1925, 1926, and 1927. Place those historical records on the Ready and Butler charts and we find that if they had considered the year 1923 to be, as it was, a peak year and not as disclosing a permanent trend, and if they had put on their charts the figures for 1924 and 1925, which were then obtainable, their chart line would have been on a regular slope which would have passed through the subsequent historical figures for 1926 and 1927—their prediction would have agreed with subsequent happenings. I show you a blue print which thus illustrates what Ready and Butler predicted and what has happened instead. I am referring to this only in connection with the honesty of typical Boulder Dam estimators. I do not criticize estimates which fail to predict accurately. None of us can prophesy with exactness, but when engineers purport to give a chart that is part history and part prediction, and, in order to make their prediction achieve a desired result, first distort the historical portion, then I think that honesty as well as the ability to predict is the thing that must be questioned. I refer to this much-advertised but unimportant Ready and Butler report merely as a striking illustration of the honesty of such "engineering" reports as are, with apparent seriousness, being placed before the Congress by the advocates of this bill.

Next we find in a report of W. F. Durand to the Secretary of the Interior the following excerpt printed on page 399, hearings before Committee on Irrigation and Reclamation on S. 728 and S. 1274:

> With the above product at the switchboard, it then becomes necessary to examine the possible market within economic transmission distance for such an amount of power.
>
> Regarding this question, it may be noted that the record of the various hearings before Congress is particularly full on this point and gives strong evidence for the conclusion that by the time the dam and plant could be completed, the demand due to normal growth in the territory susceptible of economic service from Boulder Canyon should be sufficient to absorb a very large percentage of the available power from the plant; and that within a period of two or three years from completion, a market should be found for the entire product.
>
> A careful independent study of this subject by Messrs. Ready and Butler, consulting engineers, of San Francisco, and the details of which have been carefully examined by the undersigned, support these same general conclusions.

From the report of Professor Durand, which was submitted to the House of Representatives Irrigation Committee by the Secretary of the Interior on January 6, 1928, it appears that Professor Durand, in the course of his careful examination into the Ready-Butler report some years later, had not discovered, either that they had failed to use historical figures available to them when their report was made, or to note that later historical figures had disproved their prediction. Professor Durand, however, is the most optimistic of all of those who have attempted to predict the length of time necessary to absorb Boulder Dam power. Ready and Butler had indicated five and a half years for absorption without shutting down steam plants. Professor Durand, however, makes the interesting suggestion that the Boulder plant when completed would at once absorb the growth of electric load that had occurred during several years prior to the completion of the Boulder plant; that the remaining small percentage of Boulder's capacity might be absorbed within a following period of two or three years.

It is interesting to observe that this is not a new theory for Professor Durand. I quote from his statement of June 21, 1922, appearing at page 65 of Hearings before the Committee on Irrigation of Arid Lands, House of Representatives, Sixty-seventh Congress, second session (H. R. 11449):

> I was about to say a moment ago, with regard to the aggregate amount of power which will be developed on the Colorado River on Boulder Canyon, 600,000 horsepower, that unquestionably the interests in the territory to be served from that site will not remain without some further power development in the meantime; but it is very sure, so far as we can in any way humanly forecast the situation, that the future power developments within the next six or eight years are going to run far short of the requirements in that period, so that at the time the Boulder Canyon project shall be completed and ready for service there will be a very large void for power ready to be filled up promptly from that source, and I am satisfied in my own mind that within a very short period of time after the completion of that project the entire output of the plant will be required and can be marketed at figures which, as I shall show in a moment, will represent an economic security for the money invested.

This prediction was made six years ago. It referred to a period six or eight years from that time. That period is now here, but what do we find as to a "very large void for power"?

Why, we find that just about a year ago the largest utility company in southern California made a substantial reduction in its electric rates and that within a month or two thereafter the municipally owned bureau of power and light of the city of Los Angeles, which appears here as an advocate of Boulder Dam, and for which Professor Durand has acted as a consulting engineer for 18 years, also made a substantial cut in electric rates. These rate reductions were announced as made in order to stimulate the consumption of electricity. This looks like the exact opposite of a power shortage. There is no large "void" into which a great block of power can be dumped. In fact, the slightest reflection will show that there never can be such a void. If the use of electricity increases between the present time and the time when Boulder Dam can be finished, that increase will come because some one has in the meantime built plants to supply the business. The beginnings of a new 1,000,000-horsepower steam plant in southern California are well under way, as I have said. The load demand will be met by new construction as the demands grow. There will never be any "void." There is no such thing as thousands of homes wired for electricity and equipped with electric appliances but waiting for Boulder Dam in order to get service, or of great factories equipped to use electric power but standing idle waiting for Boulder Dam.

Disregarding, then, that part of Professor Durand's estimate which deals with a power void into which electric power can be dumped instantly, we find his statement to be that within a period of two or three years a small percentage of the available power from Boulder Dam can be absorbed. A "small percentage" can hardly be more than 20 per cent; if so, Professor Durand's real estimate of time needed to absorb 100 per cent of Boulder power must be 10 to 15 years, if we disregard the theory of a "void."

Others have estimated this period variously at from 9 to 12 years. In my computations illustrative of the probabilities that may be looked for I shall use 10 years as the period for absorbing Boulder power.

Now, what do we find that proponents have said respecting the price at which Boulder Dam electricity can be sold at the dam? First, let me read from the testimony of Mr. F. E. Weymouth, pages 732 and 733, hearings on H. R. 2903, March 20, 1924:

Mr. WEYMOUTH. I have not computed for present rates, but have for a rate of 4 mills.

Mr. SWING. Is 4 mills higher or lower than the prevailing wholesale rate to-day?

Mr. WEYMOUTH. It is lower. I believe the entire cost could be repaid in 40 to 45 years with a 4-mill rate. If a 6-mill rate is charged, it would pay out much more quickly.

Mr. SWING. How much quicker?

Mr. WEYMOUTH. I do not know; I judge in 25 or 30 years.

Mr. RAKER. Six mills is lower than any rate now.

Mr. WEYMOUTH. Yes; it is lower than the rate at which power is being sold now.

* * * * * * *

Mr. WEYMOUTH. Do I understand you to mean that the power should also pay part of the cost of the all-American canal?

Mr. RAKER. No. You could not do that, could you?

Mr. WEYMOUTH. Yes. Personally I doubt if this power should be sold at four-tenths of a cent. I think it should be sold——

Thus, in 1924, 4 mills was a price that would return the Government's investment, but, in the opinion of Mr. Weymouth, power should not be sold at so low a figure; 6 mills could be charged and still the power would be cheaper than power from alternate sources. This 4 or 6 mills price was, mind you, to be charged at the dam. What a change came within two short years! I now quote from Secretary Work's letter of January 18, 1926, to the chairman of the House Irrigation Committee (majority report of 1926):

Estimated gross revenues from sale 3.6 billions kilowatt-hours power at $\frac{1}{10}$ cent ..... $10,800,000

If we take Mr. Weymouth's estimate of 1924 at the average of the two figures he gave (4 to 6 mills), we may call his figure 5 mills. This seems a fair assumption, since he said 4 mills was too low. In two years, then, the official figure was dropped from 5 mills to 3 mills, a reduction of 40 per cent.

Two more years have now elapsed—has the official estimate gone down any further, and how much? The answer is by no means specific; the present authority seems to be Professor Durand, and he hedges all his statements about with qualifications. However, Professor Durand presents tables on pages 399 to 402, Hearings on S. 728 and S. 1274, January 17–19, 1928, and in Professor Durand's tables, based upon theoretical repayment, the selling price ranges from 1.67 to 2.14 mills and from 1.81 to 2.28 mills. In the other tables the figures range from 1.8 to 2.5 and from 1.74 to 2.41. Presumably Professor Durand expects the actual selling price to be within these ranges—perhaps to be at about the mid-point of the figures used or, say, 2 mills for a round figure.

Since at that price—2 mills—Professor Durand's cost of Boulder power in southern California, including effective steam reserve, becomes 4.37 to 4.67 mills, assuming public ownership (p. 401), and 5.07 to 5.37 mills (p. 402), assuming private ownership, while his somewhat inflated alternate cost of steam power with $1 oil, and with 8 per cent fixed charges, at 55 per cent load factor, is 4.93 mills (p. 405), it seems obvious that the real present estimate of the promoters can not at the most be more than a price of 2 mills at the dam, or a 33⅓ per cent reduction during the last two years, and a 60 per cent reduction from the first estimate made by Mr. Weymouth in 1924. These constant decreases in the estimates of the price at which Boulder power can be sold give eloquent testimony to the rapidly decreasing cost of steam power during the last few years.

Let us now examine the statistical means used by Professor Durand in his computations of the alternate cost of steam power—a field in which he is a real expert. We find that on page 403 Professor Durand makes the statement that such steam plants, when "large installations and favorable conditions" are involved, can be built for $100 per kilowatt. We find that at the bottom of page 404, as a basis for his tables on page 405, Professor Durand uses $110 per kilowatt as cost of steam plant. Why this 10 per cent increase? Is it to be supposed that the steam plants with which he is comparing cost of power production at Boulder are to be small plants, badly located, or what is the inference to be drawn from this increase of 10 per cent in steam-plant costs?

Then we find that Professor Durand on page 404 estimates that the fixed charges (interest and depreciation) on steam plants, if built by a private corporation, run from 8 to 12 per cent. We find that to-day the interest rates paid by electrical utility companies, plus the depreciation rates authorized by the railroad commission of California for steam plants, is less than Professor Durand's minimum figure of 8 per cent by from one-half to 1 per cent; yet Professor Durand's tables on page 405 purport to give the range of cost of electrical production with which the cost of Boulder power delivered in the Los Angeles neighborhood is to be compared; and the range he used for fixed charges is 8 to 12 per cent. Further, since comparisons to be really useful must be prepared for similar conditions—why does Professor Durand assume money from tax-free securities when considering Boulder—and money from taxpaying corporation securities when considering steam plants? If the Government is to finance Los Angeles electric-power needs, it will find on investigation that the Government would be the gainer if it were to build steam plants near Los Angeles—using the expected profits therefrom to finance a really effective and prompt flood-control system on the Colorado.

We then find that Professor Durand's tables on page 405, purporting to show the range of cost of fuel within which the comparable steam-plant electricity cost is supposedly to be found, start with a price of $1 per barrel for oil and end with a price of $1.50 per barrel for oil; yet we know that the principal producer of steam electricity in southern California is at the present time paying 80 cents per barrel for fuel oil and is securing natural gas fuel at an even lower cost.

On page 403 of Professor Durand's report, as printed in Senate hearings on S. 728 and S. 1274, we find that Professor Durand refers to this lower present cost of oil fuel, but says this lower cost is the result of "contracts made some years ago" when the price of oil was lower than it is to-day. We find the facts to be contrary to Professor Durand's statement. The three-year contract under which fuel oil is now being purchased by the utility company to which I have referred was executed in the latter part of 1927 and took effect January 1, 1928. We find in the minority report of Mr. DOUGLAS of Arizona, page 36, that Mr. DOUGLAS of Arizona made an investigation of the fluctuations in the price of fuel oil, disclosing that the average price of crude oil in California in 1900 was 95 cents per barrel and in 1927 was 80 cents per barrel. We all know that the means now employed for the detection of oil pools and their exploitation, particularly modern methods of deep drilling, have advanced even faster than the consumption of oil has increased, so that to-day we have "shut in" oil wells, well-known pools that are not tapped, and we find that the problem of to-day in the oil industry is to find a way to cut down production in order to stabilize prices at even the present figure. What excuse, then, can Professor Durand give for using a range of between $1 and $1.50 in the tables through which he purports to compare the present cost of producing steam electricity in southern California with the cost of delivering Boulder power at that point?

Now it is time to consider the actual price at which Boulder power can be delivered in the proposed market—southern California—and to compare that price with the cost of electricity in that neighborhood as produced from the most modern steam plant; then to make a similar comparison with the probable cost of steam or other power in southern California during the ensuing 60 years. Mr. DOUGLAS of Arizona, in his minority report on H. R. 5773, page 34, gives the estimate of the Federal Power Commission of the cost of Boulder power in southern California as 4.77 mills per kilowatt-hour. This estimate is the minimum possible, since it assumes that the whole project will not cost more than the $125,000,000 now estimated; that the period of absorption will be nine years; that no other project will be constructed to compete with Boulder Canyon in the meantime; and that the revenues at this price for power are to be barely sufficient to reimburse the Government for the expenditure now proposed. It may be remarked that this figure will be constant. It can not grow less as the years go by, since the money will be invested and the interest rate is fixed.

The Federal Power Commission also advised Mr. DOUGLAS of Arizona, page 35, that the present cost of producing steam power at the latest plant now operating in southern California is but 4.17 mills per kilowatt-hour, and that this cost will shortly be reduced by later construction to 3.86 mills per kilowatt-hour. These estimates include interest, depreciation, and operating and maintenance charges. Thus it appears that if the Government investment is to be amortized, Boulder power must be sold in southern California at a higher price than the present cost of producing power in steam plants. We next have to examine the probable trend of future steam cost in southern California or, perhaps, the cost of producing electricity by some other

means. Bear in mind that if Boulder Dam and power plant be finished in 10 years, it would start operating at the earliest in 1938 and the end of the amortization period would then be 1988. I doubt very much whether they will still be building steam plants in 1988. Probably they will have other and very much better and cheaper sources of power by that time. I can only discuss tendencies, examine the future in the light of the past. What has been and what is the trend of prices for electricity? What is the trend of the cost of making electricity? The mid-point of the 50-year period that we are dealing with will be 1953—35 years hence. Let us go back 35 years, to 1895. What was the average cost of making electricity in that year as compared with the cost of making electricity to-day? Exact figures are impossible, since the records of 35 years ago are not very complete, but we may say without fear of successful contradiction that the cost of making electricity 35 years ago was more than twice and probably three or more times the cost of making electricity to-day.

I quote a comparison of fuel economy of only 14 years ago with that of last year, from page 35 of Mr. DOUGLAS's minority report:

The coal consumed per kilowatt-hour in 1927 was less than two-fifths of the 1914 consumption per kilowatt-hour, equivalent to a saving of more than 8,233,000 tons of coal per annum on the basis of generation in 1927. (Article in Electrical World of February 11, 1928, by W. D. B. Ainey, chairman Public Service Commission of Pennsylvania.)

The cost of 3.86 mills obtainable in southern California in 1928 will probably be reduced to half that figure 35 years hence. This is what we must judge from an examination of the trend. If so, then for the last half of the 50-year period the price at the dam will just equal the cost of transmission to southern California so the power will be worth nothing during the last half of the period. While I believe this to be probable, I shall not use anything like such an estimate in my figures.

Another and more direct means of approach to the same problem lies in an examination of the present trend of steam plant efficiency. Decrease in cost of making steam power has been so pronounced that even the lapse of one year has found the Boulder enthusiasts reducing their prediction from a proposed price of 3 mills at the dam to a present estimate of about 2 mills at the dam. The following editorial from the Electrical World for April 9, 1927, illustrates what is going on:

Some steam stations now produce a kilowatt-hour for 14,000 B. t. u.'s or less with fixed charges based on an investment of $100 or less per kilovolt-ampere. About five years ago the corresponding figures were 22,000 B. t. u.'s and $125 per kilovolt-ampere. Five years hence the figures are expected to be 11,000 B. t. u.'s and $75 per kilovolt-ampere. These economies and cost changes are accompanied with reductions in labor and maintenance charges, and give a total cost of energy at a modern fuel-burning station switchboard, which is astonishingly low. Steam-station production costs at a water-power site are competitive with water-power costs in many instances, and if, as is usually the case, the costs created by transmission lines are added to the water-power costs, the total water-power costs measured at energy delivery points are greater as a general thing than those involved in building and operating steam stations at the loads. Nor do these costs place a dollar value on the comparative service reliabilities. Yet serious attention is given to plans which involve water-power developments costing $200 or more per kilovolt-ampere and which require transmission lines two or three hundred miles long to carry the power to the loads. The mists and rainbows in a waterfall often screen the balance sheet.

A corroborative bit of evidence is that the quantity of electricity produced per barrel of oil burned in the latest steam plants in southern California as of 1918 and as of 1928, has approximately doubled, as shown by the article from which I quoted a short time ago. A hint at an enormous possible, or perhaps even probable, reduction in the cost of steam fuel in the future, through the pretreatment of coal and the recovery of by-products therefrom, I will now read—and please remember, that all modern steam-electric plants in southern California are equipped to burn powdered coal, also that my own State is prepared to furnish for hundreds, perhaps for thousands of years, all of the high-grade easily mined coal that California can use. I quote from the Giant Power Survey Board report, dated February, 1925, the following statement from Judson C. Dickerman, assistant director, Giant Power Survey.

There remains the fuel required for the power plant at practically no cost, since the returns on the fuel and by-products sold practically balance the total cost of operation and investment charges connected with handling and treating the 20,000 tons of coal.

My friends who are advocating Boulder Dam must approve whatever comes from the Pennsylvania "Giant Power" group, since the two groups are one as to this measure and Gifford Pinchot is reported to be lobbying for this bill. The fact that the same group offers evidence that steam power is very cheap when the question is Government steam plants in Pennsylvania, and is high when the question is Government water-power plants in California, is doubtless a mere detail. I am, however, disregarding all of the preceding indications of a considerable reduction in the cost of steam-made electricity and I base my figures solely upon the costs now in sight and that will be accomplished facts—in part this year and, as to the remainder, will be achieved long before the Boulder Dam can deliver power.

Let us now make a brief review; let us suppose that the bill before us becomes a law by June 1, 1928; let us accept advocate's estimate that 10 years later Boulder Dam and power plant will be ready for operation. That will be June 1, 1938. Then with a 10-year loading period we have the power fully used by June 1, 1948. Fifty years from June 1, 1938, or June 1, 1988, marks the end of the amortization period. What does the bill before us say regarding revenue? I quote from S. 728, page 5, line 19:

(b) Before any money is appropriated or any construction work done or contracted for, the Secretary of the Interior shall make provision for revenues, by contract, in accordance with the provisions of this act, adequate, in his judgment, to insure payment of all expenses of operation and maintenance of said works incurred by the United States and the repayment, within 50 years from the date of the completion of the project, of all amounts advanced to the fund under subdivision (b) of section 2, together with interest thereon, made reimbursable under this act.

Now, this reads very well, assuming that any such firm contracts, running to June 1, 1988, can be secured from responsible bidders. Advocates of this bill know that no such contracts are possible; therefore we find the "joker" that relieves bidders from all risks and that puts all the losses on the United States Treasury. I read from page 8:

Contracts made pursuant to subdivision (a) of this section shall contain provisions whereby at the end of 15 years from the date of their execution and every 10 years thereafter there shall be readjustment of the contract, upon the demand of either party thereto, either upward or downward as to price, as the Secretary of the Interior may find to be justified by competitive conditions at distributing points or competitive centers, and with provision under which disputes or disagreements as to interpretation or performance of such contract shall be determined either by arbitration or court proceedings, the Secretary of the Interior being authorized to act for the United States in such readjustments or proceedings.

Obviously these two provisions of the bill before us nullify each other. Obviously, also, the plain intention of the bill is to seem to require contracts but actually to require nothing at all, except that some contractor agrees to take Government power, for which the Government will provide all of the investment, at exactly what the same power would have cost him had he secured all of the capital and taken all of the hazards of construction incident to the generation of power on his own account.

Let us assume, now, that one of the things the advocates tell us happens to be true—that municipalities and private power companies are waiting anxiously for the passage of this bill in order that they may at once get their signatures on the dotted line at the bottom of contracts; so let us take the contracts also as starting on June 1, 1928. Ten years of the contract will have expired—only 5 years of firm-price power will remain—when delivery of Boulder power begins. The price named in the contract will then apply only during 5 years or during the first half of the load-building period—will apply only to electricity bought between June 1, 1938, and June 1, 1943. For the remaining 45 years the price will be "readjusted" to "competitive conditions." If this means anything at all—and remember that provision is made for "arbitration or court proceedings"—it means that during the last 45 years of the contracts the price paid for Boulder power as received in southern California shall not, at the highest, exceed the cost, then, of making steam power in southern California. So the crux of a decision on the question of whether or not the Government can hope to get back any of its investment depends on an estimate of the cost of steam-made electricity in southern California in the period between June 1, 1943, or thereabouts, and June 1, 1988. If anyone (and I am one of them) doubts the accuracy of any such possible estimate, he doubts also whether there are reliable means of figuring possible return of the Government's money. However, this is one of the problems that Congress must solve.

You might at first suppose that if electricity is to be sold on contract for 5 years, and at the cost of steam power for the remainder of a 50-year period, that one-tenth of the 50-year

output would be sold on contract. Not at all! The first 10 years after the plant is finished comprise the period of load building. The load is nothing to start with and steadily increases to 1,000,000 horsepower at the end of 10 years. At the end of the first 5 years the load is 500,000 horsepower, and, having increased from zero to that figure, the average 5-year horsepower is but 250,000. That is all that is to be sold at a firm price. The average for the last half of the load-building period is 750,000 horsepower, but that period is to be sold at the cost of making steam power in the latest type of plant that can be built on June 1, 1943. Then we have 5 more years at which 1,000,000 horsepower will be sold at that price; then 10 years, at the cost of electricity at the best steam plant that can be built on June 1, 1953; 10 years at the cost of the plant of 1963; 10 years based on the plant of 1973; and 5 years based on the plant of 1983. Therefore we have—

| | Product |
|---|---|
| 250,000 horsepower for 5 years on firm price | 1,250,000 |
| 750,000 horsepower for 5 years at equivalent steam cost | 3,750,000 |
| 1,000,000 horsepower for 40 years at equivalent steam cost | 40,000,000 |
| | 45,000,000 |

of which the fractional part sold at a firm price is only one thirty-sixth of the total. Thirty-five thirty-sixths will be sold at an undetermined but steadily decreasing cost as the years go by and as steam plants—or gas turbines or atomic power plants or whatever they will use in 1983—steadily improve.

Now, we are ready for some tentative figures that will illustrate what may be expected as to the financial performance of the Boulder experiment. I do not present these figures as an estimate. I do not know what steam power will cost in 1983 nor shall I extend my figures so far. I am using what I regard as extremely conservative figures for steam-power costs. I am confident that the actual results of the Boulder experiment are likely to be very much more adverse to the enterprise than are the figures that I am about to present.

The first or firm contract price that bidders must agree to—and perhaps might agree to since only one thirty-sixth of all of the power contracted for will be bought at that price—is the Federal Power Commission figure of 4.77 mills per kilowatt-hour as delivered in southern California or 2.84 mills at Boulder Dam. This price is figured to repay the estimated cost to the Government. If actual cost to the Government exceeds the estimate, the United States Treasury will shoulder the difference. The total electricity sold during this first 5 years will be 4,500,000,000 kilowatt-hours and the gross receipts at 2.85 mills will be $12,780,000. Secretary Work's letter of January 18, 1926, gives—

| | |
|---|---|
| Operation and maintenance, storage and power | $700,000 |
| Interest on $125,000,000 at 4 per cent | 5,000,000 |
| | 5,700,000 |
| Which for 5 years is | 28,500,000 |
| The deficit for the first 5 years is therefore | 15,720,000 |
| The Government's investment as of 1938 was estimated at | 125,000,000 |
| Making the Government's net investment as of 1943 | 140,720,000 |

In dealing with five-year periods in this manner there is neglected, of course, the year by year addition of deficits to previous net investment; therefore actual deficits computed as required by the bill will exceed those shown by the rough approximations here presented by sums that will aggregate several millions of dollars.

The firm contract ends on June 1, 1943, and the price for the following 10 years can not be higher than will correspond to the 1943 cost of steam electricity in southern California. Doubtless the intervening 15 years will have produced a very material advance in steam-plant economy as well as a probable continuation of steady progress in the reduction in the cost of new steam plants. However, let us give Boulder Dam all the advantage possible and let us take the cost of competitive power in southern California in 1943 as only 10 per cent below the cost of 3.86 mills, reported by the Federal Power Commission to Mr. Douglas as the cost at the latest—1928—southern California steam plant. The price in southern California then becomes 3.48 mills, and at the dam, let us say, 1.63 mills per kilowatt-hour. The total quantity of electricity sold during the last 5 years of the load-building period will be 13,500,000,000 kilowatt-hours.

| | | |
|---|---|---|
| The gross receipts for this 5-year period will then be | | $22,005,000 |
| Operation and maintenance per annum | $700,000 | |
| Interest on Government net investment of $140,720,000 at 4 per cent | 5,628,000 | |
| | 6,328,000 | |
| Or for the 5-year period | | 31,640,000 |
| Deficit for last 5 years of load building | | 9,635,000 |
| Net investment of the Government as of 1948 | | 150,355,000 |

Similarly, for the first five years of full load we have—

| | |
|---|---|
| Total sales, 5 years—kilowatt-hours | 18,000,000,000 |
| Price at dam—mills | 1.63 |
| Gross receipts | $29,340,000 |
| 5-year expenses | 33,571,000 |
| Deficit for the 5 years | 4,231,000 |
| Net investment of the Government in 1953 | 154,586,000 |

We then come to the second readjustment of price on a competitive basis, and for the following decade it can not be hoped that increased effectiveness of competitive sources of power will be equivalent to less than a reduction of 5 per cent in price of Boulder electricity, or to 1.55 mills at the dam.

We then have for the five years 1953–1958—

| | |
|---|---|
| Gross receipts, 18,000,000,000 kilowatt-hours at 1.55 | $27,900,000 |
| Expenses and interest | 34,417,000 |
| 5-year deficit | 6,517,000 |
| Net investment as of 1958 | 161,103,000 |

The Government's net investment, then, in the year 1958 will be likely to approximate more than $160,000,000, assuming that the Boulder enterprise in the beginning only cost $125,000,000. It is not necessary to pursue figures through the remainder of the 50-year period, since it is obvious that alternate power costs will decrease year by year, that the net investment of the Government will increase year by year, that there can be no question of amortization or even of the full payment of interest on the Government's outlay.

One correction becomes necessary; in proponent's estimates the item of depreciation on plant and structures is always omitted, since, as they say, amortization will be so rapid that no depreciation reserve to provide for repairs, renewals, and replacements will be necessary. It being now obvious that there will never be any amortization, a depreciation annuity and a depreciation reserve fund will be essential. Even if depreciation annuity be taken at as little as one-half of 1 per cent, this will add a necessary expense of $625,000 per annum on the theory that original investment does not exceed $125,000,000, or will add $1,250,000 per annum on the more probable theory that original investment will run up to $250,000,000. At the minimum, this item will add $3,125,000—plus interest—to the deficit of each five-year period—which increases the preceding total to at least $175,000,000.

We have not yet, however, reached the point of producing what Secretary Work, in referring to Boulder estimates termed "an intelligent guess," since figures up to this point have been based upon the theory that the Boulder investment will not exceed the estimate. An "intelligent guess" would assume the original cost of the Boulder enterprise to be about twice the estimate, or $250,000,000, at the time the project is ready to operate.

The second $125,000,000—to which even the firm contract of the first five years will have no relation, since the contract will be signed 10 years before the final cost can be known—may be treated as running at 4 per cent interest, compounded annually in the same manner as provided by the bill for interest during construction. Money under these circumstances will double about every 18 years, so that by 1958 we will have to add to our net investment on the former theory a sum which (without depreciation on the additional cost) will bring the Government investment as of 1958 to some $450,000,000.

This is my best "intelligent guess" of the outcome at the end of only 20 years of operation of the Boulder project. I have taken no account of revenue from the sale of water, for there will be no such revenue. The bill provides that no charge for stored water can be made to Imperial Valley. No revenue can be collected from approximately 5,000,000 acre-feet of water per annum, presented without charge to Mexican landowners. Los Angeles certainly will not begin to pump water prior to 1958, nor, if she did, would she pay for water already released for power purposes and running in the channel available to any appropriator. In addition, there is the following provision, on page 2 of the bill, which provision apparently prohibits any charge for water for any purpose for which the water will be used:

*Provided, however,* That no charge shall be made for water or for the use, storage, or delivery of water for irrigation or water for potable purposes.

Next I propose to show you how to amend this bill so that the Government will not be put to quite all of these serious financial hazards.

HOW CAN THE GOVERNMENT INVESTMENT BE PROTECTED?

It is, I think, now obvious that under the bill which we are here considering the Government of the United States is asked to take all of the financial risks of the undertaking, and those financial risks are so considerable that there is every prospect

that all of the money spent will be a direct outlay from the United States Treasury, none of which will ever be returned. It is quite doubtful if there will even be any return in the way of interest on the Government's expenditure. This situation differs so markedly from what we have been led to expect that it is worth while to examine some of the statements that have been made respecting the security of the Government's investment and to see just where it is that the security offered is faulty; to find, if we can, some means through which the United States can be made secure.

A few weeks ago all of the Representatives in Congress from the State of California joined in a letter to the other Members of the House of Representatives, and in this letter the California delegation stated, among other things, that $4,000,000,000 in property located in southern California stands behind the Boulder Dam proposal as security that the United States Government can never lose a cent through it. I think we must assume that this letter of the California delegation was sent in good faith and we must assume that it was the belief of these gentlemen that $4,000,000,000 in southern California is, in fact, pledged as security to the Government if this bill passes.

Mr. SHORTRIDGE. Mr. President——

The PRESIDING OFFICER (Mr. SHEPPARD in the chair). Does the Senator from Utah yield to the Senator from California?

Mr. SMOOT. I hope the Senator will not interrupt me.

Mr. SHORTRIDGE. I understand that the Senator desires not to be interrupted.

The PRESIDING OFFICER. The Senator from Utah declines to yield.

Mr. SHORTRIDGE. Therefore, I do not interrupt him.

Mr. SMOOT. I thank the Senator.

We must then assume that the reason the Government does not have this security, does not, indeed, have any security whatever under the terms of this bill, is a mere matter of unskillful drafting; that had the bill been so drafted as to put into plain English the desires and intentions of the Southwest, and particularly those of the people of Los Angeles, that this security would in fact have been given. On this assumption it is necessary for us to draft an amendment to this bill which will do all of the things that it was the intent that the bill presented to us should do. Now, are there simple means through which the public that hopes that it will benefit by the terms of this bill, may in fact give security to the taxpayers who will loan the money for Boulder Dam; that will insure that these latter taxpayers should not be the losers?

The whole thing turns upon the price that is to be paid for electric power and upon what security can be given that the price paid for this electric power will in fact be sufficient to repay the Government with interest. I think we are under some misapprehension as to who it is that expects to use the major part of this power. On January 21, 1928, Mr. H. A. Van Norman, assistant chief engineer of the Los Angeles city water department, appeared before the Committee on Irrigation and Reclamation of the United States Senate, representing the city of Los Angeles, Calif. Mr. Van Norman testified particularly with respect to the securing by the city of Los Angeles of a water supply from the Colorado River and of the use that would be made by the city of Los Angeles of Boulder power for the pumping of this water. Mr. Van Norman explained that it was proposed to take 1,500 second-feet of water from the Colorado River, to pump it over the mountains and deliver this water to the city of Los Angeles. I quote from page 297, hearings on S. 728 and S. 1274:

Senator JOHNSON. And where is it you expect, if your plan matures, to get the power?

Mr. VAN NORMAN. There is only one place to get it, Senator, and that is from a power plant on the Colorado River, and this Boulder plant is the one that we are depending on for it.

Senator JOHNSON. How much power will it require, in your opinion, for the city of Los Angeles to take from this project in order to carry out its contemplated plan?

Mr. VAN NORMAN. I have it figured out here, Senator. I will refer to my notes and give you an accurate answer.

Senator JOHNSON. I will be very glad to have you give it, if you please.

Mr. VAN NORMAN. For a total of 1,500 cubic feet per second continuous flow, after allowing the necessary line losses and the proper efficiencies of the pumps and all the rest of it, the figure is 294,820 kilowatts; that is in horsepower 395,000.

That Mr. Van Norman's estimate of the quantity of water that is to be pumped is thought to be conservative is indicated by a statement of the Los Angeles Chamber of Commerce, through its president, and printed on page 272 of the same volume. I quote the following extract:

* * * an investigation on our part by reputable engineers of years of experience convinces us that these statements are under rather than overdrawn and that even with the addition of 1,500 cubic feet per second of Colorado River water there will still be more needed for an ever-increasing population located in the region south and west of the Sierra Madre Mountains.

It must be pointed out, of course, that the statement of the Los Angeles Chamber of Commerce respecting the need for more than 1,500 second-feet includes the needs of minor municipalities and agricultural areas which have not yet been annexed to the city of Los Angeles. Mr. Van Norman's statement refers to water that is to be taken for the city of Los Angeles itself, or at least is to be underwritten by that city and perhaps to some extent divided up among certain small municipalities. In fact, the laws of California permit associations of this sort, and such an association for this particular purpose has already, it is understood, been organized in a preliminary manner. Let us for simplicity consider that "Los Angeles," as I shall use it in this connection, means the territory that is to be supplied with water from the aqueduct Los Angeles proposes to build. The present city of Los Angeles would be overwhelmingly preponderant in any such district and the final contributions that might be made by all of the other members of the district put together would not substantially influence one way or the other the carrying out of the scheme by the city of Los Angeles alone. We are officially advised, therefore, that Los Angeles will need ultimately 395,000 horsepower of the 550,000 firm horsepower that is to provide the revenue for the return of the Government's money according to the Boulder Dam plan. I quote from page 299:

The CHAIRMAN. I want to be sure of one point in your statement. Eventually, using the full 1,500 second-feet of water through the canal would require 395,000 horsepower, and that would be taken out of 550,000 constant horsepower that is estimated to be produced at Boulder Canyon Dam?

Mr. VAN NORMAN. Yes, sir. Now, Senator Hayden has called attention to a certain thing. It might be that by the time all that power is developed—I am confident there will be other developments along the river, either above or below, where all the people that want power can get it. But, as you state, Senator, if no other plant was installed other than this, that would be the condition, there would be almost four-fifths of the power which would be used for pumping water.

Now, then, what do we have? We have one of the greatest and richest cities in the world telling us officially that they will eventually need almost four-fifths of the power that we are asked to create at Boulder Dam. We have the Representatives in Congress from that city, as well as the Representatives in Congress from all the remainder of the State of California, joining in a letter stating that $4,000,000,000 worth of property is pledged as security that the Government will not lose money on the Boulder Dam proposal. Why not make this statement into an actual, tangible fact, at least as to about four-fifths of the power that it is proposed we should generate and which is to pay for the entire enterprise except as to principal on the all-American canal. No one will question that there is property in the city of Los Angeles that might be made tangible security for the repayment to the Government of all of the cost of this proposal with interest. They tell us that this has already been done. Can they complain if we ask them to do it?

Now, what would be the process of putting this into tangible form? The detail, of course, is a question for attorneys; but I will make a suggestion of the line along which the plan should be worked out. Let the city of Los Angeles, either by itself or in combination with minor neighboring municipalities in accordance with the California law, authorize a bond issue in the amount of not less than twice the present estimate for this project; that is to say, in the amount of not less than $250,000,000. These bonds are not to be sold, but are to be issued and deposited with the United States as security for the faithful performance of a contract which will be entered into between the United States and the city of Los Angeles, whereby Los Angeles will take on the completion of the Boulder project nearly four-fifths of the power and will agree to pay in installments over 50 years a sum which will repay to the Government about four-fifths of the entire cost of this project, except the principal sum otherwise returnable, being the cost of the all-American canal plus four-fifths of the operating and maintenance expenses, repairs, and renewals, during the 50-year period, plus 4 per cent interest, computed each year upon the net investment of the United States at the beginning of the year, and if in any year such interest be not paid in full, the deficit in interest to be added to the Government's net investment at the beginning of the year, and to constitute the Government's net investment at the end of the year.

Here we have a definite, tangible, enforcible, arrangement whereby it will be assured that the property of the city of Los Angeles shall be security for nearly four-fifths of the power portion of this proposed enterprise. The provision does not, indeed, go so far as the representatives in Congress from the State of California said they had already gone. It does not pledge $4,000,000,000 as security for the whole enterprise. It would pledge the property in Los Angeles as security for nearly four-fifths of the power portion of the enterprise, the proportion being the fraction of all of the power proposed to be developed, that the city of Los Angeles says to the Congress that the city will ultimately need. Can there be any objection to this proposal so far as I have gone with it?

If it be objected that the bonding limit of the city of Los Angeles would be exceeded by the issue of $250,000,000, to be used as security only, for the faithful carrying out of a contract, the answer is that the whole State of California is represented to be a unit for the Boulder proposal, that it has often been demonstrated that the laws or the constitution of the State of California can be amended with great speed when the leaders of California desire it. If we pass this bill, these authorizations can easily be given long before the litigation promised by the States of Arizona and Utah over the constitutionality of this bill can possibly be concluded. Such a provision as I have suggested will not, therefore, delay construction of Boulder Dam by a single hour.

If it be objected that Los Angeles, which will need approximately 395,000 horsepower or roughly four-fifths of all the Boulder horsepower, would not need any such quantity to begin with, the answer is that, since Los Angeles will ultimately require nearly four-fifths of the power for a use that is higher than any of the other uses proposed for this power, it follows that sales of some portion of Boulder power during the interim prior to the time when Los Angeles will need the full four-fifths can only be temporary allocations of power for an interim. The city of Los Angeles can dispose of this surplus power during this interim, at least to as good advantage as the Government of the United States could dispose of such power temporarily. If it be true that during the interim prior to Los Angeles requiring about four-fifths of all of the power, the temporary power can be sold temporarily in a ready market, the city of Los Angeles, which tells us that such a situation exists, is better able to do the temporary selling than we are.

This solution does not, of course, give security to the Government for all of the investment that the Government is asked to make. Indeed if the total expenses of the project should exceed $250,000,000 then my proposal would not furnish any security for any of this excess, but if the total expenditures can be limited to $250,000,000 or to twice the present estimate (and I greatly doubt if this can be done) the Government will be made secure as to almost four-fifths of the revenue that it proposes to get from power. While I believe that the revenue from power will prove in the outcome to be the only revenue that the Government will ever get from this project, nevertheless there are some who hold the contrary view. If it proves possible to get similar contracts for the purchase of stored water, then such contracts should be made and the burden on Los Angeles as a user of power will be thereby diminished. If, for example, Los Angeles as the purchaser of stored water will make a similar contract and give similar security, then Los Angeles as a purchaser of electric power would be relieved to the extent of the payment that Los Angeles would make as a purchaser of stored water. If any other district desired to contract for the purchase of stored water, such district should at the outset issue bonds and deposit the bonds with the United States as security for the faithful performance of the contract which it enters. And the security in each instance must be given at the time the contracts are signed.

It is, in my judgment, a vital factor of the plan that I propose, that the contracts should not be contracts to repay the Government $125,000,000 plus interest, but must be contracts to repay the Government with interest whatever the Government may spend in completing the project. No single item of this suggestion, however, proposes anything more than the advocates of this bill tell us they propose to do. The only merit in my proposal is that it substitutes definite, enforcible, secured contracts for vague promises that mean nothing. If the people behind this bill are sincere in the statements that they have made to the Congress they will accept my proposal with alacrity. Will it be so accepted? We shall see.

I have not said anything about the one-fifth of electric power that the Government will have on its hands after Los Angeles and associated municipalities shall have contracted for about four-fifths of the power. I do not see any way in which the Government can avoid taking the risk of loss on this unallocated one-fifth of the power. If there should be any other agencies, public or private, willing to enter into similar contracts and to give similar security for this unallocated one-fifth of Boulder power, then, of course, such proposals should be accepted, but I have not the slightest notion that any other contractors will be found who are willing to do this. Under these circumstances, I would be willing to have the Government take a chance on one-fifth of the power, provided Los Angeles and the other communities that may be interested will show their good faith to the extent of making enforcible secured contracts for the four-fifths that they say they need. This is not good business; I know that. Any investment banking house would require 100 per cent security under similar circumstances in the case of a private enterprise. I am willing, however, to accept less than 100 per cent security for the Government in this instance.

If it be objected that my suggestion provides for the payment to the Government of its actual expenditures, as disclosed by the event, rather than for the repayment of the present estimate of cost, made by a department that has a bad record for underestimating—my answer is that I intend exactly that. I wish to be sure that the actual expenditure is what is to be paid back. I am not interested in getting back merely an estimate.

Do not misunderstand me. The amendment just outlined would increase the Government's security for its investment, but it would not make this an acceptable measure. Many other major defects remain, and the amendment which I have introduced and shall discuss later is the only remedy I have been able to devise for their correction.

### THE QUESTION OF STATE RIGHTS

The bill is predicated upon the assumption that the Federal Government has very much greater rights in the Colorado River and older streams generally in the country than has ever been recognized by any judicial tribunal. Indeed, the theory upon which this bill must be upheld, if it is upheld at all, is that the Federal Government is sovereign over the Colorado River, and that Congress may determine how the waters of the Colorado should be divided between the States.

Now, the bill provides that it shall become effective only upon the ratification by six of the States in the Colorado River Basin of the Colorado River compact. There are, however, seven States in the Colorado River Basin, and it was originally intended that the Colorado River compact should be a compact between these seven States. The fact that one of the States is now left out of the compact, and that the rights of this State are to be determined not by its consent given in a compact or otherwise but by an agreement between six other States and the Federal Government, violates every principle for which the compact idea was originated. In other words, it makes no difference whether one State, two States, three States, or four States are left out of the compact, the principle that the Federal Government controls the waters of the Colorado River is established just as much by one case as by the other.

The compact which was negotiated at Santa Fe, N. Mex., in the fall of 1922, as I have said, contemplated the division of the waters of the Colorado by agreement between the States, and it contemplated that when this agreement was consummated the Federal Government or other agencies might be permitted to create a storage reservoir in the lower Colorado River basin without endangering the rights of the upper States. That idea was sound. The States were to be protected by an agreement between themselves, ratified and approved by the Federal Government, before construction of any storage was permitted. The control over the river was thus left in the hands of the States, and the division of the waters between the States was determined by them.

Now, however, an entirely different idea is substituted. Because it has been difficult, and thus far impossible, to secure ratification of this seven-State compact by the State of Arizona, it is now proposed to shift to the position that the Federal Government and not the States shall control the waters, and that six of the States and the Federal Government may enter into a compact under which the amount of water which Arizona may take from the stream will be limited and determined. Furthermore, it assumes that the Federal Government can, without consulting the State of Arizona, build a huge dam, resting upon soil which under the Constitution belongs to the State of Arizona, and create a huge reservoir which occupies territory within that State, all without the consent of the State of Arizona.

Those of us who live in the upper-basin States, as well as all who are interested in the development of the Western States, should resent this proposal and oppose it with all our might. Regardless of whether Arizona is right in her contentions about the waters of the Colorado River and in her op-

position to this particular construction, the principle that she can be overridden by a combination of her sister States with the Federal Government is a principle which is dangerous in the extreme.

At this point I desire to quote from the testimony of a man who is perhaps better informed as to the water problems in their legal aspect with which the West is confronted than any other individual. I refer to Mr. Delph Carpenter, the water commissioner for Colorado, and I quote from his testimony which appears in the hearings on H. R. 6251 and H. R. 9326 at pages 147–148:

The deliberate and constant pressure of certain enthusiasts for Federal usurpation of State powers in arid States, pressed before the courts and injected into Executive orders, has awakened the people of the arid States to the necessity of first protecting their State autonomy before encouraging any further development which may become the basis of additional adverse claims. The States take this attitude in necessary self-defense and in protection of their rights to control and administer that resource necessary to their very existence.

For three-quarters of a century courageous pioneers have been converting the American desert into a fertile empire by applying water to waste places, and this, too, long prior to any Federal aid or encouragement. The major reclamation of arid lands has been by private and State initiative and expense. The last census shows that more than 93 per cent of the irrigated lands of the West were so reclaimed and that less than 7 per cent of these lands are under national reclamation projects.

Long prior to any action by Congress each arid State had created its own system of State (or Territorial) control of diversion, use, and distribution of water. Each State had, by constitutional provisions, by progressive legislation, and by decisions of its courts, built up a system of local law, which was and is the basis of local rights, by which the State has permitted its citizens to use the property of the State (the waters of its streams) and has kept constant and hourly supervision and control of the use of this natural resource in order that waste may be prevented and the maximum public benefit may be obtained. That laws of each State, while partaking of certain similar fundamental principles, have been molded to fit local needs and conditions. These laws differ according to the natural conditions obtaining in each State due to topography, soil, climate, geographical location, and other unalterable natural phases controlling the best use of water and essential to obtaining the maximum benefit of the State resource. Throughout the period of the evolution of State water law, the primary element of maximum benefits for the greatest public welfare has been the underlying principle, and the United States fostered and encouraged this development of local law. These principles still obtain and the State machinery still progresses toward greater perfection, except where interfered with and overridden by Federal courts and executive agencies since the enactment of the national reclamation act in the year 1902.

In each of the arid States the waters of the State are recognized to be its property, subject only to the rights of neighboring States, in the waters of interstate streams, as defined by interstate compacts or by the decisions of the United States Supreme Court between litigant States. The rights of the appropriator within each State are mere rights to the use of the property of the State, subject always to the sovereign will and to the exercise of eminent domain in adapting the use of the resource to State progress.

The water laws of each State are mere rules of State administration of the use of a natural resource imperative to State existence. The usufructuary right of citizens—appropriators—inter sese, are thus fixed and determined, subject always to the superior right of the State to regulate, control, readjust, take by eminent domain, and otherwise provide for the use of the precious element according to its will.

If we pass this bill we recognize the right of the Federal Government to this superior control over the Colorado River. Again, I say, it makes no difference whether Arizona is right or wrong in her contentions as to how the Colorado should be developed. The fact is that under our system of government Arizona's contentions must be recognized and can not be simply overruled. If we do overrule them and take the position that Congress will tell Arizona what is good for her, whether she likes it or not, then we place the Federal bureaucracy in the saddle, and this control over the waters of the western streams is substituted for State dominion.

I do not desire to enter into any extended legal discussion of this question. There are innumerable legal discussions of the question appearing in the hearings, and I refer you to the presentation of Mr. Gust, of Arizona, which was given before the Senate committee this year, and appears at pages 103 to 127 of the Senate hearings on this bill.

I simply inquire whether the Federal Government has received this power which Congress is asked to exercise over the waters of the State of Arizona. As I understand it, the Constitution of the United States defines the powers of Congress and unless the particular power which is claimed can be found within that instrument, the Federal Government does not possess it. In the case of Kansas *v.* Colorado (206 U. S. 46) it appears that the Reclamation Service caused the Attorney General to intervene and to assert the interest of the United States in the Arkansas River, and the court in that case stated with reference to this intervention:

It rests its petition of intervention upon its alleged duty of legislation for the reclamation of arid lands; alleges that in or near the Arkansas River, as it runs through Kansas and Colorado, are large tracts of those lands; that the National Government is itself the owner of many thousands of acres; that it has the right to make such legislative provision as, in its judgment, is needful for the reclamation of all these arid lands and for that purpose to appropriate the accessible waters.

That contention is one of the very contentions which is made with reference to this legislation, namely, that the Federal Government owns certain lands near the Colorado River and that Congress has the right to determine, therefore, how the Colorado shall be developed because Federal property is involved. In answering that contention the Supreme Court said in Kansas against Colorado:

In other words, the determination of the rights of the two States interesse in regard to the flow of waters in the Arkansas River is subordinate to a superior right on the part of the National Government to control the whole system of the reclamation of arid lands. That involves the question whether the reclamation of arid lands is one of the powers granted to the General Government. As heretofore stated, the constant declaration of this court from the beginning is that this Government is one of enumerated powers. "The Government, then, of the United States, can claim no powers which are not granted to it by the Constitution, and the powers actually granted must be such as are expressly given or given by necessary implication." (Story, J., in Martin *v.* Hunter, 1 Wheat. 304, 326, 4 L. ed. 97, 102.) "The Government of the United States is one of delegated, limited, and enumerated powers." (United States *v.* Harris, 106 U. S. 629, 635, 27 L. ed. 290, 292, 1 Sup. Ct. Rep. 601, 606.)

Turning to the enumeration of the powers granted to Congress by the seventh section of the First Article of the Constitution, it is enough to say that no one of them, by any implication, refers to the reclamation of arid lands. The last paragraph of the section which authorizes Congress to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof, is not the delegation of a new and independent power but simply provision for making effective the powers heretofore mentioned.

* * * * * * *

As our national territory has been enlarged, we have within our borders extensive tracts of arid lands which ought to be reclaimed, and it may be well that no power is adequate for their reclamation other than that of the National Government. But, if no such power has been granted, none can be exercised.

* * * * * * *

But it is useless to pursue inquiry further in this direction. It is enough for the purposes of this case that each State has full jurisdiction over the lands within its borders, including the beds of streams and other waters.

I particularly commend the study of this case and of what Justice Brewer said therein to those gentlemen who are now arguing that the Federal Government may obtain the power to do a thing from the mere fact that it is, according to their opinion, the best agency to do it. We are continually hearing these days the expression of the idea that because a thing is too big for a State to do the Federal Government should do it. It seems not to worry those who make this argument that the Federal Government does not derive its powers from any such general source. In this day of big undertakings, such an argument would soon lead to the absorption of all the leading activities by the Federal Government. Again I say, that if the Federal Government has any right over the Colorado River, it must obtain that right from one of the enumerated powers given to it in the Constitution. The only power that I know of which may reasonably give any general power to the Government over the river is the commerce clause which gives it the right to improve navigation. If anyone is under the delusion that the construction of this great dam, 550 feet high, in the desert region of Nevada and Arizona has anything to do with navigation, I commend to his study pages 14 to 19 of the minority report of Congressman LEATHERWOOD upon this feature of the bill. Time will not permit me to extend this discussion. I hope I have said enough to emphasize the point that the question of State rights which is involved is fundamental and vital. Upon the answer which Congress makes to it depends the question as to whether years of litigation over the waters of the Colorado will ensue. If you give these States an opportunity to work out their own problem, a problem in which the Federal Govern-

ment is not concerned, that is the division of waters and benefits from the river, between themselves, we may avoid a fight in the courts which will last, according to the precedents set by similar litigation, from 10 to 20 years.

Haste at this time in forcing this bill through Congress will certainly make waste, not only in the expenses of litigation but in the years of time which it will take before any construction whatever can start upon the Colorado. To pass this legislation over the protests of Arizona and the four upper-basin States—Colorado, Wyoming, New Mexico, and Utah—as expressed by their governors, is, it seems to me, the utmost foolhardiness.

If anything could be gained by it except delay, if there was a pressing necessity for the beginning of this huge dam, if the construction of this huge dam were the only way in which the immediate needs could be relieved, there might be some argument for starting litigation. The fact is there is no necessity of any such hurry.

THE POSITION OF UTAH

In making a statement as to the position of the State of Utah with reference to this legislation, I quote from the testimony of Governor Dern, given before the Senate committee under date of January 17, 1928, in the hearings on this bill:

I now come to a definite statement of Utah's position on the whole matter. Utah is opposed to the pending bills. The official pronouncement of Utah's essential requirements in the solution and settlement of the Colorado River problem was made by the Utah Water Storage Commission with my full approval and consisted of the following points:

(1) Seven-State ratification of the Santa Fe compact.

(2) A treaty with Mexico reserving to the United States the rights to any water of the Colorado River made available through development in the United States, including equitable rights to the natural flow.

(3) Acknowledgment that water within the State is the property of the State.

(4) Acknowledgment that the State of Utah is the owner of that portion of the bed of the Colorado River which lies within its borders.

(5) Full acknowledgment that the States have the right to demand and receive compensation for the use of their lands and waters.

As expressive of the attitude of the governors of the upper States—that is, Colorado, Wyoming, New Mexico, and Utah—I read you the following from page 132 of the testimony of Governor Dern, given under date of January 17, 1928, before the Senate committee:

In view of these developments, the governors and interstate river commissioners of the four upper-basin States (Colorado, New Mexico, Utah, and Wyoming), whose territory is the source of more than 80 per cent of the water of the Colorado River, met at Denver on December 19, 1927, for the purpose of discussing ways and means of bringing about the most expeditious settlement of all problems concerning the Colorado River and of agreeing upon a common policy and plan of procedure with reference to the pending legislation. After mature deliberation and after consideration of the existing situation, those present unanimously agreed that the best interests of all the seven States, and particularly of the upper-basin States, would best be subserved if an equitable apportionment of the use of the waters of the river precedes authorization or construction of works upon the lower river, and agreed to the following resolution:

"Whereas it is the conviction of the governors and interstate water commissioners and other representatives of the States of Colorado, New Mexico, Utah, and Wyoming, the four States of the upper basin of the Colorado River, that the interstate agreement embodied in form by the Colorado River compact as negotiated at Santa Fe, N. Mex., in November, 1922, should be completed and placed in full force and effect through approval and acceptance by the seven Colorado River States, in order that the way may be properly cleared for the orderly development of the Colorado River; and

"Whereas substantial progress has been made during the past few months toward the completion of the said compact, and negotiations are now being carried on in a competent manner looking to such completion: Therefore be it

"*Resolved*, That it is the firm belief of the representatives of the four said upper-basin States, as assembled at Denver, Colo., this 19th day of December, 1927, that no legislation proposing the construction of any project upon the Colorado River should be enacted by Congress or otherwise authorized by any Federal agency before the negotiations now in progress have been completed and every reasonable effort exhausted to reach such agreement between the seven States.

"W. H. Adams, Governor of Colorado; George H. Dern, Governor of Utah; Frank C. Emerson, Governor of Wyoming; Edward Sargent, Lieutenant Governor of New Mexico; Delph E. Carpenter, interstate river commissioner for Colorado; William L. Boatright, attorney general of Colorado; Francis C. Wilson, interstate river commissioner for New Mexico; L. Ward Bannister, counsel for the city of Denver; M. C. Mechem, representing New Mexico."

ANOTHER HETCH-HETCHY

Those of my colleagues who were in the Senate in 1913 will recall the Hetch-Hetchy bill—a bill which was enacted into law under the greatest pressure as an emergency measure for the relief of San Francisco from a serious water shortage. The representations as to the menace of a flood in the Imperial Valley which were heard in connection with this bill were mild as compared with the representations as to the need of San Francisco at that time for more water. The representation made in connection with this bill that Los Angeles will at some future time need more water, which it can only secure through the construction of this particular dam, is also tame as compared with the need under which San Francisco was supposed to be laboring at that time. You may recall the monster petitions containing 20,000 or more signatures which were thrust upon us. You will recall the special edition of a paper devoted exclusively to the exploiting of the needs of San Francisco for water which was circulated amongst us.

I quote from the speech of Senator Myers, who had that bill in charge (CONGRESSIONAL RECORD, December 1, 1913, vol. 51, pt. 1, p. 6):

This bill presents to Congress a question of most momentous importance, a question of the sustenance of human life, a question of the necessities of human life, a question of three-quarters of a million people having an adequate water supply for the absolute necessities of life, for sanitary purposes, for municipal purposes, and for consumption by individuals of the communities which are interested. I think it is one of the most important questions that has been presented before this body since I have been here, one that pertains to the conservation of the very life of a large number of citizens of this country and of the people of a very large and important section of the country.

Senator Myers further stated, page 8, same CONGRESSIONAL RECORD:

I believe that there is no difference of opinion that the supply of water there [referring to San Francisco] must be increased from some source and in some way. The reports are to the effect that there is actual suffering and dire distress in that respect.

Other representations were to the same effect—that life itself was in danger because of this need and further that the need could only be met by the passage of that particular Hetch-Hetchy bill providing for the construction of a great dam in the Hetch-Hetchy Valley in the Yosemite; and, Mr. President, I believed every word that was said.

There were those of us in the Senate at that time who questioned whether it was actually necessary for the city of San Francisco to go to the Hetch-Hetchy Valley for its water supply, and some of us were bold enough to suggest that, after all, the primary thing which was involved in that development was power. Indeed, the Senator from Nebraska [Mr. NORRIS] expressed himself as being particularly interested in it from the power standpoint. Yet the proponents for the bill for the most part carefully avoided the discussion of the fact that it was power which the promoters were after. The stress was laid upon the need for water. Now, although it was pointed out that there were other sources from which San Francisco could obtain its water supply much more easily and cheaply, and although it was pointed out that the building a great dam would delay the securing of the water supply, yet the Senate passed that bill, and I have not the slightest doubt that the majority of those who voted for the bill were sincerely of the opinion that the great necessity for it lay in the need of San Francisco for more water. Fifteen years have passed since that time and the dam at Hetch-Hetchy has been completed, but San Francisco is securing its water supply elsewhere and is said now to have an ample supply for more than twice its present population. The water from Hetch-Hetchy has not been brought within 100 miles of San Francisco. So, looking back 15 years, I am sure I will be pardoned if I am not greatly impressed by the representation that the primary purpose of this great dam at Boulder Canyon is the furnishing of flood protection to the Imperial Valley and of a water supply to Los Angeles. I see sticking out of this bill at every point not flood control, not water, but power, the same commodity which so attracted the promoters of the Hetch-Hetchy project.

The parallel between the Hetch-Hetchy situation and the present one is, indeed, very close. There Congress was asked and did include within its bill a provision for taking control over the waters of a stream within a State. A great deal of the debate at that time was devoted to the question of the right of Congress to assert such control and sovereignty over the waters within a State. Much of what was said about State rights in that debate is clearly applicable to the question here presented on that point.

Furthermore, the fact that a great dam is to be built which it will take years to build and which is principally designed as

a power dam is another close parallel between this and Hetch-Hetchy. If there was any emergency about flood control for the Imperial Valley, they certainly would not be seeking to obtain flood control through this means. They would take the most direct, feasible, and surest means of obtaining that flood control, which would be either through levees or the building of a much simpler dam.

Many other points of similarity between the Hetch-Hetchy development and this proposal may be pointed out. There was the same enthusiastic representation by proponents that Congress would be conferring a boon of cheap power upon the people of San Francisco—that the opportunity was there offered to show and demonstrate the cheapness of water power and to revolutionize the lives of the people of San Francisco by furnishing them this cheap power. And although the power has been developed and is a part of the supply furnished to those cities, it seems to be no cheaper power than that from other sources, nor do the people of San Francisco enjoy any advantages by reason of this power development over those enjoyed elsewhere.

It is well, too, to recall that the original estimate of cost for the Hetch-Hetchy project was $45,000,000. On March 1, 1916, the engineer's estimate was $51,607,900. The project is not yet more than half completed. There had been expended to 1925 a total sum of $54,470,816, and the estimated cost to complete at that time was $149,000,000 in addition to what had already been spent.

Is it not interesting to compare some of these promises which are made to us when legislation is pending with the results which are obtained?

ALTERNATE DAM SITE AT TOPOCK—MOHAVE CANYON

One of the alternate dam sites which has received much discussion and but little investigation in connection with this Weymouth Boulder Dam plan is the site in Mohave Canyon near Topock, Ariz., and referred to both as the Mohave Canyon and Topock site. This is the site recommended for first development by the engineers of the Federal Power Commission and of the Geological Survey.

We find that it was favorably mentioned in the report of the board of these engineers which was sent to the Congress with the Weymouth report. I read from paragraph 5 of that report, which appears on page 822, hearings on H. R. 2903, Sixty-eighth Congress, first session:

5. If a storage reservoir were to be built without regard to its power possibilities but for the sole purposes of flood protection and irrigation regulation—in other words, to meet the most pressing needs of the lower Colorado—the Mohave site would possess the advantages of being closer to the great body of land affected than any other and of allowing the development and operation of the upstream sites in the canyon section to be carried on for power only, except as their water supply may be affected by irrigation above. The Mohave site has not yet been tested and may be found infeasible.

* * * * * * *

A reservoir at Mohave of 10,000,000 acre-feet capacity with a dam 160 feet high and operated so as to reserve 4,000,000 acre-feet for flood protection and irrigation, as suggested in Colonel Kelly's report, would, in his opinion, produce about 150,000 horsepower, which might carry all or part of the project. While such a reservoir would drown out some 40,000 acres of land that might be irrigated in the future, practically none of this land is under cultivation at present, and it is possible that there are more than enough irrigable lands below the reservoir site to use up all the water that may ultimately be reliably counted on to be steadily available.

The Topock Dam site was suggested by Mr. La Rue after the Weymouth Boulder Dam plan was practically completed and, according to Mr. La Rue's testimony, given before the Senate committee on Senate Resolution 320, his suggestion was unwelcome to the Reclamation Service. From Mr. La Rue's testimony it appears that the Reclamation Service considered it as a rival dam site which would militate against the adoption of the Boulder Dam plan; that they were wedded to the Boulder Dam plan and did not care to have their recommendations upset by a newly discovered site. In any event, Mr. J. L. Savage, engineer of the Reclamation Service, was sent to the Topock site and made a two-day examination of it, after which he submitted his report. His report was neither entirely favorable nor unfavorable. He did recommend that the site should be further investigated. I quote from his report, which appears on page 560, hearings Senate Resolution 320, Sixty-eighth Congress, second session:

The lower dam site No. 2, as selected by Mr. La Rue, is located about 2 miles below Topock. The river at this site cuts through a granite dike very similar to the granite in Boulder Canyon. There seems to be an excellent abutment on both sides of the river, and probably not over 10 feet of the surface rock would have to be removed in excavation for the dam. * * *

Considerable quantities of sand and gravel suitable for concrete are available close to the dam site, and the granite would provide excellent material for crushed rock. The proximity to the railroad, combined with the favorable geological condition, make this site attractive, and I believe that careful consideration should be given to further investigation, including detailed surveys and diamond drilling.

Apparently the recommendation made by Mr. Savage that careful consideration should be given to further investigations did not meet with the approval of the other engineers of the Reclamation Service, because that further investigation has never been made.

The favorite method of disposing of the Topock Dam site is to say that it would be too costly because of the flowage damages. Great emphasis is laid upon the fact that the town of Needles, Calif., would have to be moved. Yet Needles is a town, little, if any, larger than the town of American Falls in Idaho, and the Reclamation Service has recently moved the town of American Falls because of the construction of another reservoir and apparently did not find that cost too burdensome for even the $5,000,000 reservoir which was built at that point.

There is a great discrepancy between the contentions of Mr. LaRue and Mr. Weymouth and others favoring the Weymouth plan as to the cost of relocating the Santa Fe Railroad tracks. Mr. La Rue thinks that the Santa Fe would welcome the relocation because it would substitute a much more favorable grade for their present unfavorable grade, and because it would remove them from the flood menace of the Colorado which they are constantly forced to fight in their present location. The Reclamation Service estimates a total flowage damage of $8,500,000 at Topock, while Mr. La Rue estimates that the cost would be under $3,000,000. (See p. 561, hearing, Senate Resolution 320.)

Mr. La Rue says that the Santa Fe Railroad could shorten its tracks in the event of the erection of the Topock Dam, whereas the Reclamation Service claims that it would be necessary to lengthen the track some 3 or 4 miles and in their estimates they have included capitalization of the increased investment and the additional operating cost of the railroad.

It is also claimed by the Reclamation Service that a large amount of potentially valuable irrigable land would be submerged and destroyed by this Topock Reservoir. Upon this point I refer you to pages 30 and 31 of Water Supply Paper 556, Department of the Interior, wherein it is pointed out that the land which would be submerged is practically swamp land which has been tried and abandoned by irrigationists heretofore and which could be made available for irrigation only at the expense of levee construction and maintenance.

It is certain that the estimates of the Reclamation Service are not too low. They have apparently overlooked nothing in their attempt to discredit the Topock site. It may be true that Mr. La Rue in his zeal on behalf of this site has underestimated the cost. At least we need an investigation of this site to ascertain which is right. It can not be summarily dismissed without an investigation in view of its obvious advantages for the primary purposes.

What are these advantages? The most striking and obvious advantage is that a dam at Topock would be from ten to twelve times as efficient in storage capacity. That is because of the better storage basin afforded at this site. For a given height of dam, as compared with Boulder, the water stored would be from ten to twelve times the quantity at Topock for the same height of dam as at Boulder. I refer you to page 20 of the Leatherwood minority report on this bill, where this subject is discussed and a table set forth. Another very obvious advantage which strongly appeals to my mind is the fact that the Topock site is located practically on the Santa Fe Railroad, and instead of having to build 35 to 48 miles of new branch railroad to reach the dam site, at a cost estimated at approximately $2,000,000 (which is undoubtedly the minimum), the railroad is already there at the Topock site—and not a branch railroad, but a main transcontinental line, which would save great sums in switching and charges for use of equipment, to say nothing of the other increased freight charges.

Another advantage of the Topock site is the fact that the loss of water due to evaporation would be largely avoided, because the present evaporation and transpiration in the Mohave Valley and swamp lands is practically as great as would be the evaporation from the surface of a reservoir created there. (See Water-Supply Paper 556, p. 31.)

For a summary of the advantages of the Mohave Canyon reservoir site, I refer you to pages 37 and 38, Water Supply Paper 556, Department of the Interior, reading as follows:

A storage capacity of 10,000,000 acre-feet may be created at the Mohave Canyon reservoir site by building a dam to raise the water 155 feet. The depth to bedrock is unknown, but it seems reasonable to esti-

mate the height of the dam above its foundation at 240 feet. This may be compared with 523 feet for a dam at Black Canyon to provide the same storage capacity. The Mohave Canyon dam site is easily accessible, being only 2½ miles from the railroad; the walls are low, and the conditions are favorable for carrying on the work of construction; and the volume of the dam would be relatively small. All these features lead the writer to believe that the dam could be built in three years. The work of relocating the railroad and the town of Needles could be carried on simultaneously with the construction of the dam and might easily be completed within the same time.

The Mohave Canyon reservoir site is low on the river, near the lands that are menaced by the floods, and would therefore be more effective in eliminating the flood menace than a flood-control dam at either Boulder Canyon or Glen Canyon.

The favorable features of this site may be summarized as follows:

1. It would provide more effective flood control than any other known reservoir site on the river.

2. The project may be constructed in less time and probably at less cost than any other project that would provide the same amount of storage capacity for flood control.

3. It is the only site where adequate storage capacity may be provided for flood control and at the same time a maximum use of the water for irrigation and for the development of power may be permitted.

4. It is the only site on the river where sufficient storage capacity may be provided to protect the interests on the lower river from floods due either to natural causes or to the failure of a series of dams constructed in and above the Grand Canyon and at the same time permit maximum power development.

5. It is more accessible than any other known flood-control site on the river.

6. If deemed advisable, the site could be developed to serve four purposes—flood control, the storage of water for irrigation, the development of power, and the storage of silt.

7. The net additional loss of water due to evaporation would be materially less here than at any other known storage site on the river.

8. Materials suitable for the construction of the dam are available at the site.

9. For a given height of dam the storage capacity of the Mohave Canyon site is ten times greater than the storage capacity at either Boulder Canyon or Glen Canyon.

10. Under full irrigation development no water should be permitted to pass the storage dam except as needed to meet the demand for water for irrigation. With a storage capacity of 22,000,000 acre-feet provided at Mohave Canyon, the excess flow during wet years can be stored and released to meet the demands for water during years of low run-off.

The unfavorable features of the Mohave Canyon site are these:

1. Stored water released at Mohave Canyon would have a minimum value for the development of power.

2. Storage at Mohave Canyon would not lessen the cost of dams subsequently built farther up the river.

Now, if we are actually interested in providing flood control for the Imperial Valley and water storage for irrigation and domestic purposes, and if we are not actually interested in creating a huge power development, I submit that at least we should have an honest and thorough report upon the desirability of this Mohave Canyon or Topock site. If any gentleman can give me a good reason why this site should not be investigated, I would be glad to hear it.

FURTHER INVESTIGATIONS WILL PREVENT DELAY

It is argued by the proponents that this measure must be passed at this time without further investigation; that there has already been too much time spent in investigation; that this bill has been before Congress for six years; and that the expenditure of time in further investigation would be not only wasteful but would mean the delay of relief which is urgently needed. It is even suggested that the purpose of asking for a further investigation is to cause delay, and not to sincerely seek further information. Let us see about this argument.

In the first place, the answer to the argument is that the investigation which has been carried on during the past six years has been largely confined to this particular plan and has not been devoted to the real problem which is the best method of providing the real needs in which the Government is interested. I charge that the record of the hearings will demonstrate that the proponents of this bill themselves have persistently opposed the investigation of alternative plans and have insisted that only this project should be considered. I have called your attention to the fact that the Topock Dam site, an investigation of which was recommended by one of their own engineers, has never been investigated, although the recommendation that it should be investigated was made three years ago and its obvious advantages over the Boulder Canyon Dam site have been repeatedly pointed out. The primary reason why this alternate dam site has not been investigated is that the Reclamation Service and the proponents of this bill have themselves opposed and prevented that investigation. I have also called your attention to the fact that Mr. La Rue says that he was forced out of the Government service because he criticized the Boulder Canyon plan and insisted on further investigations. I call your attention to the fact that Mr. Stabler, in his report on the problem of Colorado River development, made after the Boulder Dam plan, which is before us, was submitted, stated (p. 844, Hearings on H. R. 2903, 68th Cong., 1st sess.) that—

> The need for more facts is the rather astounding conclusion one must reach from study of the data at hand. While hundreds of thousands of dollars have been expended on intensive investigation at Boulder and Black Canyons, the various dam sites between Boulder and Diamond Creek are untested, as is also the site at Mohave Canyon. Drilling at these sites and sufficient investigation and study to permit estimates of comparable accuracy to be made for each are necessary before a satisfactory conclusion can be reached.

I further called your attention to the fact that the Army engineers have been prevented by law from expending any of the river and harbor appropriation in investigation of the Colorado. Is this a record of painstaking investigation? On the contrary, it is the very negation of investigation. What the proponents of this bill mean when they tell us that the project has been under investigation all of these years is that it has been under promotion and protection from attack all of these years. Read the cross-examination of any man before the committee who dared to oppose it and judge for yourselves if an attempt has been made to investigate the primary problem. You will find that in each instance the attempt has been confined not to eliciting the information but an attack upon the witness in an endeavor to show undue bias and prejudice on his part against this project.

In the second place, upon the question of delay which might be caused by further investigation, I ask the proponents what they are going to achieve by this bill but delay? Pass this bill to-day and you will not afford flood protection under the plan herein provided within 10 years. Why? Because the enactment of this bill is simply the first chapter in a prolonged struggle between the States. The next chapter will be a fight in the courts. Judging from past records of such fights, it will take not months but years to settle the controversy by this method. And during the progress of the lawsuit Colorado River development will be at a perfect standstill.

Further than this, the delay which is involved in the construction problems presented by this Boulder Dam plan is bound to be very much greater than the delay involved in any other plan for the control of the Colorado River. In other words, this very proposal, even if the construction could be started this year, would delay the flood relief which is represented as being urgently needed—and it is the only thing which is urgently needed.

In addition to these delays, I call your attention to the fact that this bill is predicated upon a six-State Colorado River compact and that there is no such compact in existence, and it will be necessary to secure the approval of the State of Utah before any such compact can be consummated. The fact that the six-State compact was rejected by unanimous vote of the State Legislature of Utah does not promise any very prompt ratification in that State.

Before this project is adopted and we start out upon a course of litigation resulting from interstate quarrels, is it not the part of wisdom to make a further attempt to secure agreement upon a plan?

What is there to investigate? Allow me to enumerate some of the questions upon which the need for further investigation clearly appears:

1. Is it wise or practicable to combine a flood-control project with a power project?

2. Is it necessary to provide 26,000,000 acre-feet of storage in order to accomplish the objects in which the Federal Government is interested?

3. Are there other dam sites which offer better opportunity for flood control and irrigation storage—better from both the standpoint of cost and efficient storage capacity?

4. Is it better to attempt to provide flood control through levees and channel dredging on the lower Colorado River delta or through the construction of storage reservoirs?

5. Is it practicable to solve the silt problem on the Colorado River by the construction of storage dams from 100 to 300 miles above the point where the silt control is required?

6. How long will it be before the silt storage provided by Boulder Canyon Reservoir is effective?

7. Is it practicable and is it safe to build at the Black or Boulder Canyon dam sites a dam of the proposed dimensions without first having provided river regulation above it?

8. Where is the best place to begin the construction of dams on the Colorado—at the top or the bottom of the canyon section?

9. Does the Federal Government have the right or authority to construct a storage dam on the Colorado River over the protest of any of the States in the basin?

10. Should a large storage reservoir be constructed in advance of a treaty with Mexico covering water rights?

11. Can power be produced on the Colorado River at Boulder Dam or elsewhere at a cost which will permit of its sale in the available market in competition with other power?

12. Is there a real demand for an additional supply of power in southern California?

13. To what extent can the cost of this particular project be reimbursed through the sale of power?

14. Is there a need for further irrigation in California, or will there be such need within the next 20 years?

15. Should we adopt the policy that the Government may go into a business enterprise solely in order to return the cost of a Government undertaking? If so, what should be the relation in total expenditure between the business enterprise and the governmental aims?

It seems to me that all of these questions must be answered before we can intelligently pass upon this measure, and the passage of the measure without answering them will simply result in greater confusion and more delay.

There are two other subjects often discussed in connection with this bill which should receive consideration—a domestic water supply for Los Angeles and the all-American canal. I do not undertake, however, to discuss them here further than to point out that neither the all-American canal nor the Los Angeles water supply is dependent upon this project. The supply of water for an all-American canal will be diverted from the river 300 miles below this dam site, and the supply of water for Los Angeles will be diverted, if at all, 200 miles below. Any dam which stores sufficient water for flood-control purposes will regulate the low-water flow of the river sufficiently to supply these needs for the reasons I have before pointed out. I therefore do not find it necessary to discuss the merits of the represented needs for these two diversion projects, which are tied to this project as additional reasons for its construction but are without any necessary connection therewith.

For a discussion of the merits of these two proposals, including the question of the necessity of "cheap power" from Boulder Dam to pump the Los Angeles water supply, I direct your attention to the minority reports of Congressman LEATHERWOOD (pp. 23–26 and 39–44) and Congressman DOUGLAS of Arizona (pp. 7–8) on this bill.

SUMMARY AND ALTERNATE PROPOSAL

I have now presented to you the evidence which, to my mind, conclusively establishes the following propositions:

First. The problem before us is that of determining the first step which should be taken for the development of the lower Colorado River, with particular reference to those objects in which we have an interest as Federal legislators.

Second. These Federal objectives in order of their importance are: (1) Flood control for the Imperial Valley in California and other smaller areas; (2) storage of water for domestic and irrigation uses.

Third. It is possible to provide flood control through channel dredging and levee construction or through the construction of a dam which will create a storage reservoir of a capacity of not less than 4,000,000 and not more than 8,000,000 acre-feet. We have insufficient information at this time to determine which of these methods of flood control would be the better from the engineering and economic standpoints.

Fourth. The construction of a storage reservoir for flood control has the advantage of providing the river regulation required for further irrigation and domestic water coincidentally with the flood control; that is, the same storage which provides flood control also provides for irrigation and domestic-water needs without additional storage capacity. At the same time the need of water for further irrigation and domestic uses is not so pressing as the need for flood control.

Fifth. Before storage is provided on the lower river there must be a compact between the seven Colorado River States if we are to avoid expensive and dilatory litigation, and avoid the danger of turning the Colorado River control over to the Federal Government as against the interested States. There should also be a treaty with Mexico before storage which increases the low-water flow of the river is provided.

Sixth. The bill before us presents us with a single plan of river development which is wrong in its conception because it fixes the future development at this time upon a basis which will prevent the economical, orderly and logical development of this great resource.

Seventh. Congress is here asked to authorize and fix the site for the first dam upon the Colorado at a point where only a dam of inordinate size and height can be constructed because the required storage can not be provided at this site except by such a dam. Whether the dam is 300, 350, or 550 feet above the water level, the same major constructional difficulties, risks, delay, and expense are involved. The same is true as to any site in either Black or Boulder Canyon.

Eighth. That the engineering plan upon which we are asked to proceed with the construction of this dam is so obviously highly experimental, positively dangerous in trial and impossible of successful accomplishment, that it is unthinkable that Congress should authorize an attempt at its consummation; that to do so in the face of the warnings before us from the ablest engineers in the country would constitute a gross neglect of the plainest mandate of common sense and prudence.

Ninth. That the only semblance of justification which can be offered for this dam and this plan of river development is the creation of the greatest single hydroelectric power project in history, for which there is not only no need but actually no economic demand, and would therefore constitute a continuing drain upon the Federal Treasury. It follows that the inclusion of power in this project instead of making it self-supporting and financially sound only adds to the delay and jeopardizes the primary objects of flood control and storage for other purposes.

Tenth. That the economic arguments as to the attractiveness of this project from the standpoint of power are based upon assumptions just as unsound and impossible of realization as are the engineering plans.

Eleventh. That the uncertainty as to the time required for construction of Boulder Dam, the uncertainty of time required for preliminary litigation which will follow enactment of this measure, the uncertainty as to the cost, the provision in the bill for periodic readjustment of the sale price of the power to meet competitive conditions absolutely negative the oft-repeated representation that this project can be carried through without risk of loss to the Government.

Twelfth. That we are presented with another plan of river development for the lower Colorado which has the support of two Government bureaus and the weight of engineering authority, and is further supported by the most complete study of the problem which has been made, which was completed in 1925, a year after the plan before us in this bill, and which report is published in printed form by the Government, supported by dozens of photographs, survey maps, drawings, and designs.

Thirteenth. That this alternate plan of development informs us of the possibility of constructing a storage reservoir at a point where a dam which does not necessitate the departure from standard engineering practice will hold back from ten to twelve times the amount of water which would be stored by a dam of the same height at the site proposed in this bill; that this dam is 120 miles nearer to the lands to be protected, provides ample storage capacity for all purposes except power development, and can be constructed at a fraction of the cost of Boulder Dam; that this dam as the first unit of a comprehensive and orderly development of the Colorado River will not interfere with the construction of other dams as conditions justify their construction for power purposes in the great canyon system of the river; that this dam should be constructed in all events for regulation of the river below the canyon section and as a safety measure against the failure of dams higher up the river.

We are confronted with only one problem which has any aspect of real urgency, and that is the flood menace to Imperial Valley in California. It is not a flood menace in the common acceptation of that term. It is not a menace to lives. It is a danger that the Colorado River may break the dikes which confine it to its present course some 70 miles from the Imperial Valley; that having broken the dikes it may dig itself a new channel from the present one to the Salton Sea, the "sink" in the bottom of Imperial Valley, and over a period of years, unless it is rediverted, gradually raise the level of water in that "sink" until it would drown out the farm land in the valley. While this is an unusual kind of flood menace, and while the property involved is valued only at about $100,000,000, it is nevertheless a menace to which we should be attentive in the consideration of similar problems.

Now, we are presented in this bill with a possible, partially delayed solution for this menace, which solution at the best would not be effective for 7 or 8 years, and which probably would not be effective for 10 to 15 years. Flood control is only an incident in the project authorized by this bill; it is subordinated, and badly subordinated, to the real object of the bill which is power development.

We are, nevertheless, confronted with the question of what we should do to meet the problem of Colorado River development, particularly with reference to flood control and ultimately and more remotely with reference to storage for irrigation and domestic uses of its waters, and finally, with reference to safeguarding and protecting the potentiality for power development.

What shall we do? I am convinced that this bill offers no solution whatever for the problem before us. Since it is based upon an impossible engineering scheme of dam construction and upon an erroneous plan of river development I am unable to see how the bill can be amended to meet the situation.

I am nevertheless not content simply with proposing that this bill should not pass—not content that we should simply reject this plan. I should prefer that we provide a substitute for this bill which will provide the benefits which it is supposed to provide and yet avoids.

The amendment which I propose is designed to provide that which the proponents of this bill profess to be concerned about, namely, flood control, in the quickest and most effective manner possible. It avoids the delay, the risks, the uncertainty, the impossible features of the present proposal. It leaves the more difficult problem of a general plan of development of the river for future determination when we have more complete facts before us, and it avoids the great positive mistake of this measure which fixes the development of the river according to a plan which is obviously inadvisable and would be a source of constant regret in the years to come.

Finally, I propose the solution of the immediate problem by a method which protects the future, meets the present needs economically and wisely, and avoids the terrific risks and inordinate delay of the present measure.

In conclusion, I can not too strongly impress upon you the importance of avoiding, in such action as you may take, the risk of a mistake which would invite the most disastrous and lamentable consequences. Setting aside, for the moment, consideration of the huge expenditure of money, the certainty of economic failure, the improbability of successful execution of the engineering plan proposed, the losses of life and property which might be entailed, the lack of necessity for such a structure as proposed in the text of the bill—disregarding these matters, I appeal to you to consider this whole subject in the light of our responsibility to the Nation as a whole.

We can not, must not, deal politically with this great problem of the Colorado, nor can we deal with it dramatically, or from a viewpoint of prejudice, no matter what sort. Neither should we permit ourselves to be hypnotized by the tongue of eloquence, influenced by the insidiousness or the blatancy of propaganda, or lured by an artist's picture.

To proceed without regard to the precedent we are setting upon the vexed question of the rights of the States and without regard to the effect upon a fundamental theory of Government would indeed be serious. But all must agree that to proceed without the considered advice of the best engineering and economic authorities crystallized into a comprehensive plan of development would be to put at risk not only all the purposes sought by the bill but also much of the great treasure which this river holds for posterity.

I respect the opinions of the sponsors of this bill and I admire their zeal; but they are not engineers, they are not economists, and they have not produced a plan which accords with the controlling physical conditions which exist upon this river.

I shall be content, as I believe you will be, in view of the enormous importance and involved consequences of this matter, to take the only constructive and statesmanlike course open to us, namely, to submit the problem to the study of an able and disinterested board of engineers and, at the same time, to make the promptest possible provision for flood protection to the Imperial Valley.

Mr. President, I send to the desk a proposed amendment, in the nature of a substitute, and ask that it be printed in the RECORD.

Mr. SMOOT's amendment, in the nature of a substitute, intended to be proposed by him to the bill (S. 728) to provide for the construction of works for the development of the lower Colorado River Basin, for the approval of the Colorado River compact, and for other purposes, was ordered to be printed, and to be printed in the RECORD, as follows:

Strike out all after the enacting clause and insert in lieu thereof the following:

"That the President of the United States is hereby authorized to appoint a board composed of five members, four of whom shall be engineers of high standing and national reputation in their profession, two from the Corps of Engineers, United States Army, and two from civil practice, and the chairman of said board shall be a business executive. None of the members of said board shall be a resident of either of the States of Wyoming, Colorado, Utah, New Mexico, Nevada, Arizona, or California. The said board shall examine into and investigate the Colorado River for the purpose of making recommendations to the President as to the most feasible method and the cost of obtaining flood control of the waters thereof and as to a comprehensive plan of development and utilization of the water resources of said river.

SEC. 2. That the Secretary of War is hereby authorized to construct on the Colorado River flood-control structures, recommended by and located at a site or sites to be selected by the above-mentioned board.

SEC. 3. That for the purpose of erecting such flood-control structures on the Colorado River and of defraying salaries and expenses of said board as fixed by the President, there is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $20,000,000, or as much thereof as required to carry out the provisions of this act.

SEC. 4. That in case the recommendations for flood control include the construction of any dam or dams the construction of said dam or dams shall not be commenced until the Colorado River compact signed at Santa Fe, N. Mex., November 24, 1922, shall have been ratified by the States of Wyoming, Colorado, Utah, New Mexico, Nevada, Arizona, and California and have been approved by the Congress of the United States; or until all of said States shall have agreed by compact approved by the Congress of the United States that no title to waters which may be stored by such flood-control dam or dams shall be acquired in excess of present perfected rights.

Mr. PHIPPS obtained the floor.

Mr. KING. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. SHEPPARD in the chair). The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

| | | | |
|---|---|---|---|
| Ashurst | Edwards | La Follette | Shortridge |
| Black | Fletcher | Locher | Simmons |
| Blaine | Frazier | McKellar | Smoot |
| Blease | George | McNary | Steiwer |
| Borah | Gerry | Mayfield | Stephens |
| Brookhart | Glass | Moses | Swanson |
| Broussard | Gooding | Norbeck | Tydings |
| Bruce | Harris | Norris | Tyson |
| Capper | Hayden | Oddie | Vandenberg |
| Caraway | Howell | Overman | Wagner |
| Copeland | Johnson | Phipps | Walsh, Mass. |
| Couzens | Jones | Pittman | Walsh, Mont. |
| Curtis | Kendrick | Reed, Pa. | Warren |
| Dale | Keyes | Schall | Waterman |
| Dill | King | Sheppard | |

Mr. JONES. I was requested to announce that the Senator from Oklahoma [Mr. PINE], the Senator from Rhode Island [Mr. METCALF], and the Senator from West Virginia [Mr. GOFF] are detained in committee.

Mr. GERRY. I wish to announce that the senior Senator from Mississippi [Mr. HARRISON] and the junior Senator from Oklahoma [Mr. THOMAS] are necessarily detained from the Senate as members of the committee appointed to attend the funeral of the late Representative Madden.

The PRESIDING OFFICER. Fifty-nine Senators having answered to their names, a quorum is present.

[Mr. PHIPPS addressed the Senate. After having spoken for a few minutes, he was interrupted by the message from the House of Representatives which follows. His speech is published entire in RECORD of May 2.]

DEATH OF REPRESENTATIVE SWEET, OF NEW YORK

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, communicated to the Senate the intelligence of the death of Hon. THADDEUS C. SWEET, a Representative from the State of New York, and transmitted the resolutions (H. Res. 182) of the House thereon.

The PRESIDING OFFICER. The Chair lays before the Senate resolutions from the House of Representatives, which will be read.

The Chief Clerk read the resolutions (H. Res. 182), as follows:

IN THE HOUSE OF REPRESENTATIVES,
*May 1, 1928.*

*Resolved*, That the House has heard with profound sorrow of the death of Hon. THADDEUS C. SWEET, a Representative from the State of New York.

*Resolved*, That a committee of 25 Members of the House, with such Members of the Senate as may be joined, be appointed to attend the funeral.

*Resolved*, That the Sergeant at Arms of the House be authorized and directed to take such steps as may be necessary for carrying out the provisions of these resolutions, and that the necessary expenses in connection therewith be paid out of the contingent fund of the House.

*Resolved*, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased.

*Resolved*, That as a further mark of respect this House do now adjourn.

Mr. COPELAND. Mr. President, as the Senate has just heard, it is the sad duty of the Senators from the State of New York to announce the death of Hon. THADDEUS C. SWEET, Congressman from the thirty-second district of our State. He was killed in an airplane accident a few hours ago.

Mr. SWEET was not of our party, but he was our friend; and both Senator WAGNER and I were friends of his. We feel great grief at the untimely death of this fine man.

Mr. SWEET was a member of the assembly of our State for a great many years. He was speaker of the assembly for a period of six years immediately preceding his election to the Congress.

I send to the desk resolutions with regard to the death of this broad-minded, cosmic-minded, far-seeing statesman. His death brings a real loss to the Nation.

The PRESIDING OFFICER. The resolutions will be read.

The resolutions (S. Res. 218) were read, considered by unanimous consent, and unanimously agreed to, as follows:

*Resolved*, That the Senate has heard with profound sorrow the announcement of the death of Hon. THADDEUS C. SWEET, late a Representative from the State of New York.

*Resolved*, That a committee of 10 Senators be appointed by the Presiding Officer to join the committee appointed on the part of the House of Representatives to attend the funeral of the deceased Representative.

*Resolved*, That the Secretary communicate these resolutions to the House of Representatives and transmit a copy thereof to the family of the deceased.

Under the second resolution the Presiding Officer appointed as the committee on the part of the Senate the senior Senator from New York, Mr. COPELAND; the junior Senator from New York, Mr. WAGNER; the senior Senator from Kansas, Mr. CURTIS; the senior Senator from Arkansas, Mr. ROBINSON; the junior Senator from Connecticut, Mr. BINGHAM; the Senator from Pennsylvania, Mr. REED; the senior Senator from Maine, Mr. HALE; the junior Senator from Massachusetts, Mr. WALSH; the senior Senator from Virginia, Mr. SWANSON; and the junior Senator from New Jersey, Mr. EDWARDS.

Mr. COPELAND. Mr. President, as a further mark of respect to the memory of the deceased Representative, I move that the Senate do now adjourn.

ADJOURNMENT

The motion was unanimously agreed to; and (at 4 o'clock and 35 minutes p. m.) the Senate adjourned until to-morrow, Wednesday, May 2, 1928, at 12 o'clock meridian.

---

## HOUSE OF REPRESENTATIVES

### TUESDAY, *May 1, 1928*

The House met at 12 o'clock noon.

The Rev. C. Howard Lambdin, of the Anacostia Methodist Episcopal Church, offered the following prayer:

O Thou, who art the eternal and the everlasting, as we lift our minds to meet the challenging duties of this day we pray for guidance into that wisdom that is greater than our own.

We remember in this moment of our meditation the life and service of one of the honored Members of this body who has been called from our midst. May Thy blessing be with his family, and all others who share intimately in this loss. And continue to raise up in our land such public officers who shall give of their life and loyalty to the security of our Government.

Bless Thou the Nation and all men in places of authority, and sanctify our service this day to the common good, we pray, through Jesus Christ our Lord. Amen.

The Journal of the proceedings of yesterday was read and approved.

SENATE BILL AND JOINT RESOLUTION REFERRED

A bill and a joint resolution of the following titles were taken from the Speaker's table and, under the rule, referred to the appropriate committees, as follows:

S. 433. An act for the relief of Harry C. Bradley; to the Committee on Claims.

S. J. Res. 135. Joint resolution making an emergency appropriation for flood protection on White River, Ark.; to the Committee on Flood Control.

ENROLLED BILLS AND JOINT RESOLUTIONS SIGNED

Mr. CAMPBELL, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bills and joint resolutions of the following titles, when the Speaker signed the same:

H. R. 8132. An act authorizing the appropriation of $2,500 for the erection of a tablet or marker at Medicine Lodge, Kans., to commemorate the holding of the Indian peace council, at which treaties were made with the Plains Indians in October, 1867;

H. R. 13331. An act to authorize the President to present the distinguished flying cross to Col. Francesco de Pinedo, Dieudonne Costes, Joseph Le Brix, Ehrenfried Gunther von Huenefeld, James C. FitzMaurice, and Hermann Koehl;

H. J. Res. 192. House joint resolution to provide for the coinage of a medal in commemoration of the achievements of Col. Charles A. Lindbergh; and

H. J. Res. 239. House joint resolution authorizing the erection in the District of Columbia of a monument in memory of Peter Muhlenberg.

The SPEAKER also announced his signature to enrolled bills of the Senate of the following titles:

S. 4046. An act authorizing the Henderson-Ohio River Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Henderson, Ky.; and

S. 4180. An act authorizing the attendance of the Marine Band at the Confederate Veterans' Reunion at Little Rock, Ark.

BILLS AND JOINT RESOLUTIONS PRESENTED TO THE PRESIDENT

Mr. CAMPBELL, from the Committee on Enrolled Bills, reported that this day they presented to the President of the United States, for his approval, bills and joint resolutions of the House of the following titles:

H. R. 8132. An act authorizing the appropriation of $2,500 for the erection of a tablet or marker at Medicine Lodge, Kans., to commemorate the holding of the Indian peace council, at which treaties were made with the Plains Indians in October, 1867;

H. R. 13331. An act to authorize the President to present the distinguished flying cross to Col. Francesco de Pinedo, Dieudonne Costes, Joseph Le Brix, Ehrenfried Gunther von Huenefeld, James C. FitzMaurice, and Hermann Koehl;

H. J. Res. 192. House joint resolution to provide for the coinage of a medal in commemoration of the achievement of Col. Charles A. Lindbergh; and

H. J. Res. 239. House joint resolution authorizing the erection in the District of Columbia of a monument in memory of Peter Muhlenberg.

ADDRESS OF HON. R. WALTON MOORE, OF VIRGINIA

Mr. BLAND. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing therein an address delivered on Saturday last at Fredericksburg, Va., by Hon. R. WALTON MOORE, a Member of this House, on the subject of James Monroe.

The SPEAKER. Is there objection?

There was no objection.

Mr. BLAND. Mr. Speaker, pursuant to leave this day granted, I extend my remarks by printing in the RECORD the admirable address delivered in Fredericksburg, Va., on Saturday, April 28, 1928, by my colleague, R. WALTON MOORE, on the occasion of the dedication as a national shrine of the law office in that city in which James Monroe, subsequently President of the United States, began the practice of law. The address deals with the life of Monroe and is a valuable contribution to the history of that period.

Mr. R. WALTON MOORE said:

HON. JAMES MONROE

Before he came to Fredericksburg and occupied the law office which to-day, on the one hundred and seventieth anniversary of his birth, through the generosity of his descendants, is being dedicated as a patriotic shrine, Monroe was very familiar with this town. It was the nearest town to his father's plantation in Westmoreland County, where he was born, a spot which should be enduringly marked, and to the plantation of his mother's family in King George. Those with whom he had business relations, some of his kinsmen, and many of his devoted friends were among its people.

One can not think of Fredericksburg, now in the springtime of new growth and progress, without reverting to the past, for the history of this locality and the region surrounding it is largely the history of what has been called the Athenian period of Virginia. Here are guarded the home and tomb of the mother of Washington and the home of his sister, and just across the Rappahannock River is the Ferry farm, where a part of Washington's childhood was spent. Here are cherished memories of John Paul Jones, who went from here as the pioneer and founder of the American Navy, the first to raise the flag of his country on a naval vessel, and memories of a long line of other unforgotten heroes.

Consider the constellation of shining names which are associated with this historic region. Within a maximum distance of 60 miles of Fredericksburg were the homes of more of the foremost men who won

independence for the Colonies, founded the Government, and, by their wisdom, insured its perpetuity, than in any similar area anywhere: Four Presidents—Washington, Jefferson, Madison, and Monroe—all of them great statesmen and one of them a great soldier; Patrick Henry and Richard Henry Lee, the most eloquent orators of the Revolution; George Mason, the author of the bill of rights, announcing the principles which form the basis of free institutions; John Marshall, who did not assist in framing the Constitution but by his decisions made it a living thing. These men long ago passed from the scene, but, even so, they are "the dead but sceptered sovereigns who still rule our spirits from their urns." These men lived in the same social and political environment, and, though differing from each other as one star differs from another star, it is easy to believe that each derived inspiration from the others in their common effort to achieve a higher and better destiny for their country than the nations up to that time had known.

Monroe was the youngest of the group, the junior of Mason by 33 years, of Washington and Henry by 26 and 22 years; 15 years the junior of Jefferson and the junior also of Madison and Marshall. It is some evidence of his extraordinary qualities that whether in cooperation or not with his remarkable contemporaries, whether in agreement or disagreement with them, always honest and deliberate in forming his opinions and courageous in maintaining them, he steadily held upon his course; and never, throughout his long life, lost the confidence and support of the public. Toward the end, when the shadows were beginning to fall about him, the approval of the public was manifested by his elevation to the Presidency. Of the 221 electoral votes, he received 183. At his second election he received all the votes except one. It is stated that this lone vote was based upon a sentimental objection to any candidate being permitted to share with Washington the honor of a unanimous election.

Here was Monroe's residence from the fall of 1786 to the late summer of 1789. Back of his advent here his career had been notable. Glance at the events with which he was connected in the little over a decade before he opened this office in his twenty-ninth year.

He was at William and Mary College when the students were called to arms and was quick to offer himself. He was appointed a lieutenant in the Seventh Company of the Third Virginia Regiment, the company commanded by Capt. William Washington, of Stafford County, and the regiment first commanded by Col. Hugh Mercer until he was promoted to the rank of brigadier general; and then by Col. George Weedon, Mercer and Weedon both citizens of Fredericksburg. The Virginia forces marched to the north, and Monroe had his baptism of fire in the engagement at Harlem Heights, in the city of New York, and then participated in the engagement at White Plains. Soon came the picturesque and daring affair at Trenton, where in the very front of the attack Monroe received a wound which would have caused his death but for timely surgical aid. Recovering, he was assigned to the staff of Lord Stirling, with the rank of major, and fought in the bloody battles of Brandywine, Germantown, and Monmouth, and experienced the privations and sufferings of the bitter winter at Valley Forge.

A good deal has been written about him as a soldier. A writer, referring to the capture of Trenton, speaks of him as "an 18-year-old boy who grew a great deal that morning." This comment recalls what Napoleon said when some one meeting him expressed surprise that the conqueror of Italy should be so youthful. He remarked that a man soon grows old on the battle field. General Washington wrote of Monroe, "He has in every instance maintained the reputation of a brave, active, and sensible officer." The English historian, Trevelyan, singling out for discussion two young officers, Alexander Hamilton and another to whom he alludes as "the junior officer in William Washington's company" says, "If, in the course of ages, both their memories were to perish, that of Lieutenant Monroe would in all likelihood be the last forgotten of the two, for he was the famous Monroe who in December, 1823, enunciated the policy which defeated the machinations of the Holy Alliance and deprived Spain of her American colonies." That reference is, of course, to the Monroe doctrine, the centennial anniversary of which was celebrated in 1924 all over this land and in others.

Washington was anxious to provide a suitable command for his fellow Virginian so as to retain him in the North, but was unable to do so, and Monroe returned to Virginia in 1780 and was appointed by Governor Jefferson a lieutenant colonel and sent to the Carolinas on a military mission. In 1782, when independence had been gained and there was important work for the best men in the field of government, Monroe was elected a member of the Virginia Legislature from King George County, and immediately appointed a member of the executive council, and he so impressed the legislature that the next year it elected him a delegate to the Continental Congress, where he continued to serve until just before settling in Fredericksburg. There is no opportunity now to review his record in the legislature and Congress, which gave him a very high standing in both bodies, but I may pause to mention that he was associated with Jefferson in consummating the transfer of the territory northwest of the Ohio River from the ownership of Virginia to the ownership of the United States, save for which there would have been no such Constitution and no such Republic as we now have. In the library at Washington there is preserved the original deed by which Jefferson, Monroe, and two other Virginia delegates in the Continental Congress conveyed for Virginia to the United States the territory now embracing five States and a portion of a sixth. Not elsewhere is there a conveyance of parallel interest and magnitude. To this day the deed is as legible as when Monroe signed it, attached his seal, and acknowledged it before a local official. Following that transaction, he and Jefferson were in close contact in preparing the ordinance of 1784 for the government of the Northwest Territory, on which was based the celebrated Ordnance of 1787.

Before his election to the legislature Monroe had studied law under George Wythe at Williamsburg and under Governor Jefferson at Richmond. Wythe was a man of wonderful ability and learning and a resolute advocate of liberal principles. He held the chair of law at William and Mary, provided for his occupancy at the suggestion of Jefferson, who delighted to call Wythe his "master and friend"; and except Sir William Blackstone, he was the first law professor on either side of the ocean. Some idea can be had of what Wythe taught his students from his own statement that it was his chief aim "to form such characters as may be fit to succeed those who have been ornamental and useful in the national councils of America." His aim was to train them to be statesmen. That Jefferson was a thoroughly learned and capable lawyer is well known, and it is equally well known that, having discerned what manner of man young Monroe was, he gave him his unreserved friendship. The ties which bound the two together never weakened, but became stronger as they moved through life.

When he opened his office Monroe, who was never in easy circumstances, because always compelled to neglect his private affairs, was anxious to enter upon a practice which would make reasonable provision for his needs. But we can believe that he did not find the outlook very encouraging. Virginia was almost wholly rural and sparsely peopled. According to such statistics as are available, the population of the State, including what is now West Virginia, was about 700,000. The population of Spotsylvania County, of which this town was a part, was about 5,000, and the total population of that county, King George, Stafford, and Orange was about 19,000. As late as 1830 the population of Fredericksburg was only 3,300. The era of varied and complicated business activity was far distant. There was certainly not much business which could have been productive of substantial remuneration for lawyers. Even in towns larger than any of the Virginia towns it was the common saying that lawyers might manage to live well, but almost always died poor. John Marshall, during his first year of practice in Richmond, which was the leading town of the State, received but four fees, and they were small.

Having mentioned Marshall, I may turn aside for a moment to suggest how closely connected were his career and that of Monroe up to the time of the Virginia Constitutional Convention of 1788. They went out together to the Revolution from William and Mary, Monroe a lieutenant of one company and Marshall lieutenant of another company, in the same regiment; together they shared the dangers and hardships and the glory of the northern campaign, and Marshall, for the same reasons which impelled Monroe, returned to Virginia before the end of the war. Marshall, like Monroe, studied law under Wythe. They served at the same time in the Virginia Legislature, where they were very intimate.

As was long ago observed, the law is a jealous mistress, who refuses her favor to all but her constant suitors. There can be no doubt that Monroe could have become a highly successful lawyer, but he was not to find time to apply himself to the practice of his profession in any continuous or fruitful manner. To use the words of Lord Bacon, he was, from first to last, "indentured to the public service." Such was his fate, and that it was his fate we can not help rejoicing.

There is little known or written of him as a lawyer. William Wirt, who was Attorney General in his Cabinet, and himself an eminent lawyer, ranking with Webster and Pinckney, and with Gen. Walter Jones, a kinsman of Monroe and one of the leaders of the bar of the Supreme Court, mentions Monroe as "a very laborious lawyer," but does not intimate what were his labors in Fredericksburg or while he rode the circuit in the adjoining counties according to the custom of the day. I have looked through his printed correspondence, and the manuscript letters to him of his uncle, and adviser, Judge Joseph Jones, of King George, whose distinction the Government has recognized in recent years by publishing a portion of his correspondence, and have discovered only fugitive references to Monroe's professional activities. His numerous letters to Jefferson and Madison dwell less upon his practice than on other matters. On October 12, 1786, he writes Jefferson from New York, where he had been at work in the Continental Congress, "I set out to-morrow for Virginia, with Mrs. Monroe, by land. My residence will be for the present in Fredericksburg. * * * I should be happy to keep clear of the bar, if possible, and at present I am wearied with the business which I have been engaged in here." In May, 1787, he writes Madison from Fredericksburg: "The scale of my observations is a narrow one and confined entirely within my room," and then he expresses his anxiety as to the result of the Constitutional Convention about to assemble in Philadelphia. In July of the same year, writing from Fredericksburg to Jefferson, he says, "Since I left New York I have been employed in the discharge of duties entirely new to me, oftentimes embarrassing, and of course highly interesting, but which have

sought the accomplishment of only a few objects. In October last I was admitted to the bar of the court of appeal and chancery and the April following of the general court. In the course of the winter I moved my family to this town, in which I have taken my residence with a view to my profession. These pursuits, though confined, have not been attended with the less difficulty. * * * My standing at the bar has been so short that I can not judge of it in that respect, though am inclined to believe it not an ineligible position for one of that profession. * * * Mrs. Monroe has added a daughter to our society, who, though noisy, contributes greatly to its amusement. * * * The county in which I reside have placed me in the legislature. I have been mortified, however, to accept this favor from them at the expense of Mr. Page. I suppose it might be serviceable to me in the line of my profession—my services have been abroad and the establishment others have gained at the bar in the meantime requires every effort of my power to repair the disadvantage it hath subjected me to." And then there is a discussion of the political situation. In April, 1788, he writes Jefferson from Richmond, where he was attending the legislature: "The real pleasure of my life, which consists in being at home with my family, has been interrupted by an attendance at the bar and service in the legislature since I left New York. Although neither of these employments has many allurements in it, yet I think the latter rather a more uncomfortable one than the former. Perhaps, however, I obtained a seat in it at a very unfortunate period both as to public affairs and my own temper of mind."

We can easily believe that most of those with whom he conferred in this office were not clients, but political friends and followers. We can not imagine that he was building up a very successful or lucrative practice, for he was constantly diverted toward public affairs. Consider that point for a moment. During the three years of his residence here he served a part of the time as a member of the legislature from Spotsylvania County. He served a part of the time as representative of the county in the Virginia convention, which ratified the Constitution; and to show the fairness of the man, although he had opposed ratification which General Washington favored and was most influential in securing, Monroe after the convention wrote in glowing terms of the man who had lead the armies of the Revolution. Here he engaged in a campaign for election to the first Congress. Monroe became a candidate in this district against Madison, the district being composed of the counties of Albemarle, Amherst, Fluvanna, Goochland, Spotsylvania, Orange, and Culpeper. He was defeated, but that his friendly relations with Madison were not interrupted appears from the letters which passed between them when the contest was over.

In 1789 he went from Fredericksburg to Albemarle more advanced as a public man than when he came here, but without having had any opportunity to forge to the front as a lawyer. In the very next year he was elected to the United States Senate, and thence onward he gave himself up to the service of the public. How continuously he served the public is suggested by an enumeration of the positions he held: United States Senator, member of the Virginia Legislature, and four times at intervals Governor of the State; the representative of this country in dealing with matters of extreme importance in France, Spain, and England; Secretary of State in the Madison administration, and for several months while the war with England was in progress, also Secretary of War, and for eight years President. Then going into retirement he received from the people of Virginia, who had already so lavishly honored him, one further mark of their confidence and affection. He was chosen president of the constitutional convention of 1829–30, composed of the most prominent men of the State, reaching at that time to the Ohio River. Madison and Marshall were members of the convention. Madison placed Monroe in nomination and Marshall and Madison escorted him to the chair. Thus the paths of Marshall and Monroe, which had diverged, again united.

Monroe, under the stress of financial troubles, was forced to abandon the home in Loudoun County where he had hoped to spend his last days. He moved to New York, where more than half a century before he had fearlessly fought for the cause of independence, and there he died in 1831.

At the outset I spoke of the Athenian period of Virginia, and in order that we may be reminded of the rich lessons taught by the services of Monroe and his leading contemporaries, let me quote, in conclusion, with an immaterial change, the words of Pericles, a great citizen of Athens, in one of the noblest orations of antiquity:

"The whole earth is a sepulcher of famous men and their glory is not graven only on the stones over their native earth, but lives on far away, without visible symbol, woven into the stuff of other men's lives. For you it now remains to rival what they have done, and knowing the secret of happiness to be freedom, and the secret of freedom to be a brave heart, squarely to face the difficulties of this day and the problems and perils of the days to come."

### CORRECTIONS IN THE RECORD

Mr. LAGUARDIA. Mr. Speaker, I rise to propound a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. LAGUARDIA. In respect to corrections in the RECORD which are purely stenographic or typographic errors, may they not be corrected by the Member submitting them to the Clerk at the reporters' desk;

The SPEAKER. The Chair thinks so.

Mr. LAGUARDIA. And it does not require unanimous consent.

The SPEAKER. The Chair thinks that such corrections that are merely typographic may be made without unanimous consent.

### CHAMP CLARK MEMORIAL BRIDGE

Mr. CANNON. Mr. Speaker, I ask unanimous consent to proceed for one minute.

The SPEAKER. Is there objection?

There was no objection.

Mr. CANNON. Mr. Speaker, on June 9 next the Champ Clark Memorial Bridge across the Mississippi River at Louisiana, Mo., will be opened for traffic with appropriate ceremonies. It will be a notable occasion. Governors of States and mayors of cities, and other distinguished guests, will participate in the program, and visitors will be welcomed and entertained with traditional Missouri hospitality.

Members of the House will be particularly interested not only of the importance of the event in the economic and transportation history of the Central West, but because of their affection and regard for Speaker Champ Clark, for whom the bridge is named, and for whom it will be an enduring memorial.

Arrangements are being made whereby trains carrying delegations from the East to the Kansas City convention will stop over for the dedicatory ceremonies on the morning of the 9th of June, and it is to be hoped that as many Members as can will stop over for the dedication and a brief visit to this progressive Missouri city.

Those of you who find it impossible to visit us at this time we trust will take advantage of the opportunity the first time you travel west to come by way of Louisiana, Mo., and the new Champ Clark Bridge, which greatly reduces the distance between Chicago and Kansas City and which makes Highway No. 54, from Washington, D. C., to Sacramento, Calif., one of the most direct transcontinental highways of the Federal system. [Applause.]

### AGRICULTURAL SURPLUS CONTROL BILL

Mr. TILSON. Mr. Speaker, I am requested by the chairman of the Committee on Agriculture to ask unanimous consent that the time for general debate on the agricultural surplus control bill be extended for one hour and a half, but to be finished to-day. As I understand it, there are three hours and a half remainining of the time already allotted, and it is desired to add an hour and a half.

Mr. GARNER of Texas. Is it the purpose to close general debate to-day?

Mr. TILSON. That is the understanding.

Mr. LAGUARDIA. Mr. Speaker, reserving the right to object, do I understand that Wednesday and Thursday will be devoted to the reading of the bill?

Mr. TILSON. There is no understanding as to Wednesday.

Mr. LAGUARDIA. The reason I inquire is that the Army will hold aerial maneuvers at Langley Field on Friday next. A great many Members are interested and feel that it would be instructive and beneficial to attend those maneuvers. They are planning to go. If we could know just what the plans of the House are in the meantime, it would guide us as to whether or not we should forego that trip or stay here for the consideration of the agricultural relief bill.

Mr. TILSON. It is impossible to tell the gentleman so far in advance just what we shall be doing at that time. Before the day is over we shall arrive at a conclusion as to whether we shall dispense with Calendar Wednesday, postpone it, or go on with Calendar Wednesday business.

Mr. VESTAL. Mr. Speaker, reserving the right to object, I think we ought to make as much progress as possible with this agricultural bill. It seems to me that we ought to be able to vote on the bill late Thursday evening. I know the entire Indiana delegation is very anxious to get back to Indiana. We have our primaries on Tuesday next. We are all staying here—and will stay through to vote on the bill—but if we could get through with it by Thursday evening it would be a wonderful help to the Indiana delegation, because we would all like to go home.

Mr. KVALE. Is it proposed to have a session of the committee this evening?

Mr. TILSON. No; there has been no mention of that.

Mr. HAUGEN. Mr. Speaker, we ask for the extra hour and a half in order to take care of the Members who wish to address the committee.

Mr. JONES. What was the request of the gentleman from Connecticut?

Mr. TILSON. My request is that the time for general debate be extended an hour and 30 minutes, with the understanding that the time is to be used to-day. I suppose that the time will be divided just the same as the other time is divided.

Mr. JONES. Mr. Speaker, in that connection I have two or three requests from Members who wish to speak on the debenture plan. I would like to know if we shall be yielded a portion of the time in the extension. In the original division we were supposed to have two hours.

Mr. ASWELL. That is the understanding.

Mr. JONES. All right.

Mr. MAPES. Reserving the right to object, Mr. Speaker, the original time was divided in so many ways, being in the control of six different Members, that there has been some misunderstanding in the committee at times as to how time is to be allotted, and there may be misunderstanding as to how this extra time is going to be divided. I think it would be well if we had a definite understanding as to who was to control the extra time of one hour and a half, whether it would be the gentleman from Iowa [Mr. HAUGEN] and the gentleman from Louisiana [Mr. ASWELL], exclusively, or split up in six different ways.

Mr. TILSON. As originally fixed in the rule the time was equally divided between the gentleman from Iowa [Mr. HAUGEN] and the gentleman from Louisiana [Mr. ASWELL], but at the same time they entered into an additional agreement, a gentlemen's agreement, which has been observed during the consideration of the bill.

Mr. ASWELL. I think we should go on in the same way that we have heretofore been dividing it.

Mr. LAGUARDIA. The only thing that the Committee on Agriculture seems to agree on is the division of time. [Laughter.]

The SPEAKER. Is there objection to the request of the gentleman from Connecticut?

Mr. TILSON. If there appears to be objection, I shall withdraw my request.

Mr. ASWELL. I do not think there should be any objection.

Mr. HAUGEN. There seems to be objection raised.

Mr. GARNER of Texas. Who objected?

Mr. TILSON. Let me restate my request. It is that an hour and a half of additional time be added to the time already allotted, and that it be divided equally between the gentleman from Iowa and the gentleman from Louisiana.

The SPEAKER. The gentleman from Connecticut asks unanimous consent that the hours of debate provided by the rule be extended one hour and a half, and that the control of the additional time be divided as is provided by the rule. Is there objection?

Mr. KINCHELOE. I object.

Mr. RAMSEYER. The gentleman from Louisiana [Mr. ASWELL] has already stated he would divide his time.

Mr. HAUGEN. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill S. 3555.

Mr. KINCHELOE. Mr. Speaker, I did not understand the proposition of the gentleman from Connecticut. I withdraw my objection.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The gentleman from Iowa moves that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill S. 3555. The question is on agreeing to that motion.

The motion was agreed to.

The SPEAKER. The gentleman from Michigan [Mr. MAPES] will please take the chair.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union for the further consideration of the bill S. 3555, with Mr. MAPES in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the further consideration of the bill S. 3555, which the Clerk will report by title.

The Clerk read as follows:

A bill (S. 3555) to establish a Federal farm board to aid in the orderly marketing and in the control and disposition of the surplus of agricultural commodities in interstate and foreign commerce.

Mr. ASWELL. Mr. Chairman, I yield 30 minutes to the gentleman from South Carolina [Mr. HARE].

The CHAIRMAN. The gentleman from South Carolina is recognized for 30 minutes.

Mr. HARE. Mr. Chairman and gentlemen of the committee, a few weeks ago I endeavored in a general way to bring to the attention of the House a plan for farm relief which I consider both economically and politically sound. I shall to-day attempt in a more detailed way to point out the actual operations of this plan, the same being embodied in H. R. 10562. But before doing so I wish to read for the benefit of Members of this House a few letters I have received in response to the address or speech I made here April 12. One of these letters comes from a Corn Belt farmer in the State of Illinois, and I will read only that part pertinent to this plan. The author of the letter says as follows:

I read with much interest your speech on farm relief.

Your argument on controlling production to the needs of consumption is the only possible way this relief can be brought about.

I will read a letter coming from a gentleman in the State of New York. The writer states that he was a member of the commission appointed by Congress in 1912 to go abroad and study the rural-credits problem, the agricultural-production problem, and the agricultural distribution problem. I assume, therefore, that he is a man of more than average information with reference to agriculture. He says:

I have seen the notice of your farm-relief plan. From what I have noted, it seems to me the wisest measure that has so far been introduced into Congress.

I have another letter here that may be of particular interest to Members from the South. This comes from an extension director of one of the cotton States. He says:

I have gone very carefully over the bill that you were good enough to send me and inasmuch as I am in sympathy with the McNary-Haugen bill I am free to confess that I think your bill is far superior. In the first place, the necessary machinery for the administration of the bill is already provided in the different departments. I am glad to see that you realize that the first aid from Congress for the relief of agriculture is providing a system and the loans necessary to control the crop surpluses which result from natural conditions. All that can be done for agriculture is surplus control, efficient production, and co-operative selling.

As we proceed in our discussion, I hope you may keep this latter suggestion in mind. That thought, you will note, comes from one of the State extension directors in one of our cotton States, and he analyzes the great farm problem to-day as surplus control, economic production, and scientific marketing, just exactly what we have attempted to illustrate by this chart [indicating].

It has been said and reiterated here time and again that there is a farm-relief problem. That being conceded it is unnecessary to dwell upon that phase of the subject any further. It has been suggested further that we are all in favor of it. I agree with that statement, and it is not my purpose this morning, friends, to offer any criticism to any plan that has been submitted to this House for consideration, but I hope to impress upon the minds of the Members of this body the feasibility of a plan that is worthy of consideration, that is sound in principle, and if enacted by this Congress, will become a law and will immediately begin to operate and give relief to agriculture.

I think I can best explain my bill and explain the plan by contrasting it with the ideas with which you are already familiar, ideas that have been brought out, analyzed, and interpreted by the proponents of other farm-relief measures.

In the first place, the solution of the farm problem should be approached from two angles. One is to consider the complaint which says that the plight of agriculture is due to the fact that the margin between the cost of production and the price received by the farmer is too small. As a matter of fact, the complaint is to the effect and the proof is conclusive that, in most cases, the margin between the cost of production and the price received by the farmer is absolutely wiped out, and in many cases he has become bankrupt. The problem, therefore, is to devise some plan or some scheme whereby agriculture or those engaged in this great industry will be able to widen this margin. That can be done in one of two ways; one is to reduce the cost of production and the other is to raise the price.

The next complaint is to the effect that the spread between the price the farmer receives and that paid by the consumer is too wide, and, gentleman, I invite your attention to this one phase in particular, for it was brought out in the hearings before the Agricultural Committee that the 17 major crops this last year cost the consumer twenty-two and a half billion dollars, of which the producers of these 17 crops received only seven and a half billion dollars; in other words, the producers of farm crops received only about one-third of the money that was paid by the consumers. So where is the greater problem, widening the margin between the cost of production and the price received by the farmer, or reducing the margin between the price received by the farmer and that paid by the consumer? I

hope to show before I finish that the operation of this plan will be able to do both. That is, we will be able to increase the price to the producer and decrease the price to the consumer. If we can show that the plan will do this, then I submit to fair-minded, honest, and intelligent men such a plan should command your consideration and cooperation.

The plan I have to submit is not wholly unlike those already submitted. It is quite like what we know as the McNary-Haugen bill in that it has a board consisting of 12 men from each Federal land-bank district. It has the cooperative feature in it; that is, the encouragement and the aiding of cooperative marketing. And, friends, I stop long enough here to say that, to my mind, the development of a scientific system of marketing is the one great problem before Congress to-day.

I have listened to men wider in experience, probably, men who have had observations broader possibly than that of mine, and I have yet to hear a man discuss the farm problem intelligently but what does not say that cooperative marketing is the solution. If that is true, then let us bend our energies and our efforts to that end and in that direction. Let us take the great arm of this Government and give assistance and material aid for that purpose.

This bill has a loan feature in it quite similar to that embodied in the McNary-Haugen bill, and very similar to that embodied in what is known as the Crisp bill. I think it is the sense of Congress that that provision is sound, but there is one difference to which I want to call your attention in this bill, and in that of other bills. In other words, the bill which has been presented to us for consideration by the Agricultural Committee provides that this board shall make loans to any cooperative association engaged in the handling, storing, or marketing of farm crops. Let us get that idea—any cooperative association. This bill provides that the board may make advances to but one commodity cooperative association engaged in the handling, storing, and marketing of that particular crop.

Mr. CLARKE. Does that include processing? For instance, as to dairy products, would it include processing?

Mr. HARE. It includes any crop that would come under the provisions of the bill, but it means this, that it would make loans to only one cooperative association for the purpose of handling the surplus of that particular crop, because if the Government is to furnish the money one organization can handle the surplus just as easily as 100 or 1,000 associations can and do it much cheaper.

I can best illustrate it by taking cotton. For instance, the Division of Markets in the Department of Agriculture tells me that we have 121 cooperative cotton associations in the South. Under the bill before us for consideration the board will be authorized and directed to make loans to possibly all of them in case they should make application. The bill further provides that there shall be no discrimination between them. In that event the board would be called upon to make 25, 50, or 100 or more investigations before a loan could be made, which would require quite a number of employees if these requests for loans should come practically at the same time.

Mr. CRISP. Will the gentleman yield?

Mr. HARE. Yes.

Mr. CRISP. And if you had 121 cooperatives holding the surplus and taking it off the market would there not be great competition between them when they were disposing of the surplus, whereas if you had one they would have control of the handling of that surplus?

Mr. HARE. The gentleman is correct, and I intend to come to that in a minute. Suppose they should make loans to 121 cooperatives for the purpose of handling the surplus of cotton? In that event they would have an enormous expense and an enormous overhead charge. And, friends, I want to stop again long enough to say that I have been a member of the cotton cooperative association almost ever since it has been in existence, and the only reason the cotton cooperatives have not succeeded to any great extent is because of the excessive overhead charges and the expenses incident to carrying the surplus. For instance, under the present arrangement every cooperative has a separate and distinct insurance contract with every lot of cotton in charge; it has a separate and distinct storage contract in handling cotton; and under the bill before us for consideration that board would have to make 500, 1,000, or 2,000 separate insurance contracts in order to store the surplus cotton.

Then you would have to pay the highest premium. Under the bill I am proposing the manager of the cooperative cotton association, which would cover the entire field, would say to the insurance companies of the country, "Give me your cheapest rate upon 5,000,000 bales of cotton or upon 6,000,000 bales of cotton." I am told by the Federal warehouse division that this year we will store approximately 7,000,000 bales of cotton, and under the present arrangement the cost ranges from $3 per bale to $7.25 per bale a year; but under the proposed arrangement a bale of cotton could be carried at not exceeding $3 a bale, or a saving of at least $4.25, or a total saving of about $28,000,000 on this one crop alone.

Now to the point that was suggested by my friend, the gentleman from Georgia [Mr. CRISP]. Suppose we had 121 cooperative cotton associations in the South. Suppose they all had loans from the board—one in Texas, one in Oklahoma, one in North Carolina, and one in South Carolina, and so forth. Without any coordination or understanding between these men, the manager of one would be selling in competition with the manager of the other. The overhead charges of one would be almost as much as the overhead charges of one commodity association. In other words, if we made loans to 100 cooperative cotton associations we would increase the cost of overhead charges one hundred times; and I want to say, friends, to my mind the great agricultural problem to-day is one of economic marketing and distribution. The idea is to eliminate the enormous expense, the enormous charges incident to marketing these various crops.

The cooperative marketing division in the Department of Agriculture says we have 10,803 cooperative associations in the United States that would be entitled to loans under the bill we have under consideration. Think of it! Ten thousand eight hundred and three applications coming to this board; and if it is a board of wisdom, which it will be, it would certainly have to have representatives to go to each place to look over the situation before it made a loan. It would take a never-ending army of employees to do it, and under the bill we are considering the expense would be borne by the producer, whereas under my bill the expense would be paid by the Government, in that we would use existing governmental agencies, which are already being paid.

Mr. ANDRESEN. Will the gentleman yield?

Mr. HARE. Yes.

Mr. ANDRESEN. I hope the gentleman will explain how his one cooperative is going to function and be financed, and so forth.

Mr. HARE. I will come to that in a moment; but before going into that I hope you will agree with me when I say that surplus control of any commodity is dependent upon three things: First, you have got to have money; second, you have got to have a place to store it; and third, you have got to have some method of marketing the surplus. Is this right? Do you agree with me on this proposition? Then if you do, I invite your attention to this chart or illustration [indicating]—

SURPLUS CONTROL

Finance: Intermediate-credit banks, Federal reserve banks, farm surplus board.
Storage: Federal warehouse system.
Marketing: Cooperative marketing division.

ECONOMIC MARKETING

Where: Bureau of Foreign and Domestic Commerce.
When: Cooperative Marketing Division, extension service.
How: Interstate Commerce Commission.

STABILIZED PRODUCTION

Acreage: Farm surplus board, Bureau of Agricultural Economics, extension service.
Diversification: Intermediate-credit banks, Federal reserve banks.

SURPLUS CONTROL

FINANCE

It will be observed from this illustration that the intermediate-credit banks, the Federal reserve banks, and the revolving fund provided for in this bill will furnish ample financial arrangements for handling the surplus of any and all crops and can do it at a minimum cost.

STORAGE

It will be observed further that the Government has made ample provision for handling and storing the surplus of nonperishable farm crops under the Federal warehouse system.

MARKETING

Then the Government has made provision for scientific and economic marketing of such crops through the establishment of its cooperative marketing division. The point I am making is that in the interest of economy and efficient administration there should be a coordination of these three agencies already in existence, already paid for by the Government; clothe them with a responsibility and associate them with this board and let it serve as a connecting link between these existing governmental agencies and the producers themselves, thereby effecting a surplus-control system at the least possible cost.

I imagine that if the President of the United States, who seems to be strong on economy, were evolving or making a plan for farm relief, he would do just like any other good business man or just like a good farmer does to-day, he would be certain to see if it were possible to use some of the agencies already available. You have a number of farmers here in Congress, as well as a number of good business men. Suppose you were going to enlarge your farming operations and add to them a new type of agriculture, what would you do? You would look around, you would make an inventory, you would make a survey to see whether or not your existing farming operations could be harmonized and dovetailed into each other in such a way that the capital already invested, the machinery already in hand, the labor already supplied, could in any way add to the strength and the operation of the new plan. Then why should not our Government do the same thing?

I submit the proposition to your intelligence and say that if this Government has already provided agencies for this very kind of work, why should they not be clothed with responsibility and called upon to take care of the surplus as provided for in this bill?

ECONOMIC MARKETING

Where, when, and how?

Let us go a little further and see how the operations of this bill will assist economic marketing. The author of the bill we have under consideration says, and I agree with him, that legislation enacted by Congress should be for the purpose of encouraging and promoting a system of marketing in the hands of the farmer himself. A few years ago we established a bureau of farm and domestic commerce primarily for the purpose of finding a market for the crops of our country, products of our factories, and anything that we might have to sell.

A few years prior thereto we established an extension service that would carry to the farmer the best methods of production and distribution. Then later we established a cooperative marketing division to assist in marketing the farm crops.

Then we have the Interstate Commerce Commission, and I want your eyes to be resting on this particular part of the illustration [indicating] while I refer briefly to the other phases of the subject. Why should we not call upon this bureau of farm and domestic commerce to tell us where we can find a market for the farm crops? That is its duty, that is embodied in the law creating that bureau. It could tell us at any time where we could find a market if it exists, and if it does not exist we should be so advised. Why should not we have the right to call upon the cooperative marketing division to tell us the best time to sell the crop? This is its business, and it ought to be called upon to function, and function in the most efficient way.

Then we come to the Interstate Commerce Commission. I have not heard a man speak on the question of farm relief in the three years I have been in Congress but what has raised his voice in protest against the unfair, unreasonable, and discriminatory freight rates the farmer has to pay. And yet there is no other bill before Congress to-day that has one scintilla or one item or one idea looking to the relief of agriculture from this great burden the farmers are compelled to carry.

You understand that if the wheat grower in Minnesota feels that the freight on a carload of wheat to New York City or San Francisco is excessive, he can file a complaint with the Interstate Commerce Commission submitting his views, as if he were in court, and prove that the rates are excessive. But you know that there is not a farmer who has the money to pay the lawyer, and if he has a lawyer there is not one out of a thousand who knows anything about freight rates, and the consequence is that when he goes to the Interstate Commerce Commission he makes a failure and loses his case.

What can be done under the provisions of this bill? The board would be charged with the responsibility and would know whether the freight on a carload of cotton from Texas to Massachusetts is excessive. It would know whether or not a carload of apples from Washington to the eastern seaboard is discriminatory. It would know whether or not the freight on a carload of peaches from the State of Georgia to the city of Chicago is excessive. Then the board would have the right, would have the authority, and would be charged with the responsibility of bringing a complaint before the Interstate Commerce Commission, submitting its evidence and asking for fair, just, and reasonable rates. You have been talking here several days about economic marketing of farm crops but we can tell from the very tenor of your voice that you are speaking of it as if it were a mere dream, and I think that is the way many people look at it. There can be no economic marketing system until there is some way for adjusting and effecting reasonable and just freight rates, and the bill I am proposing is the only one that proposes to do it. You will observe from the illustration above that this bill would coordinate such governmental agencies as the Bureau of Foreign and Domestic Commerce, the Cooperative Marketing Division, the Extension Service, and the Interstate Commerce Commission with the operations of the board, and by their coordinate efforts effect a system of marketing that would certainly be most effective and efficient in its operations, and would undoubtedly bring relief to agriculture.

Mr. LANKFORD. Will the gentleman yield?

Mr. HARE. I will.

Mr. LANKFORD. Will the gentleman discuss the control of production as embodied in the bill? To my mind the difficulty of farm relief is the question of properly controlling production.

Mr. HARE. I will come to that in a minute, that is the last, but not the least, phase of the problem.

Mr. SHALLENBERGER. Will the gentleman yield?

Mr. HARE. I will yield.

Mr. SHALLENBERGER. I would like to point out an illustration brought out before the Committee on Interstate and Foreign Commerce. If you want to ship a hundred pounds of steel or iron across the continent for export you only pay 40 per cent of the domestic rate. The rate on wheat for export is only a slight reduction. Iron and steel is 60 per cent less, wheat 4 per cent less, showing the immense advantage that steel has over wheat when sold for export.

Mr. HARE. The provision I have reference to in this bill should be able to correct this practice as it applies to agriculture.

STABILIZED PRODUCTION—ACREAGE AND DIVERSIFICATION

I will attempt to comply with the request of the gentleman from Georgia [Mr. LANKFORD]. I am thoroughly convinced that surplus control and economic marketing are two vital and essential factors to be considered in solving the agricultural problem, but I am convinced further that these two within themselves will not effect a permanent solution, and I base this observation not upon a guess, not upon a theory, but upon a principle that is universally admitted. This principle is that whenever the price of any crop, commodity, or article of any kind is raised to a point where it includes the cost of production plus a reasonable profit the universal tendency of the producer or producers of that commodity or article is to increase the production thereof. The experience and observation of ages teaches us that this is one law upon which there can be no dispute.

There may be a difference of opinion as to the constitutionality of the equalization fee referred to here so often, and it may require an expressed opinion from the Supreme Court to decide that matter, but it takes no Supreme Court decision for the average man to know that if you increase prices over a period of years increased production will follow just as sure as night follows the day. Therefore, if we are going to set up machinery designed to increase prices for farm crops over and above the cost of production—and I am in favor of it—then we must set up along with it some machinery that will in some way regulate production. If not, sooner or later, we may be confronted with an accumulated surplus sufficient to meet the domestic and world requirements for a year or more ahead. Then what will you do? The bill I am proposing takes care of the surplus on the occasional year when it appears and does so at the least possible cost, and provides for the storing and marketing of this surplus in the most economical way possible. At the same time the producer still has an equity in that surplus and if sold at a profit he will receive his proportionate share of the proceeds. Under your bill it is admitted that none of the profits will be returned to the producer. How does this bill propose to regulate production? It provides that no advance or advances shall be made to any person, organization, or association whatsoever when the ensuing annual production of a crop or commodity is the result of an increase in acreage over and above the five-year average immediately prior thereto. Now, mark you, this is not an effort to force farmers to do anything. Everything in this bill is absolutely voluntary in so far as the farmer is concerned. It simply sets up the necessary machinery for assisting agriculture. The Government says, in effect:

"I have provided all the machinery necessary for handling your surplus crops; I have made all necessary financial arrangements; I have provided ample storage facilities; I have established an efficient marketing system; I have arranged to see to it that you are not compelled to pay excessive freight rates; and the only thing I am asking of you is to cooperate with me and not to increase the acreage of those crops where the surplus may become a burden to both of us."

I know that the surplus for some particular year may be greater with a decreased acreage than with an increased acreage, but the Government is not alarmed over the surplus for

any particular year; but it does not want to assume the obligation of taking care of the surplus over a long period of years with an increasing acreage from year to year with the possibility of an accumulated surplus from time to time. Here is my reaction to a proposition of this kind. If my annual cotton acreage heretofore was 10, 25, 100, or 1,000 acres, or more, and the Government would say that it would guarantee to me a fair and reasonable price for my cotton on condition that I will not increase my acreage, in the light of my observation and experience I think I would be somewhat out of the ordinary if I should say, "No; I will increase my acreage and take the chances on price." On the contrary, my idea is that I would let my acreage remain the same or possibly decrease it, and then if I had surplus land, labor, and capital I might introduce an additional type of farming or enlarge on my other farming operations. This would result in stabilizing the production of cotton on my farm and increasing the diversification of other crops or farming operations, and if this would be the natural and logical result on the individual farm it will hold true for the entire section or cotton-producing States. It seems to me that if the acreage can be stabilized to an extent by a voluntary understanding between the Government and agriculture, and then have the Government provide an economical system for handling the surplus on occasional years "to be fed back into the market on lean years," it would be a happy solution of the problem. And I am unable to subscribe to the theory advanced by Mr. HAUGEN, the author of your bill, last year when he said:

No; rather than curtail production we should, as in the past, continue our appropriations to encourage and protect production.

But subsequently, when making an argument in favor of the equalization fee, he seems to have abandoned that idea, when he said:

Let's put an equalization fee on cotton, and put it so high that it will compel the farmer to reduce his acreage and curtail production.

It is not my idea to reduce or in any way curtail the average production, but the purpose of regulating acreage is to stabilize production as near as possible. If this is done, surplus control will be an easy and inexpensive matter, but with unlimited production over a period of years surplus control becomes an uncontrollable monster.

PRODUCERS DETERMINE WHEN LAW WILL OPERATE

I stated near the outset that I could best explain the provisions of my bill by contrasting its provisions with other bills previously discussed. In this connection I desire to call attention to one other difference in the provisions of this bill and the McNary-Haugen bill. In the latter, for instance, it is left entirely with the board to say when an operating period shall begin, whereas under the proposed bill the producers themselves determine this, provided there is a surplus over and above domestic requirements, and I might say there is such a surplus as to cotton every year. To illustrate the difference, let us suppose that the board has found that there is a surplus and that the cost of production for cotton is 18 cents per pound, the average cost for the preceding five years being 17 cents per pound, the board would not declare an operating period until the price reached one or both of these prices, for on page 51 of your bill it is provided that the board shall not declare an operating period until the—

surplus depresses or threatens to depress the price of such commodity below the average cost of the actual production of such commodity in the continental United States during the preceding five years.

Now, we all know that a farm-relief plan that does not give more than the cost of production of a crop is not going to relieve agriculture.

Under the bill I am proposing the united producers of cotton, for example, may request that an operating period begin, under the circumstances above noted, when the price reaches 20 or 21 cents per pound, or even higher, which would give the farmer not only the cost of producing his crop but a reasonable profit on the capital and labor expended in its production. Here is what my bill proposes. I will read it:

Whenever the board finds that there is or may be in the hands or possession of the producers during the ensuing year a substantial surplus above the normal domestic or world requirements of any nonperishable farm crop or product thereof in the United States, said board is hereby authorized, upon the request of the organized producers of such crop, or upon the request of an approved commodity cooperative association of such producers, to avail itself of any provision or provisions of the Federal reserve act, the intermediate credit bank act, the Federal warehouse act, and any other act of Congress, not inconsistent with the provisions of this act, and arrange for financing or otherwise aiding such organized producers in removing from the market and storing under any approved warehouse system any such farm crop or crops to the extent of the estimated surplus of such crop or crops. That the advances so made or provided for under this section may be on the basis of the market value of such crop at the time of purchase, storage, or removal of same from the market.

In other words, under the provisions of the bill reported by the committee you can easily see that the board will be functioning according to law and yet the farmer will simply be exchanging his cotton or other crop at just what it cost him to produce it; whereas under the bill I am proposing the farmer would be receiving at least 3 or 4 cents per pound more, because under your plan the board will say that, under the law, the operating period will begin at the average cost of production for the preceding five years, but under this bill the operating period will begin when the price has reached a point where it represents the cost of production plus a reasonable profit and the request is made by—

the organized producers, or upon the request of an approved commodity cooperative association of such producers.

OTHER AGENCIES

Another difference between the bill under consideration and the one I propose is found under section 9, subsection (e) of the former, which states:

If the board is of the opinion that there is no such cooperative association or corporation created and controlled by one or more cooperative associations capable of carrying out any marketing agreement for purchase, withholding, or disposal, then the board may enter into the agreement with other agencies, but shall not unreasonably discriminate between such other agencies.

One of the fundamental purposes running through the bill I have proposed is to aid and assist in creating a system for surplus control and marketing of farm crops by the farmers and for the farmers. The activities are all to be free and voluntary on their part, and if there are any benefits to be derived from the operation of the system, or if there are any profits to be made as a result of these efforts, they should and will go to the farmer. But in your bill, as I have just shown, the board is given the authority and absolute power to make agreement with "other agencies" to handle the surplus and the farmer will not participate in this transaction in any way whatever, except to pay the equalization fee to provide a fund to be used by these "other agencies" in buying, handling, storing, and selling the surplus. If the surplus handled by these "other agencies" is sold at a profit the farmer will not get any of it, because Mr. Chester Gray, representing the American Farm Bureau Federation, who is considered authority on the operations of the bill, stated before the Agricultural Committee, page 3, serial E, part 1:

The producer does not get back as a residue any amount of the money which might be left in the stabilization fund after marketing, or after the operation period has been concluded.

The bill I am proposing does not permit any other "agency" apart from that of the organized producers to handle the surplus cotton, or any other crop, and when this agency of organized producers begins to operate the farmer is advanced 100 per cent of the market value of his cotton, or other crop at that time, and then when the surplus is sold or fed back into the market at a profit the farmer receives his proportionate share. In your bill the farmer pays the expenses for these "other agencies" to handle the surplus and pays them in advance, and yet not a penny of the profits is refunded to him. The only possible benefit he could get from this transaction is that he may get a better price for that part of his crop he does not sell to the "other agency." But as I have said a number of times, under this provision of your bill, some one has to sell, and it is usually the poor man that can not help himself. In this case he would not get any benefit whatever in the increase in price and yet he would be taxed to defray the expenses incident to handling the surplus. In other words, under your bill you would pay this man the market value for his cotton when the price was lowest and then tax him enough to pay the expenses incident to holding it off the market, and then give him none of the profits when the cotton is disposed of. Under my bill this man would receive the same amount you give him under your bill at the time he places his cotton in the surplus pool, he would not be taxed or required to pay one penny at that time, and when the surplus is sold, the expenses paid, he would receive his share of the profits. This will mean real assistance to agriculture.

EQUALIZATION FEE

The other outstanding difference between the bill reported by the committee and the one I am presenting is that the latter does not contain the provision embodying what is often referred to as the tax or equalization fee. This is a controversial matter both as to its wisdom and constitutionality.

I shall not attempt to discuss it in detail, because there seems to be a wide difference of opinion among its proponents as to its operations, there being no one, judging from their speeches on the subject, who knows exactly how, where, or when it will operate. However, the Illinois Bankers' Association Bulletin of February, 1928, gives what appears to be a rather concrete and fair analysis of the actual operations of this provision, and I will, therefore, quote what it says:

The purpose of the McNary-Haugen bill is to stabilize the prices of farm products by removing the surplus from the domestic market. If a loss is incurred in the operation of removing the surplus, each producer of the particular product is assessed a per unit amount to make up the loss. This is the much-discussed equalization fee. Right here it can be noted that this equalization fee is not a charge against the Government, nor does it in any way affect the taxes, nor does it extend any governmental credit to the farmer. The farmers producing the crop affected are the ones who pay the money to make up the loss. The Government does loan the board enough money to buy up the surplus. That surplus is then either held for better conditions or is sold abroad. The cost of operation plus any loss that may arise is then spread over all of the producers of the particular product and the loan made by the Government is repaid.

THIS IS HOW IT WORKS

In the case of wheat let us assume that 600,000,000 bushels are required for the domestic market, but the prospects after a careful survey indicate a crop of 700,000,000 bushels, thus producing a surplus over domestic needs of 100,000,000 bushels. Let us assume that because of this surplus the price of wheat on the world market becomes $1 per bushel.

According to the provisions of the bill, the board created thereby, anticipating such surplus, would contract for the withholding of this 100,000,000-bushel surplus from the market, guaranteeing to make up any loss should it occur. The natural consequence of the withholding of the surplus from the domestic market would influence the domestic price to a stabilized level of the world price plus the tariff on wheat, which is 42 cents per bushel. There is no price fixing involved here, simply the operation of the protective tariff in accord with its intent to protect products of the farm. This surplus would then be held awaiting a more favorable market or, if necessary, it would be exported at the world market price. This latter operation on the above assumption would show a loss of 42 cents per bushel below the domestic price, or a total loss of $42,000,000 to be reimbursed by the collection of the equalization fee pro rata from all producers of wheat within the given year. Accordingly the amount charged against each bushel of wheat produced during the given year would be a little over 6 cents. Therefore the price the farmer would receive for his entire crop would be $1.42 a bushel minus the equalization fee of a little over 6 cents, or about $1.36 per bushel, as compared with the world price of $1 a bushel.

As I have already said, this is a rather fair analysis of the operations of this particular part of the bill, and where the surplus or quantity of a crop to be exported is much smaller than that needed for domestic requirements, like wheat, it should prove to be quite successful, but with those crops where the surplus or quantity to be exported exceeds domestic requirements the farmer operating under the above illustration will certainly be the loser.

For example, let us see how the above illustration would operate as to cotton. Let us take the year 1927 and assume that 7,200,000 bales are required annually for the domestic market, for that was about the amount consumed, but the total crop was approximately 17,700,000 bales, making a surplus over and above domestic requirements of about 10,500,000 bales.

Now, if we follow the illustration given above with reference to wheat, the board, under the provisions of the bill, will contract for the withholding of this 10,500,000 bales surplus off the market, "guaranteeing to make up any loss, should it occur." The proponents of the bill say:

The natural consequence of the withholding of the surplus from the domestic market would influence the domestic price to a stabilized level of the world price, plus the tariff.

In the case of wheat the tariff is 42 cents per bushel. There is no tariff on cotton, but in order to complete the illustration, let us assume that the price of cotton on the world market is 15 cents per pound and that the cost of production is 18 cents per pound, the difference of 3 cents per pound would represent what the tariff would be and corresponds to the tariff of 42 cents per bushel on wheat. The assumption, therefore, is that the price of cotton would increase immediately from 15 to 18 cents per pound as soon as the surplus is removed from the market. In other words, the farmer would receive 3 cents per pound more for his 7,200,000 bales by the removal of the 10,500,000 bales from the market at the same price, but if the 10,500,000 bales, like the wheat above referred to, is placed on the world market, it would sell for 15 cents per pound, or 3 cents per pound less than what it cost. Therefore, in the operation, there would be a gain to the cotton farmer of $15 per bale, or a total of $108,000,000 on the 7,200,000 bales; but there would be a loss of $15 per bale, or a total of $157,500,000, on his 10,500,000 which would mean a net loss of $49,500,000, even after receiving 3 cents per pound more for his 7,200,000 bales, and he would then be taxed, or an equalization fee levied on the 17,700,000 bales to pay this $49,500,000, which would be about $2.75 per bale. Of course, this would only represent the loss in price. It does not take into account the insurance and storage charges, or the interest on the loan with which to purchase the 10,500,000 bales, the total of which would amount to $104,150,000 for only six months, which would be about $6 per bale, or in the neighborhood of $12 per bale per annum, not including the expenses to be incurred incident to paying thousands of employees to go around over the country to collect this tax or equalization fee.

Friends, I may not have the capacity, but I must emphasize the fact that I am unable to see from these illustrations where the equalization-fee principle could be of any benefit whatever to the cotton farmer. If you will eliminate this equalization fee or tax I shall be glad to vote for the bill. Otherwise I am afraid of it. It may work for wheat but not for cotton, and nearly all the people I represent are interested in cotton. A majority of them grow cotton and a large percentage of the remainder aid in the manufacture of cotton. I am sure they are generous and patriotic enough to pay a little more for flour with an assurance of a higher price for cotton or an increase in wages, but if there is to be no increase in either they are not going to be enthusiastic about paying $3 a barrel more for flour.

In my opinion, the placing of this fee or tax on the farmer is unfair and unjust, and it is not in keeping with the precedents established by Congress. For example, when the railroads or transportation companies came to Congress a few years ago asking for relief you did not require them to pay a tax or equalization fee, but they got the relief. The fee business was passed on to the public by way of increased freight rates. When industry came here a few years ago and asked for relief, Congress did not call upon the manufacturers to pay any equalization fee, but they got the relief and the bill was handed over to the public for payment. But when agriculture comes for relief you are saying by the provisions of your bill, "Yes; we are willing to try and help you a little, but in doing so you farmers are going to have to bear the burden, stand good for the losses, and pay all expenses, and more than that, you will have to pay them in advance."

Gentlemen, it is not fair, neither is it just, to compel the farmer to pay this fee or tax from his own pocket. The country at large is to be benefited if the experiment succeeds and the country at large should pay the cost just as the country at large is paying the bills for the protection of railroads and manufacturers.

Mr. JONES. Mr. Chairman, the gentleman from Louisiana [Mr. ASWELL] has been called out on important business. He gave me permission to yield myself 10 minutes, and I yield that to the gentleman from Texas [Mr. SUMNERS].

Mr. SUMNERS of Texas. Mr. Chairman and gentlemen of the committee, for a long time Congress has been discussing agricultural relief. There are two things responsible for the failure of the Congress in dealing with agriculture. One is the lack of a correct diagnosis. But the chief reason for failure is that when we come face to face with the application of the remedy Congress hesitates to apply it. Something else is offered or another hearing or investigation is begun.

Before steam and electricity were applied to human activities the farmers produced not much more than enough to feed and clothe their own families. Commerce was incidental. Now it is the business of agriculture. Farmers produce to sell. We find agricultural commodities moving in long, circuitous routes with much economic waste and a multiplicity of intervening profits. I am not going to have time to develop that, but I make this suggestion: That agriculture will never be able economically to distribute its commodities until it is possible to move them under prior sale from the point of first concentration to the point of use in quantity and quality in accord with the requirement of that use.

Examining the situation at the selling end of agriculture we discover two closely related problems, one having to do with the sale and distribution of agricultural commodities in domestic markets. We find tremendous economic waste here. The character of legislation which I have favored is not present in this bill, but we can not always get what we favor. It is attempted to set up in this bill the machinery that will make for economical distribution of agricultural commodities in the domestic

market and in addition to that, another thing is attempted; and I think that every person who looks into the future realizes that the time is not far distant when we will be compelled to construct a reservoir somewhere in our economic organization into which we can feed surplus in years of high production and from which we may draw in the years of low production. Not yet, but to-morrow, we must deal with that problem, and we ought to begin at it now.

There is a further problem, and this is the problem that I want to have the House direct its attention to. I speak with no partisan purpose. The time has come when, in dealing with this great problem, we must deal with it in a nonpartisan way. At the same time it must be recognized that we have to confront some questions and some problems which do have partisan aspects. Legislation which deals solely with the question of domestic distribution and the merchandising of the surplus will not meet the economic requirements of agriculture. I do not see how any intelligent person can question that fact. The deepest public interests are involved here. Population is being driven from the country. What is the remedy? There can be but one. We are compelled to remove the economic disadvantages that operate against agriculture if we are to maintain the equilibrium of population as between agriculture and the great industrial centers. In my judgment the most important public considerations demand that the Congress come to a practical grapple with that situation, and do it now. In this brief time allotted to me one can only deal with fundamental things. I call attention to this one: That nation is strongest, history proves beyond question, the largest percentage of whose people pursue the productive vocations of the country. There is another thing which history discloses, and that is that population moves under the operation of economic law toward the centers of best opportunities. That law has controlled every migration. The drift of population proves where the centers of best opportunity are. It is not necessary to direct the attention of gentlemen in this House to the story that the census reports disclose. Never in any time or country has there been such a vocational and residential migration as is now taking place in this country. When we look further into it we find this situation and we may just as well face it.

We have adopted in this country a protective-tariff system. It is here. There is not a political party now, there will not be a political party, that would tear down the protective-tariff wall quickly. No party would dare to assume that responsibility, because behind the protective-tariff wall the industrial machinery of the country has been constructed, and although I think it was a mistake, yet I know it is a fact. Our ancestors dealt with theories; we must deal with facts. That is the situation. It confronts us all—Democrats and Republicans. Gentlemen on the Republican side and gentlemen on the Democratic side, we may just as well face this fact. Common honesty requires that we do it. That fact is this, that the protective-tariff system deals not with revenue but with prices and with profits. Revenue is an incident. Of course it is. Why not be candid and honest about it? The protective-tariff system deals with prices and profits. I am not criticizing it now. I have no observations to make now with regard to its wisdom. I am stating a fact which we ought to be brave enough to face. The protective-tariff system by the might of government, by the paternalistic acts of government, puts a higher price in the pockets of the people protected by it than otherwise they would get. That is what it is for. It makes prices higher. Farmers who produce exportable surpluses must pay higher prices. They are made to do so by the might of the Government, by a policy of government having for its purpose the giving to a part of the people higher prices.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. JONES. Mr. Chairman, I yield the gentleman 10 minutes out of my time.

Mr. SUMNERS of Texas. That is the situation that confronts us. What are we going to do about it? How are we going to balance opportunities as between agriculture, producing surpluses, and production, where the tariff is effective? No tariff can be effective where production is in such volume as to require the exporting of a considerable surplus as is the case with most of our basic crops. I assume that we all agree to that.

A protective tariff upon an industry producing a large surplus which must find a market in the competitive markets of the world can not materially benefit that industry. There is no use arguing that, and it has never done any credit to anybody on either side of this aisle to argue that. Let us face the facts. Then how are you going to maintain the equilibrium of population and equality among the industries of the country, and that is the first obligation of government, unless you do something that has not heretofore been done? The tariff is not the remedy. I am not now discussing the tariff as a policy of government. We confront the tariff now as a fact rather than a policy. We must deal primarily with a great industrial, interdependent machinery constructed behind the tariff wall, where workmen are making a living and things are being produced. As I believe, it is in many respects unnaturally developed, but as we must know the changes and corrections even after it has been agreed to make them, and there is not even such agreement, must be cautiously and gradually made.

We confront this situation. It is an obligation of government to do justice. The highest interest of this country requires us to take into consideration this tide of population sweeping from the country into the great centers. Congress, facing that responsibility, has but one choice. We have got to give to the producers of exportable surpluses the benefit of the same power from the same Government that by the protective tariff is taking money out of their pockets to increase the price of the products that they must buy.

I hope that statement may be understood as coming from a man who at least for the moment has no partisan consideration in mind. It is a fact.

I have never been able to understand, gentlemen, how it comes about that there are those here who can vote for a protective tariff that compels—does not leave the privilege, but compels—one group of people to pay more for commodities when they buy from another and considers that sound statesmanship, but who is not willing to have the same Government give back to those people—give back to these farmers who must sell in a nonprotected market a part of that which has been taken from them by the might of government. I favor giving to these producers who are compelled to sell their surpluses abroad and to sell in their home markets at the world price that which will in a measure balance against the increase of prices which the Government gives to others through the protective tariff. That is justice and it is sound statesmanship.

Has anybody else suggested any other way to meet our situation? I do not mean our theory—our situation. I will be glad to yield for that suggestion if anyone makes it. There is no other. It is paternalistic; why deny it; but there is no other way to do it. I am sorry we are in this situation. It is the mess our paternalistic tariff policy has gotten us in. But we confront a situation; and because we do confront that situation, I hope that the House will agree to the proposition of my colleague from Texas [Mr. JONES]. I believe it is practically the same proposition as that of the gentleman from Michigan [Mr. KETCHAM]. It is to permit the Government to pay to these people who are producing exportable surpluses a part of that which they have been compelled to pay for that which they buy by reason of the increase of prices resulting from the protective tariff. How can anyone question the fairness of that or its soundness? This mighty tide of population sweeping in from the country, leaving in its wake wrecked fortunes, embittered thousands, and abandoned farm homes is of the mightiest concern to this Nation.

Mr. LAGUARDIA. Will the gentleman yield?

Mr. SUMNERS of Texas. Yes.

Mr. LAGUARDIA. Has the gentleman thought out what would be the reaction upon foreign countries of the debenture plan? If foreign countries would import their products into this country and we should give an agricultural subsidy, would it not excite retaliation?

Mr. SUMNERS of Texas. I think not. The policy here which most disturbs European countries in their commerce is our high tariff, which shuts out their commodities. Most of the foreign countries purchase our farm products. They want us to continue our production in exportable quantities.

Mr. KETCHAM. Mr. Chairman, will the gentleman yield?

Mr. SUMNERS of Texas. Yes.

Mr. KETCHAM. The point is answered fully, I think, by this statement, that this does not in any way affect the world price at which these people buy their commodities, but it does give to the producers in this country a differential. There is no dumping.

Mr. LAGUARDIA. But it will encourage an exportation of agricultural products that does not take place to-day.

Mr. KETCHAM. I do not agree with the gentleman in his conclusion.

Mr. SUMNERS of Texas. Mr. Chairman, I am certain the application of the debenture plan would produce no international trade complications. There is another feature, and I am going to be fair about it. If this debenture plan goes into effect, it will increase the domestic price. That is the purpose

of the whole thing. If the Congress is not willing to do that, it ought not to give one minute's consideration to this legislation. Why dodge the truth or run from it? We have the protective tariff for others. The purpose of that tariff is to increase the price of their commodities. The country approves it.

The philosophy, if there is any, and reasoning for a protective tariff on industry is to enable the manufacturers and workmen to become better customers, to have more money with which to buy. Every year that argument is made to the farmers. Then if that is the fact, the old saying in regard to the goose and gander ought to work here. If an increased price of manufactured commodities by the tariff is sound on the theory that it makes a better market, then an increase in the price of the farmer's product by debentures is sound also. Gentlemen responsible for or supporters of the present tariff policy, you can not deny that.

Mr. HAUGEN. Will the gentleman yield there? I do not want to take up the gentleman's time.

Mr. SUMNERS of Texas. Yes. Will the gentleman give me a little time?

Mr. HAUGEN. Yes.

Mr. SUMNERS of Texas. I yield.

Mr. HAUGEN. Under the debenture plan, take wheat, for instance. For four years the benefit of the debenture plan in the 21-cent advance of the price of the wheat crop would be $705,268,280, and the cost to the Government would be $142,484,630, the net gain after deducting the debenture would have been $562,783,650.

Mr. SUMNERS of Texas. Those are estimated amounts?

Mr. HAUGEN. Oh, no. There is no estimate about it. We know what the production was; we are dealing with past years, and we know what the export is. Therefore we can easily determine the exact amount. A schoolboy could do it. There is no guess about it.

Now, under the equalization plan the benefit would be $960,000,000. If you deduct your $562,783,650, the benefit under the equalization plan would be $398,000,000 in excess of the benefit they would derive from the debenture plan, all without a cent of expense to the Government. I have taken it for four years on wheat and corn. Now we will take it on beef and butter under the debenture plan for three years. The cost to the Government would be $149,984,390; net, $1,981,590,850. Under the other plan the net benefit would be $4,091,642,317, or a net profit for them of $2,110,947,467 over the debenture plan. In other words, they would receive $211,047,467 more under the equalization plan without one cent of expense to the Government. Is it good policy to pay out of the Treasury $149,984,390 and then deprive the producers of $2,110,947,467 in return? That is the difference between the two plans.

Mr. SUMNERS of Texas. Will the gentleman yield me the time he has taken from my time?

Mr. HAUGEN. Yes. I will yield to the gentleman five minutes.

The CHAIRMAN. The gentleman from Texas is recognized for five additional minutes.

Mr. SUMNERS of Texas. Mr. Chairman, this seems to me to be—and I am very candid with you—the difficulty with regard to what the chairman of the committee has suggested and the advantage on the other hand. On the one hand, under the debenture plan whatever amount represents the increase in price to farmers would have against it, or deducted from it, practically no expense for administration. That is true. The other plan would require a vast machine, with many new people on the pay roll, whose salary and expenses would have to be deducted either from what the farmers get, the people pay, or taken out of the Treasury under any change or modification of the plan. Besides, with regard to a commodity such as we have in the South, cotton, where we export practically two-thirds of it, the other plan would put upon the one-third sold at home the burden of giving a profit on the whole crop. That, it would seem to me, would put the industries in America who use our cotton at a great disadvantage in the markets of the world, and I think, seriously, coming as I do from the section of the country, that we could not maintain it.

Mr. HAUGEN. As I understand it, the gentleman is opposed to the proposition because it would increase the cost of the commodities. Let me call the gentleman's attention to the testimony of the consumers. I will give the gentleman more time. The consumers appeared before our committee. Edgar Wallace, one of the grandest men I have known, appeared before our committee. He represented the American Federation of Labor, and I think he was in a position to speak for labor. We also had appearing before the committee a representative of every labor group, and Edgar Wallace appeared before our committee only a few days before he passed away.

The business men's association reported the farm population of the country is decreasing 2,000,000 people a year; Mr. Wallace stated that whenever 2,000,000 people move into towns they were going to become competitors of those engaged in industrial lines; he said that those people living on the farms were their customers and that whenever the farmers were without money they were without work, and he said:

> Of what benefit is it to me to be able to purchase meat at 10 cents a pound if I do not have the 10 cents? As far as I am concerned, I can see no difference in confiscating the farmer's property by force or to force upon him confiscatory prices.

That was the statement of Mr. Wallace before our committee, representing the American Federation of Labor.

Mr. SUMNERS of Texas. Replying to the chairman's question [laughter], and seriously, gentlemen, we have to watch the effect on domestic prices. There is a point beyond which we can not go. To make one-third of a crop sold in the domestic market sell at a price sufficiently above the foreign sales or to give a substantial increase in the price of the whole crop would not be sustained, I am afraid. I want to be helpful to the grain sections, but they ought not to insist on putting a grain bill where about 20 per cent of wheat, for instance, is exported, on cotton where nearly two-thirds is exported. I hope that we will be able to agree to what is known as the debenture plan; a plan in which there is involved no constitutional question, a plan which puts no burden of administration upon the commodity either in its domestic sales or its foreign sales, a plan which in a practical sort of way undertakes to give back to agriculture something in compensation for what agriculture must give up to industry under the general protective tariff system of the country. I hope that the sound judgment of this House will agree to that proposition; and if it will agree to it, without any question on this earth the price of agricultural commodities will be increased. If that is what we want to do, let us do it, and let us do it in a way which will give the fewest number of additional salary drawers and expenses. If we do not want to do that, let us say so and be done with it.

The CHAIRMAN. The time of the gentleman from Texas has again expired.

Mr. KINCHELOE. Mr. Chairman, I yield 20 minutes to the gentleman from South Carolina [Mr. FULMER], a member of the committee. [Applause.]

Mr. FULMER. Mr. Chairman and gentlemen of the committee, if I had the time this afternoon I would like to comment on the splendid work of the various members of the Agriculture Committee. However, I am just going to take a minute or two for the purpose of referring to one of the best friends I have in Congress. I refer to Mr. RUBEY, of the great State of Missouri. [Applause.]

Mr. RUBEY has served about 12 or 14 years in Congress. He went out during the Sixty-seventh Congress and came back in the Sixty-eighth Congress. It was at that time I had the privilege of meeting Mr. RUBEY, and since that time I have been fortunate in having been associated with him in the committee and outside of the committee. I want to state to you, my friends, that during all of this time he has been one of the hardest-working members of the Agricultural Committee, deeply concerned about his constituents, his State, and his country, and it is my hope that his people will be able to return him to this House for many years, where he will be able to continue the splendid work he has been carrying on in the past. [Applause.]

Now the pending bill, my friends, is not just what I would write had I the privilege of presenting you an agricultural relief bill, and I am going to say at this time that the success of this bill or the failure will depend absolutely on the type of board that is appointed by the President of the United States to administer the act. If we had a board consisting of members interested in agriculture, one that would stand up and fight for agriculture just like other Federal boards we have now, such as the Interstate Commerce Commission, the Federal Reserve Board, and the Tariff Commission, that operate absolutely for their groups, I would not be at all uneasy about rescuing agriculture out of the serious position it is in to-day.

In 1926 I had the privilege, as a member of the Committee on Agriculture, through its chairman, to write into the bill a provision that I do not believe Members from the South will ever again get a chance to vote for. That bill carried $100,000,000 without interest for two years, subject to any losses we might have in operating in connection with cotton, we to retain any profit that we might make out of the operation, and without any equalization fee for two years, and then only at the request

of a majority of the cotton farmers of the South. Yet Members from the South who seem to be interested in agriculture voted against that bill, and they had enough votes to vote it down.

I believe with two or three amendments which we propose to offer on this side of the Chamber we can make out of this bill a good, clean, sound, workable bill, one that Members from the cotton States will be able to vote for. I want to say here and now that unless we can have these amendments adopted I propose to vote against the bill.

It is generally agreed not only by the Government but by practically all economists and those who know anything about the farmers' problems that cooperative marketing on a 100 per cent or even a 75 per cent basis would solve the farmers' problem.

Amendment to be offered by my colleague, Mr. KINCHELOE, from Kentucky, will give the cotton commodity advisory council the power to check the board in going into or out of an operating board in cotton. In other words, if cotton is selling for a satisfactory price, they could refuse to allow the board to go into an operating agreement. Once the board has gone into an operating agreement because of a surplus that has depressed the price, should the board want to withdraw before the price advances to a fair price, this council could have the last word as to whether or not they should go out of an operating period. What more protection could our farmers ask for?

My amendment that I propose to offer is not to allow the cooperatives to present the list of names to the board to make their selection as to who shall compose the cotton advisory council, which is the sole check on the operations of the board. Inasmuch as the cooperatives only represent about 5 per cent or 10 per cent of the producers, I want the bill to read so that all other producers might organize into farm organizations, farmer's unions, and so forth, and have equal rights in naming this council. Further, I want the governors and the heads of the agricultural departments in the cotton States to represent the unorganized farmer. This protection on the part of all producers not members of the cooperatives will keep the cooperatives from being able to name the council out of men represented in their organization. I want to say now that unless these two amendments are adopted, I will vote against this bill. My friends, you will have to weigh carefully statements made by the opponents of this bill because while they may tell the truth, they can easily tell you one side of the question and not tell you the whole truth. I can easily see how Members and others who oppose this legislation would want to make statements so as to justify their vote and opposition to the legislation. The statements have been made on the floor of the House, and the opponents of this legislation will tell you that under the bill cotton farmers will be taxed $10 a bale for their cotton. Yet there is not a line in the bill to verify this statement.

EQUALIZATION FEE

If at any time farmers should be blessed with a surplus crop, and cooperative associations, other producers, not members of the cooperatives, the governors and secretary of agriculture of the cotton States should think it wise to pay an equalization fee on all cotton produced, say from $2 to $3 per bale, the Government would not get one cent of this money. On the other hand, this money would go into what is known as the stabilization fund, for the purpose of being used through an agency created under the bill to go out into the market and buy up all, or any part of the surplus, so as to take same off the market to bring about a fair and stable price, and to be fed back into the market in an orderly way so as not to depress the price of cotton. In other words, this money will belong to the farmers to buy up their own surplus cotton so as to bring about a fair price for that which they produce. Farmers did not have this machinery and money in 1926 when they produced 18,000,000 bales of cotton, so what happened:

Anderson-Clayton Cotton Co., other speculators, mills, and foreign countries took their money and robbed the farmers not only of their 18,000,000 bales of cotton, but 1,000,000 more during 1926–27, at an average price of about 13 cents; in other words, about 5 cents to 8 cents a pound below the actual cost of production. These parties did the very thing that I am now trying to put the farmers in a position to do, namely, carried this crop over until the short crop of 1927 and sold it back into the market either as cotton or cotton goods at about an average of 20 cents per pound, a difference of about from $25 to $50 a bale profit in their pockets out of the pockets of the farmers who produced this cotton. Now, which would the farmers rather do, pay $2 per bale, or even $5 per bale, and carry their own surplus cotton so as to get an average price, or let these big birds rob them out of their hard-earned money?

ONLY ANOTHER FALSE REPORT

Cotton mills are generally opposed to this legislation, stating that they understand that under the bill we propose, by adding an equalization fee, to make the price of cotton higher in the United States than in foreign countries. In other words, they understand that we propose to dump the surplus cotton on foreign markets at a reduced price. There is nothing in the bill that contemplates doing such a rash act. In fact, it would be a very unsound policy to try to operate in this manner, because we export at least 60 per cent of our cotton, and besides, foreign countries are absolutely dependent on this country for their supply of cotton. They only produce from eight to ten million bales and can always use from five to ten million bales per annum of our cotton. We exported last year 11,000,000 bales. Another reason they have to have our cotton is because the only kind of cotton they can produce, outside of one or two sections where they produce a quantity of long-staple cotton, is a very short staple and altogether a different type cotton to our cotton. Whatever price we might pay to secure for our cotton under these arrangements will be a world price. In other words, the cotton in Liverpool will be exactly the same price as the cotton in the United States, with freight, insurance charges, and brokers' profits added.

MR. CLAYTON OUGHT TO KNOW WHAT HE IS TALKING ABOUT

Mr. Clayton, of Anderson-Clayton Cotton Co., of Texas, the largest spot-cotton firm in the world, stated the other day before our committee (Agriculture Committee) that the cotton farmers' problems could be solved if farmers would organize and pool their surplus cotton, so as to be able to feed the surplus into the market in an orderly way and at a time when it would not interfere with the actual demand for cotton on a fair basis. I gathered from his remarks that if this were done we would not have to pass legislation to regulate speculation. He said, however, that he was against the Haugen bill. He is one of those who believe that what we are trying to do under this bill will work, but said, "Let the farmers do it." He knows just as well as you and I do that the farmers have tried for the past 50 years to organize and that they have not been able to do so, and to my mind they will never be able to do so unless with proper assistance from the Federal Government.

I am wondering if this Congress will say, "Let the farmers do it?" Now, my friends, the Congress did not say, let the railroad people do it for themselves.

You will note from the following statements that the railroad folk are very prosperous under special legislation passed by the Congress in their interest.

The Interstate Commerce Commission reports the net revenue from railroad operations for the past seven years as follows:

| | Net revenue |
|---|---|
| 1921 | $969,346,226 |
| 1922 | 1,162,779,249 |
| 1923 | 1,412,962,592 |
| 1924 | 1,304,206,157 |
| 1925 | 1,470,037,742 |
| 1926 | 1,614,247,269 |
| 1927 | 1,579,904,326 |

These figures show that the railroads are making more money than ever before, and they should have a reasonable return on their invested capital and on their labor. Agriculture should have the same returns on the capital and labor put into that industry. That commission helps the railroads, not the farmers, but why not have a commission to help the farmers?

(Special correspondence)

NEW YORK, April 30.—The Wall Street Journal prints a story which explains the "boom in rails" which featured the stock market last week. Taking 19 representative railroads, scattered all over the country, the Journal finds that they earned an average during 1927 of $13.62 per share on common stock, and paid an average of $7.24 per share in dividends.

I want to say that you did not say let the manufacturers do it themselves. They came to Congress and said: We can not complete with foreign manufacturers; our standard of living is too high; our labor is too high in comparison with foreign labor. Therefore unless you give us a tariff rate high enough to save our skins we are gone.

In 1922 you passed the Fordney-McCumber Tariff Act, carrying the highest rates ever written in a tariff bill that is costing farmers and consumers millions annually, and millions of profits into the pockets of the manufacturers.

The following statement will indicate what you have done for the manufacturers.

I here insert a table placed in the CONGRESSIONAL RECORD May 31, 1924, by Hon. JAMES G. STRONG, a stalwart Republican Member of Congress from the State of Kansas, showing what

the farmers paid for farm machinery in 1914 and what he was compelled to pay in 1924 under the present tariff law:

*Comparison of the 1914 buying and selling prices, and 10 years later, 1924, buying and selling prices from the Kansas farmers' standpoint*

| Implements | 1914 | 1924 |
|---|---|---|
| Hand corn sheller | $8.00 | $17.50 |
| Walking cultivator | 18.00 | 38.00 |
| Riding cultivator | 25.00 | 62.00 |

LOW PAY OF TEXTILES DESPITE HIGH TARIFF—STRIKE OF 32,000 EMPLOYEES IS AGAINST AN AVERAGE WAGE OF $13.46 A WEEK

(Special correspondence)

NEW BEDFORD, MASS., April 30.—With 32,000 textile employees on strike and appeals being made for food and other essentials of life, there is gloom in every section of the mill region. No move looking toward a settlement has been made since the strike against wage cuts began two weeks ago.

Last fall mill workers were receiving an average of $22 a week. During the winter reductions decreed by the barons brought this average down to $14.95. Then on April came a further cut of 10 per cent, bringing the weekly wage down to $13.46.

This should interest Members of Congress, which enacts tariff laws giving the textile industry of New England special and favored protection from foreign competition. Wages here in many instances are lower than in England.

You did not let the bankers do it for themselves. You gave them the great Federal reserve system, branch banking, and everything asked for. You will note from the following statements that I am inserting in the RECORD that the banks are combining, weeding out the agricultural banks and small independent banks and making millions:

GREAT MERGERS IN BANKING PEND—DOZEN POSSIBLE UNIONS IN FORMATIVE STAGES INVOLVE HUNDREDS OF MILLIONS

(By J. C. Royle—Special dispatch to the Star)

NEW YORK, April 17.—There are a dozen possible bank mergers which may come to a definite stage of negotiations in the coming week. These are not confined to New York. They are scattered from New Orleans to the British Columbia boundary and in capital and assets involve hundreds of millions of dollars.

In the last six years, the average size of the American bank has increased 56 per cent. There are nearly 6,000 fewer banks to-day than in 1921. Resources, on the other hand, have increased by $18,500,000,000. In the same period the weaker units have been shaken out until bank failures have been reduced in the last year to 662, of which more than two-thirds were in villages with a population of less than 1,000, according to the Federal Reserve Board.

There are still about 27,000 independent banks in this country, but this number is steadily being reduced.

FARMERS CAN NOT CONTROL PRODUCTION

Another statement often made by those opposing this legislation is, "Let the farmers decrease their acreage and production so as to produce enough to equal the actual demand." This is an absurd statement and a very dangerous statement. A decrease or increase in acreage would cut a very small figure as to what farmers will produce in the way of a small or large yield. If the cotton farmers decreased cotton acreage, that acreage would be planted in other major crops which would be in competition with other farmers in other sections. That may put cotton up temporarily, but would tend to help the other fellow overproduce in his line, only to force farmers from one line that has been depressed in price to the line of production that has increased in price. In the next place, you would decrease acreage and do away with a surplus of all major commodities, which perhaps would prove to be a national calamity.

I contend that with 120,000,000 people to be fed and clothed, we should at all times have a reasonable surplus in all of the major commodities, but should be able to so control that surplus so as to not let it prove a curse to the ones producing it.

Other lines of business sometimes find themselves overproducing but they are able to reduce or increase at will—farmers can not do it.

Mr. LAGUARDIA. Does the gentleman say that Mr. Clayton is against the bill?

Mr. FULMER. Yes.

Mr. LAGUARDIA. Then that is a recommendation for the bill.

Mr. FULMER. Farmers are not only unorganized to control their products and to have something to say about the price they shall receive for what they produce, but they are unorganized politically and therefore have a very small voice in governmental affairs. On the other hand, other groups being smaller in number are not only well organized financially but also politically, therefore, they are able to have legislation passed for their interest and defeat legislation offered in the interest of the unorganized.

Sinclair can steal the whole Tea Pot Dome and Capitol as well as pay out of the proceeds of same the expenses of the Republican campaign and walk around as free as a jay bird; yet let the rabble steal a small roll of barbed wire worth $5 or get caught with a half pint of cheap liquor and he is immediately sent to a Federal prison.

I want you to note what the New York Times and the Associated Press of Washington had to say about Mr. Sinclair in connection with the oil deal:

Harry F. Sinclair whose trial for conspiracy ended a few days ago in Washington has his residence and business home in New York. In commenting on his acquittal the New York Times said:

"Acquittal in such a notorious case does not mean restoration to public confidence or respect. A larger jury has already brought in its verdict. Mr. Sinclair stands legally quit of the crime of conspiracy, but on the moral counts of his indictment the general judgment has gone heavily against him. From that no appeal lies. He is condemned to figure as a man of great wealth who had snapped his fingers at its just and unescapable responsibilities. He tampered with one whom the Supreme Court has declared to be a 'faithless officer' of the Government. He sought to cover up his tracks by the lavish use of money, personally and politically. That record can not be altered. Nothing that happened in his criminal trial at Washington can change it. He will remain a scandal to his class; a public warning to rich men, tempted as he was, to avoid his example as they would the plague. For both him and ex-Secretary Fall the sentence of the intelligent public has been pronounced and will abide. As time goes on, it will be strange if Sinclair is not moved to exclaim, 'My punishment is greater than I can bear!'"

---

WASHINGTON, May 1.—Harry F. Sinclair, testifying to-day before the Senate oil committee, said he had given Will H. Hays a net total of $160,000 to help wipe out the Republican deficit after the 1920 elections, but insisted that no inducement was offered to him. He said he had been a Republican in politics, but did not know what he was.

What is holding up the Muscle Shoals bill now before the Rules Committee which proposes to have the Government manufacture cheap fertilizer for farmers? The Rules Committee had a visit from the fertilizer trusts and they have said, "All right, boys, we will stick this bill in a pigeonhole and continue to force farmers to pay $50 and $60 per ton for nitrate, as well as a $12 tax to the Chilean Government on every ton of nitrate imported.

ASTOUNDING STORY OF CORRUPTION IS PLACED ON RECORD—POWER LOBBYISTS TELL HOW THEY "FIXED" POLITICIANS AND ALL CLASSES OF WRITERS

With cold-blooded effrontery power lobbyists declared they had bought up politicians to influence Members of Congress and State legislatures to vote in the interest of the Power Trust; that they had corrupted newspaper men and recruited them into their lying propaganda service; that they had on their pay roll authors and educators whose job is to write propaganda books and place them in the schools of the country, to influence the budding minds of children.

RAISING THE "JACK POT"

Nine months ago the trust raised a "jack pot" of $400,000 which was to be used to kill off the Boulder Dam bill, turn Muscle Shoals over to private power interests, and prevent an investigation of its activities. "Sam" Insull was the heaviest contributor.

A lobby was formed to carry out this program, and it was from the records of this organization that the amazing story of scandalous abuse of position and betrayal of trust was written into the commission's records.

The $400,000 which has been expended by the main lobby represents but a fraction of the sum used to corrupt public officials, pervert public sentiment, and poison the stream of education.

The lobby is merely the directing head of other lobbies maintained in every State, all of which have contributed liberally to the buying up of such talent as was purchasable.

The following clipping from the Washington Times gives us very interesting information along the line as to what the fellows who control the Republican administration can do:

WHAT ABOUT THE BIG FELLOWS?—WHAT THEY WANT THEY GET

The House Military Committee says the Government should operate its power plant at Muscle Shoals manufacturing commercial fertilizer, ready at any moment to produce nitrates for explosives in war.

Important news, if true. But what about the theory that the Government isn't sufficiently able or honest to do anything for itself? And what about possible Government competition with private power and fertilizer concerns?

Senator NYE said the other day: "You can't convict a million dollars in this country." He said then what is commonly called "a mouthful."

What the big people want they get, as a rule. And what they don't want usually doesn't happen.

The Power Trust, one of the most powerful in this country, doesn't want cheaper power prices, or competition from Muscle Shoals.

And the big fertilizer gentlemen didn't relish the suggestion of cheaper fertilizer produced by Government ownership.

Things that the big fellows don't want don't happen. Make a memorandum of that.

Look at the letters and telegrams that you are receiving now from mills, speculators, middlemen, and generally from those whom you have already protected opposing this legislation. If we succeed in passing same, then they will take their fight up to the White House with the hope that they may force the President to veto the bill.

FARMING NOW IS A REAL BUSINESS LINE

As the gentleman from Texas [Mr. SUMNERS] stated a few moments ago, in the beginning at least 75 per cent of the people were engaged in farming, primarily to take care of their own families. Since that time they have been going away from the farms into other lines of business cutting this per cent down to about 30 per cent; and to-day farmers are called upon to feed and clothe the world, therefore, farming is a business line just like all other businesses.

Farmers producing the staple agricultural commodities deal almost exclusively as an individual both in buying and selling; therefore they are now attempting to perform a variety of functions such as now obtained in almost no other trade. It is too much to expect a farmer to be an efficient producer as well as an expert salesman. He is supposed to be a judge of the market conditions as well as an astute financier. Therefore, the only way for farmers to succeed and take their business out of the hands of the fellow who is squeezing agriculture to-day is to organize so they can really control their own business.

The four major problems confronting farmers to-day are the controlling of the surplus, when they are blessed with one, production credits, establishing a marketing system of their own, and collective buying and selling.

AGRICULTURAL CREDITS

Production credit is one of the biggest problems with agriculture in my part of the country. It is almost impossible for a great many of the farmers to secure money under the present system to pay for labor and to carry on until they can produce their crops. It is easy enough for a farmer to go into town with 10 bales of cotton or with a receipt for 10 bales of cotton and borrow money from the bank; but under the present system in South Carolina, and I believe the same thing is true in a great many other States, farmers are unable to go direct to the intermediate credit bank, which is claimed to be the bank for the farmers. If they get any money out of the intermediate credit bank they have to go through certain corporations and they have to pay in the stock themselves; they have to pay an extra profit on the money and pay attorney fees and everything else, which makes it very expensive, and sometimes because of the amount of red tape they are unable to secure these funds in time to buy fertilizer and carry on. As a rule, those running these corporations are not especially interested in farmers, but in profits.

Under section 5 of this bill cooperatives will be able to qualify so as to be able to discount with the intermediate credit banks member's crop and stock paper. This will enable the cooperatives or corporations formed by the cooperatives to furnish their members with cheap money for production purposes. This will enable the cooperatives and their members to buy collectively fertilizer and other farm supplies at the very best prices.

Members of the committee frequently are asked to explain the provision in this section which would authorize the board to make loans to a cooperative association for the purpose of furnishing the association with "funds to be used by it as capital for any agricultural credit corporation eligible for receiving discounts under section 202 of the Federal farm loan act as amended."

The section 202 referred to authorizes intermediate credit banks to discount for or purchase from any agricultural credit corporation notes given to secure loans made in the first instance for "any agricultural purpose or for the raising, breeding, fattening, or marketing of livestock." Under regulations prescribed by the Federal Farm Loan Board an agricultural credit corporation is required to have unimpaired paid-in capital and surplus equal to at least $10,000.

Such an agricultural credit corporation would be a valuable adjunct to a cooperative association. It would make production and marketing credit from the intermediate credit banks available to agricultural producers for periods of time adapted to their needs and at a minimum rate of interest.

FARMERS' GROSS INCOME

The gross income of farmers for their products, as stated by Mr. Yoakum, of New York, when testifying before our committee, is around $7,000,000,000, while the consumers paid for the same products $22,000,000,000. Certainly I must be right when I contend that there is too much slack between producers and consumers. In this connection I want to deny statements made on this floor and outside of this Chamber by the opponents of this bill that if we succeed in increasing the price of farm products to the farmers that we will increase the price to the consumer. If we carry out the plan under section 8, which I think is one of the most important sections in this bill, we will be able to cut the slack between the producers and consumers to the advantage of both. The extreme high prices charged to the consumers is one reason why we very often have a surplus. The world to-day needs every pound, every bushel, and every basket of farm products if at a fair price. Thousands to-day because of their poverty are denied the privilege of an abundant supply of the real necessaries of life as well as the fruits of the land. Many a person refuses to buy fruits, watermelons, and so forth, because of the high price charged by middlemen, and millions of this stuff goes into waste at the expense of the producer.

FARMERS OUGHT TO OWN AND OPERATE THE MARKETING MACHINERY

To-day the marketing machinery is owned and controlled by middlemen. Thousands of these are parasites not only on the producer but also on the consumer.

Section 8 will enable producers to establish clearing houses and marketing facilities in the large marketing centers which will bring about orderly marketing and distribution. Under this section farmers will be furnished the money to establish or maintain warehouses, compresses, and bring about direct marketing with mills and foreign countries. With the control of compressing, we will be able to bring about high-density compression whereby we will be able to save millions in freights, warehouse space, insurance, and tare. We will then be able to load 100 bales of cotton on one box car, whereas to-day it takes three box cars to ship 100 bales of cotton.

Edgar B. Stern, president of the New Orleans Cotton Exchange, New Orleans, in a speech at Atlanta, Ga., some time ago, said:

And it is of marketing that I speak this morning—marketing, the most complicated, difficult, and baffling of the problems of agriculture. The modern farmer finds no great difficulty in producing crops. Our railroads and steamships have adequately solved the problem of transportation, even of perishable goods. When he has tried other things, he has had to face the bewildering uncertainties and disappointments of unstandardized markets. If he ships tomatoes to the nearest city, he may find the local market is flooded with tomatoes but wants beans. He is frequently at the mercy of the local buyer, who, if overstocked with the commodity which the farmer has to sell at the moment, can name no price at all for the product.

The following is a statement of Mr. B. F. Yoakum, 17 East Forty-second Street, New York:

Farm commodity marketing should be placed on a nation-wide business basis where it could stand alone as other big businesses do. Marketing of farm products should be controlled by the farmers themselves.

INSURANCE SECTION

Now as to the insurance feature, the gentleman from Mississippi [Mr. WHITTINGTON] covered that fully the other day, and I would be very glad if every Member would read his speech thereon. We had before our committee Mr. Stone and Mr. Bledsoe, from Mississippi, who have given this section a lot of thought; and from what I gathered from their testimony I am sure that the insurance section will be a most important part of the bill.

This bill does not force a farmer to join a cooperative association, but it does offer a great inducement in several instances. Under the insurance section the farmer delivering his cotton to the cooperatives will be paid at least 95 per cent of the

value of his cotton based on the price prevailing at the time of delivery. This cotton will be held and sold in an orderly manner, and the farmer will be able to participate in any profits at the end of the period. In the meantime he will not be subject to any losses. Otherwise he can sell his cotton on the open market as he is now doing and let the speculator or some cotton merchant receive the profit.

The insurance agreement really provides the cooperative marketing associations with a hedge against loss caused by decline in the average seasonal market price. It has an advantage over the ordinary market hedge. If the average market price during the sales season is higher than the average market price during the delivery season, the members of the cooperative association will receive the benefit of the advance. The insurance applies to agricultural commodities that can be warehoused or stored and held without deterioration and with safety over a period of time. The insurance can only be obtained upon an agricultural commodity that is regularly traded in on an exchange in sufficient volume to establish a recognized basic price for that commodity. In addition the exchange must have accurate price records covering a sufficient length of time to enable the board to calculate the risks of insurance on a sound basis. Over a period of years the market price for such a basic commodity will average higher during the period from the end of one harvest to the beginning of another harvest. This is necessarily true. Otherwise agencies which purchase and store commodities for later resale could not remain in business. Cotton is such a basic agricultural commodity. Wheat is another such commodity. Careful investigations have been made over a period of years. The committee had elaborate hearings on the insurance feature. It is generally conceded to be sound business, because it is based on good insurance principles and because there is an insurable risk.

Statistics for a period of 20 years show that, with the exception of certain years that are capable of reasonable explanation, the average price of cotton during the period that farmers usually sell their cotton, namely, from September 1 to December 31, is lower than the average price for the 12 months beginning September 1 and ending August 31. It would be to the benefit of the cotton farmers if a plan of insurance against price decline during any one crop year could be put into effect. It would promote orderly marketing and it would assist in the control of the surplus. The farmer belongs to the debtor class, and he usually sells his cotton and other products during the harvesting season. The result is that there is a dumping of too much cotton on the market. The mills buy as their requirements dictate. The farmer thus sells to the speculator. The speculator knows that the average seasonal price must be in excess of the average price that obtains during the period of delivery. The price is generally depressed when the farmer sells, and the result is that the farmer does not get a fair price. One of the great difficulties with the cooperatives is that their members need the value of the product at the time it is delivered to the association to liquidate their debts. The association now advances, in the case of cotton, something like 65 per cent of the market value. If the association is hedged or assured against decline, the producer may be advanced his market value less the cost of the storage, interest, and insurance, and the cooperative would thus be promoted while the farmer was insured.

The five years in which there were exceptions were due to unusual conditions, most of which are not likely to occur again. The examinations of the daily price records of the New Orleans Cotton Exchange for the period mentioned were made by Ernst & Ernst, public accountants. I embody herewith the result of these examinations:

First. A letter from Messrs. Ernst & Ernst to Mr. O. F. Bledsoe, jr., dated September 1, 1926, covering examinations of the New Orleans Cotton Exchange, and giving the average prices of middling spot cotton for the delivery and for the annual seasons for the 20 years, which show the average price during the farmer's delivery season from September 1 to December 31 to be 17.55 cents per pound, while the average price during the entire season from September 1 to August 31 is 18.03 cents per pound, or the average price for the year is 0.58 cent, or a little over one-half a cent per pound more than the average price during the harvesting, or farmer's selling period, as follows:

27 CEDAR STREET, *September 1, 1926.*

Mr. O. F. BLEDSOE, Jr.,
*President Staple Cotton Cooperative Association,*
*Greenwood, Miss.*

DEAR SIR: We hereby certify that we have examined the daily price records of the New Orleans Cotton Exchange from September 1, 1905, to August 31, 1925, and find that the average prices reported for middling spot cotton for the periods from September 1 to December 31 and from September 1 to August 31 were as follows:

| Sept. 1 to Dec. 31— | Average price | Sept. 1 to Aug. 31— | Average price |
|---|---|---|---|
| | *Cents* | | *Cents* |
| 1905 | 10.86 | 1905–6 | 10.92 |
| 1906 | 10.22 | 1906–7 | 11.22 |
| 1907 | 11.48 | 1907–8 | 11.14 |
| 1908 | 8.93 | 1908–9 | 10.03 |
| 1909 | 13.79 | 1909–10 | 14.51 |
| 1910 | 14.26 | 1910–11 | 14.39 |
| 1911 | 9.85 | 1911–12 | 10.87 |
| 1912 | 11.99 | 1912–13 | 12.26 |
| 1913 | 13.29 | 1913–14 | 13.23 |
| 1914 | 7.29 | 1914–15 | 8.29 |
| 1915 | 11.45 | 1915–16 | 12.15 |
| 1916 | 17.56 | 1916–17 | 19.78 |
| 1917 | 26.47 | 1917–18 | 29.40 |
| 1918 | 30.88 | 1918–19 | 30.01 |
| 1919 | 36.15 | 1919–20 | 38.38 |
| 1920 | 20.21 | 1920–21 | 14.75 |
| 1921 | 18.21 | 1921–22 | 18.71 |
| 1922 | 23.34 | 1922–23 | 26.15 |
| 1923 | 31.39 | 1923–24 | 30.51 |
| 1924 | 23.45 | 1924–25 | 23.89 |
| 20-year average | 17.55 | 20-year average | 18.03 |

Attention is directed to the fact that in the year 1914 the exchange was closed during August and September. Therefore price of 7.29 cents above actually covers three months. The prices of 13.23 cents for the year 1913–14 and 8.29 cents for the year 1914–15 actually cover only 11 months of each year.

ERNST & ERNST.

Second. The summary of the New Orleans spot prices of cotton, as follows:

*New Orleans Exchange spot middling cotton*

| Year | January | February | March | April | May | June |
|---|---|---|---|---|---|---|
| | *Cents* | *Cents* | *Cents* | *Cents* | *Cents* | *Cents* |

[1] Money panic. [3] Armistice signed.
[2] World War. [4] Crop estimate.

Mr. Bledsoe is a man of broad experience and has given many years of thought and study to the marketing of cotton. The New Orleans Cotton Exchange is probably the most stable exchange in the world. Under the insurance plan which Mr. Bledsoe proposes, which is embodied in this bill and which I now advocate, the cotton cooperative associations would be guaranteed that their weighted average daily spot price during the delivery period, which is from September 1 to December 31, would not be less than their average selling price for the year; that is, from September 1 to August 31.

The examinations of the daily-price records of the New Orleans Cotton Exchange for a period of 20 years—beginning September 1, 1905, to August 31, 1925—show that with the exception of 5 years the average price during the harvesting season was lower than the average price for the 12 months.

That is because the average annual seasonal price is what the consumers of the country pay for our cotton. The growers do not have an opportunity to sell cotton to the consumers during the marketing period. We must sell largely to speculators, who sell at higher prices throughout the year to the consumers, so that the speculator and not the producer gets the benefit of the increase in price.

Mr. Bledsoe has prepared a statement giving profit and loss of seasonal cotton-price insurance from 1905 to 1919, and from 1921 to 1924, inclusive, which shows that the growers would have received, under the plan proposed, an increased amount for the annual period over the four months' delivery period in the sum of $1,011,325,750. The production during these years was 228,528,000 bales; and if the board had underwritten insurance against decline in the annual price at a premium of $1 per bale, the premiums would have amounted to $228,528,000, while the losses would have been $120,783,450, leaving a profit of $107,744,550, to the board. The statement which was prepared by Mr. Bledsoe on January 26, 1927, is as follows:

*Profit and loss statement of seasonal cotton price insurance from 1905 to 1919 and 1921 to 1924, inclusive*

| Fiscal year | Bales produced | Value per pound, Sept. 1, to Dec. 31 | Value per pound, Sept. 1, to Aug. 31 | Increased amount received by growers, yearly period over 4 months | Losses due to decrease in value, yearly period over 4 months |
|---|---|---|---|---|---|
| | | *Cents* | *Cents* | | |
| 1905–06 | 10,575,000 | 10.86 | 10.92 | $3,172,500 | |
| 1906–07 | 13,274,000 | 10.22 | 11.22 | 66,370,000 | |
| 1907–08 | 11,107,000 | 11.48 | 11.14 | | $18,921,900 |

Baleage: United States Department of Agriculture.

Prices: Average spot middling prices of the New Orleans Cotton Exchange, New Orleans, La., certified to by Messrs. Ernst & Ernst, certified public accountants.

STAPLE COTTON COOPERATIVE ASSOCIATION,
O. F. BLEDSOE, *President.*

In other words, the above computation proves that the average annual price is in excess of the delivery price and that as an insurable risk the Government can with safety guarantee and insure that the annual price will be in excess of the delivery price.

I call attention to the fact that while the theoretical average delivery price during the 20-year period, as shown by the above statistics, is 17.55 cents, the actual delivery price based upon the association's deliveries shows a gain of 0.11 cent per pound of the actual delivery average over the theoretical delivery average. Hence it is that section 12 of the Haugen bill provides that the measure of any decline shall be the difference between the average market price weighted for the days and volume of delivery and the average market price weighted for the days and volume of sales, for the actual delivery average of the Staple Cotton Cooperative Association was weighted for the days and volume of delivery. The foregoing statistics show that the average daily spot price of middling cotton on the New Orleans Cotton Exchange for the period September 1, 1905, to September 1, 1925, is higher for the selling season—that is, from September 1 to August 31—than for the delivery season—that is, September 1 to December 31—except for the season 1907–8, the year of the money panic, when there was a loss of 34 points, or $1.70 a bale; 1913–14, when the World War broke out and there was a loss of 6 points, or $0.30 per bale, during which year the exchanges were closed and no cotton was marketed for several months; 1918–19, the year of the armistice, when there was a loss of 87 points, or $4.35 a bale; 1920–21, the year of the great deflation, when there was a loss of 546 points, or $27.30 per bale, and inasmuch as it resulted from war, such a condition is not likely to occur again and might be omitted in the calculation; 1923–24, the year in which there was an overestimate of demand and an underestimate of supply, there was a loss of 88 points, or $4.40 a bale. Excluding the season 1920–21, deflation, the average annual loss for the 19 years included in the calculation is 56.6 cents per bale. The weighted price of the association, which shows the reduction of 11 points, would reduce the average loss to 46.3 cents per bale.

If cooperative associations, instead of selling futures, instead of hedging, with these reliable statistics, can procure insurance against seasonal decline without loss to the Government, it will promote cooperative marketing as nothing else can.

The aggregate of the loss cost for the 4 years out of the 20, exclusive of the year 1920–21 (deflation) amounted to $10.75 per bale. As an insurance proposition I think it would be mani-

festly unfair to include in this loss cost the whole loss due to deflation, as without deflation it is doubtful if there would have been any loss at all, but assuming for the sake of argument that the loss for the year 1920–21 would have been the average of the other entire 4 years of loss, or $2.68 per bale, we get a total loss cost for the entire 5 years out of the 20 of $13.43 per bale or $0.67 per bale per annum. If we add 33⅓ per cent for expenses, there would be a rate of $0.895 per bale. The Government could afford, according to these reliable statistics, to insure cotton against seasonal decline for a period of one year for $1 per bale.

It has been suggested that if the insurance feature is sound the cooperatives could secure the insurance from Lloyds or from other insurance companies. The answer is that neither Lloyds nor any insurance company in the United States insures against any sort of price decline. No insurance can be obtained for this purpose under the laws of New York, New Jersey, Mississippi, or under the laws of any other State in the Union, so far as I know, nor under the laws of the District of Columbia. It is outside of the province of insurance. In a way it invades the realm of banking. The matter of interest and carrying charges must be kept in mind. There is no private agency that can supply the insurance needed to stabilize a basic agricultural commodity. But the Government was organized to do what individuals can not do, what corporations are not authorized to do. The Government financed the railroads during the World War, and it has provided capital for banking under the Federal reserve system. It ought to do for agriculture what it has done for transportation and banking.

The committee considered very carefully the statistics which I have embodied herein, as well as other statistics, and they will be found in Mr. Bledsoe's statement in the hearings. Moreover, the hearings show that Mr. Bledsoe submitted these statistics to some of the leading insurance authorities in the country. Page 108 of the hearings shows that Edwin G. Seibles, manager of the Cotton Fire & Marine Underwriters, of New York City, one of the most prominent insurance men in the United States, believes that the proposition is sound. I quote from the hearings (p. 109), where Mr. Seibles says:

> This appears to me to be a sufficiently definite proposition to calculate a fair rate for the risk involved, and the statistics and records seem to me to be in better shape than a great many propositions which underwriters are willing to undertake.

He also says:

> I think the proposition is not only sound in itself but it has a particular attraction from an underwriting standpoint at the present moment.

He calls attention to the fact that the trend of prices is found in wheat as well as cotton, for he says:

> It will be interesting to know that the uniform trend of prices is found in wheat as well as cotton. This result, of course, is in strict conformity with the logic of the situation.

AGRICULTURAL AND INDUSTRIAL SURPLUSES

There is a fundamental difference between the surplus problem in agriculture and that of industry. It is possible for a manufacturer to adjust the volume of his production closely to the estimated requirements of his market. This the farmer can not do, since in many crops weather and pests have more weight than acreage in determining total yield.

Winds, droughts, floods, boll weevil, corn borer, wheat rust, and other pests and diseases make the accurate adjustment of the production of agriculture to estimated demands in order to avoid a surplus on the one hand, and national underproduction, possibly famine, on the other, out of the question. For example:

In 1920 the corn acreage of the United States—approximately 101,000,000 acres—produced at the rate of 31.5 bushels per acre; in 1924 the yield was 22.9 bushels. On the same acreage base for those two years the variation in total yield due to weather and other factors beyond the farmers' control was 858,000,000 bushels. According to the United States Department of Agriculture, the acreage in corn in 1927 was about a million acres less than in 1926, but the estimated production increased by nearly 100,000,000 bushels on the reduced acreage.

The average United States cotton acreage for the years 1921–1924 was 35,000,000 acres. The 1921 yield was 124.5 pounds per acre; in 1924, 156.8 pounds. The cotton yield variation in those years, due to uncontrollable influences, amounted to 2,225,000 bales on the average acreage.

The 52,000,000 wheat acres, which produced on the average 16.5 bushels per acre, a total of 862,627,000 bushels in 1924, yielded only 12.8 bushels per acre, a total of 669,365,000 bushels, in 1925. The difference, which no degree of foresight or organization on the part of the farmers could have presented, was nearly 200,000,000 bushels of wheat. In other words, the same acreage that yielded barely enough wheat to supply our domestic requirements in 1925 had produced a gigantic exportable surplus the year before. The foregoing examples show conclusively that control of acreage is not equivalent to control of production.

OTHER FACTORS THAN ACREAGE DETERMINE YIELD

The Bureau of Agricultural Economics of the Department of Agriculture points out:

> Crop production varies both because of changes in acreage, which farmers can control, and because of changes in yield, most of which farmers can not control. The relative importance of yield and acreage differs with different crops. During the last 20 years 95 per cent of the changes in spring-wheat production were due to differences in yields; 83 per cent of winter-wheat production changes and 85 per cent of corn production differences were likewise caused by yield changes. Corn and wheat, occupying together about half of all the crop land on American farms, thus offer only slight opportunity for the prevention of occasional years of very large crops.
>
> The remaining major crops—oats, hay, and cotton—are less dependent upon weather conditions, the proportions of variation due to yields being 60 per cent for cotton, 62 per cent for oats, and 47 per cent for hay. As a whole, perhaps three-quarters of the annual variation in crop production is due to yield variations, and lies beyond human control through acreage adjustments.

POLICY OF ACREAGE REDUCTION CONSIDERED

It is recognized as the responsibility of agricultural producers to make all possible readjustments in acreage and production to conform to changing economic conditions. It is felt that much can be accomplished under the influence of a central body like the Federal farm board, to assist producers in the development of sound programs of planting and breeding. But when all has been done that can be done in that direction there still remains the problem of uncontrollable surpluses which this bill attempts to meet. Furthermore, there is distinct difference between making wise crop adjustments and deliberately adopting a national program which aims to do away with all national surpluses of important food products and raw materials.

IT WOULD BE DANGEROUS TO CUT PRODUCTION

It would be difficult in practice, if not impossible, to cut down the farm acreage of the United States to the point where there would be no prospect of surplus production in a favorable season. From the consumer's viewpoint, nothing could be more dangerous than to urge general curtailment of the supply of essential food and raw materials. Repeatedly representatives of the American Federation of Labor have indorsed legislation for agriculture such as is embodied in this bill and have pointed out the serious danger to consumers of any policy to do away with crop surpluses. From the national viewpoint, the grave danger in such a policy is best pictured when one asks the question: "What would have happened to the United States and to the allied nations in the late war if the agriculture of the Nation previously had been reduced to a domestic basis?" It was the fact that they were then on an export basis that enabled the farmers of the United States to supply quickly to the Allies food that was necessary in carrying on the war.

SPECIFIC OBJECTS SOUGHT THROUGH SURPLUS CONTROL

Results obtainable through organized handling of agricultural surpluses would depend with any commodity upon the nature of the commodity itself, its markets, and its methods of marketing. In general the objects sought under this bill are—

First. To stabilize market price levels against excessive fluctuations.

Second. To secure on commodities whose exportable surplus is small relative to the total domestic production, but is still large enough to influence materially the price in the home market, a domestic price for the bulk of the crop independent of the world price at which the surplus must be sold.

Third. To secure a stable and satisfactory world price for the producers of a crop like cotton, of which the American supply is the dominant factor in world price.

In this, as in previous measures, the committee recognizes that weather and other uncontrollable factors influence crop yields to such an extent that farmers are unable through adjustment of acreage to fit their supply to the market demands during any one year. In the judgment of the committee reasonable efforts toward the adjustment of acreage by the producers is necessary, but they should be supplemented by the machinery necessary to control the market movement of surplus portions of the crop and to handle and dispose of such surpluses in the interest of the producers. It is recognized that those who

attempt this task, whether they are cooperative associations of the producers or stabilization corporations or other agencies, incur operating costs and risks of loss; and that these are inescapable if a considerable surplus is to be managed so that the remainder of any crop may bring the producer a fair and stable price.

AGRICULTURAL PROBLEMS NEED THE ATTENTION OF CONGRESS

The general situation of agriculture presents a problem of such widespread importance that there appears to be little difference of opinion as to the necessity of some action by Congress aimed to secure for agriculture greater stability and a more proportionate share of the national income. The differences of opinion which have developed have to do with the means through which this is to be sought rather than with the end itself.

PROBLEM OF FUNDAMENTAL IMPORTANCE

Any serious and careful consideration of the situation and trend of American agriculture makes it clear that in relation to it the United States is confronted with a question of fundamental national concern and of permanent importance to the American people. The specific problems which face individual farmers, the different branches of the industry, and the several agricultural sections of the country are numerous, varied, and constantly shifting; but beneath all these there lies the fundamental question of the maintenance, improvement, and wise utilization of the irreplaceable land resources of the Nation, which must remain the basis of the prosperity and even of the very existence of our people.

Agriculture is not merely a way of making money by raising crops; it is not merely an industry or a business; it is essentially a public function or service performed by private individuals for the care and use of the land in the national interest, and farmers in the course of their pursuit of a living and a private profit are the custodians of the basis of the national life. Agriculture is therefore affected with a clear and unquestionable public interest, and its status is a matter of national concern calling for deliberate and far-sighted national policies, not only to conserve the natural and human resources involved in it but to provide for the national security, promote a well-rounded prosperity, and secure social and political stability.

THE AGRICULTURAL SITUATION

The evidence is clear that American agriculture has undergone a prolonged and trying readjustment to postwar conditions, in the course of which those engaged in it have suffered seriously in their relative economic prosperity in comparison with those engaged in other fields. On the human side it has been deprived of the energy, experience, and knowledge of many thousands of farmers who have lost their resources and have been persuaded or compelled to leave the farm for other occupations, while the land resources of the Nation have been impaired by neglect and by wasteful exploitation under the pressure to which those who have remained in the business have been subjected.

RELATIVE PRICES LOW

Since the war the prices of farm products have persisted in an uneconomic and unfavorable adjustment to the general scale of prices of other goods and services. Though the relative price of agricultural products has increased, the costs of production in agriculture have risen or tended to remain high in comparison with the agricultural income, so that the readjustment of price relationships alone does not assure real improvement in the relative economic position of agriculture as a whole.

Production in some of the important branches has been slow in readjusting itself to normal demand after expansion during the extraordinary emergency conditions of the war, while the foreign market for farm products has been depressed by the low purchasing power of European nations, by the stimulation of their own agriculture, by their internal and external indebtedness, and by the postwar restrictions upon international trade.

LOWERED STANDARDS OF LIVING

This disparity between urban and farm incomes has emphasized the disparity in standards of living in the rural and urban populations and caused a large net migration to the cities. In large part this migration has been a kind of natural or economic selection through which the agricultural position has been improved by the elimination of the inefficient farmers, but in part it has meant the withdrawal from agriculture of some of the more energetic and intelligent farmers who have been unwilling to accept the relatively low standards of living possible on the farm.

LAND VALUES HAVE DECLINED

The continued low incomes have been reflected in a general decline in land values. The index number of the value of farm land with improvements, which for the country as a whole stood at 169 in 1920 and 157 in 1921, has declined each year, reaching 124 in 1926 and 119 in 1927. Considered by geographic divisions, the decline has been greatest in the West North Central States and least in the New England and Pacific Coast States. As a result of this decline in real-estate values, it has been estimated that the value of all capital invested in agriculture declined from $79,000,000,000 at the beginning of 1920 to $58,000,000,000 at the beginning of 1927.

FARM BANKRUPTCIES HAVE MULTIPLIED

Largely as a result of the shrinkage in the value of farm capital and the low current incomes of so many farmers, there has been a great increase in the number of farm bankruptcies in recent years. In the 10-year period, 1904–1913, there were, on the average, 1.4 farm bankruptcies per year for each 10,000 farms, while during the three years ending June, 1926, there were 12.2 per year for each 10,000 farms. The number of farmers who resort to bankruptcy courts is so small that even in times of financial stress most farmers who lose their property do so without foreclosure or bankruptcy.

BANK FAILURES INCREASE

The decline in the economic position of agriculture has been the chief cause of the enormous number of bank failures in the United States since 1920, without parallel in any previous period in our history.

The number of bank failures in 1924 (915) was 42.5 per cent larger than the number of failures in 1893 (642). The number of failures for the period 1920–1925, inclusive (2,494), was greater than the number of failures during a period of 26 years up to 1920 (2,424). Most of the closed banks were located in agricultural districts.

The following table showing bank failures in the United States since 1920 does not include figures for closed national banks which were reopened without having been placed in the hands of a receiver.

*Bank failures by years ending on June 30, 1920 to 1927*

[Statistics obtained from the Comptroller of the Currency]

| Year ended June 30— | National banks | | Other banks | | Total | |
|---|---|---|---|---|---|---|
| | Number | Liabilities | Number | Liabilities | Number | Liabilities |
| 1920 | 5 | $1,930,000 | 44 | $18,955,000 | 49 | $20,885,000 |
| 1921 | 28 | 17,301,000 | 290 | 96,124,000 | 318 | 113,425,000 |
| 1922 | 33 | 20,287,000 | 363 | 95,029,000 | 396 | 115,316,000 |
| 1923 | 37 | 20,076,000 | 237 | 64,550,000 | 274 | 84,626,000 |
| 1924 | 138 | 74,743,000 | 777 | 223,188,000 | 915 | 297,931,000 |

| 1927 | 141 | 66,586,000 | 689 | 206,655,000 | 830 | 273,241,000 |
| Total | 562 | 292,550,000 | 3,336 | 970,052,000 | 3,898 | 1,263,402,000 |

Chairman HAUGEN, of the Committee on Agriculture, in his report on the present Haugen bill said:

As a result of high costs and impaired income of the farmer, the total farm indebtedness in the United States, which was estimated at $4,320,000,000 in 1910, has grown to $12,250,000,000 in 1920, and stands at approximately that figure to-day.

CONDITION OF AGRICULTURE

This is very convincing evidence written by a man from my State who really knows the condition of farmers:

FARM SITUATION IN TRUE LIGHT—GEORGE W. PARK DISCUSSES PLIGHT OF SOUTHERN AND WESTERN FARMERS

That there is a great depression among the cotton and wheat farmers no intelligent person will deny, if he speaks conscientiously. Since the World War the farmers have not been able to pay expenses and are running in debt to such an extent that many have left their farms. A few have kept the "wolf from the door" by persistent industry and rigid economy; but their old, weather-beaten, unpainted buildings indicate the stress, the hard times to which they are subjected. This depression is not simply around Greenwood. It is found throughout the South, Middle West, and West. Two years ago, it is said, one-tenth of the western wheat farmers lost their farms, and the loss has been almost as great ever since. If such conditions prevail for several years more, the farmers will be ruined.

Every farmer growing wheat and cotton who pays the ordinary wages of carpenters and even of common laborers will eventually become bankrupt.

It is about time for the people to stop reading and believing the articles that are being published about farmers in such periodicals as Collier's Weekly and the Saturday Evening Post. Those articles are mostly written by politicians who are trying to camouflage the public and prevent a knowledge of the truth. I would call attention to an article in a recent issue of the Saturday Evening Post entitled "Our

best customer," written by Secretary Mellon. He boasts of the "more equitable distribution of wealth, the better-clothed, better-fed, better-paid population, their comfortably heated houses with modern conveniences, their leisure, luxury, and amusements." Where are they? Does he realize the condition of the cotton and wheat farmers that form a very large part of our population? If not, he had better read the article in the July Review of Reviews, written by E. E. Miller, editor of the Southern Agriculturist. It will pay anyone interested in the South to read that article. Let me quote a paragraph. It shows that the Secretary is either ignorant of facts or is attempting to deceive the farming population by falsifying facts. Mr. Miller says:

"In Georgia in 1920, 481,000 males and 132,000 females were listed as agricultural workers; in Alabama 382,000 males and 123,000 females. These females were not only the wives and daughters of negro 'hands' or croppers but also the wives and daughters of white tenant farmers and small farm owners. Many a cotton farmer's wife makes a regular 'hand' in the field during planting and chopping season, going to the house an hour or so ahead of the rest of the family at noon and in the evening to get the meals ready. Little children play in the corners of the fields, or in the shade of near-by trees, while their mothers hoe or pick cotton. Nowhere else in America do so many farm women work in the fields.

"The pay received by cotton growers for their work is smaller than that received by any other class of laborers in the United States. Cotton is produced by the help of tens and hundreds of thousands of women and children who get a mere pittance for their labor. If the average cotton crop were produced by man labor working at an average rate of wages it would have to sell for fully twice the price now received in order to pay out."

Will these conditions last?

I dislike to present these pessimistic facts to the public, but it is high time that our cotton and wheat farmers should know whither they are drifting. The outlook is truly ominous. If the present conditions continue the fate of the culturist is sealed. His farm will soon be owned by those who are becoming wealthy under our unsound economic system, and he will be, like the scapegoat of the Israelites, turned loose in the wilderness.

But the farmer will surely get relief, and that speedily. Already he is beginning to realize his deplorable condition, and when the whole truth dawns upon him in all its hideous aspects, and his hair lengthens thinking upon it, like Sampson of old, he will feel of the political pillars upon which the present "artificial Coolidge prosperity" stands, and it will crumble and fall; or else it will secure for him equal rights.

Yes; the dark cloud now hanging over the farming industry is beginning to show a silver and gilt lining which will, by the farmers' cooperative might, dispel the darkness, and reveal a transformation of silver and gold dollars into the lean pocketbooks of the worthy toilers of the soil, enriching them as never before. My concluding letter, in a few days, will relate to this transformation and point out how it can or will be effected.

GEO. W. PARK.

GREENWOOD, S. C., *September 10, 1926.*

FALSE ECONOMY

The Republican administration is long on practicing economy when you want to spend the taxpayers' money for the relief of agriculture or for the relief of the great masses. I doubt seriously if we will get any relief to combat the pink bollworm or the corn borer that threatens the destruction of the farmers' corn and cotton. They have tied up legislation that would put Muscle Shoals into operation to manufacture nitrates for farmers. This administration would sacrifice agriculture, forgetting that we won the World War because we were able to feed and clothe our brave soldiers as well as our allies. Yet even the President would have us spend $4,200,000,000 on the Navy.

In my opinion, this is no time for the United States to flaunt its overshadowing power by engaging in a navy-building enterprise that will fill the world with ill will and crush reviving economic strength under a burden of taxation. Our influence should be all in favor of international good will and the elimination of war. No nation or group of nations in the world would dream of attacking us or risking our wrath in the present condition of things. They can not afford war. The approximate indebtedness of England is $37,200,000,000; the United States, $18,284,000,000; France and her colonies, $12,872,000,000; Italy, $4,942,000,000; and Japan, $2,500,000,000—making a total of nearly $76,000,000,000 for the five major nations of the world, most of which is the terrible toll caused by war. Another war in the near future would ruin our rivals. No matter how much they may dislike us, all want peace.

IN 1861–1865

It took 20 years for the South to get back to normal in the cotton markets, the price of each crop falling. The South was poorer than it was safe for any great section to be, many thousands moving away to the Southwest, where land was free. Others moved into the Northwest to make wheat cheaper than it was. Lands and ancient homes were deserted, as lands and homes had been deserted in 1820–1830.

Somebody set about a scheme to unite the restless West with the broken South. If they united they might control the United States and learn the way to self-help, farmers thus taking the control of things into their own hands, as they had done when young Calhoun and Clay tried their powers in 1820, tariffs and paper money and great banks to the contrary notwithstanding. But then somebody reminded them that the two sections of farmers had waged the Civil War. They must vote as they had shot; and children must vote as fathers had shot. There was an end of farmer self-help. Neither Bryan nor Roosevelt found any way to share with the farmers the vast and unprecedented prosperity of the new and unprecedented Republic. A single State in the East received twice as much of the annual income of the country as all the 13 Southern States!

Hundreds of thousands of farmers and children of farmers moved into the thriving cities. They sought places in the mills, on the railroads, in the great business houses, counting the money.

1914–1920

There was again a day of deceitful riches; and then a collapse, first of farmers, next of business in the cities. The world outside struggled between war and peace; the President, broken and hated for his scheme of peace that was failing, departed. He gave place to another, to a new régime that would save business if nothing else—a city régime made up of the fragments of all nations, bent upon a policy of oblivion and isolation. It was but another day till Europe once more ceased to buy cotton and wheat and pigs; the farmers were cast down from their high prosperity. Cotton could not be sold; wheat fell below the cost of production—dire distress. From 1921 till the present moment the experience of 1820, of 1866, repeated itself.

There was poverty wherever men produced the foodstuffs of the country; fair prosperity elsewhere. But the fears of 1921, like those of 1866 and afterwards, raised again the protecting wall against European competitors who would sell European goods at low prices and buy American farm products at rising prices. The fear of cheap imports raised the tariff walls higher than ever before. That secured the prosperity of business; it doomed the farmer, for no protective tariff could help him, nor were rich, vacant lands anywhere.

Somehow society found a way to relieve the fears and distress of those who own mills, run railroads, and operate the finances of the country. The price of manufactured products scarcely fell at all; the returns on railway investments were stabilized by official guaranty of 5½ per cent; the banks lent money at fixed and stable rates. Everybody received help save those who needed it. Statesmanship!

THERE IS ANOTHER SIDE TO THIS STATEMENT

Opponents of the bill will tell you that if you stimulate the price you will stimulate production. They make those statements because of the fact that they are not familiar with what farmers have to contend with and how they figure their way out.

With good prices, farmers will send their girls and boys to college. A great many of them will take a vacation like other folks do, and negroes with more money will not, under any circumstances, work full time.

Being a farmer and having supplied thousands of farmers as a supply merchant, I know that when prices are depressed, farmers will increase their acreage so as to increase the volume of production, hoping, with a depressed price, to have enough cotton at the price to bring in as much money as would a small crop at a better price.

If you will read on page 77, report on the condition of agriculture and the causes thereof, gotten out in 1927 by the Business Men's Commission composed of—

Charles Nagel, St. Louis, Mo., chairman of Nagel & Kirby.

E. N. Brown, New York City, St. Louis-San Francisco Railway Co.

E. M. Herr, New York City, president Westinghouse Electric & Manufacturing Co.

J. G. Lonsdale, St. Louis, Mo., president National Bank of Commerce.

A. F. McKissick, Greenville, S. C., vice president Alice Mills.

Clay Miller, San Francisco, Calif., of Clay Miller & Co.

Arthur R. Rogers, Minneapolis, Minn., president Rogers Lumber Co.

John Stuart, Chicago, Ill., president Quaker Oats Co.

Alfred H. Swayne, New York City, vice president General Motors Corporation.

Paul M. Warburg, New York City, chairman International Acceptance Corporation—

you will find that they have made this statement:

Once agricultural prices have definitely fallen it is a long and hard struggle to restore them again. Producers immediately tend rather to increase than restrict their output in order to make up by volume of sales what they lose in price, and the situation grows worse.

Mr. LAGUARDIA. It is far better to have a natural depression or reduction in production than an artificial market by these ticker manipulators.

Mr. FULMER. Absolutely. If this Government would spend less money in trying to increase farmers' production and many millions in research work, new uses for cotton and other commodities, new markets and marketing system owned and controlled by farmers so as to bring about orderly marketing and distribution we would be able to dispose of all crops at a fair price to the producer and consumer.

Dr. James E. Boyle, an economist of New York, in his book on agricultural conditions made a statement, and it sounds reasonable, that during the war when crop prices were high farmers plowed up 5,000,000 acres of pasture lands and planted same in crops. I think the gentleman from Texas [Mr. Box] will bear me out in this statement, that there were at one time thousands of acres of pasture lands plowed up in his State as well as in other States because the price of cattle got so low they could hardly give them away. Depressed prices in any line of agriculture will drive farmers into the other farmer's line. Let cotton prices go to 10 cents for a year or two and you will see a great many cotton farmers going into grain, hogs, cattle, or something else.

THIS BILL PROPOSES TO PUT ALL MAJOR COMMODITIES ON EQUALITY

If this bill will put all major agricultural commodities on a fair basis as to price, you will see each farmer and each section pushing his own line and farmers and sections bartering their goods and wares with each other.

Our farmers in the South are in need of thousands of good mules and dairy cattle, but because of their condition they can not buy; therefore, our friends from the West can not supply our market with that which they have an abundance.

JUST AN IMAGINARY SURPLUS

If you take the figures for the past 10 or 15 years in the production of cotton, you will see that we have never had a surplus over a period of, say, five years above that which we should have at all times. In the meantime, if you will take the average price for a period of, say, 10 or 15 years, you will find an average price of about 25 cents. If the farmers of the South could have gotten 25 cents for the cotton production for the past 10 or 15 years, we would to-day have the most prosperous country in the world.

TABLE 1.—*Cotton production in the United States and average price of New Orleans spots, 1907–1926*

| Year beginning August 1— | Production (linters not included) | Average price per pound of New Orleans spots |
|---|---|---|
| | *Thousands of 500-pound bales* | *Cents* |
| 1907 | 11,107 | 11.41 |
| 1908 | [1] 13,424 | 9.80 |
| 1909 | 10,005 | 14.33 |
| 1910 | 11,609 | 14.65 |
| 1911 | 15,693 | 10.77 |
| 1912 | 13,703 | 12.20 |
| 1913 | 14,156 | 13.12 |
| 1914 | [1] 16,135 | 8.35 |
| 1915 | 11,192 | 11.68 |
| 1916 | 11,450 | 18.84 |
| 1917 | 11,302 | 28.97 |
| 1918 | 12,041 | 29.88 |
| 1919 | 11,421 | 38.21 |
| 1920 | [1] 13,440 | 16.56 |
| 1921 | 7,954 | 17.91 |
| 1922 | 9,762 | 25.94 |
| 1923 | 10,140 | 30.33 |
| 1924 | 13,628 | 24.21 |
| 1925 | 16,104 | 19.71 |
| 1926 | [1] 17,977 | 14.74 |

[1] Production figures are from United States Department of Commerce, Cotton Production, 1926, p. 3. Prices are the annual averages of the official daily closing spot quotations of the New Orleans Cotton Exchange.

| Year | Production | Total value |
|---|---|---|
| 1923–24 | 10,140,000 | $1,615,911,300 |
| 1924–25 | 13,628,000 | 1,691,917,950 |
| 1925–26 | 16,104,000 | 1,616,875,380 |
| 1926–27 | 17,977,000 | 1,184,791,150 |

You will note that the 1924–25 total yield was three and one-half million bales larger than the 1923–24 crop, yet the smaller crop of 1923–24 brought the farmers over $76,000,000 more than the larger crop of 1924–25.

Also, while the 1926–27 cotton crop was around 2,000,000 bales larger than the 1925–26 crop, the smaller crop of 1925–26 brought the farmers $432,000,000 more.

The 1927–28 crop was 12,750,000 bales, yet the farmers received several million more for the smaller crop than the bumper crop of 1926–27.

I contend that because farmers were blessed with 5,000,000 more bales of cotton it is a national shame that they are unable to so control the same as to bring them a fair return, while in the meantime this 5,000,000, supposed to be a surplus, was taken by mills, speculators, and foreign countries at about from 5 to 8 cents below the cost of production, only to be held by them, either as cotton or cotton goods, to be fed back into the 1927–28 market from 18 to 24 cents.

I ask my friends to read the consumers' chart during these ups and downs, when the farmers are always down and the speculator always up, as far as prices are concerned; and you will note that the consumer was not considered as he continued to pay on a fairly straight line at top prices.

REPUBLICAN PROSPERITY

I am inserting herewith some statements which represent the Republican prosperity that we read about in the papers. While farmers, their wives, and children are toiling in the fields, speculators are fixing prices, either up or down, making millions, while legitimate business is slowing up, unemployed labor increasing, and farmers going broke.

SALES RECORD IS SET AS STOCKS SURGE UP—3,909,100 SHARES CHANGE HANDS—MARKET BOILS AS TECHNICAL CORNER IN RADIO IS RUMORED

(By the Associated Press)

NEW YORK, March 12.—Unconfirmed rumors that a "technical corner" has been created in the common stock of the Radio Corporation started a fresh outburst of speculation on the New York Stock Exchange to-day and carried that issue up $18.50 a share to $138.50, the highest at which it ever sold.

The day's total sales, 3,909,100 shares, established a new high record for all time.

Radio's advance since last Friday has been the most spectacular of any of the booming shares in the current "bull" movement. Closing last Friday at $98.25, its total gain to the end of to-day's session was $40.25 a share, eclipsing the advance of about $25 in seven days of feverish buying.

The former record for a day's total sales was established at 3,765,700 shares on March 3, 1926.

Speculative enthusiasm ran riot through a long list of popular issues, advances of $5 to more than $8 a share being recorded by Baldwin, American Linseed, General Electric, Gold Dust, International Nickel, Wright Aero, Montgomery Ward, International Harvester, Commercial Solvents, Woolworth, Vanadium Steel, A. M. Byers, and several others.

MARKET BUCKS THE BANKS

(By Broadan Wall)

NEW YORK, March 19.—A bank roll of more than $1,500,000,000 is bucking the Federal reserve policy in the stock market. It is the money and profits of a group of millionaire industrial magnates and is victor for the moment at least. The result is more of an inflated market in stocks than a stock market. It's anyone's guess how long such a condition can last. The group dominating dealings are comparatively new to market circles.

Durant has been known to the Street for many years but he is the only one of those staging the present "merry-go-round" on the stock exchange who can be called an old-timer. Arthur Cutten was known in the Chicago wheat pit but never as a figure in stocks until three years ago. Raskob was not heard of before the Coolidge bull market.

---

M. J. MEEHAN, CHIEF FIGURE IN WALL STREET BOOM, ROSE FROM RANKS

(By the Associated Press)

NEW YORK, March 14.—A man who 20 years ago was selling tickets at a Broadway theatrical ticket agency to-day was credited with putting over one of the most sensational coups in Wall Street history.

He is Michael J. Meehan, who almost single-handed engineered the sensational rise in Radio common, which carried the stock up 50 points in four trading days, brought him a fortune of millions of dollars and a severe case of nerves.

Just how much he has made in the past four days, which have seen the exchange record for sales volume twice broken, he probably does not know himself and estimates in the Street run from $5,000,000 to $15,000,000.

AMONG BIG SPECULATORS

He has pushed Durant, Livermore, Cutten, and the Fisher brothers into the background, and to-day is the "biggest man" in speculative Wall Street. There is evidence, however, that he is on friendly terms with all of them and has probably had some help from those sources during the past four hectic days.

He literally and actually "made the move" in radio, gave most of the orders, filled most of the bids, and churned the stock around at a million-dollar clip, which left Wall Street gasping and trying to guess what "Mike" Meehan would do next. Even the bears, who have taken

one of the worst whippings in years, pay tribute to the dashing drive that for daring and success is outstanding.

BOOM MARKETS BRING NEW RICHES

(By International News Service)

NEW YORK, April 12.—Many new millionaires have been made throughout the country—and in Wall Street, too—as a result of the spectacular rise in prices during the recent run of record-breaking 3,000,000 and 4,000,000 shares a day markets on the New York Stock Exchange.

George Briggs Buchanan, who has been a member of the exchange for almost a quarter of a century, says that more than 300 new millionaires were made all over the United States.

MEN MADE RICH BY STOCK MARKET GIVE FAREWELL DINNER TO AUTO MAKER

(By the Associated Press)

NEW YORK, April 20.—An elaborate dinner of men made millionaires by the stock market was disclosed by the New York Times to-day.

So many people have become a part of the Wall Street market that, in Buchanan's opinion, the future will see many days in which shares for the day will run between 4,000,000 and 5,000,000. A few months ago a "3,000,000-share day" attracted wide comment. Before the war a "1,000,000-share day" was out of the ordinary.

WHAT DOES IT MEAN?

Sales topping 4,000,000 shares; stocks up to record high levels; frenzied scenes on the floor of the stock exchange; brokers sustained in the fearful ordeal by fresh air mechanically pumped into the building; armies of clerks working night and day to post up the day's business; enormous profits for somebody—what does it all signify?

Stocks go up when the bulls are on the rampage, go down when the bears make an offensive, then go up again. For the mere service of buying and selling brokers are reaping profits of such magnitude as to inspire promises of handsome bonuses and trips to Europe for overworked employees. And when the gong sounds the closing there is no more wealth in the country than there was when the trading began, and the world is no better off. Men count huge gains who have produced nothing, rendered no valuable service. With its stock at 199 General Motors represents precisely the same instruments of production as it did at 180, and at a new high the New York Central has no greater potentialities in the way of public convenience than it had before the flurry.

All this furious trading is in tokens of ownership industries in which the traders never lifted a hammer or turned a wheel. All they do is to gamble with something which, in its useful aspects, means the lifeblood of large communities and the bread and butter of millions of workers and their families.

The best that can be hoped is that these stock exchange transactions mean nothing to the factories and railroads in whose name they are carried on; that gambling in shares, even reckless gambling, will not jeopardize industries and those who work in them. All the same, one can not escape the disparity between the riches that nonproducers gain through trading in shares, and the rewards that go to those who perform services socially worth while. There will be no trips to Europe for automobile mechanics and railroad employees.—New Bedford Standard.

FARMERS HAVE NO CONTROL OVER PRICES

The following will give you some idea as to why the farmer can not tell one day from the next what the price of his commodity will be. On September last the Department of Agriculture stated that later on cotton would be cheaper, the price then being 24 cents. Immediately the speculators got on a bear rampage and pushed the price down to 16½ cents or about $40 per bale in the midst of the farmer's cotton-selling season. Now that the cotton has passed into the hands of the mills and speculators cotton is advancing and selling to-day for about 22 cents per pound. You will notice by the newspaper clipping that they are able to put cotton up $1.70 per bale on the grounds that we had some rains or showers in Tennessee and North Carolina. No cotton is planted in Tennessee, and none was planted in North Carolina at the time this statement was made:

COTTON PRICES RISE IN TO-DAY'S DEALINGS—GENERAL BUYING INSPIRED BY FIRM CABLES AND REPORTS OF RAINS IN THE SOUTH

(By the Associated Press)

NEW YORK, May 1.—The cotton market showed continued activity and strength to-day, with the opening 17 of 34 points higher on more or less general buying inspired by relatively firm cables and reports of rains or showers in Tennessee and North Carolina.

COTTON HAS BREAK IN LATE DEALINGS—FEAR OF HIGHER MONEY RATE IN NEW YORK CAUSE OF HEAVY SLUMP IN PRICES

(By the Associated Press)

NEW ORLEANS, May 3.—Fear of a higher money rate in New York and England this afternoon was responsible for a wide-open break in cotton prices in the late trading on the exchange here to-day. Prices sagged $3 a bale before the decline was checked. The market closed barely steady at net declines of 53 to 59 points.

| | High | Low | Close |
|---|---|---|---|
| January | 20.66 | 20.11 | 20.11 |
| May | 21.17 | 20.54 | 20.54 |

| December | 20.77 | 20.13 | 20.14-15 |

I am inserting herewith a very interesting newspaper clipping which clearly shows the position of wheat growers, and yet the opponents of this bill will tell you, "Let the farmers take care of themselves."

HUGE PROFIT-TAKING CAUSES GRAIN BREAK

(By the Associated Press)

CHICAGO, May 1.—Unofficial crop reports to-day as to wheat proved fully as bullish as expected, but immense profit-taking sales carried prices downward in the early dealings. The average of the private estimates of the winter wheat crop was 474,000 bushels.

Buying on declines was based largely on the fact that domestic winter wheat acreage remaining for harvest has, according to some authorities, an indicated yield of only 13.6 bushels per acre, the smallest, with one exception in 18 years.

Notwithstanding that to-day's private monthly crop reports showed that the abandonment of winter wheat acreage this season is the largest ever known, wheat prices plunged headlong downward. Speculators, who had been buying on an immense scale of late in anticipation of these reports, made haste to collect profits, if possible, while the collecting was good. Despite the bullish character of the crop reports, however, the weight of selling proved too heavy, and the market collapsed nearly 6 cents a bushel.

The following statement will show how the cottonseed mills are able to combine and fix prices during the fall on the farmers cottonseed, every mill having the same price day in any day out and now are able to sell cottonseed meal for $15 and $20 per ton more than they paid the farmer for his cottonseed. Yet these same people will tell you, "Let the farmers do it."

FORT WORTH.—Another new peak has been set this week for cottonseed meal prices, which rose to $53 and $54 a ton of 1927 crop, now reaching the mills. Farm agents are warning farmers such prices make meal prohibitive as a fertilizer and urged that they plan feeding campaigns carefully so as to avoid losses.

Let me give you a concrete example as to what cotton farmers have to contend with in marketing their cotton:

During the year 1926 we were blessed with sunshine and rain. God Almighty withheld the ravages of the boll weevil and we had the largest crop in the history of cotton growing, which amounted to 18,000,000 bales. In 1921 we produced only 8,000,000 bales. When farmers began to gather their cotton the first of the fall of 1926, cotton was selling for 18 cents, and everybody was happy. About this time the speculators began to put on one of the largest bear campaigns ever waged. The Government came out with its report of the total prospective yield of 15,000,000 bales, and every 15 days thereafter the Government reports came, increasing each time until it reached 18,000,000 bales in December. Speculators sold millions of bales on the exchange and bought spot cotton at their own price, as it was forced on the market until it sold as low as 5 and 6 cents for low grade and 11 and 12 cents for best grades. What happened? The buyers in America took 8,000,000 bales of cotton and the foreign countries 11,000,000, 1,000,000 more than we produced in 1926. Out of the 19,000,000 bales, 17,000,000 bales were actually consumed up to July, 1927.

This crop was sold by farmers from at least 5 to 8 cents per pound under the cost of production. Now, let us see what happened. As early as May, June, and July, 1927, after the cotton had passed out of the hands of the farmer into the hands of foreign countries, mills, and speculators, these same speculators started a bull campaign. Why this sudden change? Because the large crop was out of the hands of the producers and safe and sound in the hands of speculators, millers, and two large spot-cotton operators. This cotton must now be fed back into the markets either as cotton or as manufactured cotton goods and now that we, the speculators and mills, see a prospect of a small cotton crop for 1927 we will get busy before the new crop is ready to go on the market. I imagine they said also that then we will be able to handle the new crop of 1927. The press was full of "bull dope." Telegrams were sent out to large cotton buyers and to the exchanges. The Government gave out bullish reports on the boll-weevil situation. In the meantime the same speculators began to buy on the cotton exchanges. Here is a telegram dated July 15, 1927,

sent out from New York to all cotton exchanges, large cotton buyers, and the press:

Cotton being bought vigorously by trade and speculators on acceptance of Government acreage as correct and calculating fourteen half-million bale crop will be liberal yield with favorable weather. Weevil damage already heavy some sections and infestations on increase. This indicates yield may be well under fourteen half million. Exports total eleven million, American mills taking eight million, total nineteen million, with crop promises fourteen and half million under this. Recommend purchase December contracts, believing results will be quite favorable.

If I had the time, I could stand here and read into the RECORD telegrams like this and statements from the press making even much stronger the pressure to buy cotton on the exchanges so as to bring about a bull market.

Now, you will notice that from this telegram, with a prospect of a crop of even fourteen and a half million bales, with all information in hand as to the large crop, surpluses, and so forth, from 1926, yet they state cotton is a good buy. They were perfectly willing to broadcast to the world the large export and American takings of cotton out of the 1926 crop that not only would we have a short crop for 1927 but the whole 18,000,000-bale crop of 1926 and 1,000,000 more had already been taken.

To carry out these bear and bull schemes successfully it seems that under the present law the speculator and cotton firms like Anderson-Clayton Co. and McFadden Co. do not have to organize. They control the exchanges and the fixing of the price of that which the farmer has to sell. Yet, knowing this as we do, the American Congress refuses to pass legislation so as to allow the producers of cotton and other farm products to have some say so as to what price they shall receive for that which they produce.

The Textile Institute of New York, representing the cotton mills, began to put out very bullish dope on increased mill production, consumption on the part of the consumer, and increased orders coming into the mill. The price of cotton commenced to climb until the first of the season of 1927 the price had reached 24 cents.

In the meantime consumers of cotton goods did not know that cotton had gone to such a low price, because the price to the consumer remained on a fairly straight line at top prices.

This institution got in on the bull campaign during the first of the year 1927, after the manufacturers and speculators had taken over the 19,000,000 bales of cotton, and it was their part to show to the world the very bullish position of cotton because of the full-time speed of the mills and spindles and the wonderful demand and sale of the manufactured cotton products.

They carried on their campaign by the use of a cotton Textile Bulletin and by giving out monthly and in some instances daily statements to the press.

Why, gentlemen, as a cotton farmer, the holder of spot cotton, and the representative of cotton farmers, their statements made my mouth run water and my heart leap for joy because of what I could see in the future for the cotton South.

But, my friends, let us read into the records some of their propaganda, so that you will be able to see why I was so joyful. On or about May—I have not any records before this date—they came out with a statement like this—

[From the Cotton Textile Bulletin]

INDUSTRY'S STATISTICAL POSITION CONTINUES TO IMPROVE

More than a billion yards of standard cotton cloth were sold during the first four months of 1927, according to combined monthly reports for this period compiled by the statistical staff of the association.

The volume of sales in this period was more than 38 per cent larger than the volume in the corresponding period last year.

Production has been slightly larger up to May 1, but stocks have declined and unfilled orders on May 1 had accumulated in record volume. During the first four months of last year stocks increased slightly and unfilled orders declined.

The improved statistical position of the industry is indicated in the following comparative summary (000's of yards omitted) based on combined yardage reports compiled by the association:

| | 1926 | 1927 |
|---|---|---|
| | *Yards* | *Yards* |
| Production | 894,187 | 976,057 |
| Sales | 866,348 | 1,196,197 |
| Shipments | 890,834 | 1,046,610 |
| Stocks on hand: | | |
| Jan. 1 | 268,716 | 247,234 |
| May 1 | 272,069 | 176,681 |
| Unfilled orders: | | |
| Jan. 1 | 261,317 | 324,943 |
| May 1 | 236,831 | 474,530 |

Unfilled orders during April this year increased 6.6 per cent from 445,171,000 yards on April 1.

Production during April, 1927, amounted to 237,185,000 yards, an increase of 11.9 per cent over April, 1926.

Sales were 252,301,000 yards, or 106.3 per cent of production. In April, 1926, the ratio of sales to production was 79.8 per cent.

Shipments during April were 222,942,000 yards, or 94 per cent of production. Shipments increased 17.1 per cent over the volume in April, 1926, when the ratio to production was 89.8 per cent.

Stocks on hand April 1 amounted to 162,438,000 yards. On May 1 they were 176,681,000 yards, or 35.1 per cent lower than on the corresponding date a year ago.

The reports compiled by the association are based on yardage statistics on the manufacture and sale of more than 200 classifications of standard cloths, and represent a large part of the production of these goods in the United States.

Now, I gather from this report that during the first four months of 1927 sales of cotton goods increased over 1926 38 per cent. I call that good business. I also gather that up to May 1, stocks had declined and unfilled orders for cotton goods in the hands of the mills to be shipped out had accumulated in record volume. I especially want you to get this, the unfilled orders to be shipped to jobbers and wholesalers of cotton goods had accumulated in record volume. In other words, the demand for cotton goods is so large that we, the mills of America, are unable to make prompt shipment. We gather from the statement also that on May 1, 1927, stocks of cotton goods held by mills were over 35 per cent below same date a year ago.

George A. Sloan, secretary to the institute, made this statement on May 18, in a speech at Chicago, Ill.:

I can not overestimate the importance that we attach to the proposed statistical work of the institute. The thought that is uppermost in the minds of our officers and directors is that our statistical reports, when compiled, be truthful and that they be presented in such an intelligent manner as to impart their real significance.

In a letter dated June 6, 1927, addressed to Walter Hines, president of the institute, signed by Floyd W. Jefferson, chairman executive committee Hunter Manufacturing & Commission Co., 58 Worth Street, New York, he agreed with Mr. Hines that now is a good time to go to the country with the slogan—

"This is cotton year." It can have a far-reaching influence on the whole market and is in entire accord with the idea of its general use—

Says Mr. Jefferson. From what I could gather from these folks and the press, it did really look to me that 1927 would be "cotton year," but it did not last long enough. In other words, it was only cotton year until the cotton or manufactured goods out of the 19,000,000 bales could be unloaded. When the fall of 1927 came on and farmers were ready to sell their cotton it ceased to be cotton year.

On June 9, this statement went out from this institute:

THE ASSOCIATION OF COTTON TEXTILE,
MERCHANTS OF NEW YORK,
*New York, June 9, 1927.*

Sales of standard cotton textiles during May were nearly twice as large as they were a year ago, according to statistics for the month just compiled by the Association of Cotton Textile Merchants of New York. Unfilled orders established a new high record.

Sales amounted to 328,144,000 yards, or 141.5 per cent of production which was 231,874,000 yards. The volume of sales was 91.5 per cent larger than during the corresponding period in 1926. Unfilled orders on June 1 were 572,009,000 yards, or 20 per cent larger than on May 1, and equivalent to nearly 10 weeks' production at the rate of output during May.

A summary showing the records of May, 1926, compared with May, 1927 (000's of yards omitted), follows:

| | 1926 | 1927 | Change from 1926 |
|---|---|---|---|
| | | | *Per cent* |
| Production | 201,058 | 231,874 | +15.3 |
| Sales | 171,394 | 328,144 | +91.5 |
| Shipments | 187,796 | 230,665 | +22.8 |
| Stocks on hand: | | | |
| May 1 | 273,658 | 176,681 | −35.4 |
| May 31 | 286,920 | 177,890 | −38 |
| Unfilled orders: | | | |
| May 1 | 234,252 | 474,530 | +102.6 |
| May 31 | 217,850 | 572,009 | +162.6 |

This is a most wonderful statement, which shows sales of manufactured goods during May, 1927, about twice as large as May, 1926. Also the statement of unfilled orders that seemed

to be rushing in on June 1, 1927, stood 20 per cent over May, 1926, with the broad statement that these unfilled orders are equivalent to nearly 10 weeks' production by the mills.

Let us see about that statement. Ten weeks' production would put the mills on full speed up to August 15 to catch up with the increased orders during the month of June over May. This certainly looks bullish to me.

Sales of May, 1927, increased over May, 1926, 91½ per cent. Stocks of cotton goods decreased 38 per cent during this month over same month in 1926; increased unfilled orders, 162.6 per cent. If I had been in on this bull campaign and could have known when to have gotten out, as these boys who were on the inside knew, I could have made enough money to have been able to compete with Andy Gump.

THE COTTON-TEXTILE INSTITUTE (INC.),
*New York, June 21, 1927.*

Eight new members have just joined the Cotton-Textile Institute (Inc.), George A. Sloan, secretary announced to-day. With these the membership of the institute now represents more than 21,540,000 cotton spindles.

Twenty-three members, representing 821,246 spindles, have been added to the membership of the institute since headquarters were opened at 320 Broadway, November 1, 1926. The new members are:

Neely Manufacturing Co., York, S. C.; Travora Cotton Mills, York, S. C.; Bourne Mills, Fall River, Mass.; Carolina Textile Corporation, Dillon, S. C.; Davidson Cotton Mills, Davidson, N. C.; Flint Mills, Fall River, Mass.; Dana Warp Mills, Westbrook, Me.; and Gem Yarn Mills, Cornelius, N. C.

On June 21, I am placing in the RECORD a statement showing that everything was running so fine that eight new members were added to the institute that day, making a membership now that represented 21,540,000 cotton spindles. Three hundred and twenty members, representing 821,246 spindles, have been added to the membership of the institute since headquarters were opened at 320 Broadway, New York, November, 1926. South Carolina and North Carolina mills are added to this list.

Now I bring you a remarkable statement of the continuation of the best "bull dope" ever placed before the public.

On July 1 we step up a month.

(Available for publication in newspapers of Monday, July 11)

THE ASSOCIATION OF COTTON TEXTILE MERCHANTS OF NEW YORK,
*New York, July 10, 1927.*

| | June | Six months | | Per cent of change |
|---|---|---|---|---|
| | | 1926 | 1927 | |
| Production | 279,456 | 1,321,052 | 1,487,387 | +12.6 |
| Sales | 179,060 | 1,209,891 | 1,703,401 | +40.8 |
| Ratio of sales to production per cent | 64.1 | 91.6 | 114.5 | |
| Shipments | 269,723 | 1,281,291 | 1,546,998 | +20.7 |
| Ratio of shipments to production per cent | 96.5 | 97 | 104 | |
| Stocks on hand: | | | | |
| First of period | 177,890 | 268,716 | 247,234 | −8.0 |
| June 30 | 187,623 | 310,825 | 187,623 | −39.6 |
| Unfilled orders: | | | | |
| First of period | 572,009 | 261,317 | 324,943 | +24.3 |
| June 30 | 481,346 | 182,708 | 481,346 | +163.4 |

Sales of standard cotton textiles during the first six months of 1927 were 40.8 per cent greater in volume than during the first six months of 1926, according to yardage reports just compiled by the Association of Cotton Textile Merchants of New York.

The volume of unfilled orders on June 30 this year was 163.4 per cent larger than a year ago and 48.1 per cent greater than at the beginning of the year. Stocks on hand on June 30 this year were 39.6 per cent lower than they were on the same date last year and 24.1 per cent lower than on January 1, 1927.

A summary of the statistics for June, covering a period of five weeks, and consolidated reports for the first six months of 1927 compared with the first six months of 1926 (000's of yards omitted) are given in the above table.

In this statement we still have some startling figures as follows: Production of manufactured goods increased 12.6 per cent, sales increased 40.8 per cent, shipments increased 20.7 per cent, stocks on hand July 1 had decreased 39.6 per cent, unfilled orders on this date increased 163.4 per cent. This looks like good business to me as a business man.

We will now step up to August 1, where I am still prepared to show that they were "slinging the bull." But this is cotton-picking time in Dixie, and you will note that we begin to have some blue mixed with what seemed to be in the past all white:

(Available for publication in newspapers of Tuesday, August 9)

THE ASSOCIATION OF COTTON TEXTILE MERCHANTS OF NEW YORK,
*New York, August 8, 1927.*

Production of standard cotton cloth in July was 24.5 per cent greater than during that month last year, while stocks declined 5.4 per cent during the month, according to yardage reports just compiled by the Association of Cotton Textile Merchants of New York.

Although sales were less than production and 21.2 per cent less in volume than they were in July, 1926, they were 20 per cent larger than during June, 1927. A large consumption of cotton goods is indicated by shipments which continue to exceed production.

The reports for July, 1927, and July, 1926, may be summarized (000's of yards omitted), as follows:

| | 1926 | 1927 | Per cent of change |
|---|---|---|---|
| Production | 184,033 | 229,097 | +24.5 |
| Sales | 273,900 | 215,730 | −21.2 |
| Shipments | 206,676 | 239,193 | +15.7 |
| Stocks on hand: | | | |
| July 1 | 310,825 | 187,623 | −39.6 |
| July 31 | 288,182 | 177,527 | −38.4 |
| Unfilled orders: | | | |
| July 1 | 182,708 | 481,346 | +163.4 |
| July 31 | 249,932 | 457,883 | +83.2 |

For the month of July, 1927, over 1926 we seem to have increased production of 24½ per cent. A decrease of stock on hand of 38.4 per cent, and unfilled orders increased 83.2 per cent.

We are now ready to give you the real beginning of what has proven to be the blackest bear raid that has ever been put over on legitimate cotton merchants and producers of cotton.

(Available for publication in newspapers of September 12)

THE ASSOCIATION OF COTTON TEXTILE MERCHANTS OF NEW YORK,
*New York, September 11, 1927.*

Reports on the production, sales, shipments, and stocks of cotton cloth for August just compiled by the Association of Cotton Textile Merchants of New York show for this month a more comprehensive picture of the current statistical position of the industry than ever before.

Through the cooperation of the Cotton Textile Institute (Inc.) the August report includes data from a great many mills not previously reporting to the association. While this gives a much better view of current operations, unfortunately for the time being intelligent comparison with previous reports is impossible.

Production of cotton cloth for the month of August amounted to 245,605,000 yards. Sales during the month amounted to 255,992,000 yards. Sales represented 104.2 per cent of production.

Shipments during August amounted to 225,462,000 yards, or 91.8 per cent of production. Stocks on hand on August 31 amounted to 201,217,000 yards as against 177,527,000 yards on August 1, an increase of 13.3 per cent.

Unfilled orders on August 31 amounted to 491,960,000 yards as against 457,883,000 yards on August 1, an increase of 7.4 per cent.

The report includes yardage statistics on the production and sale of more than 250 classifications of standard cotton cloth and represents in many instances more than 90 per cent of the total production of those fabrics in the United States.

The next statement was issued October 10, for the month of October, showing decreases in sales, shipments, and unfilled orders. It also showed an increase in stock. Some time prior to September 15, Prof. John A. Todd, of Liverpool, England, in an analysis of the "World Outlook for American Cotton" which was published by the Association of Cotton Textile Merchants of 70 Worth Street, New York, giving a very bullish statement that I am going to insert at this point. It is too long to read to you, but if you are interested, you should certainly take the time to read it in the RECORD:

(Release for publication in newspapers of September 16, 1927)

THE ASSOCIATION OF COTTON TEXTILE MERCHANTS OF NEW YORK,
*New York, September 15, 1927.*

In view of the record abundance of raw cotton during the last season, "the really astonishing feature in the situation thus created has

been the capacity shown by the world to digest such a supply," states Prof. John A. Todd, of Liverpool, England, in an analysis of "The World Outlook for American Cotton" just published by the Association of Cotton Textile Merchants of New York.

World consumption of American cotton during the year ended July 31, as recently announced by the International Cotton Federation, was 15,777,000 bales, or more than 2,000,000 bales greater than the consumption during the preceding 12 months.

"The elasticity of demand has proved greater than anyone could have anticipated," Professor Todd writes, "and the growth of consumption has more than kept pace with the increase of supplies.

"The world has not realized the extent of the arrears of potential consumption of cotton goods in the Old World as well as the New; and on that point it must be remembered that, in the East especially, cotton consumption is to some extent capable of accumulation.

"In many parts of the East clothing is rather a luxury or a sign of prosperity than a real necessity, and in many oriental countries the vast millions of the population buy new clothing only when they have special occasion, and then when the occasion happens to coincide with a period of prosperity and good purchasing power. Their total expenditure on such goods is rather a certain amount of money than a fixed quantity of goods. When prices are high they do without, and when prices fall their purchases increase almost in proportion.

"At the same time, the abundance of the cotton supply came at a time when most of Eureope was just emerging from the cloud of the postwar depression. In England the long period of organized short time which was first necessitated by the deflation period of 1920 and had then to be continued through the three years of short supplies would have been brought to an end earlier in 1926 but for the coal strike; but that also passed just in time to let England take full advantage of the abundant supplies of that year. * * *

"The question remains whether this extraordinary power of absorbing cotton has been due to abnormal conditions or whether such an achievement could be repeated if the world's supply could repeat the enormous figure of 1926.

"It is, of course, certain that another crop of 18,000,000 bales, if such were possible, either this year or in the near future, would not pass into consumption at anything like present prices (say 20 cents a pound), but on the other hand, in view of the experience of the past season, there is no reason why even such a supply should permanently reduce prices to levels so low as during the early part of last season—say below 12 cents. That was largely due to the sudden change in the situation produced by early crop reports and the expectation that the crop would actually reach still higher figures.

"It must be recalled that before the war the world's consumption had been steadily increasing, except when short supplies made it impossible, and there is no reason why the same should not become the normal course of events again in the future. England's consumption is still far behind pre-war, but has recovered substantially since the end of the coal strike. The Continent last season probably exceeded pre-war consumption for the first time, but the United States and Asia have been far beyond pre-war figures for several years, and there is no reason why they should not continue consuming on that scale.

"Had there been no war the world's consumption of American cotton would by this time have exceeded 20,000,000 bales annually, and a few years of steady supplies would soon bring us to that figure again.

"But it may be asked, can the world consume increasing quantities of American cotton when so many other countries, especially India, are increasing their local supplies? On that point it may be stated quite definitely that America has nothing to fear yet from all these other supplies. The most that they can do so far is to compensate partially the extreme vagaries of the American crop. Thus India has increased her total by almost 50 per cent from pre-war average figures, say to 6,000,000 bales, and of this quite one-third is of seven-eighths inch staple or above, and reasonably capable of substitution for the lower grades of American cotton.

"All the other new sources of supply, especially in the British Empire, are still comparatively small in quantity and do little more than to fill in odd corners in the world's supplies, though in certain directions their good quality has enabled them to do that very usefully. But the future prospects of all these new cotton countries depend very largely on the price of American cotton."

Professor Todd made his analysis by request after completing a visit with friends and a series of lectures in Southern States and an address at the Institute of Politics at Williamstown, Mass. He is principal of the City School of Commerce, of Liverpool, and the author of several authoritative books based on his statistical studies of cotton.

It seems, prior to this time, Professor Todd traveled through the South giving quite a lot of publicity in the way of lectures on the "bullish dope" contained in the above statement.

We now find the cotton crop of 1927 5,000,000 bales under 1926, or a crop of 12,750,000, and the price advanced to 24 cents. Now that those who had robbed the farmer out of his 1926 crop and 1,000,000 bales more than we produced during 1926 were about to double up on the price to a peak price of about 24 cents. At this time the farmers were selling the cotton produced in 1927, this being about September, the same crowd started the blackest bear raid that has ever been recorded in history. The Department of Agriculture joined in by making a statement about the 15th of September while cotton was selling for 21 and 22 cents per pound by issuing a statement that cotton would sell cheaper later on. This was used by the speculator on the cotton exchanges, through the press, and in telegrams to the mills and large cotton buyers and thereby were about to reduce the price of cotton to 16½ cents, a loss of about $40 per bale to producers. At this time, now that they have the 1927 crop well in hand, cotton is advancing daily, selling for about 21 cents per pound to-day. Inasmuch as we can not tell what the 1928 crop will be, it is a very strange thing to me, as well as to the producers of cotton, that after the 1927 cotton has passed out of the sellers' hands, that speculators proceed to put the price about $40 per bale higher than the low price. Yet you say, "Let the farmers run their own business." They can not do it with what they have to contend with; therefore I believe with Abraham Lincoln when he said:

> That which a people should do for themselves, but could not do, the Government should do it for them.

In closing I am reminded of the statement of James J. Hill when he stood on the bank of the Red River which separates Minnesota from North Dakota and looked across the vast expanse of what was then considered as desert and is now known as the "bread basket" of the world:

> Not armies, or navies, or commerce, or diversity of manufacture, or anything other than the farm is the anchor which will hold through the storms of time that sweep all else away.

Surely a prosperous agriculture is fundamental to the success of all related business enterprise and to yourself.

Mr. FORT. Mr. Chairman, I yield 15 minutes to the lady from Massachusetts [Mrs. ROGERS].

Mrs. ROGERS. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD by inserting therein certain papers relative to this bill.

The CHAIRMAN. Is there objection?

There was no objection.

Mrs. ROGERS. Mr. Chairman, for the last three years I have worked constantly with the western Members of the House who are so desirous of securing the passage of this measure. I like them so much and respect them so highly I am very sorry that I can not vote for their measure conscientiously, and regret that I can not speak in favor of it. I can not see how this measure will settle the farm problems in any way. It may give the farmers more money temporarily, but then the day of reckoning will come—the day of retribution. By this measure Congress with its own hands would fatten the agricultural goose and then wring its neck. I fully realize the harm that it will do to our cotton industry all over this great land, not only to the cotton industry in my own district, which means so much in the State of Massachusetts and all over New England, but to the cotton industry in every part of the country.

It is my belief up to a few days ago some of the Members of this House did not fully realize that cotton is an agricultural commodity. Two Members told me that they did not realize that it is an agricultural commodity.

I have word from the Nashaba Apple Packing Association, with its headquarters in my own district, in Harvard, Mass., and they say:

> We are very strongly opposed to the inclusion of fresh fruits and vegetables in the McNary-Haugen bill.

In addition to the Nashaba Apple Packing Association, of Littleton, Mass., the leading growers' packing association in New England, the following desire the exception of fruits and vegetables from the bill:

> The Massachusetts Fruit Growers' Association.
>
> The Clintondale Fruit Growers' Cooperative Association, Clintondale, N. Y., the leading fruit growers' cooperative association in eastern New York.
>
> In Michigan: The Fennville Fruit Exchange, Fennville, Mich.
>
> Pennsylvania: Adams County Fruit Packing & Distributing Co., Biglerville, Pa.; the American Fruit Growers (Inc.), with about $6,000,000 invested in fruit and vegetable farms.
>
> Illinois: Illinois Fruit Growers' Association.
>
> Wisconsin: Door County Fruit Growers' Union.

Montana: The Fruit Growers Distributors of Hamilton, who handle 33 per cent to 50 per cent of Montana production (a cooperative).

Georgia: Consolidate Apple Growers' Exchange, Cornelia, Ga.

Washington: Yakima County Horticultural Union, Yakima, Wash.; the Yakima Fruit Growers' Association.

The above are among the leading fruit growers' cooperatives of the United States.

The Wenatchee District Cooperative Association, Wenatchee, Wash., the largest cooperative association in Wenatchee; the North Western Fruit Exchange, Wenatchee, Wash.

Oregon: Hood River Apple Growers' Association; Mosier Fruit Growers' Association.

California: Sebastopol Apple Growers' Union.

Ohio: Marietta Truck Growers' Association, Waterford, Ohio.

West Virginia: J. G. Maples, Martinsburg, W. Va.; Cumberland Fruit Exchange, Martinsburg, W. Va.; Rothwell Gatrell Co., Martinsburg, W. Va.; American Fruit Growers, Martinsburg, W. Va.; Export Apple Co., Martinsburg, W. Va.; West Virginia Horticultural Society, Martinsburg, W. Va., by the president, Ed Leatherman, Rada, W. Va.; E. Graham Wilson, Charles Town, W. Va.; P. R. Harrison, Martinsburg, W. Va.; Consolidated Orchard Co., Paw Paw, W. Va., by H. W. Miller, president; L. P. Miller, Paw Paw, W. Va.; Oakland Orchard Co., Charles Town, W. Va.

New York growers: S. J. T. Bush, Morton, N. Y.; Morton Cold Storage, Morton, N. Y. (owned by growers); Fred W. Cornwall, Pultneyville, N. Y., and 14 others growers of fruit and vegetables who ship annually 650 cars of fruit and vegetables; Walter J. Clarke, Milton, N. Y.; Paul Judson, Kniderhook, N. Y.; W. P. Rogers, Williamson, N. Y.; Samuel Fraser, Geneseo, N. Y.

Virginia: Growers of apples who have expressed themselves are unanimously in favor of being exempted from this bill.

Not a single person in my district, so far as I know, wants the passage of this measure.

Last evening a gentleman from Georgia spoke of helping the farmer. What of the manufacturer and the consumer? He will realize that the day of reckoning will come with his own cotton manufactures of Georgia. Georgia has 3,070,688 cotton-spinning spindles. He surely does not want to pass legislation that will cripple the Georgia mills and that labor will walk the streets. I do not believe that he entirely realizes what he was advocating last evening. Do you realize that 28 States have among them 36,012,262 cotton-spinning spindles, and that over 191 Members of Congress have in their keeping the welfare of the operators of those spindles, the stockholders in those mills, and the townspeople where they are located, to say nothing of the merchants? If the operatives do not have the money to purchase the merchants can not sell their wares. I know that because I have lived all of my life in manufacturing cities, and I know exactly what it means when the operatives have no money with which to buy the things that are sold in the shops. The chart which I have here shows the cotton-spinning spindles in the United States in 1927. It will be seen from the chart that Massachusetts has the greatest number of cotton-spinning spindles, but that does not mean that she has the greatest number of cotton-spinning hours, as it has the humane 48-hour law and because the southern mills work not only all day but all night.

*States' trade in March, 1928, cotton spindles in place in the United States*

ACTIVITY IN THE COTTON-SPINNING INDUSTRY FOR MARCH, 1928

WASHINGTON, D. C., April 20, 1928.—The Department of Commerce announces that, according to preliminary census figures, 36,012,262 cotton-spinning spindles were in place in the United States on March 31, 1928, of which 31,412,820 were operated at some time during the month, compared with 31,687,012 for February, 31,697,876 for January, 31,715,388 for December, 32,269,478 for November, 32,497,504 for October, and 32,920,466 for March, 1927.

The aggregate number of active spindle-hours reported for the month was 8,312,305,109. During March the normal time of operation was 27 days, compared with 24⅔ for February, 25½ for January, 26 for December, 25¼ for November, and 25¾ for October. Based on an activity of 8.83 hours per day, the average number of spindles operated during March was 34,865,589, or at 96.8 per cent capacity on a single-shift basis. This percentage compares with 101.2 for February, 101.5 for January, 94.3 for December, 107.2 for November, 105.3 for October, and 109.8 for March, 1927. The average number of active spindle-hours per spindle in place for the month was 231.

The total number of cotton-spinning spindles in place, the number active, the number of active spindle-hours, and the average spindle-hours per spindle in place, by States, are shown in the following statement:

| State | Spinning spindles | | Active spindle-hours for March | |
|---|---|---|---|---|
| | In place Mar. 31, 1928 | Active during March | Total | Average per spindle in place |
| United States | 36,012,262 | 31,412,820 | 8,312,305,109 | 231 |
| Cotton-growing States | 18,456,362 | 17,830,552 | 5,508,055,878 | 298 |

Mr. FULMER. Mr. Chairman, will the lady permit a question?

Mrs. ROGERS. Yes; certainly.

Mr. FULMER. South Carolina is in the lead in the number of spindle-hours.

Mrs. ROGERS. South Carolina and North Carolina together have more cotton spindles than Massachusetts. Our mills are moving south. We have lost a good many cotton spindles out of my home city of Lowell and out of New England to Southern States.

*Spindles in place in New England States and cotton-growing States*

| | Cotton-growing States | | New England States | |

| 1927 | 18,169,000 | +294,000 | 16,871,000 | −1,075,000 |

I believe in time the pendulum will swing back and that we will produce a greater amount of cotton manufactured products than any other city in the entire world. We have a large industrial population there.

The president of a great corporation told me that if he were going to start an industry in any new city in this country or in any other country, he would go to my own city of Lowell, Mass., because we have the most scientific, highly skilled, and best class of labor in the entire world. When we are placed on equal terms in the matter of hours of labor and wages and taxes we can then produce more than any other part of the country owing to our class of labor.

With this chart [indicating] which you see before you, I want the Members of the House to realize that they have cotton mills in their States. Last year, when I spoke against the Haugen bill then pending, one man told me he did not realize that there were cotton spindles and cotton mills in his State. The chart is here before you, so that you can all see.

I have here a resolution from the National Association of Cotton Manufacturers, and I will read it and insert it with the rest of my speech. I read:

NATIONAL ASSOCIATION OF COTTON MANUFACTURERS' STATEMENT UNANIMOUSLY ADOPTED

The board of government of the National Association of Cotton Manufacturers to-day considered certain features of the McNary-Haugen bill which affects the cotton textile industry.

The board of government appreciates the unfortunate economic conditions which have adversely affected the position of the farmer, but believes that the present bill is uneconomic, unsound, and will not afford the relief to the farmer for which it is designed. Furthermore, certain features of the bill if put into operation would so seriously affect the cotton-manufacturing industry as well as other branches of the textile industry as to cause further serious depression if not actual disaster.

If, however, this type of legislation has prospects of favorable consideration by Congress and the administration, the board believes that an amendment should be offered by which the textile industry, whose interests are very closely related to the farmer, would not be so seriously damaged. The damage thus caused to the American textile industry, the cotton farmer's best customer, would in turn react on and seriously damage the cotton farmers themselves. The amendment suggested is that of including cotton goods within the operations of the act and to apply the equalization-fee plan to cotton goods in respect to both imports and exports.

Following are outlined some effects upon the textile industry which would result from the enactment of the legislation passed by the Senate and now before the House unless an amendment to include cotton goods is added.

The present bill provides that raw cotton be exported at world market prices, which means at prices below those current in the domestic market; and that the losses on such exports of cotton would be made up out of equalization fees collected on sales of cotton to domestic mills. In effect, this means that foreign mills could secure American cotton at prices less than that paid for it by domestic mills.

Foreign mills, therefore, could convert the American cotton into yarns and cloth, and because such were made out of cotton obtained at prices oftentimes considerably below that paid for it by domestic mills, could export these yarns and cloths to the United States at prices low enough to undersell with the yarns and cloths from American mills in spite of any tariff. Furthermore, foreign mills would make yarns and cloths out of their cheaper American cotton and export them to the world's markets in competition with American exports of such commodities, thus almost entirely killing our own export trade in cotton textiles, which now amount to nearly 600,000,000 square yards a year.

The disastrous effects of the operation of such a law on the chief consumer of farm products has been recognized in the provisions for the protection of the packers and flour mills, their most important customers.

The flour mills and the packers process and distribute grain and animal products. The cotton mills process and distribute raw cotton, the product of the cotton farmer. The cotton mills should, therefore, be included in the McNary-Haugen bill in order to protect the cotton farmer's chief market.

In view of the serious consequences to the textile industry which would follow from the operation of the McNary-Haugen bill as now before Congress, your board of government recommends that this association urge the adoption of such an amendment, and that a committee of four be appointed to bring this situation to the attention of Members of the House and Senate.

I think the Members who have cotton mills in their districts are probably now receiving messages from the cotton manufacturers as to just what the bill will do to their products, just how their mills will be injured by the passage of this measure, especially if the equalization fee is not placed upon the imports of finished products of cotton.

I suppose that perhaps the women are somewhat to blame for the fact that the cotton industry of this time is a sick industry. Perhaps we do not wear enough cotton dresses, and there is not material enough in the cotton dresses that we do wear. [Laughter.] We have not made it the fashion to wear cotton dresses. I am going to tell you of an incident that happened in a Washington shop. I made a purchase here of an emergency Christmas present, and asked to have it charged. I try to buy everything I can in my own city, but I purchased this article for an emergency, and when I went out of the shop I learned that a clerk told a man standing near by that he was afraid I could not pay the bill for the article. He said, "I read in the papers that Mrs. ROGERS always wore cotton dresses, and no one wears cotton dresses that can afford to buy anything else." I hope we shall all wear more cotton dresses, and I hope you will assist in making it the fashion to wear cotton, and we ought to put all the men in cotton suits also. The mills make fine cotton suitings. [Laughter.]

THE BILL UNDER DISCUSSION

This is the latest revision of the so-called McNary-Haugen bill, and represents the House amendments, which include some new features over the Senate bill and over the bill of last year.

An important change appears on page 48 of this bill, paragraph (b), line 14. It provides that the equalization fee shall be collected upon the importation of any food product derived in whole or in part from an agricultural commodity and im-

ported into the United States for consumption therein. Regardless of any good or bad features of this provision, an equalization fee would have to work both ways in order to be effective. It is supposed to be the equivalent of a tariff schedule which could be adjusted by the board. In other words, the equalization applied to exports has the same effect as tariff imports, and accordingly agricultural commodities and food products are relegated to the farm board. If this provision is a sound one, why not make it include products of all agricultural commodities?

Mr. WYANT. Mr. Chairman, will the lady yield?

Mrs. ROGERS. I am sorry, but my time is very short. Yes; I will yield.

Mr. WYANT. Does not the lady think that the coal industry ought to be included in the McNary-Haugen relief bill, considering its present depressed condition? [Laughter.]

Mrs. ROGERS. We are still importing about 150,000,000 yards of cotton goods every year. Presumably the equalization fee would be imposed on imports of cotton from Egypt, China, and Peru, kinds of cotton which are regarded as essential to our manufacturing industry, inasmuch as we do not produce the necessary long staple in this country. If the equalization fee is applied to cotton it would seriously hamper many sections of New England industry. It would make it difficult to market cotton goods in competition with the cotton imports which would come in largely increased quantity, because our raw material would be very much higher.

It seems to me there is a fascination, for some strange reason, among people of this country to buy imported goods when they can buy exactly the same thing and the same quality manufactured in our own mills. I hope you will all help to change that state of mind. [Applause.]

Page 40, section 6, line 20, provides for a control on increased production of agricultural commodities. The whole purpose of the bill is to improve the prices of agricultural commodities in the domestic market, and always when price improvement occurs an increase in production follows. If section 6 provided for some strict and rigid control of acreage or production according to some well-considered plan of balance and averages, it might not be so bad, but it is noted that the board—

> may refuse to make advances for the purchase of such commodity if their advice as to a program of planting and breeding has been substantially disregarded.

It is unlikely that their advice to curtail under a period of high price levels will be accepted, and, furthermore, it is unlikely that the board would refuse to make advances.

Last year's bill covered six principal agricultural commodities and excluded cotton. The present bill includes cotton in the list and also it comes within the operation of the equalization-fee plan. It would be disastrous to our cotton manufacturing industry to have cotton go abroad at a lower price than the price paid for it by domestic mills and then have the cotton goods made abroad from the low-priced cotton shipped back to this country in competition with the product of our own mills. This would happen, as the present tariff will not be high enough, and, furthermore, Section D, on page 48, does not provide for the assessment of the equalization fee against the import of products of cotton. Raw cotton could be sold more cheaply than in this country. Also cotton goods made abroad from cotton at lower prices than paid by our own mills would result in the loss of our present foreign markets. We should effectually kill our foreign trade.

The equalization-fee plan provides for operation in respect to any agricultural product and to any food product. This brings into the system the millers, the packers, the canners, and others. Such groups are in a no more desperate condition than the cotton-textile industry. They can not strictly be classified as agriculture, although they handle the raw products of agriculture; so do the cotton mills. Why not, then, include in the equalization plan the product of cotton mills and of tobacco factories, for example? The trouble with the packers, millers, and the like is that of a surplus of products and commodity. This is equally true of the cotton-textile industry. If so included, the cotton-textile industry would immensely benefit for a time, at least, by being able to export the surplus of their full-time production at prices below those current in the domestic markets. In effect it would mean that they could dump goods abroad without regard to price and have the losses on export made up out of the equalization fees collected on domestic distribution, which at present is something like 92 per cent of production. This would be a wonderful thing for the mills until the vicious circle was completed, and then disaster would ensue. Our export cotton-cloth trade has increased steadily since 1913 in yards and in value.

Another unfathomable problem relates to the position which foreign governments would take toward our dumping of goods under this scheme. With respect to agricultural products, which they find it necessary to buy under any conditions, the different countries would no doubt be glad to get these products at as low a price as possible. The same might be said of food products going to those countries which do not produce very much themselves and which import quantities annually. Where dumping of food products or manufactured products would be a serious interference with the local production in a foreign country, these governments are going to seek antidumping legislation or retaliatory measures against the United States.

Another indirect effect might be illustrated by corn at low prices going to central Europe to feed to hogs, thus stimulating that branch of the animal industry and curtailing our exports of lard and other hog products to the particular country, and also possibly interfering with our exports of similar products to other countries, due to the ability of the European hog raiser to export his products because of the much lower costs of feeding corn. Corn could go to Ontario at a low cost. We should have Ohio versus Ontario, at a terrible disadvantage to Ohio.

Only the merest reference need be made to the tremendous size of the organization necessary and the expense involved under the operation of the board in collecting statistics and information and in supervising all of the operations, issuing licenses, collecting equalization fees, administering of the revolving funds and stabilization funds, operating the insurance plan, examining books, and so on. It is conceivable that the size of the organization and its operations might in time outstrip that of the existing Department of Agriculture. All of this would have to be paid for, and every dollar of it by the consumer in this country. It is bad enough that the consumer will have to pay for the artificial and uneconomic stimulation of domestic prices, but it would be adding insult to injury to demand that the American consumer subsidize the dumping of goods abroad so that foreigners may have price benefits denied ourselves, and so that in many articles the foreigners might be enabled to further compete with us in domestic and foreign markets, thus aggravating again the distress of agriculture, industry, and the consumer in this country, and Congress would have only itself to blame. [Applause.]

The CHAIRMAN. The time of the gentlewoman from Massachusetts has expired.

Mr. HAUGEN. Mr. Chairman, I yield 10 minutes to the gentleman from Minnesota [Mr. KVALE].

Mr. KVALE. Mr. Chairman and colleagues, I find myself in complete accord with the sentiments expressed by the Member from Massachusetts, who has just taken her seat, that the women, if possible, should be induced to wear more cotton, and that those who do wear cotton should wear a little more of it—especially the latter. [Laughter.]

I have listened attentively to the discussions here and I find there are two things which have not been stressed as I think they deserve to be stressed. In fact, one has not been mentioned at all, and the other touched upon by only two gentlemen.

There is an old adage saying: "Tell me who thy friends are, and I will tell thee who thou art."

And I think we may express the same truth almost, if not quite, as well by saying: "Tell me who thy enemies are, and I will tell thee who thou art."

Who are the friends and who are the enemies of the measure which we are trying to enact into law? The answer is, the enemies are the grain gamblers and speculators in our country, and the friends are the farmers. Practically all of the farm organizations in the United States are in favor of this bill, whereas the enemies, as I say—and you will find this to be so if you search it to the bottom—are the grain gamblers and speculators. They are back of all this opposition. By that I do not mean to say that those who are opposing this bill on the floor of the House are in collusion with the grain gamblers. Not at all. They are just as sincere in their opposition and as interested in the farm proposition as I am. But they are, perhaps unwittingly and unknowingly, giving aid and comfort to the enemy by opposing this measure.

I want to call attention to the crime committed against the farmer by the indefensible delay in bringing this measure before the House. For the fourth time in a few years we are permitted to vote on this measure at the close of the session. Now, I ask, why have we not had a chance to vote upon it before?

Last July, in St. Paul, we had a large meeting of farmers and others interested in agriculture. I offered there a resolution, which was adopted unanimously, that we request the

chairman of the Committee on Agriculture of the House and of the Senate to call a meeting of their committees before the opening of Congress in order that they might at the beginning of the session have a bill prepared to present before the House so that we might vote upon it in January or February. That resolution was unanimously adopted.

And yet here we are five months after the beginning of the session of Congress and are just given an opportunity to consider a farm bill. They did not even begin the hearings until the latter part of January. Why is this? In the meantime, with the Coolidge prosperity, the closing of banks in my district is continuing. That is true of the rest of the country. Why has it not been reported before? The Ways and Means Committee is always here on time, and they have no trouble in having their bills considered. When Secretary Mellon wants legislation which will aid the millionaires he has no trouble in getting it. Why does not the Secretary of Agriculture show the same interest in the farmers and have a bill prepared for the relief of agriculture? But nothing of the kind.

The reason I wanted this bill reported early in the session was that if it were vetoed we might have a chance to vote on another bill. For I can not join the ranks of those who say "the equalization fee or nothing." I want the equalization fee. I want this bill. But if I can not have this bill I am willing to go along and vote on some other substitute which will at least do something. Beggars are not choosers. Half a loaf is better than no bread. I will go along and vote for one-eighth of a loaf. Our people are prostrate.

Give us something, no matter how little, and then in the next session we can amend and change and improve, or if we can not do this in the lame-duck session that is coming, it can be done in the next Congress. For I am in hopes that the Chief Executive after March 4 next will be more sympathetic toward agriculture than the present occupant has shown himself to be.

I can not go along with those who say we will wait three or four years more until we can get the equalization fee. There is an old adage which I heard from my grandmother when I was a little boy, which says, "Mens grässet gror dör koen," which being interpreted means, "While you are waiting for the grass to grow the poor cow is starving to death." This is the case here.

I want some kind of bill, I want some kind of law creating a Federal farm board with power and authority from the United States Government to buy and to sell. And if we can have such a board, under this bill or under some other bill, with this power, that will at once do these two things. It will give new hope and courage to agriculture which at present is prostrate. It will also do this. It will put a crimp in the activities of the grain gamblers and the speculators, and this is the main point that should be stressed, as it was by the gentleman from Illinois [Mr. ADKINS] and now by the gentleman from South Carolina [Mr. FULMER].

It has been called to the attention of this House that the gamblers and the speculators who are back of all the opposition to the bill have robbed the farmers of the United States of billions upon billions of dollars during all these years. They have bled him white, and if you can stop their activities you will have put billions of dollars into the pockets of the farmers of the country. Under the protection of the United States Government these farmers have been robbed, under the protection of the Department of Agriculture, which is placed there to safeguard the interests of the farmers.

In February, 1924, the late Congressman Little, of Kansas, a good Republican, made the charge on the floor of this House that the Department of Agriculture had been instrumental in robbing the farmer of $150,000,000 in one year. I was a new Member at that time, but if I had been as old in service as he was, and if I had had the facts he claimed to have, and undoubtedly did have, I would seriously have considered making a motion to impeach Mr. Jardine, the Secretary of Agriculture.

Mr. WYANT. Will the gentleman yield?

Mr. KVALE. I will.

Mr. WYANT. I supported this bill the last time it was before the House. Now, in my judgment the coal industry is completely paralyzed. Will the gentleman agree to amending this bill so as to include the coal industry and then vote with me in support of it?

Mr. KVALE. I hardly think the coal problem comes within the purview of a bill for the relief of agriculture. But I will say this to the gentleman: That I will support any measure tending to stop the coal companies and the money power of Pennsylvania from bleeding the farmer white.

Mr. BLACK of New York. Will the gentleman yield?

Mr. KVALE. Yes; I yield.

Mr. BLACK of New York. Is it not the fact that whenever the National Government tries to do anything with respect to the coal industry it is met with the statement that it is an industry wholly within the State of Pennsylvania and the Government can do nothing?

Mr. KVALE. The State of Pennsylvania is a good Republican State, and if the people would only wake up they ought to be able to bring some pressure to bear upon the present administration.

On January 30, 1926, I made a rather lengthy address on the gambling going on in the United States. I called attention to the fact, and I now call the attention of the House again to the fact, that we have bills before this House which would make short selling a felony. Is there any chance to pass that bill? Not with Jardine at the head of the Department of Agriculture.

The short seller is the one who is responsible for a great deal of the trouble which agriculture finds itself in to-day, but we can not hope to pass those bills to stop gambling for the simple reason that this administration, backed by the Coolidge-Mellon-Jardine-Hoover oligarchy, is supporting the interests that have been robbing the farmer.

I say this advisedly. I know it is a terrible indictment of my Government, but the facts prove it, and it has been proven by the veto of this measure, that the gamblers and the grain speculators and the manipulators have more influence with our Government to-day than the 30,000,000 farmers. In the name of these 30,000,000 farmers and the 50,000,000 others who are dependent on the farmers, I protest against these two things. I protest against having this bill reported so late in the session that we can not have time to enact some other bill into law if this fails of enactment. And I also protest against the manipulation of the gamblers and the speculators under the protection of the Government of the United States.

Mr. LAGUARDIA. Will the gentleman yield there?

Mr. KVALE. Certainly.

Mr. LAGUARDIA. The gentleman should not be too hopeful that the bill will stop this gambling. We have a law in the State of New York against selling short and against buying or selling on margins, and yet there is more gambling going on in my little town than any place in the world.

Mr. KVALE. Well, I want the Government to function in such a way that they can enforce the law. Will the gentleman join with me on that?

Mr. LAGUARDIA. Yes; if we could enforce it.

Mr. KVALE. If they will not enforce it, then put somebody in power that will enforce the law. [Applause.]

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. HAUGEN. Mr. Chairman, I yield five minutes to the gentleman from Minnesota [Mr. CARSS].

Mr. CARSS. Mr. Chairman, ladies, and gentlemen, speaking of silk and cotton, I agree with the lady from Massachusetts that the women might wear cotton, but I do not think they ought to wear any more of it. [Laughter.] I think the dress of the modern woman is the most attractive and sensible she has ever worn.

As far as this bill is concerned, I can not discuss it extensively in five minutes. If enactment of the bill accomplishes anything, it will raise the prices which the farmer gets for his products and the increase will fall on the consumer, as the middleman is organized and he will pass it on to the consumer, who in turn will act as the shock absorber, because he is not organized to protect himself.

When the consumer feels this increase in his cost of living, and knowing the farmer is not getting the money the consumer spends, we will have the farmer at one end of the line and the consumer at the other end cooperating to bring about a change in the wasteful and inefficient system of distribution which is at the bottom of the farmers' ills and which accounts in a large measure for the excessive cost of farm products to the consuming public.

So far as the attitude of labor is concerned, I think I can speak with some knowledge of that subject. Labor wants the farmer to stay on the farm and wants him to be living a happy, contented, and prosperous life, having purchasing power sufficient to buy the things labor makes in our factories. We want him to furnish work for our men in the transportation industry; we do not want him starved out; we do not want him to lose his farm. It is said that 185,000 farmers in the Northwest have lost their farms in the last six or seven years. We do not want him coming into town and crowding the labor market, bidding against us for the jobs which are scarce enough at the present time. Some of the opponents of this bill are interested in seeing a big crowd of hungry men before the factory gates every morning, willing to take employment at any wage that will keep body and soul together; but so far as the laboring people are concerned, they realize that the economic interest of

the workers on the farm and the workers in the towns are identical, and that one can not prosper unless the other is also prospering.

I hope this bill will pass. I intend to support it with the equalization fee in it. I say to some of you gentlemen over here on this side that it will be nothing new for the farmer when you ask him to pay the equalization fee. He is used to that. He has been paying the equalization fee for a good many years on every piece of farm machinery that he has bought. His competitors in the world's grain market are buying that machinery more cheaply than he can buy it here. He is paying the equalization fee and adding to his cost of production. I am very much in favor of this bill. I hope it will accomplish something for the farmer. When people are broke, the only way to help them is to give them an opportunity to make more money. If this bill does not do that, it does not do anything. So I am going to vote for it. [Applause.]

Mr. KINCHELOE. Mr. Chairman, I yield 10 minutes to the gentleman from Georgia [Mr. BRAND], with the understanding that the chairman of the committee [Mr. HAUGEN] yields five minutes of that time.

Mr. BRAND of Georgia. Mr. Chairman, this is the first time I recall that I have ever had anything to say on the floor with reference to this bill. I shall discuss it from a legal or judicial point of view in the time allotted to me. What I shall say will be mostly the declarations of law writers and the Supreme Court. Ever since the bill has been pending before Congress its constitutionality has been challenged, and therefore has become a controversial issue. Studying over it I have found, one can safely say, I think, that that claim comes as a rule from those who are naturally opposed to this character of legislation. For the benefit of those who are not Members of Congress and to refresh the recollection of those who are present and who are Members of Congress, I am going to state the fundamental principles material to this issue laid down by the courts, and especially the Supreme Court of the United States. In the first place, when an attack is made upon the validity of an act of Congress the law places the burden upon the person making the attack and alleging its repugnancy to establish clearly and plainly and beyond reasonable or rational doubt its unconstitutionality. In the second place, the person who makes the attack is confronted with the presumption of law that the act in question is valid and constitutional, a principle as old as the Supreme Court itself. In the third place, it is a well-settled rule of the writers of law, and the Supreme Court of the United States in construing an act of Congress which is susceptible to two constructions, one of which would render it valid and the other invalid, the court must adopt that construction which preserves its validity. In the next place, the rule is well settled that every possible presumption stands in favor of an act of Congress until overcome beyond a reasonable or rational doubt.

Mr. SPROUL of Kansas. Mr. Chairman, will the gentleman yield?

Mr. BRAND of Georgia. Yes.

Mr. SPROUL of Kansas. If the constructions to which the gentleman has called attention were being considered by the President, would the President be under obligation and would he be likely to adhere to the one holding it constitutional?

Mr. BRAND of Georgia. I shall come to that in a moment or two. I want to state only one other fundamental principle. The last one is that if the Supreme Court of the United States holds a portion of a Federal act unconstitutional, the other provisions of the bill are to be held constitutional if it is possible for the court to do so. Particularly is this true when the bill contains a provision to this effect, as this bill does. All these principles are as stable as the Ten Commandments, and the courts of the country are bound by them as the law of the land, because they have been laid down by the Supreme Court of the United States.

Replying now to the gentleman's question, I think that the President of the United States, who at one time vetoed this bill, in view of the decisions which I am going to quote and the fundamental principles which I have announced, should carefully consider them as the Chief Executive of the United States before he enters a second veto; and in addition I think he should consult with his Attorney General and ask him how far he is bound by them and whether or not he should not take these principles of law and the decisions I shall cite under consideration before he vetoes the bill again. In advising with his Attorney General, who is a sound lawyer and an upright man, the President should not be unmindful of the fact that there is some sense, there is some judgment, and there is some intelligence yet exercised by Members of Congress—whether lawyers or not—when such major matters as the bill are under consideration and that the lawyers in the American Congress yet know some law. [Applause.] The President is not a lawyer, as I understand it.

Mr. TIMBERLAKE. Oh, yes, he is.

Mr. BRAND of Georgia. Is he? Has he practiced law? Then I shall have to take that back. This being true, there is less excuse for his vetoing it the second time in face of these fundamental legal principles and these decisions of the Supreme Court, and I state that with the utmost respect for the President of the United States.

CITATIONS FROM THE COURTS

There are just two or three lines in each case. I read:

The presumption is in favor of validity, and only when the question is free from reasonable doubt will the Supreme Court hold an act of Congress to be in violation of the Constitution. (173 U. S. 509.)

This court has the power to declare an act of Congress to be repugnant to the Constitution, and therefore invalid. But the duty is one of great delicacy and only to be performed where the repugnancy is clear and the conflict irreconcilable. Every doubt is to be resolved in favor of the constitutionality of the law. (Mayor *v.* Cooper, 6 Wall 251.)

In Adkins *v.* Children's Hospital (261 U. S. 525) the court said that every possible presumption stands in favor of an act of Congress until overcome beyond rational doubt.

The duty of this court in construing a statute which is reasonably susceptible of two constructions, one of which would render it unconstitutional and the other valid, to adopt that construction which saves its constitutionality. (213 U. S. 367.)

A construction of a statute which makes its constitutionality doubtful is to be avoided if possible. (270 U. S. Sup. Ct. 466, par. 1.)

Provisions of statutes levying taxes will not be extended by implication beyond clear import of language, and, where doubt exists in construction, that most favorable to citizens and against taxing power will be adopted. (6 Fed. Rep. 2d series, p. 964, par. 3.)

A statute will be upheld unless clearly shown unconstitutional, all presumption and reasonable construction being in its favor. (7 Fed. Rep. 2d series, p. 715, par. 11.)

Necessarily the power to declare a law unconstitutional is always exercised with reluctance. (157 U. S. 429, 554.)

When this court is called on to consider whether an act of Congress is constitutional a due respect for Congress requires that we shall decide that it has transcended its powers only when that is so plain that we can not avoid the duty. (100 U. S. 96.)

When this court is required to pass upon the validity of an act of Congress, the duty imposed demands in its discharge the utmost deliberation and care, and invokes the deepest sense of responsibility. (158 U. S. 617.)

This court, by an unbroken line of decisions from Chief Justice Marshall to the present day, has steadily adhered to the rule that every possible presumption is in favor of the validity of an act of Congress until overcome beyond rational doubt. (261 U. S. 544.)

That is what the Supreme Court has held since John Marshall's day.

Under the title "The golden age of the Supreme Court," on page 259, in his book entitled "The Constitution of the United States," by JAMES M. BECK, the rule under discussion is stated as follows:

The second principle which the court adopted was that no law should be declared invalid unless its incompatibility with the Constitution was clear beyond reasonable doubt. All doubts were to be resolved in favor of the legislative act. The judiciary thus sought to support the legislative will. In a democracy no other attitude would be possible.

The policy of the legislation was for the lawmaking body, and the only question for the court was that of legislative power, and therefore a law should be sustained by the judiciary even though in its judgment it were grossly unwise, and even positively immoral.

Under these rules of law and the repeated declarations of the Supreme Court of the United States I do not believe for an instant that the court will ever hold this act to be unconstitutional.

Mr. LOZIER. Mr. Chairman, will the gentleman yield?

Mr. BRAND of Georgia. Yes; but not out of my time, Mr. Chairman.

Now, it should be clearly understood that even if there are entertained by Members of Congress grave doubts about the constitutionality of this bill, it is the sacred duty of the Supreme Court, if a majority of its members share the opinion, to uphold and sustain it. This is what my experience as a lawyer, studying and practicing in that vocation for nearly 46 years, leads me to believe. This is what I believe the Supreme Court will say respecting this bill if and when it comes before this court.

I want to say in conclusion that I believe that President Coolidge, as a lawyer as well as in his capacity as President,

ought to consult with the Attorney General and have him take these citations and study and examine them, and if he, the President, arrives at the conclusion that the Supreme Court would hold that the McNary-Haugen bill is constitutional he ought not to veto it again. [Applause.]

Mr. ASWELL. Mr. Chairman, I yield 10 minutes to the gentleman from New York [Mr. BLACK].

The CHAIRMAN. The gentleman from New York is recognized for 10 minutes.

Mr. BLACK of New York. Mr. Chairman and gentlemen of the committee, I am very much tempted to go off the line of the subject under consideration and refer for a few moments to women's garments in connection with farm relief, including the views of the butter-and-egg man. [Laughter.] If the ladies are really going to help the political farmers, the only thing they can do is to adopt the Hawaiian hula-hula shredded-wheat garments. [Laughter.]

A recent editorial in the Saturday Evening Post discounting prohibition as a phase of the farm problem, induces me at this time to ventilate the relation of the dry laws to farm distress. The National Economic League recently held a vote of its members as to the relative importance of pending national problems.

About 50 of these problems were considered. The following are the number of votes which were cast for the first 10 subjects in their comparative importance:

| Subjects: | Number of votes |
|---|---|
| Administration of justice | 1,720 |
| Lawlessness, disrespect for law | 1,592 |
| Prohibition | 1,247 |
| Flood control | 1,073 |
| Prevention of war | 1,007 |
| Agriculture, farm relief | 951 |
| Ethical, moral, religious training | 862 |
| Taxation | 807 |
| The World Court | 643 |
| Conservation of natural resources | 629 |

It is and has been my notion that modification will go far to solve the first three of these and farm relief. It would also have a bearing on ethical training and taxation.

It is worthy of note that prohibition got its initial economic impetus in the Lever food control bill under an amendment offered by Mr. BARKLEY, of Kentucky, on June 23, 1917. The great demands for grains for food during the war brought about to a big extent war prohibition as a food-conservation proposition. Then the Volstead Act prevented a readjustment when the demand for American grain foods ended with the war. Food that was needed due to the war could not be turned to beverages, due to prohibition. The farmer lost his foreign war market and did not get back his brewery and distillery markets.

Farm experts, instead of stressing the disaster due to the loss of markets through the artificial means of prohibitory legislation, insist on the artifice of price fixing through socialistic legislation to make up the losses. One costly lobbied legislative measure is to be solved by additional error similarly stimulated.

Recent reports from the Department of Agriculture and the Prohibition Bureau indicate that prohibition has been a monumental gold brick for the American farmer.

The Prohibition Bureau reports that the tax on distilled spirits for 1919 was $365,211,252.26, and on fermented liquors $117,839,602.21, and in 1927 on distilled spirits $21,194,668.71 and on fermented liquors $883.25. There has been an increasing loss in the intervening years. Moreover, national enforcement has required appropriations of about one hundred millions and against which approximately forty millions has been collected in fines and penalties. The farmers, of course, bear a considerable portion of this tax loss and appropriations cost. This is not considering the losses by the States, and it is to the taxes of the States that the farmers are the heaviest contributors. The farm bill proposes to add to the tax burden of the country four hundred millions.

COST OF PROHIBITION

The New York World on October 24 published an article by Henry F. Pringle, giving the voters on the New York State referendum facts to be considered. The article reads: "Loss of taxes and license fees, salaries of army of enforcement officers, destruction of industries, graft, and new crimes some of facts voters must consider." Under the caption, "The cost," the article reads:

The cost of prohibition can properly be classified as follows: (1) Expenditures of Federal Government for Prohibition Unit and other agencies concerned with enforcement; (2) expenditures of States and cities for enforcement; (3) loss of revenue received before prohibition from excise taxes and import duties; (4) loss to State and cities in former license fees; (5) loss to the Nation in the destruction of industries once engaged in the manufacture of liquors and beer.

Against this bill must be placed the estimates of the savings caused by prohibition. These, according to the estimates of the prohibitionists, have more than made up the cost.

CITY POLICE BEAR MUCH OF THE BURDEN

The expenditures of the Federal Government for enforcement are among the few items that can be given in entirely authentic form. The records show the appropriations to have been:

| | |
|---|---|
| 1920: Prohibition Unit | $2,400,000 |
| 1921: Prohibition Unit | 6,350,000 |
| 1922: Prohibition Unit | 6,750,000 |
| 1923: Prohibition Unit | 8,500,000 |
| 1924: | |
| Prohibition Unit | 8,250,000 |
| Coast Guard operation | 1,692,100 |
| Coast Guard vessels | 12,194,900 |
| 1925: | |
| Prohibition Unit | 10,012,330 |
| Coast Guard operation | 8,192,000 |
| 1926: | |
| Prohibition Unit | 9,670,560 |
| Coast Guard operation | 11,560,011 |
| Total | 85,571,901 |

The expenditures of the States and cities are difficult to estimate. Appropriations for enforcement appear on few of the State budgets. In 1924, for instance, the only ones made were: Virginia, $70,000; Wisconsin, $60,000; Nebraska, $50,000; Wyoming, $52,000; New Hampshire, $15,200; Ohio, $109,430; Missouri, $8,500. Even the various organizations working for modification hesitate to make a guess regarding the expenditures by the States.

Not only in the tax losses are the farmers injured by prohibition, but they bear the great proportion of the direct damage in losses on crops. In 1919 the barley farmers produced 147,608,000 bushels at a value of $1.20 a bushel, or at a total value of $178,080,000. But in 1927, with the barley crop at 265,577,000 bushels, its face value was only $180,127,000. No brewers on large-scale production being in existence, the 1927 barley was only worth 67 cents a bushel. So the farmers lost on their latest crop approximately $140,655,000 due to prohibition. This is on one crop in one year. The following table shows what the barley farmers can charge as losses to prohibition. I base these on the 1919 per bushel price.

| | |
|---|---|
| 1920 | $94,666,000 |
| 1921 | 124,156,800 |
| 1922 | 123,806,240 |
| 1923 | 128,276,060 |
| 1924 | 93,624,500 |
| 1925 | 132,695,060 |
| 1926 | 116,490,150 |
| 1927 | 140,655,810 |
| Total | 954,368,620 |

Ten million acres of land would be used for barley production should the Volstead Act be modified. The drys will answer that the brewers did not consume the total crop in any one year, but they did use over one-third of it, and, paying a high premium for it, were responsible for such a high price as prevailed in 1919.

[United States Department of Agriculture, Miscellaneous Circular No. 23]

THE AGRICULTURAL OUTLOOK FOR 1924

By staff of Bureau of Agricultural Economics

1. The United States is exporting about 20,000,000 bushels of barley each year, and the price of barley is therefore affected by the world price. The recovery in European production is increasing the foreign competition.

Notwithstanding that production has been maintained, market receipts during the past five years have been less than one-half as large as formerly.

---

[Yearbook of Department of Agriculture, 1922]

2. Effect of prohibition: The most recent factor affecting the production of barley has been the prohibition of brewing. * * * The brewers of the United States were using slightly more than 50,000,000 bushels of barley each year at the time when brewing was prohibited. This 50,000,000 bushels, while constituting only about 30 per cent or less of the crop, did cause a premium to be paid for the highest grades of barley.

The next important beer ingredient that tells a sad story for the farmer is hops. In 1919 hops had a per pound value of 77.6 cents and in 1927 of 23.1 cents. In 1919, 24,970,000 pounds brought $19,376,000, but in 1927, 29,794,000 pounds brought only $6,808,000.

Rice, which was extensively used in beer, has sustained a loss in value since prohibition. In 1919, 41,985,000 bushels of rice was worth $111,913,000 and in 1927, 40,231,000 bushels were worth $37,728,000, or a loss of over $70,000,000.

Mr. LAGUARDIA. Mr. Chairman, will the gentleman yield?

Mr. BLACK of New York. Yes.

Mr. LAGUARDIA. What do they use now in making liquor?

Mr. BLACK of New York. Do you mean the bootleggers?

Mr. LAGUARDIA. Yes. What do the bootleggers use in making their liquor?

Mr. BLACK of New York. They are importing foreign grain, and outside of grain I think they use sawdust, garbage, peanut shells, and all kinds of rubbish. [Laughter.]

When we look at rice, we find a most astonishing situation in dealing with 1915, 1916, 1917. We find that in 1915 the brewery consumption of rice was nearly 168,000,000 pounds.

In 1916 somewhat over 141,000,000 pounds.

And in 1917 about one hundred and twenty-five and one-half million pounds.

A total used during that three-year period of over 434,000,000 pounds.

An average use per annum of nearly 145,000,000 pounds, which has been lost by the drys.

*Materials used in the production of fermented liquors in the United States, years ending June 30, 1915, 1916, and 1917*

[Compiled by the Bureau of Crop Estimates, U. S. Department of Agriculture, from records of the office of internal Revenue, Treasury Department]

| Material | Unit of quantity | July 1, 1914, to June 30, 1915 | July 1, 1915, to June 30, 1916 | July 1, 1916, to June 30, 1917 |
|---|---|---|---|---|
| Malt | Bushels | 62,991,856 | 57,683,970 | 67,931,577 |
| Hops | Pounds | 38,839,294 | 37,451,610 | 41,958,753 |
| Rice | do | 167,750,177 | 141,249,292 | 125,632,269 |

| Do | Gallons | 6,630 | 19,112 | 16,656 |
| Do | Pounds | 68,880,530 | 24,756,974 | 17,573,893 |
| Total, all items estimated | do | 3,274,261,921 | 3,004,754,590 | 3,477,526,330 |

Those who, prior to prohibition had raised barley where they now raise too much wheat are especial sufferers because of the Volstead Act. Hon. Sydney Anderson indicated the extent of the farmer's interest in the brewing business when he stated to the House of Representatives Committee on Agriculture, on August 2, 1912, that—

There are to-day 8,000,000 acres of land in this country under cultivation in barley. The barley crop last year was 139,000,000 bushels, and the estimate this year is about 160,000,000 bushels. The production of beer in this country amounts to nearly 2,000,000,000 gallons annually, a per capita consumption of about 20 gallons. I merely mention these facts as an indication of the magnitude of the business. The brewers some years ago issued a propaganda to induce the farmers of the Northwest to engage in barley growing in order that they would have a sufficient supply of that product to manufacture beer. I feel that the farmers who have gone into barley raising—and there is practically no market for it except such as comes from its use in making beer—are entitled to have the term "beer" defined.

In an extension of remarks by Hon. Charles H. Randall in the CONGRESSIONAL RECORD (vol. 56, pt. 12, 65th Cong., 2d sess.) the farmer may find how much the brewers took of his product. Mr. Randall sets forth:

Mr. Speaker, there is before the House the report of disagreement between the House and Senate conference committees on the price of wheat. The House stands for $2.20 and the Senate insists upon $2.50 wheat.

The assurance which it is proposed to give the farmer of the price which he shall receive for his wheat, of course, has relation to the food supply of the country. Such a proposition is based upon the effort to assure a sufficient food supply by encouraging the increase of the acreage of wheat.

The Food Administration wants this law. Yet the Food Administration can by one stroke of a pen save 4,000,000 pounds of bread daily and fails to act. Last summer Mr. Herbert Hoover, in answer to an avalanche of demands that he save the food wasted by brewers, wrote the following response:

"In 1916 there was used in the production of malt for the manufacture of beer for home consumption and export about 60,000,000 bushels of barley, 15,000,000 bushels of corn, and about 3,000,000 bushels of rice. It will be seen, therefore, that the economic advantage to be gained from the prohibition of the manufacture of beer relates almost entirely to the question of saving 60,000,000 bushels of barley, which could be milled to 60 per cent of its food value and produce a pound loaf of barley bread per day for 6,000,000 people."

Since the above letter was sent out by Mr. Hoover he has written me under date of January 22, 1918:

"DEAR CONGRESSMAN RANDALL: In the administration of the food bill we have reduced the foodstuffs used in brewing by 30 per cent. I hope that by this order there may be effected a saving of approximately 18,000,000 bushels of grain.

"Faithfully yours,

"HERBERT HOOVER."

It will be seen at a glance that from Mr. Hoover's own figures the brewers are still permitted to use 42,000,000 bushels of barley, more than 10,000,000 bushels of corn, and more than 2,000,000 bushels of rice annually. The barley alone will make more than 4,000,000 pounds of bread daily.

About 8,000 square miles of American farm lands were at one time devoted to the production of barley for brewers, says E. C. Horst, an American farmer.

Mr. COLE of Iowa. Mr. Chairman, will the gentleman yield for one question?

Mr. BLACK of New York. Yes. You are a pretty decent sort of gentleman. [Laughter.]

Mr. COLE of Iowa. Has the gentleman any intelligent idea as to the quantity of grain that was used in the making of whisky and beer before prohibition?

Mr. BLACK of New York. Oh, yes. I will give you all that as I go on. If I should be able to convert you, I would be very glad.

I have only seen one answer to my proposition and that was in an editorial in a recent number of the Saturday Evening Post. This publication is always intent on fairness and the editorial I now intend to make comment on has an honest inspiration, but nevertheless comes to unfounded conclusions if the logic of the situation is to have sway. It reads as follows:

PROHIBITION AND FARM DISTRESS

The perennial discussion of prohibition takes many turns, some of them devious enough. Now and then one hears a loud voice declaiming that prohibition has been a prominent cause of agricultural distress.

During the calendar year 1916 there were used in the manufacture of alcohol and of distilled spirits some 40,000,000 bushels of grains, and in the brewing of fermented alcoholic beverages some one and a half million tons of cereal preparations. During the year 1926 something like 9,000,000 bushels of grains and a hundred thousand tons of cereal preparations were so employed. These are official data from the Commissioner of Internal Revenue of the Treasury Department. The loss of market as material for alcohol and alcoholic beverages may therefore be placed at around 80,000,000 bushels at the outside.

The crop of grains in 1926 was around five and a third billion bushels. The 80,000,000 bushels that might otherwise have gone into distilleries and breweries was therefore under 2 per cent of the crop. This quantity of grain is less than the probable error in the crop estimates. It is nothing less than absurd to ascribe to the loss of this special market any substantial proportion of farm distress.

In 1917, when the question of curtailment of the use of grain in distilleries and breweries came up, the users of grain for such purposes resisted curtailment on the ground that little loss of feeding stuffs occurred, since distillery and brewery residues were fed to animals. There was some truth in this contention. But it is inconsistent to make this claim and at the same time to claim that a large market is lost when grains are not so employed.

During recent years the count of horses and mules has been substantially reduced, probably by as much as 5,000,000 head. This has been due to replacement by automotive equipment. These work animals would use annually between three and four hundred million bushels of oats and corn. Compared with this, the 80,000,000 bushels whose market has been lost through prohibition is of little importance. Would the people who wish distillation and brewing restored as a market for grain also wish machines banished and work animals restored as a market for grain?

There can be no doubt that the consumption of milk and fruit juices has been increased as a result of prohibition. This enlargement of market for farm produce must be set against the loss of market for grain. When alcohol dropped out of the diet something else took its place and represented new demand. We can not agree that agriculture as a whole lost a market through prohibition. The only people who lost business were distillers and brewers. For them to hide behind the skirts of distressed agriculture is too transparent a maneuver to fool anybody but the wets.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. ASWELL. Mr. Chairman, I yield to the gentleman five minutes more.

The CHAIRMAN. The gentleman from New York is recognized for five minutes more.

Mr. BLACK of New York. Prohibition might be well called an antigrain consumption law. My purpose now is to compare

the consumption of grain before and after prohibition. Of the 5,000,000,000 bushels of grain produced only the corn and barley production were of major importance in the prohibition debacle. Rye, from the standpoint of the crop produced and quantity ever used, was affected in a minor degree, and, of course, wheat and oats were only consequentially affected.

Last year's wheat crop measured nine hundred millions and oats twelve hundred millions in bushels. So these two crops contributed twenty-one hundred millions to the five and one-third billion bushels cited in the editorial.

The destruction of the brewery market for corn and barley would only have an indirect effect on prices of wheat and oats but a direct and serious effect on corn and barley prices. The rye farmer, with land too poor for other grains, has conclusive evidence of harm in the loss of his domestic market.

Adam Smith, in substance, said:

A man who brings to market for sale 10 bags of wheat and finds in the market place buyers willing to purchase only 8 bags learns that it is the price of the 2 bags for which he fails to find immediate buyers that makes the price on the 10.

Applying Adam Smith's wisdom, and developing the figures involved, we can not conclude on a parallel with the editorial, though we may assume the correctness of the elementary mathematics of the editorial. Its arithmetic is sounder than its economics.

I have had the help of an expert grain market man in making the analysis I am about to submit on prohibition, the grain market, and the conclusions of the Saturday Evening Post.

The fiscal year 1926-27 indicates a consumption for beverages of under 5,000,000 bushels of malt, or barley, and a little over 2,000,000 bushels of corn.

In the last three preprohibition years the use of corn by the distilling and brewing industries aggregated—

| | Bushels |
|---|---|
| 1915 | 27,143,000 |
| 1916 | 45,643,000 |
| 1917 | 49,324,000 |

A total of a little over 122,000,000 bushels of corn, or an average consumption per year of nearly 41,000,000 bushels.

In the most recent three years for which complete figures are available these industries used—

| | Bushels |
|---|---|
| 1924 | 5,357,000 |
| 1925 | 7,496,000 |
| 1926 | 8,262,000 |

A total use during these years of a little over 21,000,000 bushels, or an average use per year by these industries of about 7,000,000 bushels.

These figures establish that in the three-year dry period the domestic demand for corn was reduced by an aggregate of 100,000,000 bushels and that the yearly use of corn by these beverage industries has been reduced on the average about 33,000,000 bushels.

In these same dry years the exports of corn have been as follows:

| | Bushels |
|---|---|
| 1924 | 18,366,000 |
| 1925 | 12,762,000 |
| 1926 | 23,064,000 |

A total of 54,000,000 bushels and an average export of a little over 18,000,000 per annum.

The CHAIRMAN. The time of the gentleman from New York has again expired.

Mr. ASWELL. I yield to the gentleman, Mr. Chairman, five minutes more.

The CHAIRMAN. The gentleman from New York is recognized for five minutes more.

Mr. KVALE. Mr. Chairman, will the gentleman yield?

Mr. BLACK of New York. Yes. The gentleman is on one of my committees. I yield.

Mr. KVALE. According to the gentleman's reasoning, then, prohibition does work, does it not?

Mr. BLACK of New York. Yes; not to the good of the farmers.

This exportable surplus of corn which farm experts claim is the cause of the distress would not during these last three years have existed had the corn crop enjoyed the domestic demand of a size equal to that which obtained as an average consumption for the three preprohibition years. The domestic brewing and distilling demand has been reduced by prohibition 33,000,000 bushels per year. The exportable surplus in the same three years has been about half that amount. A universally condemned cause of the farm trouble, the surplus of corn, was caused itself by prohibition. The proximate cause is the surplus, but the real, though remote, cause is prohibition.

When we consider barley we find the brewing and distilling use was in—

| | Bushels |
|---|---|
| 1915 | 65,349,000 |
| 1916 | 62,164,000 |
| 1917 | 85,738,000 |

A total use of 213,252,000 bushels, or just about an average crop for any recent year. This is an average annual consumption of 71,000,000 bushels.

These same industries used in the dry area in—

| | Bushels |
|---|---|
| 1924 | 5,831,000 |
| 1925 | 5,468,000 |
| 1926 | 5,863,000 |

A total of only 17,162,000 bushels, or an average annual use of about 5,700,000 bushels. We find a reduction of use annually on the average of about 65,000,000 bushels.

The domestic demand for, or market, has been destroyed by a yearly average of thirty-three and one-third million bushels of corn and sixty-five and one-third million bushels of barley, or a total disappearance of American annual demand for the two grains of about 100,000,000 bushels.

It is true that in both brewing and distilling feed by-products are recovered, which products are in high favor amongst the dairy interests.

These by-products aggregate about 20 per cent of the initial weight of the raw material, so that the net disappearance after deducting feed residue would be in substantial accord with the editorial's 80,000,000-bushel estimate.

The price registered in terminal markets which gives the crop value is measured by the demand there for the supply of grain which is brought there for sale. We must therefore compare these primary receipts, namely, the arrival of grain at the terminal markets, with the demand, actual as experienced now, and the theoretical demand which would have existed had "pre" prohibition demand in addition been preserved.

The receipts of corn at primary markets in the last three years have ranged from 232,000,000 to 284,000,000 bushels. Those receipts approached markets and found the demand for corn has been reduced by an average of 33,000,000 bushels. The demand has been reduced by prohibition alone nearly, say, 14 per cent. The demand for barley has been reduced approximately by 65,000,000 bushels per year, or by more than the whole amount of present primary receipts.

So barley has had to find a new market. It has had to compete with corn for the feed trade, and it has done this at the injury to both the corn and barley farmer.

To apply the Adam Smith theory: The American corn farmer brought to market seven cars of corn and found there buyers for six cars, the buyer for the seventh car having been outlawed from the market by prohibition. The farmer who has raised barley has brought his barley to market and found that as the premium-paying brewer could not brew, he would not buy. He has had to sell it to a buyer who paid cheaply for it only for its feed value.

The man on the farm is paying for prohibition through the nose. [Laughter.]

The CHAIRMAN (Mr. HOOPER). The time of the gentleman from New York has expired.

Mr. ASWELL. Mr. Chairman, I yield to the gentleman five minutes more.

The CHAIRMAN. The gentleman from New York is recognized for five minutes more.

Mr. BLACK of New York. Adam Smith would be forced to declare that prohibition has had a crippling effect on the farmer. The man on the farm is paying for hypocrisy through the nose.

The arrangement of figures given, all of which are from governmental documents, contradict the inferences drawn from the editorial and indicate that the comparison of an annual loss of market demand for 80,000,000 bushels of grain is far more serious in the results to the American producer of grain, in the way of reducing his income, than is indicated by the editorial comparison of that loss with the whole crop. If one compared it with the national debt or the annual American bank clearings in dollars, it would appear even more insignificant than the Post's editorial indicated.

The farmers have been propagandized by the drys for many years. They were led to believe if they supported prohibition their taxes would be reduced 80 per cent; that crime would disappear and there would be no more criminal court costs, and that jails and eleemosynary institutions would be emptied. Just the reverse has been true. The principal interest of the farmer in the prohibition question was to get rid of the saloon in his own particular locality, something he could have done through local option, and he had no idea when he was agitat-

ing a wider degree of prohibition that he was paving the way for his own economic destruction.

A dispatch from Washington, D. C., appearing in the February 18 New York World states:

The District of Columbia has increased its arrests for intoxication 168 per cent in the seven years since the Volstead Act went into effect. Arrests for manufacture of liquor advanced 307.7 per cent; for sale of liquor, 825.4 per cent; for transporting, 4,580.9 per cent; for possession, 13,323 per cent; and for driving a vehicle under the influence of liquor, 1,083 per cent. The only declines are 9.4 per cent in arrests for "drinking in public," and 83.3 per cent for possession of property designed for manufacture of liquor, according to a chart submitted by Maj. Edwin B. Hesse, district police head, to a House appropriations subcommittee and made public to-day.

The Canadian farmer must be amused at the Yankee farmer across the border as he contemplates the reports of Canadian grains in liquid form sent into the Volsteadized United States.

The Washington correspondent of the New York Times, February 6 reports that:

The minutes of the August conference, with some deletions, were made public at the State Department to-day, and revealed a large annual increase in the amount of liquor exported from Canada to the United States in violation of the United States laws. This movement was set forth from official records by William R. Vallance, assistant solicitor of the State Department, to the customs conference in figures on the value of alcoholic beverages exported from Canada, which were as follows:

| Fiscal year | Total | To United States | Percentage to United States |
|---|---|---|---|
| 1924 | $14,854,175 | $8,714,709 | 62 |
| 1925 | 16,225,533 | 11,610,169 | 72 |
| 1926 | 21,207,777 | 17,207,777 | 82 |
| 1927 [1] | 9,069,093 | 8,236,126 | 91 |

[1] 5 months ending Aug. 31, 1927.

Also from a Washington (D. C.) dispatch in the Seattle (Wash.) Star of February 7:

Vast dimensions of the illegal liquor traffic on both sides of the Canadian-American border were revealed to-day with publication of minutes of a joint customs conference here last August. Prices of bootleg liquor on the American side of the border will be increased if legislation recommended by the conference to the Canadian Parliament is enacted. The minutes revealed that between 1924 and 1927 the percentage of liquor exported from Canada ostensibly to the United States increased from 61 to 91 per cent.

Moreover, the farm country has always proven a rich harvest for Anti-Saloon League collectors. How much they have gathered from the farm belt I do not know. Perhaps the league will be glad to tell the farmers how much the farmers have paid for prohibition propaganda, which has been to them the promulgations of an Iscariot.

Modification of the Volstead Act will go a long way toward economic relief of the farmer, and when the figures are presented to him he will change his views particularly when he realizes that while he has grown poor the bootlegger, the Canadian farmer, the prohibition agent, the dry lecturers and press agents have prospered at his expense in a theoretically dry country.

I hope the farm organizations will carefully study this phase of the farm problem. I realize the woeful economic condition of the farm country, but believe that a relief, working no harm on the rest of the country, can come if the farm organizations will begin to view prohibition as a false friend. [Applause.]

Mr. KINCHELOE. Mr. Chairman, I yield 10 minutes to the gentleman from North Carolina [Mr. KERR].

Mr. KERR. Mr. Chairman and gentlemen of the committee, ordinarily when we approach a proposition with respect to legislation we have to discuss the real needs of the proposed legislation, but that is not true in this case, because it is admitted by all that there ought to be some farm-relief legislation. Farm relief goes hand in hand with Government control. It has been the policy of this Government to control several of the outstanding great economic instrumentalities of our national life, and when we see the outcome of that and see how that has benefited those instrumentalities and those economic conditions in our life then we are persuaded that the proper thing to do is to extend these same rights and these same remedies in aid of the farmers of this country so that they can again reach their proper place in the great economic life of America.

When we think, gentlemen of the committee, that one-third of the farm property of this country has been destroyed since the period of deflation it impresses us with the absolute necessity for legislation in behalf of this patient and patriotic element of our population.

More than 6,000,000 of the farmers of this country have recently left the farms and nearly 20,000,000 have left in the last 20 years, but just recently more than 6,000,000 have left the farms and gone into the industrial centers of this country. That has not only flooded the industrial centers with labor, but it largely, in my opinion, gentlemen of the committee, accounts for the great disorganized and idle labor of this country, the people having left their farms and gone to the cities and to these industrial place and can not be absorbed.

We take our Federal banking system and we make it flexible, and make it so it will accommodate the people of this country and the economic life of this country, and it is done through Government control. Everybody admits that is correct. We take our great transportation system of this country and that is made to serve the people through Government control, and the owners and operators thereof are guaranteed a fair and legitimate income and wages.

We take other great interests of our country and their success and their prosperity is largely determined by the relationship of the Government to them and by laws which assist and regulate them, but the farmer is becoming more and more impoverished each year and there is apparently no real endeavor whatever on the part of the great American manhood, on account of either indifference or selfishness, to render unto the farmers those things which are simple justice. The time has arrived for us to meet this great problem and legislate for this great element in our industrial life—the farmers.

I have been struck, gentlemen of this committee, with the fidelity—and I wish you would hear this—with which those people who want to serve all the people of this country have undertaken to bring a bill before this Congress which will aid the farmers. I believe that the bill which has been presented to this House and which has for its purpose the honest intention of helping the farm life of America has as much character in it, as much dignity in it, as much wisdom in it, and as much faithful endeavor in it as any bill ever presented to this House. [Applause.]

Now, gentlemen, this bill has been criticized, but you have noticed in this committee and away from the center of this legislation that those who criticize it have nothing to offer in its place.

Mr. ASWELL. Will the gentleman yield?

Mr. KERR. Yes.

Mr. ASWELL. The gentleman has not kept up with the record. There are five or seven bills that have been offered, but the lobby would not permit the committee to discuss them.

Mr. KERR. I am not talking about those proposed bills. I am talking about those who criticize this particular kind of legislation.

Mr. ASWELL. I am in that class and I have offered a real bill, so there has been offered something by way of a substitute for this bill.

Mr. KERR. I think it is the duty of this House to give the country the very best bill it can, and when we do that we have gone as far as we can and as far as our constituents require us to go.

Now, gentlemen of this committee, let us view this bill from a lawyer's standpoint in respect to several criticisms for just a minute or two. I know this bill has been attacked by some who say that what the farmer needs in this country is diversification; that if they would diversify their crops there would not be any necessity for this kind of legislation. I call your attention to this fact and I insist that that ought not to be the position taken in this great country of ours, and it ought not to be so. Those sections of our country which can best raise particular crops ought to be allowed to do so, and there ought to be a complete and perfect interchange of commodities between the different sections of the country.

I think one section of the country should be allowed to raise one thing, and another section another thing, each section raising what it could best produce. It would not hurt the people in the South Atlantic slope to diversify their crops. They can well afford to do it and can do it. In my State we can raise anything we want to raise—wheat, cotton, oats, tobacco, barley, or anything else—but there are a great many sections of this country, which our country is a market for, that can not raise the things we can raise in North Carolina but can raise one crop much cheaper and better than we can. So I insist that the question of diversification ought not to influence us in approaching a bill of this importance and of this import. Diversification was all right once in our national life, when our needs were simple and our exchange mediums slow and uncertain; now farming must be conducted with a view of supplying food,

clothing, and raw material for our industrial enterprises and industrial workers, and extensive provisions must be made to accommodate many millions who engage in other activities; and this is one of the great reasons for the orderly marketing of the tremendous surplus crops particular sections of our country produce, in order that the farmer may not be impoverished whenever he makes a good crop.

This bill, gentlemen, has been criticized because of the equalization-fee feature. The principle of the equalization fee is that those who are the recipients of the special benefits under this bill, that particular class, should pay for the hazards which naturally arise out of that business incident to the protection of their interests. It is not an innovation so far as this Government is concerned, and the principle is well established in the highest courts of the land. The deduction from employees' salaries creating the civil-service retirement and disability fund is similar in every respect. The principle involved is that these employees by operation of this law are the recipients of an annuity after they have reached the age of retirement. This statute has never been questioned for the reason of the benefit derived by those of that class from which it is collected.

The workmen's compensation acts of the several States if they are deemed to impose a tax do so for a public purpose, because they aid in the scheme to prevent economic wastes which arise from personal injury, and it is for the benefit of the public to care for the victims of industrial life.

The fact that the tax operates for the benefit of the injured employees and their dependents does not characterize it as taking private property without due process of law. This principle of assessments for an equalization fee is also similar to the bank depositors guaranty fund in several States of the Union, which has been held to be within the police power of the State, but do not deprive the banks assessed of their property without due process of law or deny to them the protection of the law.

In regard to these cases the United States Supreme Court held that this legislation is in the interest of the public and for the protection of our financial system. The same principle is illustrated in those cases, both in the States and in the United States, which requires those persons who are the special recipients of benefits by reason of a drainage district to contribute certain assessments which go to promote a drainage district and to keep them up and, in some cases, they have gone as far as to hold that the Federal Constitution will not prevent the State itself from defraying the entire expense of creating and developing and improving a political subdivision.

The principle always involved is that those who are the recipients of benefits by reason of the operation of the law can be assessed for costs, expenses, and liabilities incident to the privilege which is granted them.

The advocates of this Federal farm-relief legislation claim that this bill comes within that clause of our Constitution which allows the Government to regulate interstate and foreign commerce. I think that this is true and, in my opinion, can be justified under the public-welfare clause of our Constitution for the reason that agriculture should be kept upon a sound and successful basis, the Government should aid through legislation every effort which tends to promote its welfare and keep it upon a parity with other great economic activities. [Applause.]

The CHAIRMAN. The time of the gentleman from North Carolina has expired.

Mr. KETCHAM. Mr. Chairman, I yield 10 minutes to the gentleman from Ohio [Mr. BEGG].

Mr. BEGG. Mr. Chairman and members of the committee, I shall make no effort whatsoever to contribute any very great amount of information to that which has already been given to the committee. I merely want to take this opportunity to say that I am keenly alive to the competition that the United States producer not only in agriculture but in every line of industry is going to be called upon to meet, and I am in entire sympathy with anything to which I can subscribe that will give the agricultural interests a more equitable distribution of the profits of industry than they are now getting.

My position on the former McNary-Haugen bill has been very well understood, and I have not changed my position in the least on that particular type of remedial legislation.

If the equalization fee were taken out of the McNary-Haugen bill, as it is before us to-day, I would support it. I would even go further and say that if the equalization fee were made applicable to one crop for a single experiment—and I said this two years ago—I would also support the bill. The equalization fee is only a tax levied on the farmer, and according to the best lawyers would be unconstitutional. But with what little ability I have to reason and analyze, it seems to me the complexities that will be encountered in making this particular legislation, if enacted into law, at all workable will be absolutely insurmountable.

Mr. BURTNESS. Will the gentleman yield?

Mr. BEGG. I would rather not until I have finished my statement, and then I will be pleased to yield, and my statement will be rather brief.

There is a proposal that has been indefinitely presented to this House by the representatives of the National Grange, the export debenture plan which is constitutional. I want to say now if that can be put in this bill in place of the machinery that is in the bill, I can lend it my whole-hearted support as an experiment.

This, too, with the proviso that the money available to pay the debentures on exports of agricultural products shall be confined to the moneys received as duties paid on agricultural products brought into this country. I could then go before my people, whether laboring man or one engaged in industry, and defend the proposition as economically sound, and I would like to direct the attention of my colleagues, if you please, to this proposition for a few moments.

There is not any radical departure from the fundamental principles of government in this proposal. If we collect a tariff of $100,000,000 annually on agricultural products brought into America it is certainly fair to assume that the bringing in of them damages the domestic market for agriculture.

Mr. KETCHAM. Will the gentleman yield right there?

Mr. BEGG. Yes.

Mr. KETCHAM. Is it not considerably more than $100,000,000?

Mr. BEGG. Oh, it is. It is more than twice that, but I said if it were any sum——

Mr. KETCHAM. It is about $225,000,000.

Mr. BEGG. I am using the figures for the purpose of illustration.

Now, I submit that the man in the city would not object to taking the money received by the Government in destroying in part the farmers' market and using that money to rebuild and reestablish his market. This is certainly economically sound, and I can subscribe to this kind of farm relief 100 per cent. I was about to say that these other schemes seem to me absolutely futile of enforcement. I can not understand how they can be enforced without inspectors and accountants and bookkeepers sufficient to make a check on everything the farmer sells in the United States. We now have too many Government inspectors and supervisors running around the country telling the people what to do and not to do. The more complex a governmental machine is the less effective it will be and the more dissatisfaction there will be among the masses. I think, gentlemen, in a word, this states my position on agriculture.

I had rather go down to defeat in every ambition I might have than to prostitute what I believe is my good judgment for the best interests of the whole Nation, and I believe that is exactly what we are doing if we stampede a bill like this through the House, when most of us believe it will not work.

The export-debenture plan is so simple there is not anybody that will say it is impossible of practical application at a minimum cost to the Nation, which after all is a big item of consideration for the next 10 years.

You bring about a condition where industry closes down and you have brought about a condition where the revenue of the Federal Treasury will cease to flow, and then the condition of the agriculturists will be worse than it is to-day.

I wish my colleagues would give serious consideration to the debenture plan. The money paid would only be an amount equal to the tariff, ineffective to the farmer, and that money would not come out of the pockets of the American taxpayer, but out of the importer of farm products from Australia, South America, Canada, and so forth. If the wheat grower of Canada, the woolgrower of Australia, the sugar grower of Cuba, and the meat grower of Argentina ship their products to the United States and ruin the farmer's market, why not make him furnish the money to pay the debenture on the exported American products of the farm?

There is the source of supply for your money, and so far as the farmers in Ohio are concerned I think I can come as nearly to speaking for them as any other man—no more so—but I am sure the farmers in Ohio do not want one dollar of assistance if they believe it comes out of the taxpayers of some other line of endeavor. They do want and they do ask that the tariff that is applicable to industry—because industry can control her output—shall be made effective for them as well. Under the export-debenture plan, according to my light, the tariff can be made 100 per cent effective at a minimum cost and with a minimum expense to operate. [Applause.]

Mr. ASWELL. Mr. Chairman, I now yield 15 minutes to the gentleman from Georgia [Mr. LANKFORD].

Mr. LANKFORD. Mr. Chairman and gentlemen of the committee, the McNary-Haugen bill is now before Congress for the fourth time, and yet the same bill has never been here twice. The same name and dress comes back, but each time a vitally different being wears them. Some of the most dangerous bills have the prettiest names and parade in the gayest uniforms. The McNary-Haugen bill of 1924 did not provide for any fee or tax on cotton or tobacco, and some of us were willing that the western farmers be permitted to try the plan as an experiment with their basic agricultural commodities before it becomes effective as to cotton and tobacco.

Those of us voting for that bill did not vote at all for an equalization fee or tax on either cotton or tobacco. We wanted to see how the plan worked without our people trying the experiment. The McNary-Haugen bill of two years ago appropriated a large sum to be used to bring about better prices of certain commodities, including cotton but not tobacco. There was to be no equalization fee on any commodity for two years. Thus the plan could be tried out and if not good could be repealed by Congress before any fee could be assessed. Many favored giving a trial to the plan indorsed by so many farm organizations. If that bill had become law, by this time we would have been ready to perpetuate it by a new appropriation or such other legislation as the farmers might wish after a fair trial, or it would have proven to be unsatisfactory and we would be ready to pass some other measure for the farmers. As it is, the McNary-Haugen bill is blocking all other farm bills which many think much better than it, is not yet law, and may never go on the statute books.

When this bill was up for consideration two years ago, even though the fee was postponed for two years, and tobacco was not included, I sought to amend the provisions as to equalization fees on pork, beef, and other commodities, and last year I was fighting to better the provisions as to cotton and tobacco. I read from CONGRESSIONAL RECORD of February 4, 1927, page 3002, as follows:

Mr. LANKFORD. Mr. Speaker, I have to-day introduced a farm-relief measure identical in terms with the McNary-Haugen bill, except as to equalization fees on cotton. My bill would only authorize equalization fees to be levied upon the spinning, milling, or manufacture of cotton into thread or cloth and upon the sale of cotton for such manufacturing purposes and for export purposes.

Realizing that cotton may be sold by original producers to manufacturers, or for export purposes, I put a provision in the bill that no equalization fees shall be collected from original producers of cotton, except when good middling cotton is selling above 17 cents per pound, and then only out of the excess cotton brings above that price.

I had hoped for the passage of a farm relief bill without any equalization fee, but many differ with me and it seems that a bill will probably pass with such a fee. It is my purpose, therefore, to perfect any bill that may pass so as not to put this burden on the ginning or sale of cotton by the farmer. Of course, as is usually the case, the fee may be eventually passed on to the farmer. I am hoping, however, to help secure the passage of a bill which will prove more beneficial than harmful to the farmer. I am of the opinion that the McNary-Haugen bill, if so amended as to contain the provisions now presented by me, will be helpful to the farmers as a general proposition, even though it does not measure up to my ideal of a farm-relief measure.

Let me say just here that if the McNary-Haugen bill is amended as suggested by me, the provisions of the bill will be very much improved as to equalization fees on cotton. The present bill as now drawn is much better than the bill of last year as to the equalization fees on meat products, and so forth. I very much feared that the bill of last year would be construed to authorize the collection of equalization fees from every farmer who carried pork to market. The present bill does not authorize any such collection.

In order to show fully how I felt about equalization fees on the producer last year and what I did to prevent such fees, I quote from the CONGRESSIONAL RECORD of May 18, 1926, page 9661, the following:

"Mr. LANKFORD. Mr. Chairman, a parliamentary inquiry. The amendment I have would really come at the conclusion of the amendment of the gentleman from South Carolina [Mr. FULMER]. I doubt if my amendment be now in order until the amendment of Mr. FULMER is disposed of. My purpose was to offer it after the disposition of that amendment, and I ask that my amendment be reported for information, and I will discuss it now.

"The CHAIRMAN. The amendment will be reported for information.

"The Clerk read as follows:

"At the end of the Fulmer amendment add the following: '*And provided further*, That no equalization fee or charge shall ever be collected upon any basic agricultural commodity while owned by the original producer, nor upon the sale thereof by the original producer direct to consumers or to any person, firm, or corporation which buys basic agricultural commodities for the purpose of and sells same directly to consumers, regardless of whether such sale is made before or after processing.'

"Mr. LANKFORD. Mr. Chairman, the purpose of my proposal is made clear by the reading of the amendment. But I want to put in the bill a provision that so long as the producer retains his product there can be no equalization fee on that product. In other words, there should be no equalization fee charged at the gin on cotton, provided the farmer keeps it and stores it and retains the ownership of it.

"Mr. FULMER. Will the gentleman yield?

"Mr. LANKFORD. Yes.

"Mr. FULMER. This bill takes care of the cotton equalization fee until he sells it.

"Mr. LANKFORD. Yes; but my amendment goes further and provides that where the farmer sells his pork or his beef to his neighbor in the little town where he lives there shall be no equalization fee charged for the selling of that to the consumer. It also provides that if the farmer brings into market his hog or beef and sells the product to the butcher shop or market no equalization fee can be charged on that sale. In other words, if my amendment is adopted there can be no equalization fee charged except where the product is sold in wholesale or in interstate commerce. I shall ask for a vote on my amendment at the proper time."

Thereafter upon a vote being taken my amendment was lost. This amendment was voted down last year, and yet those of us who are anxious to prevent any equalization fee being levied upon the producer will very probably this year be able to go much further than we could possibly hope to go last year. We are gaining by keeping up the fight.

Personally I believe that farm relief legislation can be worked out without any equalization fee whatever. I feel that if any is levied it should be only on the excessive acreage that a man plants, and that even then it should be done only as a part and parcel of a program to help the farmer get a good price for his products. If we succeed in getting worth-while legislation for the farmers and provide for the raising of a fund to stabilize the prices of the farmers' products at a reasonable profit above the cost of production without a direct charge upon the farmer, then all will be well and good. If we can not get what we want, then we can afford to compromise if the compromise is in the interest of the farmer; otherwise it would be better that no bill be passed.

Mr. Chairman, I lost temporarily in that fight, but I later secured the help of others to carry on the fight and finally won. The bill of last year and the present measure are so worded that in no event will an equalization fee be levied on pork which a farmer carries to market in his home town. Neither will the fee apply to sales by one farmer to another. Thus it will be seen that those of us who oppose the fee have worked continuously to make it as harmless as possible. Ofttimes when we can not defeat a measure we can so amend it as to make it much less objectionable.

Last year I reintroduced the McNary-Haugen bill, not because I liked it as a whole, but to demonstrate how the equalization fee as to cotton could be very much improved. I later helped prepare an amendment which we had placed on the bill in the Senate. The amendment is still a part of the bill, and while I oppose the equalization fee, I am truly glad I helped to make less offensive the provisions as to cotton, so that if the bill should ever become law it will be much better for the cotton growers. While last year we succeeded in getting a good cotton amendment on in the Senate we were not so fortunate as to tobacco. No amendment was placed on the farm bill last year in the House. The friends of the bill stood pat and would not let any kind of an amendment be adopted. An amendment would have thrown the bill into conference and Congress would have adjourned, by law, March 4, without the bill reaching the President. Having failed to get an amendment adopted helping the equalization fee as to tobacco, we renewed early this Congress the effort to remedy the matter.

On both occasions we found the problem as to tobacco much more difficult of solution than any other equalization-fee problem. Especially is this true as to south Georgia where much, if not all, of the leaf tobacco is sold by the planter directly to the manufacturer or the exporter. I am absolutely sure this can not be remedied except by placing the fee, if at all, on the sale of prepared tobacco in wholesale quantities. I have reintroduced the bill showing just how this can be done. I shall, at the proper time, offer an amendment to the bill to remedy to a large extent the viciousness of the fee as to tobacco.

I may say just here that unless my amendment or a similar one is adopted and the bill perfected in other vital essentials I will not vote for it again. The bill is much worse, generally, than ever before, but I wish to discuss the other features of the bill a little later. I have shown that, under the first two McNary-Haugen bills, no fee would have been levied as to

cotton or tobacco unless the plan of the bill proved popular, and the farmers themselves desired legislation putting the fee provisions into effect. Last year when the bill came up, even after my suggestion as to the cotton fee was written into the bill, I was not satisfied as to tobacco or as to any other equalization-fee provisions.

I have all the time, with all my heart, wanted to help pass some worth-while farm-relief measure, so last year I finally whipped myself into voting for the bill after Senator MCKELLAR had put an amendment on in the Senate, as follows:

*Provided*, That in any State where not as many as 50 per cent of the producers of the commodity are members of such cooperative associations or other organizations, an expression from the producers of the commodity shall be obtained through a State convention of such producers, to be called by the head of the department of agriculture of such State, under rules and regulations prescribed by him. Such operations shall continue until terminated by the board. Any decision by the board relating to the commencement or termination of such operations shall require the affirmative vote of a majority of the appointed members in office, and the board shall not commence or terminate operations in any basic agricultural commodity unless members of the board representing Federal land bank districts which in the aggregate produced during the preceding crop year, according to the estimates of the Department of Agriculture, more than 50 per cent of such commodity, vote in favor thereof and until the board shall become satisfied that a majority of the producers of such commodity favor such action.

So those of us who voted for the McNary-Haugen bill last time did not vote for an equalization fee on any product, but only to let a majority of the producers of cotton, tobacco, or other commodity decide for themselves under rules and regulations of the secretary of agriculture of the State whether or not they, the producers, desired operation under the bill and also desired the collection of the equalization fee as set out in the bill.

Mr. Chairman, I finally voted to go this far, although I feel we should work out a bill to help the farmers without any suggestion of an additional tax to become effective under any circumstances. The present bill does not in the least give the farmers any say so in the matter. The bill gives the board—a big majority of whom would not live in the South and all of whom probably would not be in sympathy with the cotton and tobacco growers—the full authority to assess taxes against the production of cotton, tobacco, and other products grown by my people. "The power to tax is the power to destroy," and I will not knowingly give the power to destroy my folks to those who do not live among my people, who are not in sympathy with them, and who ofttimes hate them.

The older the McNary-Haugen bill gets, the worse it gets. It does not at all improve with age.

I have heretofore voted for it as the best thing in sight, even though it has never measured up to my ideal of a farm bill. I struggled for more than eight years after I came here to find my ideal of a farm-relief measure. I found objectionable features in all. After many efforts I put my ideals of farm relief in a bill of my own—H. R. 77. I have at least satisfied myself and am willing to argue that my bill is better for the farmer, in a contest anywhere, anytime, with anybody who wishes to argue in behalf of any other bill against mine.

Real farm-relief legislation, to my mind, must be definite and unequivocal in its provisions as to the duties and powers of those officials who by any chance may be unfriendly to the farmers sought to be helped, and must with the utmost definiteness provide for the friends of the farmer to be the sole triers and arbiters of all discretionary matters and issues. Otherwise the enemies of the farmer will capture the very means set up for the farmers and thereby further exploit and rob them.

The McNary-Haugen bill creates a board, the majority of whom will not be in sympathy with any one group of farmers, but will be more in sympathy with the enemies of the producers of each commodity, and grants to that board almost unlimited power to determine discretionary matters and issues concerning the very life of the farmers and producers. In other words, there will be more members on this board not in sympathy with the growers of cotton and tobacco than there are friends of these producers. This is true as to the producers of all other commodities. You are about to tie the farmer hand and foot and deliver him into the hands of his avowed enemies. Under the McNary-Haugen bill of last year the farmers were given a splendid opportunity to control the appointment of the members of the board, and the farmers were given a veto power over the most vital acts of the board. This bill would deprive the farmers of all voice in the selection of the board and makes the board the supreme dictator as to the powers conferred on it. The farmer could neither say yea nor nay as to the orders issued against him. But some one says there is to be an advisory council for each commodity to look after the interest of the farmer. This council will be selected by the board and not by the farmers and therefore will feel kindly toward the board. The farmers will still be in court without a friend of their own selection.

Now, let us see what wonderful powers this council has. Here they are. I am quoting from the bill:

Each commodity advisory council shall have power, by itself or through its officers, (1) to confer directly with the board, to call for information from it, or to make oral or written representations to it, concerning matters within the jurisdiction of the board and relating to the agricultural commodity, including the amount and method of collection of the equalization fee, and (2) to cooperate with the board in advising the producers through their organizations or otherwise in the development of suitable programs of planting or breeding so that burdensome crop surpluses may be avoided or minimized, in order to secure the maximum benefits under this act.

These are all the duties of the advisory councils, except the right to draw $20 per day salary, traveling expenses, patronize hotels, hold meetings, and have splendid vacations at the expense of the farmers and the taxpayers. Briefly stated, these councils would draw compensation for "conferring directly with the board" and for advising the farmers. My farmers confer with me, with their Senators, their governor, and with the President of the United States without so much cost. Then, so far as advice is concerned, the farmers get too much advice now, unless it was better. They need less advice and more nearly a square deal. That would be some board, would it not? What a wonderful privilege the council would have? The council could actually write to the board or speak to its members if it happened to get near them. And just think, they would get $20 a day for enjoying this blessed privilege. Seriously, there is no use of an advisory council if it is to have no duties or powers except to talk to the farmers on one hand and talk to the board on the other. Certainly any citizen would have the right to talk, write or wire the board about any material relevant matter. Why create an expensive body of parasites with no right or power not already possessed by ordinary folks?

The present bill has a new provision, which gives the board the power to withhold help from the producers if there happens to be an overcrop, with low prices and help is needed, and requires them to help when there is a small crop, high prices, and help is not needed. In other words, the board is to be the physician charged with the duty of curing the farmer's ills when he is sick from overproduction, but may refuse to help him when he needs help and must help him when he does not need it. There are all kinds of brakes on the help that may go to the farmer, but no brakes on the salaries of the board or anyone else; neither is there any provision that no fee shall be collected out of the farmer while he is either receiving no help or while the help is all going to a few individuals and not to the farmers as a whole. The board as doctor will say to the farmer patient, "I am to get good pay to doctor you when you get sick, but since you get sick over my objection I will not help you, even though you suffer unto death. I shall wait until you do not need me and are well, then I shall stand ready, willing, and anxious to help you. Pay me my bill regularly though."

There are many other objections to the bill which have been in the bill from the beginning. There has been some merit in the bill all the while. I have tried to point out wherein the bill is now much worse than ever. The vicious provisions now so far outweigh the meritorious ones until I can not vote for the measure in its present form. I hope it may be amended yet, so that I may support it. I know of many good amendments that will be offered, and I sincerely hope they may be adopted. The bill which passed the Senate a few days ago is much better than the one which is now about to be passed through the House, I fear, without any substantial redeeming amendments. All bills have in them the good and the bad. To my mind at present the bad in this bill predominates. [Applause.]

Mr. FULMER. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD by inserting therein certain statements and statistics.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. KINCHELOE. Mr. Chairman, I yield 10 minutes to the gentleman from Kentucky [Mr. MOORMAN].

Mr. MOORMAN. Mr. Chairman, Ladies and Gentlemen of the committee: In the whole history of the world, I doubt if there has been so much talk about any one thing and so little done about it as farm relief. All the wise ones have had their say, pro and con, in Congress and out. After all these discussions, arousing hopes and promising action, and the unjustified inter-

vening delay, we stand here to-day with the S O S of millions in economic distress ringing in our ears, and we face the great responsibility of determining the present legislative fate of American agriculture. The Senate has passed the measure, thereby increasing our responsibility. Whatever else happens, I hope there will be a roll call every time one is possible, that the real attitude of finance, industry, transportation, commerce, and labor may be registered, in so far as such is possible by our votes. The time has come for agriculture to know its friends and to know them by their votes, not by their mere words of impotent sympathy, constructive criticism, or fruitless advice. Each Member of this House is now confronted with most astounding revelations, as expressed by volumes of unchallenged statistics and proof, depicting the deplorable plight of those engaged in and dependent upon agricultural pursuits.

PERFECTION NOT CLAIMED FOR THE MEASURE

It is not the first time that great minds have differed about important remedial legislation. The bill, neither as originally introduced nor as it may be amended, will be altogether acceptable even to its supporters. It contains objectionable and questionable features and omits provisions that many honestly feel should be incorporated in it. Like all such measures, it must be the result of compromise, and, essentially, may have imperfections. But it is the product of the best agricultural minds of our great country, on a most important subject. It embodies many agreed principles and, a thing to be emphasized is, it can later be modified to suit developments or absolutely repealed, as future experiences may demand. All that the friends of the McNary-Haugen bill ask for it is a fair trial. Is this not reasonable? Many others have discussed the details of this bill, so I shall address my remarks to some of the causes, results, and possible remedies of existing agricultural conditions.

OBJECTIONS OF OPPOSITION UNTENABLE

Any time one desires to hear learned discussions on the impracticability of any farm-relief measure or on the necessity of Coolidge economy in governmental administration in the United States, just listen to some of the loquacious foes of farm relief. An appropriation for a private denominational negro school involves no violation of the Constitution, among the enemies of agricultural aid; the open and notorious ignoring of the constitutional mandate to reapportion representation, since 1920, by several Republican Congresses, is a fact, but these antifarm-aid champions of the sanctity of this good old instrument make the halls ring when any chance appears to inject a supposed constitutional impediment to farm justice. Analyze the interests of the districts which furnish the objectors, investigate their records and attitudes, otherwise, and the picture usually gets plainer.

DISCRIMINATION AGAINST AGRICULTURE PLAIN

Has agriculture received the consideration it deserves at the hands of Congress? The answer is a comparison with the benefits received by interests otherwise engaged. Reference to only a few facts reveals unjustified discrimination. In finance, capital has the great Federal reserve system, a creation of law, to regulate the volume and flow of credit. Many other legislative enactments tend to stabilize banking, investments, and other kindred undertakings. Labor has been, as it should be, recognized by Congress by the most helpful and liberal legislation. Industry has been developed and protected by a tariff so high as to even evolve our whole economic system. Tariff results not only threaten our friendly relations with the rest of the world but it is the farmer's greatest single burden. Transportation, watered stock and all, is enabled by law to guarantee satisfactory dividends. Commerce has but to ask and has received about all that law can give. Power interests are getting all they could possibly desire. Through tax manipulations, departmental rulings, board and commission decrees, and a few other friendly agencies, everybody organized receives all deserved, and often special blessings, except the farmer. Why should not agriculture, in the light of these facts, have recognition by legislation to help channelize commodities, give producers bargaining power, provide guarantees against loss, and to furnish an automatic check against overproduction? With what others have, why should they worry? They call this one-sided existence national prosperity, but what about the agricultural status of the Nation? Why is similar legislation "unsound," if sought to be applied to agriculture, when it is so eagerly sought and so helpfully applied to other industries and endeavor?

AGRICULTURE ASKS EQUALITY OF OPPORTUNITY

Many thousands of millionaires were made on account of the late war. They got theirs at "cost plus," or surer and easier, while the farmers were being urged and trained to overproduce to save the world. The Government has made good millions on commercial contracts and similar adjustments, but who helped agriculture readjust itself? Thousands of persons have bought ships, supplies, and hundreds of other things entailing great loss to the Government and gain to these purchasers. What did the farmer get? He had the blessed privilege of patriotically furnishing much of the "human material," unflinchingly contributing to every other kind of war sacrifice, even spending his meager savings in buying Liberty bonds; and, after the war, as his reward and recognition, he witnessed the inability of foreign governments to buy his products on account of the war and their inability to trade for his products on account of the tariff. Yet, this very Congress refuses legislative enactment giving agriculture just tariff benefits. Tariff-protected industries, guaranteed transportation, high-powered finance, well-treated commerce, as has organized labor, should now reach out a helping hand to their dependable sister, agriculture, and exert themselves to elevate her to a position of equal advantage in our economic system. They here and now have a chance to do this without hurting themselves, thereby engendering better feeling and creating beneficial results to all.

My position, and I think the position of all farmers and real friends of agriculture, is that it is desirable and right that capital should yield profitable returns, that transportation should pay good dividends and maintain good service, that industry and commerce should be treated so as to thrive, and that labor should be paid so as to maintain high American standards of living. This has all been happening to the other classes. At the same time, during so-called prosperity, agriculture has struck rock bottom. Now, as I really believe, our Nation is faced with serious impending depression. The whole truth about unemployment would shock the country, notwithstanding the Coolidge prosperity myth. Instead of agriculture having been treated right and being strong enough to help support such a condition, as it always has to do in the final analysis, it is absolutely prostrated, rural credit is overextended, and all connected are helpless, discouraged, and despondent. Does the condition not justify legislative action?

CAUSES OF AGRICULTURAL DEPRESSION

If asked the name of the worst enemy and controlling force against general agricultural welfare, I would have to answer that, in my opinion, secret understandings and intrigues of the bipartisan political, financial, national, and international systems, coupled with the unsympathetic attitude of most powerful coalitions of self-serving interests, are, as much as any other influence, throttling rural development and relative progress. These influences, acting together, more with a purpose of exploitation than destruction, are fast reducing rural dwellers to a state of peasantry. They are giving an undue measure of appropriations and other helpful governmental function to population centers and to finance, commerce, and the industries. Their wrong to agriculture is as much a matter of indifference to its importance and welfare as anything else. Due to its unorganized condition, it simply has had the weakest hand in the economic game of the survival of the fittest. But the farmer is crushed too low to be able to rise again, without assistance. Somebody is about to kill the goose that has always laid the golden eggs. Deliberately or unwittingly, this destructive and unsympathetic system is surely conducing to the making of radicals and paupers out of the most conservative and most dependable citizenship on earth, the American farmer.

THE BIPARTISAN SYSTEM A CURSE

I do not believe in bipartisan government, either in the State or in the Nation. I recognize and make the distinction between administration by efficient nonpartisan boards and commissions and the administration and conduct of a city, State or government by a coalition of interests or combinations of politicians, without party responsibility or political loyalty. Boards and commissions composed of members of different political convictions have, in many ways and places, functioned most efficiently. On the contrary, the dissection of bipartisan rule usually reveals unholy alliances and sordid personal and business intrigues. Often it leaves its slimy trail as a reminder of misused confidence and power. It destroys political loyalty, invites treachery, and decreases respect for those who administer government. The party in power should have all the responsibility, and it deserves whatever honor and credit is due its administration. Where bipartisan government reigns, as a rule, whatever good that is done is claimed by both parties. The mistakes and wrongs are denied by each party and laid on the other.

The taxpayers—the public—lose, and no member of either party knows definitely where anybody stands or what will happen. Public servants removed from direct accountability, as a rule, are less efficient generally. Under the despicable bipartisan system that holds some States in its clutches, millions of dollars of the taxpayers' money has been manipulated to influence and intimidate individuals and communities in efforts to confer political favors at public expense or to destroy honest

men who have declined to stultify their consciences by contributing to schemes of wholesale political perfidy. Thousands of dollars of taxpayers' money has gone for salaries and traveling expenses of supposed public servants and their underlings, who sometimes operate from their offices, but more often parade the state to consummate under-cover political trades and trickery instead of performing their real duties. Thus spending taxpayers' own money against them, often fighting members of their own party, means stabbing men in the back without notice with their own dirks; it means crucifying faithful public servants because of doing their duty; it means shamefully misusing positions of public trust and official power to crush individuals with whom the political boss differs; it means the triumph of political tryanny, intolerance, and personal venom; and, finally, it means that true democracy and true republicanism must choke off these politically irresponsible despotic "fixers" of the existing bipartisan supergovernment.

MELLON POWERFUL AND INVINCIBLE

Andrew W. Mellon is the most powerful individual in America to-day. Through his untold personal wealth, through his position as head of the finances of the Nation that holds the purse strings of the world, through his own and affiliated financial organizations and interests, this one man's will is made economically invincible. These things and others vest in him unlimited power in all things legislative and financial, and politically he almost holds the veto power on presidential nominations. He is all this officially, in the face of the law that solemnly proclaims, in effect, that a man personally and financially situated as he is said to be is not eligible to be Secretary of the Treasury of the United States. Farm sympathizers, lovers of justice, and believers in fair play, I ask you, forgetting your politics, to think of the tariff on this official's reputed aluminum interests, and other similar unjustified and oppressive conditions, and trace the hundreds of ramifications of this man's power and interests, including legislative reductions of his own taxes, and you will shiver in justified apprehension and bow your heads in economic shame. Some Democrats are also, seemingly, somewhat tenderfooted when their duty demands the thwarting of his or some other powerful associated will. But, once aroused, the farmers' enemies are afraid of his power. The safe way is to keep him down, and it is, therefore, necessary to crush anybody with nerve enough to champion his cause.

UNPRECEDENTED POWER; UNPARALLELED CORRUPTION

Power and corruption, when the latter is present in government, often go hand in hand. What has happened to the citizenship of a country that can view the records of many of its representatives in high places, for the past eight years, without sincere alarm and shame? The rottenest of corruption has stalked about the National Capital, even permeating the Department of Justice. It is, in my opinion, the due and natural result of bought special privilege, of unconscionable monopolistic greed, of the bold trading of governmental favor, and, in effect, immunity from punishment, for campaign funds; and, in its final analysis, is the result of the moral turpitude of rank combinations engaged in maladministration of national affairs. In spite of their apparent guilt, perpetrators of high crimes and misdemeanors go unpunished, under the shadow of the National Capitol; seemingly, protected crooks challenge the power of the Government to punish; and, without much apparent general public resentment, colossal spectacles of official crookedness attract and challenge the attention of the rest of the world. What sacred institution of the people is safe, whose rights guaranteed, in the light of these unusual and sensational developments, and what may reasonably be expected next?

SPECULATORS AGAINST FARM RELIEF

Under a New York headline, by United Press, a news article in the last few days said:

"Men who have had their hands on the market's pulse say 20,000,000 people are buying and selling, and everyone agrees that the estimate is conservative.

"And of the 20,000,000, experts calculate that at least 15,000,000 are riding for a fall and slated to lose everything. The market will break one of these days. It always has."

Weigh this statement as to Wall Street, bearing in mind all the thousands of bucket shops and other local speculative agencies, as affecting agriculture. Agricultural products furnish the basis for much speculation, and powerful opposition to farm legislation comes from this source. Measure the hurtful consequences of all this manipulation on the producers, as revealed by cotton investigations and other information. Who has the investment in land and labor, pays the taxes, pays for modern public improvements, takes the chances of seasons, and actually creates the wealth? Then realize who has the most influence and receives the greater consideration in governmental matters to-day, whether the real producers or those who exploit their creations by intervening between the producers and the consumer? The answer is that all are closer to the throne of organized cooperation and interlocked protection than those engaged in agricultural pursuits. The farmer is the unorganized prey of all branches of coordinated endeavor. Their numbers and personal independence, coupled with diversity of ideas and interests, has an almost insurmountable tendency to make it so. The country uses them, needs them, and should help them to help themselves. If farm legislation will not help the farmer, why the strong opposition to it by those with adverse interests? The law is intended to stabilize prices, which would tend to destroy speculation.

OTHER AGENCIES MUST PLAY PART

Farm relief will not come from legislation, except as laws may create and regulate agencies and avenues for the guidance, financial support, and helpful recognition of the farmers' own cooperative efforts. In the Census Committee, of which I am a member, matters of the most vital importance to agriculture are now being considered. The 1930 census will probably cost $40,000,000, will require the employment of 100,000 people, and many new and important features have been added. Every member interested in agriculture should read the hearings, realize the importance of the suggested additions and changes, and assist in seeing that the census is taken at the right time and in such manner as to accurately show the rural population and get the best picture possible of rural economic conditions.

This bill provides preference for veterans in taking the census. I have suggested further schedules and statistics in an effort to determine what becomes of the spread between the farmer's selling price and the consumer's buying price and to reduce it; and, also, to get statistics that will otherwise more fully advise us as to production available, supply on hand, market demands, sales facilities, and other helpful data. Great benefits can be had by the farmer by availing himself of all the agricultural information that is to be had through county agents, experiment stations, and United States Department of Agriculture, his Congressman, and many other sources. Opportunities not taken advantage of are lost. For instance, I induced the United States Geological Survey to offer to do some most valuable soil survey work in Kentucky, but local pressure was not strong enough in the Kentucky Legislature to secure an appropriation for the small amount of $5,000 to start the work. This, notwithstanding the Government was offering to put up much more than half of the cost. What is wrong when agricultural interests are thus neglected? It is easy to legislate away the people's money for roads, schools, and many other desirable and costly things, but it is equally important to pass constructive legislation enabling the taxpayers of agricultural districts to more easily bear their increasing burdens.

LET'S PRACTICE JEFFERSONIAN PRINCIPLES

Thomas Jefferson, to whose theories and administration of government our country could now so well afford to turn, and whose teachings and practice the Democratic Party in the Nation and in Kentucky could now so well afford to emulate, in his first inaugural address, said:

About to enter, fellow citizens, on the exercise of duties which comprehend everything dear and valuable to you, it is proper that you should understand what I deem the essential principles of our Government, and consequently those which ought to shape its administration. I will compress them within the narrowest compass they will bear, stating the general principle, but not all its limitations. Equal and exact justice to all men, of whatever state or persuasion, religious or political; peace, commerce, and honest friendship with all nations—entangling alliances with none; the support of State governments in all their rights as the most competent administrations for our domestic concerns and the surest bulwarks against anti-Republican tendencies; the preservation of the General Government in its whole constitutional vigor as the sheet anchor of our peace at home and safety abroad; a jealous care of the right of election by the people, a mild and safe corrective of abuses which are lopped by the sword of revolution where peaceable remedies are unprovided; absolute acquiescence in the decision of the majority, the vital principle of Republics from which there is no appeal but to force, the vital principle and immediate parent of despotism; a well-disciplined militia, our best reliance in peace and for the first moments of war, till regulars may relieve them; the supremacy of the civil over the military authority; economy in the public expense, that labor may be lightly burdened; the honest payment of our debts and sacred preservation of the public faith; encouragement of agriculture, and of commerce as its handmaid; the diffusion of information and the arraignment of all abuses at the bar of public reason; freedom of religion; freedom of the press; freedom of person under the protection of habeas corpus; and trial by juries impartially selected—these principles form the bright constellation which has gone before us and guided our steps through an age of revolution and reformation. The wisdom

of our sages and the blood of our heroes have been devoted to their attainment. They should be the creed of our political faith, the text of civil instruction, the touchstone by which to try the service of those we trust; and should we wander from them, in moments of error or alarm, let us hasten to retrace our steps and to regain the road which alone leads to peace, liberty, and safety.

Above all things, I would like for the people of the Nation, truly mindful of the foregoing principles of Jefferson, and, especially, the Democrats of Kentucky, to get together once more and march unitedly to a triumph of political right in government over the many existing political and economic wrongs.

BILLIONS GIVEN TO FOREIGN COUNTRIES

The United States, by its Congress, not satisfied with showering its special legislative and appropriation blessings on nearly every other element of its citizenship, except the basic industry of agriculture, impressed the world, in making our foreign-debt settlements, with our country's great financial strength and its unprecedented generosity. You deliberately and unqualifiedly gave to foreign countries not millions nor hundreds of millions, but billions and billions of the people's money. Notwithstanding all this, now the mere mention of the McNary-Haugen bill or the proposed modest appropriation for further vocational education to make rural existence more endurable and profitable, is likely to be met with urgent suggestions of necessary economy. Other arguments equally unreasonable and untenable come from many antifarm relief sources. I live in a strictly agricultural district. My constituents are of the highest rural type. The farmers are intelligent, energetic, and endeavor to be progressive. Our bankers and business men are conservative and efficient, and they have freely given their financial aid and helpful advice to our farmers. In spite of all this, those farmers who have tried the hardest and operated on the largest scale have usually fared the worst. Mortgages have been executed, the money spent in a hopeless struggle to survive, and now the sound of the hammer on the auction block is daily expected by many. It is hard to see good men, many of whose heads have grown gray and whose backs have become bent in honest toil, suffer the humiliation of undeserved failure and the privations of depression and poverty. But those noble women, the self-sacrificing country mothers, who have long borne the brunt of rural existence, are the ones for whom all red-blooded men should now be willing to fight. If, by some miracle, each of my city-dwelling colleagues and all those engaged in other endeavor, could be placed in the shoes of the average Kentucky farmer to-day just long enough to fully understand the true situation, and if skilled labor should shift to farm work, farm hours, and farm living conditions just long enough to fully appreciate how fortunate they are, there would be no rest in Congress until existing discrimination is removed.

We are squarely confronted with the solemn duty of furnishing a remedy for existing conditions. If you will not reduce the tariff and apply other indisputably sound governmental principles that will result in equality, then you must, if our civilization and institutions are not to decline with agriculture, apply to it similarly helpful remedies as those invoked by many otherwise engaged.

Mr. KINCHELOE. Mr. Chairman, I yield 10 minutes to the gentleman from Indiana [Mr. GREENWOOD].

Mr. GREENWOOD. Mr. Chairman and gentlemen of the committee, I have always believed in the merits of the McNary-Haugen bill and have supported it twice before and will do so again. No doubt there are other plans that have been offered to Congress that would give some relief to the farm situation. Much has been said about the debenture plan, but I can distinguish no difference between that and a subsidy. It would be taking money out of the Treasury and spending it for farm relief, because it will take the customs duties that would otherwise be collected and use them for that purpose. I have no doubt that there are bills for cooperative marketing with straight-out appropriations that would bring relief to agriculture, but I am for the McNary-Haugen bill because it has the means in the bill of sustaining the relief that is granted through the equalization fee and utilization of this fund that shall be so collected. The farmers of the country with whom I have had correspondence do not desire a straight-out subsidy.

Mr. KETCHAM. Mr. Chairman, will the gentleman yield?

Mr. GREENWOOD. No; not now, as I have only 10 minutes. The farmers desire a bill that will permit them to levy the charge themselves which will perpetuate the legislation and keep the fund intact for their relief. I am favorable to the McNary-Haugen bill. We need a surplus in this country. The surplus is the salvation of all of those consumers who live in the cities, and the man who lives on the farm should not be penalized for raising this surplus, which will be a salvation in time of famine and short crops and provide food for the people of the country.

The equalization fee will assist in orderly marketing, and is the vital part of this legislation. The fee will be charged when the commodity enters the channels of commerce. That means when the bushel of wheat goes to the mill to be ground or when the cotton goes to the gin. We can not conceive that a bale of cotton could be ginned without entering the channels of commerce, because that is merely a preliminary process; and it will have to be carried on to some other source before it can be manufactured into cloth and used for commercial purposes. Some have attacked the equalization fee claiming that it is a tax. Cooley, who is an authority on taxation, says:

> Taxation is the exercise of the sovereign power to raise revenue for the expenses of the Government.

This is not raising revenue for the expenses of the Government. It is raising revenue to keep intact this fund that is created for the purposes of orderly marketing and distribution to take care of the surplus production that arises from year to year, and it has none of the elements of taxation because it is not used for governmental purposes.

The theory upon which this authority rests is the commerce clause of the Constitution. The commerce clause does not speak alone of transportation, but it speaks of commerce, and commerce, under the definitions of the Supreme Court, takes in the widest scope. An article that is exchanged by one person with another enters the channels of commerce. It is to take care of the exportable surplus and is based on the very idea of commerce, because this exportable surplus must enter the channels of commerce before it can be disposed of. Congress plainly has the power to legislate on all matters pertaining to commerce, especially where it is based on the surplus product that is bound to enter the channels of commerce before it can be disposed of.

Some have attacked it on the ground that this equalization fee would be taking property without due process of law, but it is one of the principles of law where Congress has power, as it has under the commerce clause, that it has all the power necessary to legislate in a way that would benefit the subject, just as it has under the transportation act. This idea of an equalization fee taken from one person for the benefit of another person or group is not new. The transportation act gives the power to the Interstate Commerce Commission to fix maximum rates, and where a railroad earns more than the maximum rate that sum goes into a revolving fund to be used to provide an income for a property that does not bring the maximum rate, and that is exactly on a parallel with, and is the principle that is involved in this equalization fee. When that point was raised in what is known as the Dayton-Goose Creek Railroad case in the Two hundred and sixty-third United States the court said:

> The power of Congress to regulate interstate commerce includes the power to foster, protect, and control it, with proper regard for the welfare of those who are immediately concerned as well as of the public at large (p. 478).
>
> Authorizes Interstate Commerce Commission to provide fixed rates to yield certain return and recapture of excess earnings for a general revolving fund. Excessive income is held in trust for United States, to be used on railroads yielding lesser income.
>
> The taking of the excessive income from a railroad by this act is not a taking by the Government without due process as in violation of the fifth amendment (p. 484) and may be given by United States Government to the weaker roads to help yield a proper earning.
>
> It was insisted that the power to regulate interstate commerce is limited to fixing reasonable rates and preventing discriminations, and when these objects were attained the power of regulation was exhausted. This is too narrow a view of the commerce clause. To regulate in the sense intended is to foster, protect, and control the commerce with appropriate regard to the welfare of those who are immediately concerned as well as the public at large and to promote its growth and insure its safety. * * * Congress has plenary power over the whole subject.

So when any commodity is declared to come under the operation of this act and the fee is levied on every unit that goes into the commerce, it is levied for this revolving fund in order to create a benefit for the whole of that group that is producing the commodity; so that it can be applied to agriculture the same as the power to use the interstate-commerce clause is applied to railroads. The commerce clause of the Constitution is just as broad as the taxing power, and when we levy a tariff rate we levy it on the theory, if it is for protective purposes, that it will help everyone engaged in any particular line of

activity. And if you can use the taxing power in order to help a group, you can use the commerce clause in the manner of levying a fee upon any unit engaged in commerce; and as the power is just as great in the commerce clause as under the taxing clause, the only difference is that it is being applied for the benefit of a larger group.

That is what the farmers of our country are demanding and urging. They do not want a subsidy. They do not want a debenture plan that will take money out of the Treasury of the United States for their special benefit. All they ask is under the commerce clause to be put on an equality with those who enjoy the privileges of a high-protective tariff in order to raise the price of commodities in this country behind a tariff wall. I think agriculture, which is a basic industry, is entitled to it.

Furthermore, this legislation will not only help the farmers but, as was pointed out by the gentleman from New York [Mr. LAGUARDIA], it will help consumers of this country, because they are constantly being defrauded by the storage of grain, and it will not only help the producer by giving him a larger price but it will help the consumer by preventing an excessive price, so that as to these producers, when the price becomes excessive in storage, all they have to do is to release a portion of it and put it on the market, and thereby pull the price down to a reasonable point, and thereby help the consumer as well as the producer. [Applause.]

The CHAIRMAN. The time of the gentleman from Indiana has expired.

Mr. KINCHELOE. Mr. Chairman, I yield 15 minutes to the gentleman from Missouri [Mr. LOZIER].

The CHAIRMAN. The gentleman from Missouri is recognized for 15 minutes.

Mr. LOZIER. Mr. Chairman and members of the committee, I am wholeheartedly in favor of the pending McNary-Haugen bill, not because I consider it a perfect measure, but because I am convinced and really believe it will afford substantial relief to the agricultural classes and materially contribute to the rehabilitation of that great basic industry. It has been my privilege and pleasure to aggressively support every former legislative proposal embodying the so-called McNary-Haugen formula.

I realize that these legislative proposals have not been perfect or free from objections, but they have been fundamentally sound and based on a wholesome principle. Few bills are perfect when they are first presented.

This bill and similar bills have been debated for years. Every argument that can be advanced in favor of this bill has been presented and every argument leveled against the measure has been repeated over and over again. Congress and the American people understand this bill, and Congress and the American people favor this legislation. The time for debate has ended and the time for action is at hand. I for one am ready to vote for this bill without any further debate.

In view of the protracted debate, I will not at this time attempt to discuss this measure in detail. I desire to make a few observations in answer to some arguments that have been made against this bill. I only want to refer to the claim advanced by the opponents of this measure that the provision for an equalization fee is unconstitutional.

I do not claim to be a constitutional lawyer, though in a long and somewhat active practice of law I have been a student of our Federal Constitution and given some thought to its construction. I have some little familiarity with the decisions of our courts construing laws with reference to their constitutionality. In my humble opinion the pending bill does not carry any provision that the Supreme Court would declare unconstitutional. But I am willing to pass this measure because I believe it to be just, and I am willing to take the judgment of the Supreme Court on the question as to whether or not the provision in relation to the equalization fee is or is not constitutional.

All constructive legislation is of a progressive or experimental character. Every great constructive act of legislation that we have had in this Nation in the last hundred years was vigorously opposed on the floor of the House, in the Senate, on the platform, and in the public press on the ground that it was unconstitutional.

I challenge you to point to a single forward-looking act of constructive legislation in the history of this Nation the constitutionality of which was not aggressively and strenuously challenged in debate on the floor of the House and Senate. When the bill to establish the United States bank was pending in Congress in 1791, its validity and constitutionality were challenged by some of the ablest men in public life; and Attorney General Randolph promulgated an opinion vigorously opposing the measure and alleging that its provisions were in violation of the Constitution of the United States.

When it was proposed to build the Cumberland Road over the mountains and into the valley of the Ohio, to open up a highway to the West, many thoughtful students of our organic law denounced the proposal to extend Federal aid to the project as unwarranted and unconstitutional. When it was first proposed that the Federal Government donate public lands or grant public funds to aid in the construction of canals, wagon roads, and railroads, and for local or State projects, men who were eminent in their day and generation, men who were recognized as authorities upon our Constitution, strenuously opposed such legislation on the ground, as they alleged, that it was in violation of the Constitution of the United States. But these wise and well-meaning men were mistaken and the Supreme Court of the United States held that this legislation and these policies were not in violation of the Constitution. I call your attention to the fact that when the great Civil War came, with its deluge of blood and intestine strife, our financial system was bottomed upon State banks under what is known as the subtreasury act of 1846. While the destiny of our Republic trembled in the balance, the American Congress, public press, financial journals, and economists for two years debated the question as to whether or not we could or should establish a national banking system, although the existing fiscal system had failed and broken down. Under the stress of civil war, Secretary Chase and the administration tardily advocated the creation of a national bank or banks of issue, but many able constitutional lawyers in and out of Congress opposed the establishment of our national banking system, vigorously contending that national banks could not be created without doing violence to our Federal Constitution. And, as I have said, it was not until the fiscal system broke down under the great strain incident to the Civil War that Congress finally closed its eyes, gritted its teeth, and in effect said, "We will enact that legislation, and put it up to the Supreme Court to determine whether or not it is violative of our organic law."

I call your attention also to the fact that the legal tender act was assailed on the floor of this House and in the other branch of Congress as unconstitutional. Many leading men of the Nation insisted that the legal tender act was violative of our Federal Constitution and contrary to the genius and spirit of our institutions. But the law was enacted by Congress notwithstanding the croakings of these legalistic birds of evil omen. As soon as it became operative its constitutionality was assailed. Its validity was first argued in the Supreme Court of the United States in December, 1867. It was not until November, 1869, that the Supreme Court of the United States handed down a decision affirming the constitutionality of the act. Although the constitutionality of the legal tender act had been challenged by many of the greatest lawyers in America, the Supreme Court by a vote of 5 to 3 held that the act was constitutional, having been enacted in a period of national financial distress and as a war-emergency measure.

However, this decision was not accepted by many as final, and eminent lawyers continued to argue that the law violated the letter as well as the spirit of our Federal Constitution, and its opponents watched and waited for a new opportunity to submit the question of its constitutionality to the Supreme Court in the hope that on reconsideration that august tribunal might reverse its former decision and declare the law unconstitutional. This chance soon came. There was a change in the personnel of the Supreme Court, and the question as to whether or not the legal tender act was constitutional again came before that tribunal for determination. Again, by a vote of 5 to 3, the Supreme Court held that the legal tender act was constitutional, although the greater weight of opinion among the outstanding constitutional lawyers in America at that time was to the effect that the legal tender act was clearly unconstitutional and violative of the fundamental principles underlying our organic law.

Inasmuch as this second decision was by a divided court, those who denied the constitutionality of the act maneuvered to have the question argued and tried anew in the United States Supreme Court, but it was not until 1879 that the Supreme Court, in an opinion written by Justice Gray and concurred in by all the other justices with the exception of Justice Field, by a vote of 7 to 1 burned the bridges behind it and held unequivocally that the legal tender act was valid and that Congress had the full power and constitutional right to direct the issue of paper money and make United States notes legal tender for public and for private debts not only in war times but in peace times.

In support of my argument I call your attention to the decision of the Supreme Court in the case of Juillard *v.* Greenman (110 U. S. 421), in which the court affirmed the constitutionality of the legal tender act by a vote of 7 to 1. As I have

already said, the majority opinion in this case was written by Justice Gray and the dissenting opinion by Justice Field.

If I remember correctly, this last case was presented to the Supreme Court by a battery of very able lawyers, George F. Edmunds being chief counsel for plaintiff in error and Benjamin F. Butler being leading counsel for the defendant in error.

Among those who persistently and vigorously challenged the constitutionality of the legal tender act was George Bancroft, the great historian, who, after the final decision, issued a brochure entitled "A Plea for the Constitution," in which he bitterly opposed the validity of this act. I recall having read this pamphlet when I was a boy—at a time I could but poorly comprehend its full purport—but I have not forgotten the earnestness with which this venerable scholar attacked the constitutionality of the act that made Government notes legal tender for the payment of private debts.

Those who are interested in the details of this outstanding case should consult the decisions to which I have referred; also Thayer's article on "Legal tender," published in the Harvard Review in 1887; Miller's Lectures on the Constitution of the United States, and the article by George Bancroft to which I have referred.

This Legal Tender case furnishes a striking illustration of a law that was almost universally thought to be unconstitutional but which the Supreme Court of the United States sustained as constitutional. In enacting legislation we should be very slow to reject a wise and beneficent proposal because, forsooth, a few lawyers or many lawyers pronounce it unconstitutional. Great lawyers have condemned legislation as unconstitutional only to find out to their sorrow and chagrin that the Supreme Court of the United States upheld the constitutionality of the act that they were so "cocksure" was unconstitutional.

The constitutionality of the interstate commerce law was challenged when its enactment was proposed; the constitutionality of the act creating the Federal Trade Commission was challenged and had to be tested in the courts; the constitutionality of the legislation subsidizing the land-grant colleges was attacked, but sustained by the Supreme Court; the constitutionality of the pure food act was attacked; the constitutionality of the grain inspection act was attacked; the constitutionality of the Capper-Tincher grain grading acts was attacked, and the first Capper-Tincher law was held unconstitutional in a decision rendered by Justice Taft, after which Congress reenacted the bill with changes that met the objections raised in the Supreme Court.

I want to say to you, my friends, that in all our legislative history whenever any constructive, forward-looking legislation has been proposed in the Congress of the United States there have always been able, eloquent, logical, and forceful men honestly and sincerely or from other motives challenging the validity of those acts. But the constitutionality of the great majority of acts of Congress has been sustained by the Supreme Court and only comparatively few acts of Congress have been declared violative of the Constitution of the United States.

Mr. LAGUARDIA. The gentleman must not overlook the Adamson eight hour law.

Mr. LOZIER. Oh, yes; the Adamson eight hour law affords another striking illustration of how far wrong self-constituted constitutional lawyers may be when they arrogantly declare proposed legislation unconstitutional. The public press and many of the greatest constitutional lawyers of the United States opposed the Adamson eight hour law and ridiculed the idea that the law was constitutional. But the greatest judicial tribunal in the world pronounced this act constitutional, to the discomfiture of those "wise birds" that arrogated to themselves the prerogative of foretelling the views of the Supreme Court on legislative proposals.

The opponents of this farm-relief legislation are setting themselves up as a supreme court to destroy this wholesome formula for the rehabilitation of American agriculture. They are seeking to discredit this bill and destroy this legislation; they are seeking to prevent this plan from having a fair trial. They are not willing for the American farmer to have a square deal and an even chance. Unable to successfully answer the arguments in favor of this bill, they with unsurpassed presumption look wise and assert that the Supreme Court will declare the provision with reference to the equalization fee unconstitutional and void.

After an active practice of 42 years at the bar I have learned in my more mature years to be very slow in challenging the constitutionality of any act. When I was young and during the first few years of my practice at the bar, I, with the reckless assurance of youth, flippantly declared many acts of the State legislature and many acts of Congress unconstitutional, but after I had learned a little real law and acquired some little familiarity with court decisions I learned that the courts of the States and the courts of the United States, at all times and under all circumstances, are very reluctant to set aside the express mandates of Congress, and I soon learned they never hold an act unconstitutional if its constitutionality can be sustained by any rule of reason.

It is the settled policy not only of the State courts but of the Federal courts, including the United States Supreme Court, to resolve every doubt of the constitutionality of an act in favor of its constitutionality.

Mr. FORT. Will the gentleman yield?

Mr. LOZIER. Yes.

Mr. FORT. Is not the reason back of that rule of the court the presumption that the Congress has first carefully analyzed and discussed the constitutionality of the act and has reached the conclusion that the act is clearly constitutional?

Mr. LOZIER. On the contrary, that is not the determining factor.

Mr. FORT. Is not that the presumption?

Mr. LOZIER. When the Supreme Court has presented to it a question involving the constitutionality of a law they do not consider the arguments made in Congress by men who are lawyers and men who are not lawyers as to the constitutionality of that act——

Mr. FORT. That is not the question I asked the gentleman.

Mr. LOZIER. They examine and construe the act from its four corners; they attempt to determine the purpose and the scope of the act, and it is their policy to hold every act constitutional unless it is clearly an infringement of the organic law.

Mr. FORT. But is it not a fact, if the gentleman pleases, that from the days of John Marshall to the present time the court has reiterated the doctrine that they give the presumption of constitutionality because they believe Congress to have exercised the function of passing on its constitutionality?

Mr. LOZIER. No; they have gone further than that in determining whether or not an act is constitutional. There is a philosophy that underlies their action in holding legislation constitutional.

The underlying reason that influences courts to hold acts constitutional, unless clearly repugnant to our organic law, is because the Supreme Court, ever since its creation, has recognized that primarily, sir, this is not a government by the Executive, but a government primarily and essentially by Congress. The Supreme Court has recognized the proposition that under the genius and spirit of our institutions ours is, above all things, a government by Congress. [Applause.] No man can read the Constitution of the United States and come to the conclusion that the framers of that document did not intend to create a government in which the preponderating and controlling influence was to be vested in Congress. And there was a reason for this. As I read the history of the world, since men dared to dream of freedom there never has been a struggle between despotism on the one hand and liberty-loving people on the other in which the legislative branch of the government has not been in favor of the people, and stood as a bulwark against autocracy and despotism.

In the history of every great nation that has attained any degree of self-government the legislative branch of the government has always been the champion of the people. [Applause.]

The blessings of free government that we enjoy—the blessings of free government enjoyed by citizens and subjects in other lands—were not the gifts and bounty of kings or princes, but they were won at the point of the sword on bloody battle fields, and invariably in these contests the legislative branch of government has championed the cause of the people against the unwarranted aggression of the executive.

Congresses and parliaments have always led in every struggle for human freedom. Our constitutional fathers realized this self-evident fact, and in building our Nation they made it preeminently and essentially a government the controlling factor in which is the Congress. I do not look with contempt on the prerogatives of the executive branch of our Government, but I do assert that our whole scheme of government is built around the Congress, and our Constitution vests in the Congress supreme right and power to determine the policies of government, and in this sphere Congress is supreme.

Nor do I challenge the right of the Supreme Court to invalidate laws that clearly infringe on the provisions of the Constitution. But the duty and province to determine whether or not a law is constitutional does not primarily devolve on the President, but that responsibility, under the Constitution, is placed on the Supreme Court. I therefore suggest that the self-constituted constitutional lawyers in this House quit worrying about the constitutionality of the act we are considering

and let the Supreme Court pass on that question. I am for this bill, and I think it should be enacted without any further delay. [Applause.]

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. HAUGEN. Mr. Chairman, I yield 10 minutes to the gentleman from Kansas [Mr. SPROUL].

Mr. SPROUL of Kansas. Mr. Chairman, ladies, and gentlemen of the committee, I quite heartily concur in the general argument of the gentleman from Missouri [Mr. LOZIER]. I believe the Constitution of our country has created a duty for the Congress and has given it a lot of power. It has given it power to vest in the Chief Executive the power to make appointments, and inasmuch as the Congress has power to authorize the Executive to make appointments the Congress has the same power to take away from the Executive the right to make appointments.

I liked very much the provisions of the last McNary-Haugen bill, giving to the farm organizations the power to nominate the men who were to run the machinery organized by the Congress for their benefit. It seems to me there was an unwarranted manifestation of jealousy on the part of the Executive in taking exception to what the Congress did in that regard. Inasmuch as the machinery was made for the farmers and their organizations, no exception should have been taken to their selecting the men who were going to run their business. Now, why? Because if the McNary-Haugen bill could function as it was intended by the framers to function the prices which they were to realize for their products could not be above what the protective tariff laws of the country intended they should receive and could not be above what they were entitled to receive.

This fee that is provided for in the bill, and which is objected to by those who represent the consuming part of our country, is for the purpose of allowing the farmers to fix the price at which their products shall be sold, just the same, members of the committee, as is realized by the dealers in all other commodities. It is meting out to our people equal opportunities in industry, equal powers over our respective industries, giving to the farmers exactly what they are entitled to have and what they can not get in any other way.

The farm organizations of the country can not function without this character of machinery. For one I believe that they ought to be privileged to try it out. They ought to have the opportunity to see whether it will do the things which it is claimed it will do.

The power designed to pass upon the constitutionality of the laws which we enact is unquestionably the Supreme Court. Why? Because before that body the authorities are presented for the constitutionality of the measure and the authorities against its constitutionality, and both sides of the question are argued before the court. The court is supposed to be unbiased, unprejudiced, fair, and nonrepresentative of any consuming community which is bitterly opposed to this legislation. This is the body where the question of constitutionality should be settled and determined, and no other body, when there is any question of constitutionality, should pass upon the question, as a reason for a veto, in my judgment; and I hope the President of the United States will conclude when this bill comes to him that it is the duty of the Supreme Court to pass upon it and that he will not undertake to function as an unbiased, unprejudiced officer without allowing those who advocate the constitutionality of the question to come before him and present their arguments.

Mr. ASWELL. Will the gentleman yield?

Mr. SPROUL of Kansas. I yield.

Mr. ASWELL. If the President vetoes the bill, and you do not have a two-thirds majority, how will it ever reach the Supreme Court?

Mr. SPROUL of Kansas. I daresay it could not, but I am advocating——

Mr. ASWELL. You are just pleading with the President.

Mr. SPROUL of Kansas. Yes, indeed; I am.

Mr. ASWELL. And the gentleman is not giving any opinion at all. The gentleman is just hoping about something.

Mr. SPROUL of Kansas. The gentleman from Louisiana has the right to say that I am not giving an opinion——

Mr. ASWELL. The gentleman says he does not know whether the President will veto it or not.

Mr. SPROUL of Kansas. That is not what I am passing on. I am saying it is the duty of the Supreme Court to pass upon this question.

Mr. ASWELL. How will it get to the Supreme Court?

Mr. SPROUL of Kansas. If the President signs the bill it may get there, probably.

Mr. ASWELL. If?

Mr. SPROUL of Kansas. Yes; and he should sign it. He should not function as a Supreme Court. We have the right to expect him to sign the bill without reference to whether it is possibly constitutional or not, because he is not a suitable party and is not equipped with the legal help to come to a just and proper conclusion as to its constitutionality.

Mr. JONES. That is the Attorney General's department?

Mr. SPROUL of Kansas. No, indeed; I think the Supreme Court is the one proper place where the constitutional question involved should be passed upon rather than the one who may veto. If that is not so, let us do away with the Supreme Court for such purposes.

Mr. HERSEY. Will the gentleman yield?

Mr. SPROUL of Kansas. Yes.

Mr. HERSEY. The gentleman is a lawyer. Suppose he was President and the bill came before him; would he consider it from a lawyer's standpoint whether it was constitutional or not?

Mr. SPROUL of Kansas. I might.

Mr. HERSEY. The President did.

Mr. SPROUL of Kansas. I do not know whether he did or not; he assigned that as a reason.

Mr. HERSEY. Does not the gentleman think he exercised his knowledge as attorney, and a very good attorney?

Mr. SPROUL of Kansas. I do not know whether he was a very good attorney; I do know that he did not allow to come before him the proponents of this bill who claimed that it was constitutional to present their authorities and arguments——

Mr. HERSEY. He called on the Attorney General of the United States and took his opinion and quoted his opinion in his veto, did he not?

Mr. SPROUL of Kansas. Yes.

Mr. HERSEY. What is the office of the Attorney General for? To give advice, is it not? If you were President, would you call on the Attorney General of the United States for his opinion?

Mr. SPROUL of Kansas. If I were hunting for an excuse to kill the bill, that is what I might do. [Laughter.] If I thought there was a constitutional question, I would sign the bill and pass it on to the body which the founders of the Constitution created to do such work. [Applause.] I would think I was doing my duty as an executive when I did it.

The CHAIRMAN. The time of the gentleman from Kansas has expired.

Mr. ASWELL. Mr. Chairman, I yield five minutes to myself.

Mr. Chairman, for the benefit of those interested, I would like to have you remember this number, H. R. 13269, a bill containing the exact language of the McNary-Haugen bill before the House in every detail except the equalization fee. I have stricken out all reference to the equalization fee, and it is a complete bill as such. It was testified in the hearings many times that the bill as I have presented it here is a complete bill and will work without the fee or production tax 100 per cent on the leading products. Some have said that it would not work as well without loss on wheat. Many witnesses testified repeatedly that this bill would work on cotton without costing the Government a penny. It contains the $400,000,000 revolving fund, which would be used in the place of the equalization fee as well as for loans to the cooperatives.

Now, gentlemen, I stated in the beginning of this discussion that it then seemed to me a childish, vain thing to pass this bill with the equalization fee when all of us know it can never become a law and means no farm legislation in this Congress. I am deeply interested in farm legislation and want something that can become a law. I stated in the beginning, and I have listened sympathetically during all these hours of debate, listening to the proponents of the bill as they in a heartless sort of way—in some instances pathetic—and there has not been an enthusiastic, strong supporter of the bill who tried to explain its workings. They know the bill is primarily political and put forward for selfish purposes. The Haugen bill is really not for farm relief but for lobby purposes and for DAWES's relief.

One of the orators, one of the leaders of the proponents of the bill, stated that the equalization fee is the heart of the bill, and the very next orator, a leading orator, rose and said:

> We will suspend the pulsations of that heart for a year or two until we spend the $400,000,000.

If the equalization fee is the heart of the bill, you could not suspend the heartbeats by declaring that it would not be operative until the money which has been appropriated by the Government was expended.

I will say this, that if any gentleman in Congress or out of it can show me one single statement in this bill that authorizes

the board to suspend the operations of the equalization fee on any commodity for any time until the $400,000,000 has been expended I will apologize and support the bill. There is not a single line in the bill that directs the board with its monstrous power to suspend the operation of the equalization fee to any particular time. The fee will immediately apply on cotton, and sad will be the lot of a Member of Congress from the cotton sections who votes for this production tax should the bill ever become operative. But if in the wisdom of the committee or the House these provisions of the equalization fee are stricken from the bill I will gladly support it, every line in it.

I notify you gentlemen now that you will have the chance before this bill reaches a final conclusion to vote for this proposed complete bill, H. R. 13269, as I have presented it without the fee. If that fails, then you will have another chance to vote in the committee to strike out the fee, and you will have a final chance on a roll call to vote on a motion to recommit to strike out the fee. In any case, if we strike out the fee, we shall have a constructive, worth-while farm bill that can, and I think will, become a law. [Applause.]

Mr. FORT. Mr. Chairman, I yield five minutes to the gentleman from Virginia [Mr. TUCKER].

Mr. TUCKER. Mr. Chairman, I had not intended to take any part in this discussion, but the gentleman from Missouri made a statement which I think should not pass unnoticed. As I understood him, in speaking of the matter of the veto of the President, he said that Congress was established in the Constitution as practically the unlimited power in the Government of the United States. I heard with great interest the statement of the gentleman from Georgia [Mr. BRAND] on the relations of Members of Congress and the Supreme Court to legislation. There is no question that is firmer in the minds of all lawyers than this, laid down by Judge Cooley and Judge Marshall, and all of them, that no man should vote for any bill in this House unless he believes beyond a reasonable doubt that it is a constitutional law. How many of us do that? Every day you hear men say, "Well, we will let it go through and let the court take charge of it." The court is established for that purpose, the gentleman from Kansas [Mr. SPROUL] said. My friend from Georgia stated the doctrine admirably well. When we pass a law here and it goes to the Supreme Court, that court will not declare it unconstitutional unless beyond a reasonable doubt they believe it to be so. Why? Because they have the right, or used to have that right, to rely upon the fact that every Member of Congress who votes for a bill here has determined in his own mind after examination and study that beyond a doubt in his mind it is constitutional. Therefore, the court not only has the reliance of its own examination, but it can say, "Here are 435 men in whom we have confidence, who, when they took the oath of office swore practically to the fact. that they would vote for no law to pass this body until they had determined that it was a constitutional law."

I shall bring in to-morrow morning the authority sustaining that view. I merely did not desire the House to adjourn with any such idea resting in the mind of any Member of Congress that the court was acting without reference to us and that we have a right to pass anything here and throw it up to the court. Oh, no. This is a great body, but it is a great body because we are expected to discharge our duties; and this bill, of all that we have ever had before us, should be studied with a great degree of care and caution, because of its great importance and because the President has once vetoed it. [Applause.]

Mr. RAMSEYER. Mr. Chairman, will the gentleman yield?

Mr. TUCKER. Yes.

Mr. RAMSEYER. The rule that the Supreme Court follows and has followed for years in passing on the constitutionality of an act of Congress is correctly stated by the gentleman; but when the gentleman states the rule that it is the duty of every Member of Congress to find the bill he votes for to be constitutional beyond a reasonable doubt, I must confess that is new to me. I never heard of it. I agree with the gentleman that the duty is on us, first, as Members of Congress to pass upon it; but does not the gentleman state the rule more strongly than it really is when he says that we should also find beyond reasonable doubt that the proposed legislation is constitutional? I should like to have the authorities on that rule.

Mr. TUCKER. I shall bring in the authority.

Mr. RAMSEYER. I agree with the gentleman that the duty is on us, and the duty is also on the President. I do not think we discharge our duty as Members of Congress if we simply pass that responsibility from our shoulders to the Supreme Court.

Mr. TUCKER. And, by the way, the Supreme Court has said within the last year, in that great decision on the child-labor question, speaking through Chief Justice Taft, in rendering that decision he in effect said: "Here is a question that everybody in the United States sees except us, because we are supposed to be held by a certain tradition; we know this fact as well as the whole world knows it." That court will very soon know what is the common, everyday practice of this House.

I have heard it to-day. You will hear it to-morrow: "I do not know whether this thing is constitutional or not; therefore, take it up to the court." The court, however, has been acting on the presumption that we have given it our sincere and earnest study and have passed on its constitutionality.

Mr. RAMSEYER. That is true, although the inference might be gathered from the statement of the gentleman that it is the practice of the House recklessly to pass those things on. I think the Members of the House as a whole seriously consider those matters whenever they arise.

Mr. TUCKER. I do not desire that my remarks should be considered as a criticism of the House. I do not mean that, but I must stand by the truth. I must say that I hear that every day.

Mr. RAMSEYER. But the gentleman should not believe everything he hears.

Mr. TUCKER. I believe that many do.

Mr. BANKHEAD. Mr. Chairman, will the gentleman yield?

Mr. TUCKER. Yes.

Mr. BANKHEAD. I do not know whether the gentleman would care to express any opinion or not, or whether he has sufficiently studied this question of the constitutionality of the equalization fee to venture an opinion; but has the gentleman reached any definite conclusion as a lawyer upon the constitutionality of that question?

Mr. TUCKER. I have.

Mr. BANKHEAD. Would the gentleman mind stating what his opinion upon it is?

Mr. TUCKER. I want to give that to you in the morning.

Mr. SPROUL of Kansas. Mr. Chairman, will the gentleman yield?

Mr. TUCKER. Yes.

Mr. SPROUL of Kansas. Did I correctly understand the gentleman to say that the Supreme Court had determined what the duties of the Members of the Congress are with reference to passing on the constitutionality of a bill?

Mr. TUCKER. Oh, no.

Mr. SPROUL of Kansas. Congress is to be the judge of its own duties, and to make rules, and so forth, for its activities, is it not?

Mr. TUCKER. Oh, yes; absolutely. I do not think I could be misconstrued. Of course, the courts have nothing to do with our duty here. The court, merely in its action in passing upon the constitutionality of a law, recognizes what I stated to be the fact, that before a bill leaves this House every man must be able to put his hand on his heart and say, "Under my oath I believe it to be a constitutional act."

Mr. SPROUL of Kansas. That is all right.

Mr. BURTNESS. Mr. Chairman, will the gentleman yield?

Mr. TUCKER. Yes.

Mr. BURTNESS. Suppose Congress by a very large majority believes in the adoption of a certain policy, something new. They believe in the adoption of a certain policy, but there is considerable doubt in the minds of individual Members of Congress as to whether that policy would be in accordance with the Constitution or not.

Mr. TUCKER. Yes. In that case you can not vote for it. If you have got a doubt you can not vote for it. [Applause.]

The CHAIRMAN. The time of the gentleman from Virginia has expired.

Mr. HAUGEN. Mr. Chairman, there are no further demands for time. The general debate, therefore, is now closed. I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. MAPES, Chairman of the Committee of the Whole House on the state of the Union, having under consideration the bill (S. 3555) to establish a Federal farm board to aid in the orderly marketing and in the control and disposition of the surplus of agricultural commodities in interstate and foreign commerce, reported that that committee had come to no resolution there.

### REREFERENCE—SALARY INCREASE BILL

Mr. LEHLBACH. Mr. Speaker, I ask unanimous consent to rerefer to the Committee on the Civil Service the bill H. R. 6518, the Welch salary increase bill.

The SPEAKER. The gentleman from New Jersey asks unanimous consent to rerefer to the Committee on the Civil Service the bill H. R. 6518. Is there objection?

Mr. GARNER of Texas. What is the object? Is that a trade between two committees to refer a bill from one committee to another?

Mr. LEHLBACH. No. The request is to refer the bill back to the committee which reported it, because the committee desires to give it further consideration.

The SPEAKER. Is there objection?

There was no objection.

LEGISLATIVE BILL

Mr. MURPHY. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill H. R. 12875, the legislative salary bill, disagree to the Senate amendments, and agree to the conference asked.

The SPEAKER. Is there objection?

There was no objection; and the Speaker appointed as conferees on the part of the House Mr. MURPHY, Mr. WELSH of Pennsylvania, Mr. HOLADAY, Mr. SANDLIN, and Mr. TAYLOR of Colorado.

LEAVE OF ABSENCE

Mr. BRIGHAM was granted leave of absence (at the request of Mr. GIBSON), indefinitely, on account of illness.

ORDER OF BUSINESS

Mr. TILSON. Mr. Speaker, in order that the consideration of the farm relief bill may go on continuously and be finished at as early a date as possible I ask unanimous consent that Calendar Wednesday business, in order to-morrow, be postponed until the first regular day after the completion of the merchant marine bill, which will immediately follow the farm relief bill.

The SPEAKER. The gentleman from Connecticut asks unanimous consent that the business in order to-morrow, Calendar Wednesday, be postponed. Is there objection?

Mr. QUIN. Mr. Speaker, I object.

Mr. TILSON. Does the gentleman from Mississippi understand that no one loses any rights under this request? The committee having the call to-morrow, which is the Committee on the Merchant Marine and Fisheries, will have the call on the first day not otherwise fixed by the rules of the House. There will be another Calendar Wednesday next week, so that in all probability there will be two Calendar Wednesdays together—that is, consecutively.

Mr. RAMSEYER. If perchance this Calendar Wednesday is deferred, will it follow on Thursday?

Mr. TILSON. Yes.

Mr. GARNER of Texas. Will the Committee on Military Affairs be called next week?

Mr. TILSON. No. The Committee on the Merchant Marine and Fisheries will have the call on the first Calendar Wednesday.

Mr. GARNER of Texas. Under the gentleman's request the Committee on the Merchant Marine and Fisheries will have the call on the next regular day after the completion of this bill and the shipping bill?

Mr. TILSON. Yes.

Mr. GARNER of Texas. That would not take the place of Calendar Wednesday of next week?

Mr. TILSON. The Committee on the Merchant Marine and Fisheries will take the first Calendar Wednesday, whenever it may be.

Mr. WHITE of Maine. Let us see if I understand the situation. Unless the Committee on the Merchant Marine and Fisheries gets a day on Calendar Wednesday prior to a week from to-morrow it might happen that we would get the Calendar Wednesday another day prior to a week from Wednesday?

Mr. TILSON. Yes. The Committee on the Merchant Marine and Fisheries will have the call on the first day, and following that the Committee on Military Affairs.

Mr. GARNER of Texas. They will have that day, whatever day it comes on?

Mr. TILSON. Yes.

Mr. CRISP. Has the gentleman from Connecticut moved to dispense with Calendar Wednesday?

Mr. TILSON. No. I had not intended to ask that it be dispensed with, because I do not wish anyone to lose any rights.

Mr. LAGUARDIA. If we dispense with it, it would put off Military Affairs one week longer?

Mr. TILSON. Yes. It would put off Military Affairs one week longer.

The SPEAKER. Is there objection?

Mr. QUIN. I object.

DEATH OF REPRESENTATIVE THADDEUS C. SWEET

Mr. SNELL. Mr. Speaker, it is with very deep sorrow that I announce to the Members of the House the very tragic death by an airplane accident of our colleague, the Hon. THADDEUS C. SWEET, a Representative from the thirty-second congressional district of the State of New York. This accident happened about 1 p. m. As yet the details are very meager, although I understand he left here this morning at 9 o'clock to go to his home at Oswego, N. Y., by airplane. It was necessary to make a forced landing at Whitney Point, N. Y. He was thrown from the machine in making this landing, and I understand that he was immediately killed.

Mr. SWEET, like our deceased friend, Martin Madden, was entirely a self-made man. Everything he accomplished in the business world, in the political world, and in other walks of life was entirely through his own efforts. He represented his district, Oswego County, in the Assembly of the State of New York for 11 years. He was speaker of that body for seven years, and he made a most enviable reputation in that position. He was a lifelong personal and political friend. By his death the State of New York and the Nation has lost a most valuable public servant. A host of friends will mourn his death.

At some future time I shall ask that a day be set aside to pay proper tribute to his memory. At the present time I present a resolution and ask for its immediate consideration.

The SPEAKER. The gentleman from New York offers a resolution, which the Clerk will report.

The Clerk read as follows:

House Resolution 182

*Resolved*, That the House has heard with profound sorrow of the death of Hon. THADDEUS C. SWEET, a Representative from the State of New York.

*Resolved*, That a committee of 25 Members of the House, with such Members of the Senate as may be joined, be appointed to attend the funeral.

*Resolved*, That the Sergeant at Arms of the House be authorized and directed to take such steps as may be necessary for carrying out the provisions of these resolutions and that the necessary expenses in connection therewith be paid out of the contingent fund of the House.

*Resolved*, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased.

*Resolved*, That as a further mark of respect, this House do now adjourn.

The resolution was agreed to.

ADJOURNMENT

Accordingly (at 4 o'clock and 13 minutes p. m.) the House adjourned until to-morrow, Wednesday, May 2, 1928, at 12 o'clock noon.

## COMMITTEE HEARINGS

Mr. TILSON submitted the following tentative list of committee hearings scheduled for Wednesday, May 2, 1928, as reported to the floor leader by clerks of the several committees:

COMMITTEE ON THE JUDICIARY

(10 a. m.)

To amend the Judicial Code and to define and limit the jurisdiction of courts sitting in equity (H. R. 7759).

COMMITTEE ON BANKING AND CURRENCY

(10.30 a. m.)

To amend the act approved December 23, 1913, known as the Federal reserve act; to define certain policies toward which the powers of the Federal reserve system shall be directed; to further promote the maintenance of a stable gold standard; to promote the stability of commerce, industry, agriculture, and employment; to assist in realizing a more stable purchasing power of the dollar (H. R. 11806).

COMMITTEE ON EDUCATION

(11 a. m.)

To create a department of education (H. R. 7).

COMMITTEE ON MINES AND MINING

(10.30 a. m.)

Authorizing an appropriation for development of potash jointly by the United States Geological Survey of the Department of the Interior and the Bureau of Mines of the Department of Commerce by improved methods of recovering potash from deposits in the United States (H. R. 496).

COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

(10 a. m.)

To amend the act entitled "An act to create the Inland Waterways Corporation for the purpose of carrying out the mandate and purpose of Congress, as expressed in sections 201 and 500 of the transportation act," approved June 3, 1924 (H. R. 10710).

EXECUTIVE COMMUNICATIONS, ETC.

475. Under clause 2 of Rule XXIV, a communication from the President of the United States, transmitting supplemental estimate of appropriation for the Navy Department for the fiscal year 1928, in the sum of $92,162.56, for the relief of contractors (H. Doc. No. 256); to the Committee on Appropriations and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. GOODWIN: Committee on Patents. H. R. 12112. A bill amending the Statutes of the United States with respect to reissue of defective patents; without amendment (Rept. No. 1435). Referred to the House Calendar.

Mr. McLEOD: Committee on the District of Columbia. S. 2660. An act to amend an act entitled "An act to provide for the examination and registration of architects and to regulate the practice of architecture in the District of Columbia," approved December 13, 1924, and for other purposes; without amendment (Rept. No. 1439). Referred to the House Calendar.

Mr. McLEOD: Committee on the District of Columbia. S. 3581. An act authorizing the Commissioners of the District of Columbia to settle claims and suits against the District of Columbia; with amendment (Rept. No. 1440). Referred to the Committee of the Whole House on the state of the Union.

Mr. FROTHINGHAM: Committee on Military Affairs. S. 2463. An act to amend an act entitled "An act for the purchase of a tract of land adjoining the United States target range at Auburn, Me.," approved May 19, 1926; without amendment (Rept. No. 1441). Referred to the Committee of the Whole House on the state of the Union.

Mr. FURLOW: Committee on Military Affairs. H. R. 13250. A bill to authorize the Secretary of War to fix the percentages of enlisted men of the Army in the sixth and seventh grades, and for other purposes; with amendment (Rept. No. 1450). Referred to the Committee of the Whole House on the state of the Union.

Mr. LEAVITT: Committee on Indian Affairs. H. R. 13407. A bill relating to the tribal and individual affairs of the Osage Indians of Oklahoma; without amendment (Rept. No. 1458). Referred to the House Calendar.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. WARE: Committee on Claims. H. R. 7378. A bill for the relief of Wade Allen and Ed Johnson; with amendment (Rept. No. 1436). Referred to the Committee of the Whole House.

Mr. BURDICK: Committee on Naval Affairs. H. R. 6263. A bill to provide for reinstatement of Larry Cardwell in the United States Naval Academy; without amendment (Rept. No. 1437). Referred to the Committee of the Whole House.

Mr. BURDICK: Committee on Naval Affairs. H. R. 10274. A bill for the relief of Commander Francis James Cleary, United States Navy; without amendment (Rept. No. 1438). Referred to the Committee of the Whole House.

Mr. HOFFMAN: Committee on Military Affairs. H. R. 3443. A bill for the relief of Alfred O. Huestis; without amendment (Rept. No. 1442). Referred to the Committee of the Whole House.

Mr. REECE: Committee on Military Affairs. H. R. 4244. A bill for the relief of Joseph Lee; without amendment (Rept. No. 1443). Referred to the Committee of the Whole House.

Mr. FROTHINGHAM: Committee on Military Affairs. H. R. 4626. A bill for the relief of Maj. Arthur A. Padmore; without amendment (Rept. No. 1444). Referred to the Committee of the Whole House.

Mr. UNDERHILL: Committee on Claims. H. R. 11289. A bill for the relief of Katherina Kautz and Fred G. Wautz, heirs of the estate of Christian F. Kautz, deceased; without amendment (Rept. No. 1445). Referred to the Committee of the Whole House.

Mr. JOHNSON of Illinois: Committee on Military Affairs. H. R. 6112. A bill for the relief of Armstrong Hunter; with amendment (Rept. No. 1446). Referred to the Committee of the Whole House.

Mr. REECE: Committee on Military Affairs. H. R. 12641. A bill to correct the military record of George A. Cole; with amendment (Rept. No. 1447). Referred to the Committee of the Whole House.

Mr. FROTHINGHAM: Committee on Military Affairs. H. R. 13097. A bill for the relief of Thomas W. Moore; without amendment (Rept. No. 1448). Referred to the Committee of the Whole House.

Mr. FURLOW: Committee on Military Affairs. S. 2733. An act for the relief of Joseph Cunningham; without amendment (Rept. No. 1449). Referred to the Committee of the Whole House.

Mr. LEAVITT: Committee on Claims. S. 1541. An act for the relief of George A. Robertson; with amendment (Rept. No. 1451). Referred to the Committee of the Whole House.

Mr. UNDERHILL: Committee on Claims. S. 2061. An act for the relief of W. H. Kaufman; without amendment (Rept. No. 1452). Referred to the Committee of the Whole House.

Mr. UNDERHILL: Committee on Claims. S. 2764. An act for the relief of Nelle McConnell; without amendment (Rept. No. 1453). Referred to the Committee of the Whole House.

Mr. UNDERHILL: Committee on Claims. H. R. 3168. A bill for the relief of Douglas B. Espy; without amendment (Rept. No. 1454). Referred to the Committee of the Whole House.

Mr. BECK of Wisconsin: Committee on Claims. H. R. 3967. A bill for the relief of the next of kin of Edgar C. Bryon; with amendment (Rept. No. 1455). Referred to the Committee of the Whole House.

Mr. GAMBRILL: Committee on Naval Affairs. H. R. 2486. A bill for the relief of Andrew Jackson Seward, jr., deceased; with amendment (Rept. No. 1456). Referred to the Committee of the Whole House.

Mr. WILLIAMS of Missouri: Committee on Naval Affairs. H. R. 5019. A bill for the relief of T. G. Roberts; with amendment (Rept. No. 1457). Referred to the Committee of the Whole House.

CHANGE OF REFERENCE

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 11160) granting a pension to Eliza Hagenbach; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

A bill (H. R. 13435) for the relief of Carrie M. Haney; Committee on Claims discharged, and referred to the Committee on Ways and Means.

PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of Rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. SPEAKS: A bill (H. R. 13446) to amend the national defense act; to the Committee on Military Affairs.

By Mr. DAVIS: A bill (H. R. 13447) authorizing and directing the Secretary of Agriculture to establish and maintain a dairy and livestock experiment and demonstration station for the South at or near Lewisburg, Tenn.; to the Committee on Agriculture.

By Mr. EDWARDS: A bill (H. R. 13448) to provide for advancement in rank of certain officers on the retired list of the Navy; to the Committee on Naval Affairs.

By Mr. GRIEST: A bill (H. R. 13449) to provide for the promotion of clerks and general mechanics in the motor-vehicle service; to the Committee on the Post Office and Post Roads.

Also, a bill (H. R. 13450) to provide for the promotion of clerks, general mechanics, driver mechanics, and garage-men drivers in the motor-vehicle service; to the Committee on the Post Office and Post Roads.

Also, a bill (H. R. 13451) to authorize the Postmaster General to hire vehicles from letter carriers for use in service; to the Committee on the Post Office and Post Roads.

By Mr. VESTAL: A bill (H. R. 13452) to amend the act entitled "An act to amend and consolidate the acts respecting copyright," approved March 4, 1909, as amended, in respect of mechanical reproduction of musical compositions, and for other purposes; to the Committee on Patents.

Also, a bill (H. R. 13453) amending the statutes of the United States to provide for copyright registration of designs; to the Committee on Patents.

By Mr. CURRY: A bill (H. R. 13454) to authorize the Secretary of the Navy to proceed with the construction of certain public works, and for other purposes; to the Committee on Naval Affairs.

By Mr. LEAVITT (by departmental request): A bill (H. R. 13455) to authorize the collection of penalties and fees for

stock trespassing on Indian lands; to the Committee on Indian Affairs.

Also (by departmental request), a bill (H. R. 13456) to authorize an appropriation for the purchase of certain privately owned land within the Fort Apache Indian Reservation, Ariz.; to the Committee on Indian Affairs.

By Mr. TREADWAY: A bill (H. R. 13457) to provide for deepening the channel of the Connecticut River between Hartford, Conn., and Holyoke, Mass.; to the Committee on Rivers and Harbors.

By Mr. GARNER of Texas: A bill (H. R. 13458) authorizing and directing the Secretary of War to sell 3,304.8 square feet of the Fort Brown Military Reservation, Brownsville, Tex., to the Gateway Bridge Co.; to the Committee on Military Affairs.

By Mr. CRAIL: A bill (H. R. 13459) making women veterans eligible for admission to the National Home for Disabled Volunteer Soldiers; to the Committee on Military Affairs.

By Mr. RATHBONE: A bill (H. R. 13460) to provide for the construction of a post road and military highway from a point on or near the Atlantic coast to a point on or near the Pacific coast, and for other purposes; to the Committee on Roads.

By Mr. GIBSON: A bill (H. R. 13461) to provide for the acquisition of land in the District of Columbia for the use of the United States; to the Committee on the District of Columbia.

By Mr. SABATH: Joint resolution (H. J. Res. 293) directing the Secretary of State to instruct our ambassadors and ministers that our country affairs should not be subordinated to our title and social seekers; to the Committee on Foreign Affairs.

## PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ABERNETHY: A bill (H. R. 13462) granting a pension to Leonard Webber Nelson; to the Committee on Pensions.

By Mr. BRAND of Georgia: A bill (H. R. 13463) granting an increase of pension to David S. Harrison; to the Committee on Pensions.

By Mr. DAVIS: A bill (H. R. 13464) granting a pension to Mary Lizzie Mosby; to the Committee on Invalid Pensions.

By Mr. ROY G. FITZGERALD: A bill (H. R. 13465) for the relief of Thomas T. Gessler; to the Committee on Naval Affairs.

By Mr. GARBER: A bill (H. R. 13466) granting an increase of pension to Susan J. Boston; to the Committee on Invalid Pensions.

By Mr. IRWIN: A bill (H. R. 13467) granting an increase of pension to Blanche Holston; to the Committee on Invalid Pensions.

By Mr. JACOBSTEIN: A bill (H. R. 13468) granting an increase of pension to Margaret Hayes; to the Committee on Invalid Pensions.

Also, a bill (H. R. 13469) granting an increase of pension to Catherine Sullivan; to the Committee on Pensions.

Also, a bill (H. R. 13470) granting an increase of pension to Elizabeth K. Kershaw; to the Committee on Invalid Pensions.

Also, a bill (H. R. 13471) granting an increase of pension to Fannie F. Marts; to the Committee on Invalid Pensions.

Also, a bill (H. R. 13472) granting an increase of pension to Jennie N. Milliken; to the Committee on Invalid Pensions.

Also, a bill (H. R. 13473) granting an increase of pension to Mary A. Stephens; to the Committee on Invalid Pensions.

Also, a bill (H. R. 13474) granting a pension to Edward L. Mosier; to the Committee on Pensions.

Also, a bill (H. R. 13475) granting a pension to John A. Miller, jr.; to the Committee on Pensions.

By Mr. RANSLEY: A bill (H. R. 13476) for the relief of Joseph M. McAleer; to the Committee on Military Affairs.

By Mr. SMITH: A bill (H. R. 13477) to provide a preliminary survey of South Fork Snake River, in Idaho, with a view to the control of its floods; to the Committee on Flood Control.

By Mr. UPDIKE: A bill (H. R. 13478) granting an increase of pension to Mary Taylor; to the Committee on Pensions.

## PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

7341. By Mr. BARBOUR: Petition of residents of the seventh congressional district of California, protesting against the Lankford Sunday bill (H. R. 78); to the Committee on the District of Columbia.

7342. By Mr. BOYLAN: Resolutions adopted by the Society of Medical Jurisprudence of New York, favoring amendment to revenue act; to the Committee on Ways and Means.

7343. By Mr. CARTER: Petition of E. K. Taylor and many others, of Alameda, Calif., urging the passage of legislation increasing the pensions of veterans of the Civil War and widows of veterans; to the Committee on Invalid Pensions.

7344. By Mr. COOPER of Wisconsin: Petition of residents of Janesville, Rock County, Wis., urging the passage of bill to increase pension of Civil War widows; to the Committee on Invalid Pensions.

7345. By Mr. FULBRIGHT: Petition of citizens of Doniphan, Mo., in favor of legislation in behalf of Civil War veterans and widows of veterans; to the Committee on Invalid Pensions.

7346. By Mr. GARBER: Petition of J. H. Stolper, general counsel and chairman national executive committee, American Veterans of All Wars, Muskogee, Okla., in support of Senate bill 777; to the Committee on World War Veterans' Legislation.

7347. Also, petition of John A. Stewart, chairman executive committee of George Washington American-Citizens Bicentennial Commemoration Committee of New York City, in support of House bill 4625; to the Committee on Roads.

7348. Also, petition of Ray O. Baird, Vocational Agriculture Institution, Garber, Okla., in support of House bill 12241; to the Committee on Education.

7349. Also, petition of W. W. Rucks, Oklahoma City, Okla., in support of Senate bill 777, Tyson bill, for retirement of disabled emergency Army officers; to the Committee on World War Veterans' Legislation.

7350. Also, petition of James H. Teel Post, No. 105, American Legion, Bartlesville, Okla., in support of Senate bill 777; to the Committee on World War Veterans' Legislation.

7351. By Mr. HANCOCK: Petition of Miss Effie J. Hallock and other residents of Cortland, N. Y., favoring the passage of the Sproul bill (H. R. 11410); to the Committee on the Judiciary.

7352. By Mr. WATSON: Resolution passed by the Amalfi Commandery, No. 392, Ancient and Illustrious Knights of Malta, concerning restricted immigration; to the Committee on Immigration and Naturalization.

7353. By Mr. JACOBSTEIN: Petition of citizens of New York, urging Congress to pass House bill 11410, to amend the national prohibition act; to the Committee on the Judiciary.

7354. By Mr. LAMPERT: Petition signed by citizens of Oshkosh, Wis., urging that immediate steps be taken to bring to a vote a Civil War pension bill carrying the rates proposed by the National Tribune; to the Committee on Invalid Pensions.

7355. By Mr. O'CONNELL: Petition of the American Federation of Labor, favoring the passage of Senate bill 744, with certain amendments, for the establishment and maintenance of the Nation's merchant marine service; to the Committee on the Merchant Marine and Fisheries.

7356. By Mr. RATHBONE: Petition by residents of Chicago, urging that immediate steps be taken to bring to a vote a Civil War pension bill in order that relief may be accorded to needy and suffering veterans and widows of veterans; to the Committee on Invalid Pensions.

7357. By Mr. SMITH: Petition signed by Sid Stuart and 60 other residents of Camas County, Idaho, favoring the enactment of legislation to increase the pension of Civil War veterans and widows of veterans; to the Committee on Invalid Pensions.

7358. By Mr. SWING: Petition in behalf of soldiers and sailors of the Spanish War, Philippine insurrection, the China expedition, and widows, minor children, orphans, helpless children, and dependent parents of such soldiers and sailors; to the Committee on Pensions.

7359. By Mr. TEMPLE: Petition of E. G. Baily, Carmichaels, Greene County, Pa., in support of the Sunday rest bill for the District of Columbia (H. R. 78); to the Committee on the District of Columbia.

7360. Also, resolution of Local Unions Nos. 155, 179, 593, 2230, and 2232, all of western Pennsylvania, adopted at a mass meeting, protesting against certain actions of the State police and coal and iron police; to the Committee on the Judiciary.

7361. Also, petition of a number of residents of Greene County, Pa., in support of House bill 11410, to amend the national prohibition act; to the Committee on the Judiciary.

7362. By Mr. WINTER: Resolution re House bill 9956 by Paul C. Miner, president Lions Club, Lyman, Wyo.; to the Committee on Irrigation and Reclamation.

7363. By Mr. WYANT: Resolution of National Coal Association, in support of House Concurrent Resolution 19; to the Committee on Interstate and Foreign Commerce.

## SENATE

### WEDNESDAY, *May 2, 1928*

The Chaplain, Rev. ZeBarney T. Phillips, D. D., offered the following prayer:

O God, who art near us always, we thank Thee for the blessings about our path, for the love that makes life beautiful, for thoughts that uplift and gladden us, for disappointment and failure which humble us, for pain and distress which teach us our need, but most of all for our hope in Thee and the fullness of joy which Thy presence brings. Breathe upon us now Thy hallowed calm, lift the burdens from our hearts, soothe the anxieties of our minds, and send peace into our souls, that standing in the shelter of Thy shadowing wings we may feel that power which alone can lift us far above the plane of common standards of the good into the sacred precincts of Thy divine perfection. Grant this, O Father, for the sake of Jesus Christ our Lord. Amen.

The Chief Clerk proceeded to read the Journal of yesterday's proceedings, when, on request of Mr. CURTIS and by unanimous consent, the further reading was dispensed with and the Journal was approved.

#### COOPERATIVE MARKETING OF FARM PRODUCTS

The VICE PRESIDENT laid before the Senate a communication from the chairman of the Federal Trade Commission, transmitting, pursuant to Senate Resolution 34, Sixty-ninth Congress, special session of the Senate (agreed to March 17, 1925), the report of the commission on the cooperative marketing of farm products, consisting of two volumes, volume 1, dealing with the development and importance of the cooperative movement, together with the results of the inquiry as it related to illegal interference with the formation and operation of cooperatives, and volume 2, presenting the results of a study of comparative costs, prices, and marketing practices, as between cooperative marketing organizations and other types of marketers and distributors handling farm products.

Mr. SHIPSTEAD. I move that the communication, with the accompanying documents, be referred to the Committee on Printing.

The motion was agreed to.

#### APPROPRIATIONS FOR THE LEGISLATIVE BRANCH

The VICE PRESIDENT laid before the Senate the action of the House of Representatives disagreeing to the amendments of the Senate to the bill (H. R. 12875) making appropriations for the legislative branch of the Government for the fiscal year ending June 30, 1929, and for other purposes, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. WARREN. I move that the Senate insist upon its amendments, accept the invitation of the House for a conference, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Vice President appointed Mr. WARREN, Mr. SMOOT, Mr. CURTIS, Mr. BROUSSARD, and Mr. COPELAND conferees on the part of the Senate.

#### MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the House had agreed to the amendment of the Senate to the bill (H. R. 11629) to amend the proviso of the act approved August 24, 1912, with reference to educational leave to employees of the Indian Service.

#### PETITION

Mr. CAPPER presented a petition numerously signed by citizens of Atchison, Kans., praying for the passage of the so-called Brookhart bill, relative to the distribution of motion-picture films in the various motion-picture zones of the country, which was referred to the Committee on Interstate Commerce.

#### THE WORLD COURT

Mr. SHORTRIDGE. I hold in my hand a letter addressed to me from Pomona College, Claremont, Calif., with an accompanying petition, relating to the resolution of the Senator from Massachusetts [Mr. GILLETT] in respect to the Court of International Justice. I ask that the petition, with the names of the petitioners, be printed in the RECORD and referred to the Committee on Foreign Relations.

There being no objection, the petition, with the names of the petitioners attached, was ordered to be printed in the RECORD and referred to the Committee on Foreign Relations, as follows:

POMONA COLLEGE,
*Claremont, Calif., April 27, 1928.*

Senator SAMUEL M. SHORTRIDGE,
*The Wardman Park, Washington, D. C.*

DEAR SENATOR SHORTRIDGE: May I commend to your interest the attached petition, forwarded by the members of Pomona College, in the hope that their interest in the Gillett resolution will be shared by you?

May we respectfully request that this petition, with its complete names of signatures, be inserted in the CONGRESSIONAL RECORD, where it will undoubtedly prove of interest to the other Members of the Senate?

Respectfully yours,

F. P. BRACKETT.

A group of members of the College Club of Claremont, associated with Pomona College, would urge the importance of passing the Gillett resolution in regard to the World Court. All of us who sign this communication are voters in Claremont or in neighboring cities of California.

F. P. Brackett, George S. Burgess, Russell M. Story, Charles Fairman, Arthur Babcock, E. C. Lincoln, F. R. Iredell, W. H. Kerr, A. A. Douglass, W. P. Russell, Harold Davis, Kenneth Duncan, James A. Blaisdell, Charles J. Robinson, Gilbert N. Brink.

#### REPORTS OF COMMITTEES

Mr. CAPPER, from the Committee on Claims, to which were referred the following bills, reported them each without amendment:

A bill (H. R. 2658) for the relief of Finch R. Archer; and

A bill (H. R. 4925) for the relief of John M. Savery.

Mr. KEYES, from the Committee on Public Buildings and Grounds, to which were referred the following bills, reported them severally without amendment and submitted reports thereon:

A bill (H. R. 11951) to amend the act entitled "An act for the relief of contractors and subcontractors for the post offices and other buildings and work under the supervision of the Treasury Department, and for other purposes," approved August 25, 1919, as amended by the acts of March 6, 1920, and February 27, 1926 (Rept. No. 977);

A bill (H. R. 12899) authorizing the erection for the sole use of the Pan American Union of an office building on the square of land lying between Eighteenth Street, C Street, and Virginia Avenue NW., in the city of Washington, District of Columbia (Rept. No. 978); and

A bill (H. R. 13171) authorizing the Secretary of the Treasury to accept a franchise from the government of the city of New York to change the routing of the pneumatic-tube service between the customhouse and the present appraisers' stores building, and for other purposes (Rept. No. 979).

Mr. KEYES also, from the Committee on Public Buildings and Grounds, to which was referred the bill (H. R. 10799) for the lease of land and the erection of a post office at Philippi, W. Va., and for other purposes, reported it with an amendment and submitted a report (No. 980) thereon.

Mr. BORAH, from the Committee on Foreign Relations, to which were referred the following bills and joint resolution, reported them each without amendment and submitted a report thereon, as indicated:

A bill (H. R. 9043) to authorize the payment of an indemnity to the Government of France on account of losses sustained by the owners of the French steamship *Madeleine* as a result of a collision between it and the U. S. S. *Kerwood;* and

A joint resolution (S. J. Res. 131) providing for the participation by the United States in the International Conference for the Revision of the Convention of 1914 for the Safety of Life at Sea (Rept. No. 981).

Mr. EDWARDS (for Mr. WAGNER), from the Committee on Military Affairs, to which were referred the following bills, reported adversely thereon and moved that they be indefinitely postponed, which was agreed to:

A bill (S. 367) to authorize the President to appoint Alonzo Edward Wheat a second lieutenant, Philippine Scouts, United States Army;

A bill (S. 2530) for the relief of W. O. Whipps; and

A bill (H. R. 5065) for the relief of James M. Winston.

Mr. REED of Pennsylvania, from the Committee on Military Affairs, submitted the views of the minority to accompany the bill (S. 3089) to increase the efficiency of the Military Establishment, and for other purposes, heretofore reported from that committee, with amendments, which were ordered to be printed as part 2, Report No. 871.

BILLS AND JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. DENEEN:

A bill (S. 4308) for the relief of Maj. H. E. Miner, Capt. A. J. Touart, Capt. J. L. Hayden, Capt. H. H. Pohl, First Lieut. C. C. Jadwin, and First Lieut. F. B. Kane, United States Army; to the Committee on Claims.

A bill (S. 4309) to authorize the Secretary of Commerce to dispose of a certain lighthouse reservation and to acquire certain land for lighthouse purposes; to the Committee on Commerce.

By Mr. HOWELL:

A bill (S. 4310) for the relief of A. Ogden Pierrot (with an accompanying paper);

A bill (S. 4311) for the relief of Marion Letcher (with an accompanying paper); and

A bill (S. 4312) for the relief of Julian E. Gillespie, of the Bureau of Foreign and Domestic Commerce, Department of Commerce; to the Committee on Claims.

By Mr. DILL:

A bill (S. 4313) granting a pension to Carrie Crockett; and

A bill (S. 4314) granting a pension to W. A. Hone; to the Committee on Pensions.

By Mr. SHEPPARD:

A bill (S. 4315) authorizing and directing the Secretary of War to sell 3,304.8 square feet of the Fort Brown Military Reservation, Brownsville, Tex., to the Gateway Bridge Co.; to the Committee on Military Affairs.

By Mr. WHEELER:

A bill (S. 4316) granting an increase of pension to Debbie Beebe; to the Committee on Pensions.

By Mr. CAPPER:

A bill (S. 4317) granting a pension to Frank M. Gable (with accompanying papers); and

A bill (S. 4318) granting an increase of pension to Mary A. Smith (with accompanying papers); to the Committee on Pensions.

A bill (S. 4319) to provide for the acquisition of land in the District of Columbia for the use of the United States; to the Committee on the District of Columbia.

By Mr. HARRIS:

A bill (S. 4320) to provide for advancement in rank of certain officers on the retired list of the Navy; to the Committee on Naval Affairs.

By Mr. ASHURST:

A bill (S. 4321) authorizing the Secretary of the Interior to dispose of two bridges on the San Carlos Indian Reservation, in Arizona, and for other purposes; to the Committee on Indian Affairs.

By Mr. NORBECK:

A bill (S. 4322) granting an increase of pension to Annie L. Starling; to the Committee on Pensions.

By Mr. TYDINGS:

A bill (S. 4323) granting an increase of pension to Annie Tallerday; to the Committee on Pensions.

By Mr. BROOKHART (for Mr. ROBINSON of Indiana):

A bill (S. 4324) granting an increase of pension to Aurelia Snyder (with accompanying papers); to the Committee on Pensions.

By Mr. HAWES:

A bill (S. 4325) for the relief of Arthur E. Rump; to the Committee on Claims.

By Mr. MOSES:

A bill (S. 4326) granting an increase of pension to Mary J. Kendall (with accompanying papers); to the Committee on Pensions.

By Mr. BLACK:

A bill (S. 4327) to relinquish the title of the United States to land in the claim of Seth Dean, situate in the county of Washington, State of Alabama; to the Committee on Public Lands and Surveys.

By Mr. THOMAS:

A joint resolution (S. J. Res. 140) authorizing the President to invite the States of the Union and foreign countries to participate in the International Petroleum Exposition at Tulsa, Okla., to begin October 20, 1928; to the Committee on Foreign Relations.

AMENDMENTS TO TAX REDUCTION BILL—ESTATE TAXES

Mr. FLETCHER submitted two amendments intended to be proposed by him to House bill 1, the tax reduction bill, which were ordered to lie on the table and to be printed.

AMENDMENT TO BOULDER DAM BILL

Mr. PHIPPS submitted an amendment intended to be proposed by him to Senate bill 728, the so-called Boulder Dam bill, which was ordered to lie on the table and to be printed.

INVESTIGATION RELATIVE TO UNEMPLOYMENT

Mr. LA FOLLETTE submitted the following resolution (S. Res. 219), which was referred to the Committee on Education and Labor:

Whereas many investigations of unemployment have been made during recent years by public and private agencies; and

Whereas many systems for the prevention and relief of unemployment have been established in foreign countries and a few in this country; and

Whereas information regarding the results of these systems of unemployment, prevention, and relief is now available; and

Whereas it is desirable that these investigations and systems be analyzed and appraised and made available to the Congress: Therefore be it

*Resolved*, That the Committee on Education and Labor of the Senate or a duly authorized subcommittee thereof is authorized and directed to make an investigation concerning (a) the continuous collection and interpretation of adequate statistics of employment and unemployment; (b) the organization and extension of systems of public employment agencies, Federal and State; (c) the establishment of systems of unemployment insurance or other unemployment reserve funds, Federal, State or private; (d) the planning of public works with regard to stabilization of employment; and (e) the feasibility of cooperation between Federal, State, and private agencies with reference to (a), (b), (c), and (d). For the purposes of this resolution such committee or subcommittee is authorized to hold hearings and to sit and act at such times and places; to employ such experts and clerical, stenographic, and other assistants; to require by subpœna or otherwise the attendance of such witnesses and the production of such books, papers, and documents; to administer such oaths and to take such testimony and make such expenditures as it deems advisable. The cost of stenographic services to report such hearings shall not be in excess of 25 cents per hundred words. The expenses of such committee, which shall not be in excess of $———, shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman. The committee or subcommittee shall make a final report to the Senate as to its findings, together with such recommendations for legislation as it deems advisable, at the beginning of the second regular session of the Seventieth Congress.

Mr. WALSH of Massachusetts subsequently submitted an amendment intended to be proposed by him to Senate Resolution 219, submitted to-day by Mr. LA FOLLETTE, which was referred to the Committee on Education and Labor and ordered to be printed in bill form, and to be printed in the RECORD, as follows:

On the line following "and (d)," strike out the period and insert the following: "(f) to what extent has there been curtailment of production, in various industries throughout the country; the causes of these conditions and the remedies needed to restore prosperity to these industries; and (g) to what extent is the prevalent consolidation and reconsolidation of industries bringing about economic conditions that are unsound and insecure."

SENATOR FROM MONTANA

Mr. LA FOLLETTE. I ask unanimous consent to have printed in the RECORD an article from the current issue of Labor, on the Montana senatorial campaign.

There being no objection, the article was ordered to be printed in the RECORD as follows:

PLOT TO "GET" WHEELER IS BEING BARED IN MONTANA—ANACONDA CROWD SEEKS TO DIVIDE PROGRESSIVES IN ORDER THAT STANDARD OIL ATTORNEY MAY WIN DEMOCRATIC NOMINATION; MANIPULATION ON REPUBLICAN SIDE

In a telegram printed below, Labor's Helena, Mont., correspondent tells how the reactionaries are plotting to defeat Senator BURTON K. WHEELER, the man who drove Daugherty from the Cabinet and who is now making such a fine fight to win justice for the bituminous-coal miners.

Labor hopes the Senator's friends in Montana, and particularly the readers of this paper, will not underestimate the strength of the opposition. Crooked business could well afford to spend a million dollars in order to retire WHEELER from public life.

That being the case, we may rest assured the million will be spent.

There is only one way to defeat such a conspiracy. That is for the farmers and workers in all parts of Montana to organize in every voting precinct. Senator WHEELER should be renominated in the primary and triumphantly reelected in November.

In saying this, Labor is voicing the sentiments of the railroad workers, who own this paper.

The chief executives of all the railroad labor organizations, when they met in Washington a few weeks ago, unanimously indorsed Senator WHEELER and urged his reelection.

(Special correspondence)

HELENA, MONT., April 30.—Led by the Anaconda Copper Co., Montana "big business" is out to "get" Senator BURTON K. WHEELER, who will be a candidate for reelection this year.

If the conspirators can defeat WHEELER they will go after WALSH in 1930. They are determined to drive from public life the two great progressive Senators who have done so much to expose corruption in Washington.

Developments during the last week have made the details of the plot reasonably clear.

Sam V. Stewart, a former governor, and now attorney for the Standard Oil interests, is the man picked to beat WHEELER in the Democratic primary.

In a clean-cut fight between WHEELER and Stewart, the latter would not have a show.

SCHEME TO SPLIT LABOR

So the Anaconda crowd is endeavoring to split the labor and progressive vote which would naturally go to WHEELER. Through their emissaries they are endeavoring to induce young George Bourquin, district judge of Butte, to enter the race. Bourquin has always been credited with progressive tendencies, and his father, the noted Federal judge, is respected by everyone.

It is doubtful, however, if Bourquin will permit himself to be used in this way, but he is being subjected to great pressure, especially from certain make-believe "radicals" who are really on the Anaconda pay roll.

The Anaconda crowd has also worked out a little scheme on the Republican side which they hope will weaken WHEELER.

Some time ago former governor Joseph M. Dixon was persuaded to become a candidate for the Republican nomination for Senator. Many of his friends urged him to seek the gubernatorial nomination instead.

It is believed he decided to run for the Senate, because the Anaconda crowd, which has opposed him heretofore, gave him to understand that they would not fight him for that position.

PLAYING ON BOTH SIDES

Now, however, Charles Williams, wealthy sheepman of Deer Lodge, has been entered against Dixon, with the understanding that he will get the backing of "big business."

The conspirators hope that many Progressives will go into the Republican primary in an effort to save Dixon, and thus more votes will be drawn from WHEELER.

If the Anaconda crowd could secure the nomination of Stewart on the Democratic ticket and Williams on the Republican, they could afford to keep out of the November contest, because it would then be a case of "Heads, I win, and tails, you lose."

THE LATE SENATOR WILLIS

Mr. LOCHER. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Mr. Herbert R. Mengert, published in the Cincinnati Enquirer on April 1, 1928, entitled "A look into the soul of WILLIS—honor and integrity above reproach, sterling character; all these found embodied in life of Ohio's senior Senator."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A LOOK INTO THE SOUL OF WILLIS—HONOR AND INTEGRITY ABOVE REPROACH, STERLING CHARACTER; ALL THESE FOUND EMBODIED IN LIFE OF OHIO'S SENIOR SENATOR

COLUMBUS, OHIO, March 31.—Ohio has looked into the soul of FRANK BARTLETTE WILLIS, whose sudden death came last night, and found that he was clean. Through long observation the discerning people of this State had come to be impressed deeply with his sterling character. Thus the late United States Senator, former governor, former Congressman, former State representative, teacher, and lawyer, has come now to take his place with the cherished political household memories of Buckeyedom.

No fair critic ever impugned the integrity of the Senator in all his long service in public station. Men and women may have questioned his acumen and his vision in matters of politics and statesmanship, his ability may have ranked him below others of his party and of other parties, but deep down in the hearts of millions of Ohio people was a faith in the big fellow, a man almost boyish to the very day of his death. There was, too, an affection for him, born of the settled conviction that right motives governed his life and dictated his actions.

If, for example, Senator WILLIS believed that statutory prohibition of the liquor traffic was a solution of a problem that has vexed humanity since men learned certain of the secrets of nature, he was honest in that belief. He came to the height of a career in public life during the ascendancy of the great crusade, and no one who knew him doubted but that he would have persisted in his course had the turn of the tide of sentiment carried "the cause" to oblivion and him to retirement. In private life, too, Senator WILLIS practiced what he advocated on the platform and in legislative halls, and hence his course never could be assailed in public or in private as hypocritical.

It may be noted, too, of the Senator that his friends and admirers who had been organized about him in his earliest days in Ohio affairs continued with him. That was a point to be set down by those who beware of men who change their associates often. The WILLIS followers were grappled to his heart "with hooks of steel." It is worth a passing notice, because one may read there traits of character.

After all, is it not much to be said of man that he has loyal friends in politics as well as in other walks of life. Surely, men and women who continue through the years to cherish the friendship of a man have had their reasons.

This strong note of friendship was exemplified last night as Senator WILLIS died while an audience waited expectantly to hear the political message which he was to have given. If death was to come to a man, how better than surrounded by his neighbors, friends, and admirers in his old home at the climax of a career that held the mirage of White House occupancy at the end of the road?

Those who look over the field of activity in political affairs may wonder at many incidents. In Ohio Mr. WILLIS was a regular of regulars. He buried his own views after the party had spoken on most public questions and issues. Thus, as a young man his party leaders in Ohio took the position in favor of a franchise tax on corporations and handed him the bill in the Ohio General Assembly for sponsorship. As a loyal party man he helped to put it through. Over in Wisconsin in that same year the late Robert M. La Follette fought for the very same measure, but in opposition to the regular party organization. One does not perceive WILLIS as a man to have carried on as La Follette did. He might have attempted to persuade the organization but never to fight it.

In his career as governor Mr. WILLIS had come into office on a tide of criticism. His party then was of the "outs," due to internal dissension among the members over the new issue of "progressiveism." It followed, then, that he was not able in the short term of two years to break through the chain of circumstances that surrounded him. The WILLIS administration left no deep impress upon the State, although it was not an unpopular régime, because it offended no interests to produce retaliation.

In the years out of power the stricken leader probably had his greatest influence in the life of the State, because he was in the thick of the effort to achieve statutory prohibition. By one of those curious turns of fortune he failed in his efforts to regain the governorship at the very time in 1918 when his beloved prohibition cause succeeded. This bid for power a failure, Mr. WILLIS turned again to the law and to the lecture platform. His next opportunity found the tide running to Republicanism so strongly that he was swept into power in the great Warren G. Harding landslide, running well up with his chief.

No one who knew WILLIS believes that he was privy to any of the secrets that have been revealed by senatorial investigation and that unfortunately have been confirmed by records of courts, among them the highest tribunal in the land. When he expressed his judgment about a fellow Republican in a rather famous expression it was because Senator WILLIS believed he was telling the truth. It is a fact known to scores of his friends that he later demanded the facts in each matter and would not be content until he knew the truth.

The revelations at Washington were a distinct shock to Senator WILLIS, as his Ohio friends knew. He had either the fault or the virtue, as one may see it, of being an intense partisan, and the defiling of the party temple, which he was ready to defend with vigor and vehemence on any and every occasion, touched him more deeply than he allowed the world to know.

In the circumstances of his 1926 canvass against former Senator Atlee Pomerene his vote for the seating of former Senator Truman H. Newberry, Michigan, brought its embarrassments. There followed the declaration that he would vote in the future to unseat any man guilty of such expenditures as to suggest wrongdoing. The pledge was like other public pledges of the Senator. It was kept. No man truthfully could say that the Senator intended to condone wrongdoing, but that he had not had the vision to take a certain position at once—that was a charge that could be laid at his door. Party feeling at times carried him into dangerous positions.

Few men have been victims of more downright misrepresentation in a canvass for a few delegates from his native State than was Senator WILLIS. In fairness it must be said that his personal opponent, Herbert C. Hoover, Secretary of Commerce, was not guilty personally, and that many of the Secretary's followers likewise in all instances were not the offenders. But neither truth nor reason stayed the whims of the Hoover propagandists. It was said that Senator WILLIS sought to "hog tie" the delegation. This was the exact opposite of the fact, which was that Senator WILLIS insisted that the delegates he would win were to be bound to vote for him only so long as the majority of the delegates from Ohio, nominally committed to him, believed that he had a chance.

As a matter of fact, Senator WILLIS was more liberal in his interpretation of the position of a favorite son of a great State than any Republican in the memory of those who had followed a long line of

Ohio-sponsored candidates. Others had demanded personal attachment until personal releases were given. The selection, too, of delegates was left to local organizations without attempt to "hand pick" except for the delegates at large, and here the party leaders were recognized.

The plain truth of the matter is now due above all times. The proposed delegation was not primarily a WILLIS delegation at all in the sense that it was composed of men and women who could be bartered and traded, and those who knew the men proposed realized it fully. But this is of the past.

Those who journeyed last night through a March blizzard to participate in the WILLIS meeting, or to be professional observers, felt that in the midst of what was a tragedy of deepest hue to the little college city they had added to the stock of prized recollections. Here was, after all, the favorite American theme—of the boy, born to humbleness, who had made the most of his opportunities and the most of his talents, had brought his laurels back for the old friends and neighbors to see, and had, in Goldsmith's beautiful lines, achieved the dream of the wanderer:

"I still had hopes, my long vexations past,
Here to return and die at home at last."

SINCLAIR AND DOHENY OIL LEASES

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Lewistown Democrat-News, one of the leading Democratic newspapers in Montana, in its issue of April 28, 1928, relative to the Sinclair and Doheny oil leases.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BLIND JUSTICE

The Supreme Court of the United States, after pondering the facts presented with its traditional deliberations and discriminating judgment declared: "The Sinclair and Doheny oil leases were shot through with fraud and corruption." Juries in the Federal court in Washington have returned verdicts of "not guilty" following the trials of Sinclair and Doheny for their parts in the perpetration of this "fraud" and "corruption." The highest judicial tribunal in the land, comprising nine of our most learned men of the law, including a former President of the United States, and happily above and beyond any influence of money or power, renders a deliberate judgment. A jury of 12 laymen of no particular training of any sort reverses the highest court. In one trial the Sinclair defense offers one explanation of certain essential facts. In a second trial that explanation is abandoned and another is substituted. Secretary of the Interior Fall, under circumstances of suspicious secrecy, awarded to Sinclair, a multimillionaire, an oil lease presumably worth a very great sum of money. At the same time Sinclair delivered to Fall Government bonds in the value of more than a quarter of a million dollars. Secretary Fall, under the same attendant circumstances of secrecy, awarded to Doheny an oil lease worth, net, according to Doheny's own statement, at least $100,000,000. Doheny at the same time delivered to Fall a satchel containing $100,000 in currency. Sinclair and Doheny have both been acquitted. Fall may never be brought to trial. Sinclair delivers to the chairman of the political committee which represents the party in charge of the affairs of our Government and responsible for the appointment of Fall, $235,000 worth of Liberty bonds. Those bonds are used to liquidate a part of an indebtedness incurred in the election of the President who appointed Fall to the position which enabled him to grant these leases. Crooked big business, cynical big politics, to speak charitably, an inefficient jury system. A Government corrupted and corruptionists and conspirators permitted to go unpunished.

Silence on the part of many outstanding leaders in both major political parties. Increased cynicism of the general public in relation to efficacious functioning of our courts of justice when unlimited money—money in bonds and in cold cash, appears in the dock. A boy in Michigan sells a pint of gin and goes to prison for life. Sinclair bribes a member of the President's Cabinet and goes free. A man in New York steals a small quantity of food to give his starving children and is sentenced to jail. Doheny attempts to steal a hundred million dollar oil reserve from the Government and is acquitted. Justice sits blindfolded and its ears catch the rustle of bonds and bills while deafened to the piteous appeals of the humble unfortunate. Great men in high places stand mute in the presence of conspiracy affecting the honor of the Government; lesser men flout those who seek to arouse the national conscience to the dangers of sickening corruption. Some crack-brained radical harangues from a soap box and is held a menace to the established order, a "bolshevik." A man of great wealth defies decency, defies the Government itself, and is accounted a "solid citizen" of worth and social standing. Which is really the "bolshevik," the enemy of institutions for which many tens of thousands of men have died and millions have suffered willing privations? One Sinclair, safe behind his piled-up millions, is more of a menace to the perpetuity of this great Government than a thousand loose-tongued radicals spouting their heresies from a thousand soap boxes.

RIKER MISSISSIPPI SPILLWAY PLAN FOR FLOOD CONTROL

The VICE PRESIDENT. The Chair lays before the Senate a resolution coming over from the preceding day.

The resolution (S. Res. 217) submitted yesterday by Mr. FRAZIER was read, as follows:

*Resolved*, That Maj. Gen. Edgar Jadwin, Chief of Engineers, United States Army, having replied to a recent request of the Senate for "an immediate report upon the merits of the Riker Mississippi spillway plan for flood control" by a statement solely presenting his opinions upon its demerits without one word respecting its merits, be hereby again requested to report more specifically upon the merits of the proposed plan for flood control.

Mr. JONES. Mr. President, I ask that the resolution may go over without prejudice. The Senator from North Dakota [Mr. FRAZIER] is not here.

The VICE PRESIDENT. The resolution will go over without prejudice.

RACIAL POLICY IN EXECUTIVE DEPARTMENTS

Mr. SMOOT. Mr. President, I would like to call the attention of the Senator from South Carolina [Mr. BLEASE] to a letter which was inserted in the RECORD on April 16, 1928, by him. The letter is unsigned, and therefore I do not know who its writer was, but the substance of the letter has reference to a statement made in it:

The Land Office at its best a regular hell hole.

The letter which was inserted refers to a Mr. "Bully" McGee, a Mr. Keefer, a Mr. Obenchain, a Judge Harvey, a Mr. Parrott, and a Mr. McCall. I think that covers all the names that were mentioned. I do not know for what purpose the letter was put in the RECORD, whether political or otherwise, but I want to say to the Senator, if it was for political reasons, that every name mentioned is the name of a Democrat in the employ of the Government in the General Land Office. That would make no particular difference if the facts in the case, as outlined in the letter, were true. I merely wanted to call attention to the fact that every name mentioned in the letter is the name of a Democrat working in the Land Office.

Mr. BLEASE. Mr. President, with reference to what the Senator from Utah has just said, I desire to say that it does not make any difference to me whether a man is a Democrat or whether he is a Republican; if he is trying to conceal the truth from the American people, I would just as lief expose, as I have done, a man in the highest office in the country or any other office regardless of his politics.

INTERMEDIATE CREDIT BANK, COLUMBIA, S. C.

Mr. BLEASE. Mr. President, in the Greenville News, of Greenville, S. C., of Tuesday, May 1, 1928, there appeared the following telegraphic dispatch from Washington by Associated Press:

MELLON REPLIES TO COLE BLEASE—SECRETARY SAYS HE KNOWS OF NO IRREGULARITIES AMONG LAND BANKS

WASHINGTON, April 30.—Replying to charges made by Senator BLEASE, Democrat, South Carolina, Secretary Mellon said to-day that he knew of no unusual conditions in the Federal land banks.

In resolution introduced earlier in the day, BLEASE declared that conditions "approaching a national scandal" existed in 6 of the 12 land banks.

The resolution asserted that Secretary Mellon was withholding the annual report of the Federal Loan Board and asked that it be transmitted to the Senate.

To this Mr. Mellon replied that the report would be sent to Congress in its routine form.

Consideration of the resolution went over until to-morrow at the insistence of Senator CURTIS, Kansas, the Republican leader.

A resolution by BLEASE asking an investigation of the Columbia, S. C., land bank is pending in the Banking Committee which has asked the Farm Loan Board for a report.

I would like to call the attention of Mr. Mellon to the fact that the resolution was introduced on February 28, 1928. I would also call his attention to letters and statistics and other facts inserted in the RECORD on March 8, 13, 24, 26, and on April 2, 5, 13, 19, 20, 25, and 30, and that he also could get the proof which I filed with the Secretary of the United States Senate, and for which I hold the Secretary's receipt. I also desire further to enlighten Mr. Mellon by asking that there be published, as a part of my remarks, an article by Huston Thompson, a former member of the Federal Trade Commission, published in Farm and Fireside, of New York.

I ask also that there may be printed in the RECORD a number of letters from stockholders, protests from farm-bank people from all over the country—Oregon, Michigan, Wisconsin, Illinois, and many other States—so that the distinguished Secre-

tary of the Treasury may know that the reason why he has not heard of these scandals is because he is so closed up in his business affairs that he will not let anybody reach him to give him the information.

The VICE PRESIDENT. Without objection, the article and letters will be printed in the RECORD.

The article and letters referred to are as follows:

[Article appearing in Farm and Fireside, New York, March, 1927]

GIVE US THE TRUTH!—VITAL FACTS ABOUT THE FEDERAL FARM LOAN SYSTEM ARE BEING WITHHELD

By Huston Thompson, former member of the Federal Trade Commission

(Interview with Gertrude Matthews Shelby, writer and specialist in cooperation, executive secretary of the National Committee for Cooperative Banks, who wrote the important committee report for the American Farm Bureau Federation's investigating committee on Federal farm loan system, printed in CONGRESSIONAL RECORD April 25, 1928.)

FARMERS NOW OWN 12 FEDERAL LAND BANKS WHICH THE POLITICIANS PILLAGE

Farmers who own fifty-five millions of stock in the 12 land banks of the Federal farm loan system are worse off than stockholders in any other reputable enterprise in the United States.
